McIntosh, John T., Chicago, Ill. Vehicle spring suspension. 1,812,661; June 30.
McKinney, Harold F. (See Steinmetz, C. R., and McKinney.)
McKinzie, Edward R., Memphis, Tenn. Elevator lubricator. 1,812,540; June 30.
McLauthlin, Herbert F. (See Teale, W., and McLauthlin.)
McPhail, Gus R. (See Buckle, C. H., and McPhail.)
Meacham, William M., Seattle, Wash. Method of and apparatus for pressure concrete molding. 1,811,950; June 30.
Meade, John N., Denver, Colo., assignor to The Rail Joint Company, New York, N. Y. Toeless rail joint bar. 1,811,951; June 30.
Mednikoff, Nicolai, Scarsdale, N. Y. Piano attachment. 1,812,706; June 30.
Melhuish, Laurence E., Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Railway traffic controlling system. 1,811,857; June 30.
Melling, George, Jackson, Mich. Milling and drilling machine. 1,812,601; June 30.
Mellor Horace, assignor to Sanford Mills, Sanford, Me. Pile fabric and making the same. 1,812,602; June 30.
Mendius, William, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y. Refining hydrocarbons. 1,812,446; June 30.
Mensman, Charles J., Washington, D. C. Phonograph record. 1,812,751; June 30.
Merrill, Charles S. (See Whitehead, Robert H., assignor.)
Merrill, George S., Shaker Heights, Ohio, assignor to General Electric Company. Variable chart. 1,812,752; June 30.
Merritt, Samuel J., Central City, Ky. Control device for pumping apparatus. 1,811,952; June 30.
Messinger, William, Philadelphia, Pa. Securing eccentric motion. 1,812,109; June 30.
Metallurgica Bresciana Gia Tempini. (See Orlando, Luigi, assignor.)
Metcalf, Harold G., assignor to Columbian Rope Company, Auburn, N. Y. Rope. 1,812,354; June 30.
Methlin, Nicolas E., assignor to Schneider & Cie., Paris, France. Artillery gun more particularly applicable for firing against aircraft. 1,812,800; June 30.
Metropolitan Engineering Company. (See Holmes, Henry S.)
Meuer, George J., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electric switch. 1,812,410; June 30.
Meyer, Gottfried, assignor to Arnold Krebs, Zurich, Switzerland. Implements for moving railway wagons. 1,812,603; June 30.
Meyer, William H., St. Louis, Mo. Motion picture projecter. 1,812,212; June 30.
Meyerhoff, Jacob, Chicago, Ill. Educational device. 1,812,110; June 30.
Michael, Gus F., assignor to Bendix Brake Company, South Bend, Ind. Brake operating means, 1,812,011; June 30.
Michaels, Frank L., Covington, Ky. Weather strip apparatus. 1,812,840; June 30.
Michaels, George Z., New York, N. Y. Automobile light controlling system. 1,812,355; June 30.
Midland Steel Products Company, The. (See Neale, Fred, assignor.)
Midwest Motor Supply. (See Johnson, Ellsworth W., assignor.)
Midwest Piping & Supply Co. Inc. (See Fantz, Fred C., assignor.)
Miller, Harvey O., Chicago, Ill. Device for scraping and cleaning the face of a golf club. Des. 84,534; June 30.
Miller, Ohmer R., Floral Park, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Control system for transmission of signals. 1,811,858; June 30.
Miller Rubber Company, The. (See Collins, Arthur E., assignor.)
Miller, Samuel M. D., Detroit, Mich. Clutch. 1,812,163; June 30.
Miller, Stuart P., Glen Ridge, N. J., assignor to The Barrett Company, New York, N. Y. Fuel composition and preparing the same. 1,811,953; June 30.
Miller, Stuart P., Englewood, N. J., assignor to The Barrett Company, New York, N. Y. Production of fuel, etc. 1,812,829; June 30.
Mills Alloys Inc. (See Mills, Oscar L., assignor.)
Mills, Bertram M., assignor to The Standard Engineering Works, Pawtucket, R. I. Humidifier. 1,812,356; June 30.
Mills, Chester H., Wichita, Kans. Self computing leveling rod. 1,811,859; June 30.
Mills, Oscar L., assignor to Mills Alloys Inc., Los Angeles, Calif. Manufacturing tungsten carbide. 1,812,357; June 30.
Milwaukee Flush Valve Company. (See Judell, Julius S., assignor.)
Miner, W. H., Inc. (See Lounsbury, Harvey J., assignor.)
Mingus, Leslie C. (See Dunn, I. L., and Mingus.)
Minor, Burt S., San Pedro, Calif. Oil well packing device. 1,812,358; June 30.
Minton, John P., White Plains, assignor to United Reproducers Corporation, Rochester, N. Y. Loud speaker. 1,812,213; June 30.
Mishelevich, Benjamin, Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway track circuits. 1,812,164; June 30.
Mission Dry Corporation. (See Crosby, Harry E., assignor.)
Mitchell Camera Corporation. (See Mitchell, George A., assignor.)
Mitchell, Doren, New York, and H. C. Silent, Larchmont, N. Y., assignors to American Telephone and Telegraph Company. Transmission volume control. 1,811,954; June 30.
Mitchell, Doren, New York, and H. C. Silent, Larchmont, N. Y., assignor to American Telephone and Telegraph Company. Transmission volume control. 1,811,955; June 30.
Mitchell, George A., Los Angeles, Calif., assignor to Mitchell Camera Corporation. Dissolving shutter. 1,812,056; June 30.
Mitchell, William T. (See Hickox, G. E. F., and Mitchell.)
Mittasch, Alwin. (See Gaus, W., Mittasch, and Schlecht.)
Mitulski, F. E., et al. (See Costello, Paul S., assignor.)
Mix, Edwin S., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Belt for personal wear. 1,812,214; June 30.
Mock, Hugo, New York, N. Y. Key can opener. 1,812,111; June 30.
Moerch, Erik, Paris, France. Projection arrangement for advertising purposes. 1,811,956; June 30.
Moline Tool Company. (See Hunt, Wilson P., assignor.)
Moltrup, James T., Beaver Falls, Pa. Production of drawn metal rods. 1,812,359; June 30.

Monogram Lens Corporation. (See Coulter, Guy H., and Arbuckle, assignors.)
Monson, Louis T. (See De Groote, M., Monson, and Kelser.)
Moore, Charles G., Lakewood, and M. Zucker, assignors to The Glidden Company, Cleveland, Ohio. Synthetic resin compound and preparing the same. 1,812,639; June 30.
Moore, Lee. (See Harding, Alfred L., assignor.)
Moore, Raymond G., assignor to The Bassick Company, Bridgeport, Conn. Automobile hood clamp. 1,812,215; June 30.
Morgan, Horace H., assignor to Palmer-Bee Company, Detroit, Mich. Paint guard for conveyers. 1,812,112; June 30.
Morl, Albert. (See Ruse, John C., assignor.)
Morin, Louis H., New York, N. Y., assignor to Doehler Die-Casting Co. Metal furniture. 1,812,360; June 30.
Morris Paper Mills. (See Walker, Paul, assignor.)
Morrow, Joseph H., assignor to Fuller Company, Catasauqua, Pa. Mixing and blending system. 1,812,604; June 30.
Morton, Edmund R., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Regulator system. 1,811,860; June 30.
Morton, James, deceased; W. Morton, executor, assignor to R. H. Morton, Wishaw, Scotland, and himself. Device for measuring and depositing measured quantities of liquid, plastic, granular, and other similar substances. 1,811,957; June 30.
Morton, Robert H. (See Morton, James, assignor.)
Morton, William, executor. (See Morton, James.)
Moses, Wade, Cleveland, Ohio. Combined humidor, tamp, and pick. 1,812,753; June 30.
Motor Development Company. (See Schaefer, William D., assignor.)
Motor Products Corporation. (See Kellogg, Homer G., assignor.)
Moyer, Amos F. (See McDonough, F. T., and Moyer.)
Muhs, Henry, Company. (See Rumsey, Herbert, jr., assignor.)
Murphy, Howard J., Reading, Mass., assignor, by mesne assignments, to Alemite Corporation, Chicago, Ill. Lubricating system. 1,811,958; June 30.
Murray, Alfred H. (See Krone, Christian C., assignor.)
Murray Company, The. (See Behle, J., and Linnartz, assignors.)
Murray, John F., et al., executors. (See Holmes, Henry S., assignor.)
Murray, Joseph B., et al., executors. (See Holmes, Henry S.)
Murray, Thomas E. (See Holmes, Henry S., assignor.)
Murray, Thomas E., jr., et al., executors. (See Holmes, Henry S., assignor.)
Muzzy, William H., Evanston, assignor to Stewart-Warner Corporation, Chicago, Ill. Gasoline reserve signal for automobiles. 1,812,012; June 30.
Muzzy, William H., Evanston, assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Fuel feeding system for internal combustion engines. 1,812,013; June 30.
Muzzy, William H., Evanston, assignor to Stewart-Warner Corporation, Chicago, Ill. Limited suction feed device. 1,812,014; June 30.
Myer, Fred C., Sacramento, Calif. Coin selector. 1,812,165; June 30.
Naab, George F., assignor to The North American Manufacturing Company, Cleveland, Ohio. Proportioning valve. 1,812,015; June 30.
Naamlooze Vennootschap Bakovenbouw voorheen H. P. den Boer. (See Peikman, Johannes H. N., assignor.)
Nagel, George E., Columbus, Ohio. Railway crossing 1,812,707; June 30.
Naromore, Glenn C. (See Belden, A. G., and Naromore.)
Nasmyth, Charles S., Sydney, New South Wales, Australia. Flush valve. 1,812,301; June 30.
Nathanson, Isidore. (See Rodstein, H., and Nathanson.)
National Aluminate Corporation. (See Kensig, Louis D., assignor.)
National Cash Register Company, The. (See Brand, Samuel, assignor.)
National Cash Register Company, The. (See Goldberg, Maximilian M., assignor.)
National Cash Register Company, The. (See Robertson, William H., assignor.)
National Industrial Laboratories Corporation. (See Bassett, Orin A., assignor.)
National Rubber Machinery Company. (See De Mattia, Peter, assignor.)
National Supply Company, The. (See Hill, Rowland F., assignor.)
Neale, Fred, assignor, by mesne assignments, to The Midland Steel Products Company, Cleveland, Ohio. Compressor control apparatus. 1,812,057; June 30.
Nekarda, Victor F. (See Bragger, W. B., and Nekarda.)
Nelson, Owen F., Grosse Pointe, Mich., assignor to Copeland Products, Incorporated. Refrigerating apparatus. 1,812,113; June 30.
Nemcovsky, Louis A., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 1,812,447; June 30.
Nero Arvid H. (See Johnson, D. W., and Nero.)
Nestle-Le Mur Company, The. (See Lewis, Wilbur S., assignor.)
Newberger, Herman H. (See Weiner, Samuel E., assignor.)
New Jersey Zinc Company, The. (See Breyer, Frank G., assignor.)
Niagara Machine and Tool Works. (See Hahnemann, Paul R., assignor.)
Nicholson, Alexander W., Dickerson Run, Pa. Feed valve for air brake systems. 1,812,361; June 30.
Nicloud, Charles, Marseille, France. Electrically heated apparatus for drying coffee and the like. 1,812,016; June 30.
Nies, Arnold V., Cincinnati, Ohio. Sanitary knife scabbard. 1,812,302; June 30.
Nieuwland, Julius A., Notre Dame, Ind., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Vinyl derivatives of acetylene and preparing the same. 1,811,959; June 30.
Nieuwland, Julius A., Notre Dame, Ind., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Resinous product and preparing the same. 1,812,541; June 30.
Nieuwland, Julius A., Notre Dame, Ind., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Catalytic process for the preparation of vinyl chloride. 1,812,542; June 30.
Nilson, Carl E. J., assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden. Electromagnetic relay. 1,812,545; June 30.
Nilson, Carl E. J., and D. L. Lienzén, assignors to Telefon Aktiebolaget L. M. Ericsson, Stockholm, Sweden. Automatic and semiautomatic telephone system. 1,812,546; June 30.
Nisbet, Theodore B., Irvington, N. Y. Tonneau windshield supporting means. 1,812,362; June 30.
Noeth, John J. (See Hummel, F. E., and Noeth.)
Nölke, Ernst, Berlin, Halensee, assignor to Siemens & Halske, Aktiengesellschaft, Wernerwerk Siemensstadt, near Berlin, Germany. Cheek microphone. 1,812,114; June 30.
Norris, Gerald C. (See Stevens, R. H., Norris, and Watson.)
North American Manufacturing Company, The. (See Naab, George F., assignor.)
Northey, John J., and R. V. Northey, Toronto, Ontario, assignors to Consolidated Bolt Company, Limited, Toronto, Canada. Key bolt. 1,812,216; June 30.
Northey, Rodney V. (See Northey, J. P. and R. V.)
Northwest Engineering Corporation. (See Orloff, Arthur, assignor.)
Norton, Charles M., Grand Rapids, Mich. Door latch. 1,812,411; June 30.
Norton Company. (See Belden, A. G., and Naromore, assignors.)
Norton-Lasier Company. (See Lasier, David R., assignor.)
Nowack, Wilhelm, Berlin, and H. Buwert, Berlin-Wilmersdorf, Germany. Advertising device. 1,812,547; June 30.
Nurre Mirror Plate Company, The. (See Simonel, G., and Johnson, assignors.)
Nus, Glen F., Arlington, Iowa. Front wheel drive for automobiles. 1,812,801; June 30.
Nusbaum, Hermien D., Chicago, Ill. Child's dressing stand. Des. 84,535; June 30.
Nutter, William S., assignor to Goodall Worsted Company, Sanford, Me. Pile fabric and making the same. 1,812,640; June 30.
Nye, Oliver, Toledo, Ohio. Kite. Des. 84,536; June 30.
Nygard, Rudolf, Axel Finnila, and Torsten Lindell, Sandwich, Ontario, Canada, Harrow. 1,812,708; June 30.
Nyman, Alexander, Dobbs Ferry, assignor to Radio Patents Corporation, New York, N. Y. Illuminating apparatus. 1,811,861; June 30.
Oakes, W. B., et al. (See Davis, Kenneth, assignor.)
Oberg, William C., Munhall, Pa. Making flanged shapes. 1,812,246; June 30.
Oberg, William C., Munhall, Pa. Roll. 1,812,248; June 30.
Oberg, William C., and A. W. Soderberg, Munhall, Pa. Rolling mill plant and method of operating same. 1,812,247; June 30.
Oberle, Alfred, assignor to Universal Oil Products Company, Chicago, Ill. Process and apparatus for heating petroleum oil. 1,812,217; June 30.
Obermiller, Julius, Munich-Gladbach, Germany. Producing a constant degree of humidity in air or other gases. 1,812,548; June 30.
Oberting, Marie R., Mineral Point, Mo. Lambrequin. Des. 84,537; June 30.
Odce, Ole., and P. P. E. Richards, Batavia, Ill. Ignition mechanism for internal combustion engines. 1,812,709; June 30.
Ogden, Walter. (See Ball, H. V., and Ogden.)
Ohio Electric Manufacturing Co., The. (See Wertz, Roy O., assignor.)
Ohio Truss Company, The. (See Pease, Isaac M., assignor.)
Oliver United Filters Incorporated. (See Gardella, William, assignor.)
Oliver United Filters Inc. (See Stanley, C. M., and Evans, assignors.)
Olson, Alex H., Evanston, assignor to Droll Patents Corporation, Chicago, Ill. Machine for handling fibrous material. 1,812,412; June 30.
O'Neill, Thomas, Brooklyn, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Binder for sewing machines. 1,812,830; June 30.

Orlando, Luigi, Milan, assignor, by mesne assignments, to Metallurgica Bresciana Gia Tempini, Fiumegrande, Brescia, Italy. Device for loading firearms. 1,812,363; June 30.

Orloff, Arthur, assignor to Northwest Engineering Corporation, Green Bay, Wis. Excavator. 1,812,662; June 30.

Orr, Melville L., Cincinnati, Ohio. Game. 1,811,960; June 30.

Osborne, John G., Milwaukee, Wis., and W. W. Hicks, Fort Worth, Tex. Wire fastening means. 1,811,892; June 30.

Oursler, George. (See Oursler, James A., assignor.)

Oursler, James A., Steubenville, assignor of one-half to George Oursler, Cincinnati, Ohio. Retaining wall structure. 1,812,364; June 30.

Owen, William H., London, England. Heat exchange apparatus. 1,812,249; June 30.

Owens Development Corporation. (See Owens, Freeman H., assignor.)

Owens, Freeman H., assignor to Owens Development Corporation, New York, N. Y. Sound reproducing means. 1,812,303; June 30.

P & M. Company, The. (See Shepherd, Charles B., assignor.)

Packard Motor Car Company. (See Knapp, Archer L., assignor.)

Page, Dwight C., and R. H. Jellicoe, assignors to The Heald Machine Company, Worcester, Mass. Chuck. 1,812,017; June 30.

Pallone, Frank, Brooklyn, N. Y. Base for lamp or analogous articles. Des. 84,538; June 30.

Palmer-Bee Company. (See Morgan, Horace H., assignor.)

Palmer, John C., Edgewater, Colo. Poultry feeder. 1,812,166; June 30.

Pappas, George H., Baltimore, Md. Tire protector. 1,812,710; June 30.

Paramount Fire Alarm Engineering Company, The. (See Sackman, Charles M., assignor.)

Parker, Howard, assignor to Brown Company, Berlin, N. H. Field threading and squaring machine. 1,811,893; June 30.

Parker, Howard, assignor to Brown Company, Berlin, N. H. Field pointing machine. 1,811,894; June 30.

Parmeter, Floyd S., Los Angeles, Calif. Electric table lamp. Des. 84,539; June 30.

Parrill, Easton E., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway signaling. 1,812,167; June 30.

Parsons, Ben G., assignor to Hurricane Motor Company, Houston, Tex. Propeller spinner for aircraft engines. 1,812,831; June 30.

Partin, Albert, Portales, N. Mex. Motor suspension spring means. 1,811,961; June 30.

Patent and Licensing Corporation, The. (See Kirschbraun, Lester, assignor.)

Patent and Licensing Corporation, The. (See Wood, Henry R., assignor.)

Patentverwertungs A. G. "Alpina," S. A. pour l'Exploitation de Brevets "Alpina," Patents Exploitation Cy. "Alpina," Ltd. (See Gross, O., and Jost, assignors.)

Paul, John E., Newark, N. J., assignor to United States Radium Corporation, New York, N. Y. Luminous device. 1,812,058; June 30.

Paxton, Robert, Philadelphia, Pa., assignor to General Electric Company. Control of electroresponsive devices 1,812,754; June 30.

Peace, John D., jr., Flushing, assignor to Pioneer Instrument Company, Incorporated, Brooklyn, N. Y. Indicating instrument. 1,812,549; June 30.

Peak, Rembrandt, et al., trustees. (See Degand, Gust.)

Peale-Davis Company. (See Peale, Richard, assignor.)

Peale, Rembrandt, et al. (See Davis, Kenneth, assignor.)

Peale, Richard, St. Benedict, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del. Process and mechanism for separating intermixed divided materials. 1,812,365; June 30.

Pearl Art, Inc. (See Bragger, W. B., and Nekarda, assignors.)

Pease, C. F., Company, The. (See Brunk, Harold J., assignor.)

Pease, C. F., Company. (See Green, Charles A., assignor.)

Pease, Isaac M., Cincinnati, Ohio, assignor to The Ohio Truss Company. Abdominal support. 1,812,115; June 30.

Pelikan, John M. (See Brooks, C. A., and Pelikan.)

Pelkman, Johannes H. N., London, England, assignor to Naamlooze Vennootschap Bakovenbouw voorheen H. P. den Boer, Dordrecht, Netherlands. Traveling oven. 1,811,962; June 30.

Pellegrin, Elmer D. (See Wilkinson, G. D. and Pelegrin.)

Peninsular Grinding Wheel Company, The. (See Beebe, Alan P., assignor.)

Penrose, Chester F. (See Mansfield, J. H., and Penrose.)

Penteado, Armando A., Paris, France. Phonograph disk. 1,812,550; June 30.

Perrot, Henri, Paris, France, assignor, by mesne assignments, to Bendix Aviation Corporation, New York, N. Y. Brake mechanism. 1,812,168; June 30.

Perry, George A., assignor to Jones & Lamson Machine Company, Springfield, Vt. Taper turner. 1,812,366; June 30.

Pessione, Luigi, Turin, Italy. Block for pavements and coverings. 1,812,711; June 30.

Peters, Arthur E., Phillipsburg, assignor to Ingersoll-Rand Company, Jersey City, N. J. Drill sharpener. 1,812,304; June 30.

Petersen, Christ O., Anthon, Iowa. Antiside slip attachment for corn planters. 1,812,663; June 30.

Peterson, Eugene, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Apparatus for reducing crosstalk currents. 1,811,963; June 30.

Peterson, John W., South Bend, assignor to Bendix Brake Company, South Bend, Ind. Brake adjusting fixture. 1,812,018; June 30.

Pfeifer, Walter S., assignor, by mesne assignments of one-half to L. Bradley and one-half to H. L. Bradley, Milwaukee, Wis. Motor starting switch. 1,812,712; June 30.

Pfeiffer, Frank E., assignor to The Egry Register Company, Dayton, Ohio. Autographic register. 1,812,605; June 30.

Pflasterer, George R. (See Vantassel, H. C., and Pflasterer.)

Pflueger, Joseph E., deceased, Akron, Ohio, by The Enterprise Manufacturing Company, Akron, Ohio, assignee. Combined fishhook and weed guard. Re18,117; June 30.

Pief, John, Oklahoma City, Okla. Article of manufacture for wrist watch crystals. 1,812,367; June 30.

Pierce, Sarah E., Conshohocken, Pa. Lawn mower accessory. 1,811,862; June 30.

Pierson, Roy N., and C. H. Carlson, Minneapolis, Minn., assignors, by mesne assignments, to American Multigraph Co., Wilmington, Del. Letter folding machine. 1,811,964; June 30.

Pigeon, Fred L., et al. (See Snadecki, William J., assignor.)

Pigeon, Roy W., et al. (See Snadecki, William J., assignor.)

Pike, George J., Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio. Radiocabinet or similar article. Des. 84,540; June 30.

Pike, George J., Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio. Radiocabinet or similar article. Des. 84,541; June 30.

Pike, George J., Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio. Radiocabinet or similar article. Des. 84,542; June 30.

Pike, George J., Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio. Radiocabinet or similar article. Des. 84,543; June 30.

Pike, George J., Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio. Radiocabinet or similar article. Des. 84,544; June 30.

Pike, George J., Grand Rapids, Mich., assignor to General Motors Radio Corporation, Dayton, Ohio. Radiocabinet or similar article. Des. 84,545; June 30.

Pilkington Brothers Limited. (See Le Mare, Ernest B., assignor.)

Pinaud, Incorporated. (See Schmidt, Charles G. G., assignor.)

Pine Hall Brick & Pipe Co. (See Steele, Flake F., assignor.)

Pintsch, Julius, Aktiengesellschaft. (See Gerdes, Heinrich, assignor.)

Pioneer Instrument Company. (See Peace, John D., jr., assignor.)

Pioneer Instrument Company. (See Titterington, Morris M., assignor.)

Pittsburgh Steel Company. (See Brandt, Lewis, assignor.)

Platt Brothers & Company Limited, et al. (See Shimwell, Oliver, assignor.)

Plaxco, Frederick R., and I. L. Foster, Long Beach, Calif. Iron rest. 1,812,270; June 30.

Popkin, Martin E., New York, N. Y. Cloth matching machine. 1,812,368; June 30.

Portable Adding Machine Company. (See Barrett, Glenn J., assignor.)

Portable Adding Machine Company. (See Mapel, Clarence O., assignor.)

Porter, Kenneth L., New Rochelle, N. Y. Radiator inclosure. 1,812,606; June 30.

Porter, Russell W., and R. O. Beardsley, assignors to Jones & Lamson Machine Company, Springfield, Vt. Projecting mechanism and gear staging device. 1,812,369; June 30.

Potter, Arthur C., North Woodstock, Conn. Match book. Des. 84,546; June 30.

Potter, William H. (See Lusk, W. F., and Potter.)

Poulet, Edouard, Courbevoie, France. Brake for motor vehicles. 1,812,551; June 30.

Powell, Elmer J., assignor to The Powell Pressed Steel Company, Hubbard, Ohio. Lift truck platform. 1,812,218; June 30.

Powell, Grahame H., et al. (See Talbot, Frank A., assignor.)

Powell, Jesse R., M. L. Sheely, and R. Smith, assignors to Armour & Company, Chicago, Ill. Cushion filler. 1,812,019; June 30.

Powell Pressed Steel Company, The. (See Powell, Elmer J., assignor.)

Powell, Winfred T., assignor to Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y. Selective program service system. 1,812,169; June 30.

Powell, Winfred T., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y. Remote control magneto telephone system. 1,812,641; June 30.

Pratt, Hartley B., Barrow-in-Furness, assignor to Vickers-Armstrong Limited, Westminster, England. Submarine mine. 1,812,370; June 30.

Pratt, Jabez H., and F. B. Hunt, assignors, by mesne assignments, to The Liquid Carbonic Corporation, Chicago, Ill. Cooler cabinet. 1,811,863; June 30.

Precision Balancing Machine Company. (See McDonough, F. T., and Moyer, assignors.)

Price, Lewis C., Boston, Mass., assignor to The Fulton Sylphon Company, Knoxville, Tenn. Temperature regulator for hollow rotatable elements. 1,812,802; June 30.

Priess, William H., Montclair, N. J., assignor to Wireless Specialty Apparatus Company, Boston, Mass. Electrical condenser and making it. 1,812,664; June 30.

Priest, Harry R., Loudonville, Ohio. Fountain shaving brush and receptacle. 1,811,965; June 30.

Priester, Harry, executor. (See Fallot, Alfred.)

Proctor, John, A. Lexington, and W. M. Bailey, Lynn, assignors to Wireless Specialty Apparatus Company, Boston, Mass. Electrical condenser. 1,812,713; June 30.

Proctor & Schwartz, Incorporated. (See Hurxthal, Alpheus O., assignor.)

Proctor & Schwartz, Incorporated. (See Hurxthal, A. O., and Bogaty, assignors.)

Proper, John, Seminole, Okla. Bull wheel shaft flange. 1,811,966; June 30.

Propp, Louis, New York, N. Y. Decorative device. 1,812,116; June 30.

Prutzman, Paul W. (See Vogel, Willard L., assignor.)

Pryor, Elmer E., Fullerton, Calif. Combination trip socket for fishing tools. 1,812,059; June 30.

Pudelko, Riccard, Zug, Switzerland, assignor to Landis & Gyr, A.-G. Induction meter. 1,812,371; June 30.

Pugh, James W., Breckenridge, Tex., E. Tauch, and T. E. Warren, Cambridge, Mass., assignors to Standard Oil Development Company. Oxidation of hydrocarbons. 1,812,714; June 30.

Quellhorst, Elwin G., Cleveland, Ohio. Electric hammer. 1,812,271; June 30.

Quendt, Bernhard. (See Drüppel, Cläre, assignor.)

Quigg, Murray T. (See Volf, Christian A., jr., assignor.)

Quillin, Otto I., and C. R. Wright, Colorado Springs, Colo. Advertising device. 1,812,715; June 30.

Quinsler, Frank M., Chicago, Ill. Power driven plane. 1,812,755; June 30.

Rabe, Frederick W., assignor to Anheuser-Busch, Inc., St. Louis, Mo. Refrigerating apparatus. 1,812,170; June 30.

Rabezzana, Hector, assignor to A C Spark Plug Company, Flint, Mich. Electrical contact. 1,812,495; June 30.

Rabezzana, Hector, assignor to A C Spark Plug Company, Flint, Mich. Side wire gap wrench for spark plugs. 1,812,496; June 30.

Racine Universal Motor Company. (See Van Bree, Hubert, assignor.)

Radio Corporation of America. (See Ranger, Richard H., assignor.)

Radio Patents Corporation. (See Nyman, Alexander, assignor.)

Raffold Process Corporation. (See Rafton, Harold R., assignor.)

Rafton, Harold R., Lawrence, Mass., assignor to Raffold Process Corporation. Filled pulp and making the same. 1,812,832; June 30.

Ragonese fu Mario Anthony, New London, Conn. Jar wrench. 1,812,705; June 30.

Rail Joint Company, The. (See Meade, John N., assignor.)

Rall, Max, and E. Durst, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Gearing. 1,812,552; June 30.

Ramage, Alexander S., Detroit, Mich., assignor to Coals and Chemicals, Ltd. Obtaining aromatic hydrocarbons. 1,812,372; June 30.

Ranger, Richard H., Newark, N. J., assignor to Radio Corporation of America. Light control system. 1,811,895; June 30.

Ranney, Frederick B., assignor to Ranney Refrigerator Company, Greenville, Mich. Ice rack for refrigerators. 1,812,803; June 30.

Ranney, Leo, Greenwich, Conn., assignor to Standard Development Company. Recovery of oil from the earth by mining operations. 1,812,305; June 30.

Ranney Refrigerator Company. (See Ranney, Frederick B., assignor.)

Ransom, George F., San Angelo, assignor to Humble Oil & Refining Company, Houston, Tex. Recovery of potassium sulphate from polyhalite. 1,812,497; June 30.

Ransome Concrete Machinery Company. (See Faber, John P., assignor.)

Rastetter, Harry O., assignor to The Union Metal Manufacturing Company, Canton, Ohio. Clamp collar. 1,812,117; June 30.

Rawlings Manufacturing Company. (See Bischoff, Walter E., assignor.)

Rayfield, Frederick J., assignor to Champion Pneumatic Machinery Company, Chicago, Ill. Fan structure. 1,812,060; June 30.

Ready, William A., Brookline, Mass. Forming D-handles. 1,812,373; June 30.

Redfield, Casper L. (See Wisner, A. C., and Redfield.)

Redfield, Theodore H., Princeton, N. J. Pipe union. 1,812,553; June 30.

Reed, E. P., & Co. (See Elbing, Walter E., assignor.)

Reed, Lewis I., Berkeley, Calif. Sound reproduction. 1,812,219; June 30.

Reeves, Clifton. (See Goulding, Albanus W., assignor.)

Reilly, John J., Weehawken, N. J., and W. A. Gilmartin, New York, N. Y. Photography. 1,812,448; June 30.

Reilly, Peter C. (See Derby, I. H., and Cunningham, assignor.)

Reynolds, Arthur W. (See Babcock, I. A., and Reynolds.)

Reynolds, Eugene L., Portland, Oreg. Casing for a refrigerating, mixing, and dispensing machine. Des. 84,547; June 30.

Reynolds, Henry T., Lombard, Ill., assignor to American Can Company, New York, N. Y. Container cover. 1,811,967; June 30.

Reynolds, Kenneth J., East Hartford, assignor, by mesne assignments, to The Maxim Silencer Company, Hartford, Conn. Silencer. 1,812,413; June 30.

Rheinische Kampfer-Fabrik G. m. b. H. (See Skraup, S., and Hirschler, assignors.)

Rhenania Verein Chemischer Fabriken Aktien-Gesellschaft. (See Stuer, Bernhard C., assignor.)

Rhodesia Broken Hill Development Company Limited. (See Stevens, R. H., Norris, and Watson, assignors.)

Rice, John L., Dayton, Ohio. Display device. 1,812,171; June 30.

Richard, William E., assignor to Sunbeam Electric Manufacturing Company, Evansville, Ind. Cooling system for internal combustion engines. 1,812,665; June 30.

Richards, Paul P. E. (See Odee, O., and Richards.)

Richter, George A., assignor to Brown Company, Berlin, N. H. Liberating fiber from bagasse or like stalks. 1,811,864; June 30.

Rieck, Wilhelm O. P., Hamburg, Germany. Sealing attachment for machines for applying crown corks to bottles or other containers. 1,812,804; June 30.

Riedel, J. D., Aktiengesellschaft. (See Boedecker, Friedrich, assignor.)

Riesner, Michael, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, New York, N. Y. Variable capacity compressor. 1,812,607; June 30.

Riggs, Greeley R., Austin, Tex. Adjustable bracket for boxes. 1,812,756; June 30.

Riley, James A., Johnson City, Tenn. Reel. 1,812,805; June 30.

Ripberger, Alexander G., Philo, Ohio. Method of and apparatus for charging electric furnaces. 1,812,118; June 30.

Ripper, Kurt, Berlin, Germany. Molding composition. 1,812,374; June 30.

Roads Colloidal, Limited. (See Symons, Harry L., assignor.)

Roberts and Schaefer Company. (See Arms, George L., assignor.)

Roberts & Schaefer Company. (See Arms, Ray W., assignor.)

Roberts, Arthur S., Hendersonville, N. C. Cross-dyeing fabrics. 1,812,554; June 30.

Roberts, Arthur S., Hendersonville, N. C. Cross-dyeing fabrics. 1,812,555; June 30.

Roberts, Arthur S., Hendersonville, N. C. Cross-dyeing fabrics. 1,812,556; June 30.

Roberts, Arthur S., Hendersonville, N. C. Cross-dyeing fabrics. 1,812,557; June 30.

Roberts, Donald E., Milwaukee, Wis. Electro-surgical instrument and control. 1,812,608; June 30.

Robertson, H. H., Company. (See Young, James H., assignor.)

Robertson, James R., London, England. Vacuum tube device. 1,812,558; June 30.

Robertson, William H., assignor to The National Cash Register Company, Dayton, Ohio. Cash register. 1,812,020; June 30.

Rockford Machine Tool Co. (See Leet, Albert B., assignor.)

Rockwood Sprinkler Company of Massachusetts. (See Russell, Robert H., assignor.)

Rodstein, Harry, and I. Nathanson, Brooklyn, N. Y. Grill for a radiator cabinet or similar article. Des. 84,548; June 30.

Rodzikinas, Wallace R., Hatley, Wis. Bushing puller. 1,811,908; June 30.

Roehrl, Carl. (See Goodman, Harry S., assignor.)

Roesen, Oscar C., Brooklyn, assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Folding unit. 1,812,716; June 30.

Rogers, Albert W., Santo Domingo City, Dominican Republic, West Indies. Securing the heads of hammers, picks, axes and similar tools. 1,812,375; June 30.

Rogers, Frederick W., Beaver Dam, Wis. Separable electric connecter. 1,812,609; June 30.

Rogers, George A., New York, N. Y. Mechanism for use in musical instructon. 1,811,865; June 30.

Rogers, Harrison W., New York, N. Y. Synchronized sound and photography. 1,812,449; June 30.

Rogers Products Company. (See Albertine, Herman, assignor.)

Rohn, Wilhelm, Hanau-on-the-Main, Germany. Production of castings free from pipes and blowholes. 1,812,172; June 30.

Rosenfeld, Joseph P., Newark, N. J. Material spray apparatus. 1,811,969; June 30.

Ross, Chester R., Cambridge, Mass. Splashless dishpan, basin and the like. 1,811,986; June 30.

Ross, Donald W., and J. M. Lambie, Washington, Pa. Refractory heat insulating material. 1,812,376; June 30.
Ross, Oscar P. (See Coughlin, J. M., and Ross.)
Royer, William R., Wyoming, Pa. Auxiliary apparatus for tire valves. 1,812,610; June 30.
Rubel, Charles F., Chicago, Ill., and E. E. Gratsch, St. Louis, Mo., assignors to Union Special Machinery Company, Chicago, Ill. Oil collector for sewing machines. 1,812,377; June 30.
Rudolph, Paul, Grossbiesnitz, near Gorlitz, Germany. Lens system. 1,812,717; June 30.
Rumsey, Herbert, jr., Nutley, assignor to Henry Muhs Company, Passaic, N. J. Method of and implement for closing bags. 1,811,866; June 30.
Runquist, Ernest M., Cicero, and T. M. Yancey, Oak Park, Ill. assignors to Western Electric Company, Incorporated, New York, N. Y. Method of and apparatus for forming cables. 1,811,897; June 30.
Ruse, John C., assignor of one-half to A. Mori, Hartville, Ohio. Universal ladder. 1,812,119; June 30.
Rusilas, Walter, Paterson, N. J. Pin and needle stand. Des 84,549; June 30.
Rusling Wood, Inc. (See Gibbs, Harold B., assignor.)
Russ, Arthur J., Oakdale, assignor to Armstrong Cork Company, Pittsburgh, Pa. Insulating material. 1,812,306; June 30.
Russell, Robert H., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass. Thermostat. 1,812,718; June 30.
Russell, William I., Edinburg, Tex. Anticreeper for railroad rails. 1,812,757; June 30.
Rutter, Alvah E., assignor to Dain Manufacturing Company of Iowa, Ottumwa, Iowa. Tucker for hay presses. 1,812,061; June 30.
Ryerson, Eugene H., Worcester, Mass. Kitchen utensil. 1,812,062; June 30.

Sachs, Joseph, West Hartford, Conn. Automatic circuit breaker. 1,811,970; June 30.
Sachs, Joseph, West Hartfordfi Conn. Automatic circuit breaker. 1,812,842; June 30.
Sachs, Joseph, West Hartford, Conn. Automatic circuit breaker. 1,812,843; June 30.
Sachs, Joseph, West Hartford, Conn. Automatic circuit breaker. 1,812,844; June 30.
Sachs, Joseph, West Hartford, Conn. Electroresponsively controlled mechanism. 1,812,845; June 30.
Sachs, Joseph, West Hartford, Conn. Automatic circuit breaker. 1,812,846; June 30.
Sachs, Joseph, West Hartford, Conn. Automatic circuit breaker. 1,812,847; June 30.
Sachs, Joseph, West Hartford, Conn. Automatic circuit breaker. 1,812,848; June 30.
Sackett, A. J., and Sons Company, The. (See Sackett, Augustus J., assignor.)
Sackett, Augustus J., Anne Arundel County, Md., assignor to The A. J. Sackett and Sons Company. Mixer. 1,812,450; June 30.
Sackman, Charles M., assignor, by mesne assignments, to The Paramount Fire Alarm Engineering Company, Cleveland, Ohio. Noninterference signal transmitter. 1,812,173; June 30.
Safe Deposit and Trust Company of Baltimore. (See Stunz, William P., assignor.)
Safe Deposit and Trust Company, of Baltimore, as trustee. (See Stunz, William P., assignor.)
Sampson, Charles R., Cheswold, Del. Railway crossing gate. 1,812,539; June 30.
Sanford Mills (See Mellor, Horace, assignor.)
Sanford, Roy S., assignor to Bendix Brake Company, South Bend, Ind. Brake operating connection. 1,812,021; June 30.
Sanford, Roy S., assignor to Bendix Brake Company, South Bend, Ind. Brake operating mechanism. 1,812,022; June 30.
Sanitarium Equipment Company. (See Goodrich, Norris E., assignor.)
Santurello, Peter, Columbus, Ohio. Container for liquids or an article of similar nature. Des. 84,550; June 30.
Sauer, Ernst, Schloss Kalbitz, Germany, assignor to The Ernst Sauer Process, Inc. Printing form and preparing the same. 1,811,971; June 30.
Sauer, Ernst, Process, Inc. (See Sauer, Ernst, assignor.)
Saynisch, Yole, New York, N. Y. Corset. 1,812,758; June 30.
Scandura, Anthony J., Malden, Mass. Electrically illuminated ornament. 1,812,378; June 30.
Schaefer, William D., assignor to Motors Development Company, Milwaukee, Wis. Gas engine. 1,812,833; June 30.
Schapel, Karl, North Hollywood, Calif. Safety propeller. 1,812,451; June 30.
Scheiber, William J. (See Kienle, R. H., and Scheiber.)
Schering-Kahlbaum A. G. (See Schoeller, Walter, assignor.)
Schering-Kahlbaum A. G. (See Schoeller, W., Jordan, and Clerc, assignors.)
Schlecht, Leo. (See Gaus, W., Mittasch, and Schlecht.)
Schmidt, Charles G. G., assignor to Pinaud Incorporated, New York, N. Y. Machine for gluing cartons. 1,812,666; June 30.
Schmidt, Fritz, Troisdorf, near Cologne, Germany. Production of artificial horn. 1,811,972; June 30.
Schneider, Adolf, Brooklyn, N. Y. Terminal connection for electric circuit wires. 1,812,307; June 30.
Schneider & Cie. (See Methlin, Nicolas E., assignor.)
Schoch, Edwin. (See Egli, E., and Schoch.)
Schoeller, Walter, Berlin-Westend, assignor to Schering-Kahlbaum A. G., Berlin, Germany. Artificial mineral waters and producing same. 1,812,560; June 30.
Schoeller, Walter, Berlin-Charlottenburg, H. Jordan, Berlin-Steglitz, and R. Clerc, assignors to the Firm Schering-Kahlbaum A. G., Berlin, Germany. Producing thymol. 1,812,561; June 30.
Scholle, Eleanor P., assignor to Isabella Barclay, Inc., New York, N. Y. Radiator inclosure. Des. 84,551; June 30.
Schroder, Robert E., assignor to Goodman Manufacturing Company, Chicago, Ill. Drilling mechanism. 1,712,719; June 30.
Schultz, Joseph, Cleveland, Ohio. Dampening device. 1,812,720; June 30.
Schur, Milton O., and E. P. Cook, assignors to Brown Company, Berlin, N. H. Metering apparatus. 1,811,898; June 30.
Schütz, Fritz. (See Jaeck, O., and Schütz.)
Scott, Clarence N., Houston, Tex. Internal combustion engine-operated locomotive. 1,812,834; June 30.
Scott, John E., assignor to Allith-Prouty Company, Danville, Ill. Door construction. 1,812,120; June 30.
Scott, William, Mount Vernon, Ohio. Check rower. 1,811,973; June 30.
Scottish Dyes, Limited. (See Drescher, H. A. E., Smith, and Thomas, assignors.)
Scottish Dyes, Limited. (See Thomas, John, assignor.)
Searing, Frederick D. W., Newark, N. J. Stabilizing device. 1,812,174; June 30.
Searle, Chester F., Cranston, R. I., assignor to Universal Winding Company, Boston, Mass. Clutch. 1,811,974; June 30.
Seavey, Elmer S., Bethlehem, Pa., assignor to Bethlehem Steel Company. Punching and upsetting machine. 1,812,023; June 30.
Seguy, Jean D., assignor to Universal Oil Products Company, Chicago, Ill. Treating hydrocarbon oil. 1,812,308; June 30.
Seiberling Rubber Company. (See Kilborn, Karl B., assignor.)
Selden Research & Engineering Corporation, The. (See Jaeger, Alphons O., assignor.)
Sentry Company, The. (See Winter, Murray, assignor.)
Serragli, Giovanni, Florence, Italy. Self rotating air screw for the aerodynamic brakage of aeroplanes and the like. 1,811,867; June 30.
Sexton, Corydon W., Fayetteville, N. C. Aircraft or other brake. 1,812,806; June 30.
Shaffer, W. D. (See Jensen, Bertel M., assignor.)
Shakespeare Company. (See Shakespeare, William, jr., assignor.)
Shakespeare, William, jr., assignor to Shakespeare Company, Kalamazoo, Mich. Fishing reel. 1,812,220; June 30.
Shaw, Noble C., assignor to The Union Switch & Signal Company, Swissvale, Pa. Electrical relay. 1,812,175; June 30.
Shaw, Robert A., Detroit, Mich. Guard device for wood shapers. 1,812,452; June 30.
Sheehan, William M., St. Louis, Mo., assignor, by mesne assignments, to General Steel Castings Corporation, Granite City, Ill. Railway car underframe. 1,811,975; June 30.
Sheehan, William M., St. Louis, Mo., assignor, by mesne assignments, to General Steel Castings Corporation, Granite City, Ill. Car structure. 1,811,976; June 30.
Sheehan, William M., St. Louis, Mo., assignor, by mesne assignments, to General Steel Castings Corporation, Granite City, Ill. Railway car draft sill. 1,811,977; June 30.
Sheely, Madison L. (See Powell, J. R., Sheely, and Smith.)
Sheer, H. M., Company. (See Kuenhold, Otto J., assignor.)
Sheldon Machinery Corporation. (See Sheldon, Waldo, assignor.)
Sheldon, Waldo, South Norwalk, Conn., assignor to Sheldon Machinery Corporation, New York, N. Y. Well drilling apparatus. 1,812,721; June 30.
Shepard, Ralph H., Bronxville, N. Y. Structural toy locomotive and the like. 1,812,498; June 30.
Shepherd, Charles B., New York, N. Y., assignor to The P & M Company. Rail anchor. 1,812,414; June 30.
Shepherdson, Arnold. (See Baddiley, J., Shepherdson, and Hallwood.)
Sheridan, Leslie M., Coppercliff, Ontario, Canada. Variable speed mechanism. 1,812,176; June 30.
Sherzer, Allen F., Ann Arbor, Mich., assignor to Ingersoll-Rand Company, Jersey City, N. J. Centrifugal pump. 1,812,309; June 30.
Shimwell, Oliver, Manchester, assignor, by mesne assignments, of one-half to Gawsworth Patents Limited, Manchester, and one-half to Platt Brothers & Company Limited, Oldham, England. Shuttleless loom for weaving. 1,812,562; June 30.
Shine, Henry A., Sausalito, Calif. Hold up protector. 1,811,978; June 30.
Shutt, John E., Stuttgart, Ark. Deep well pump. 1,812,667; June 30.

Siegel, Victor N., Paris, France. Base for a display stand or similar article. Des. 84,552; June 30.
Siemens & Halske Aktiengesellschaft. (See Nölke, Ernst, assignor.)
Siemens & Halske Aktiengesellschaft. (See Stich, Johannes, assignor.)
Siemens-Schuckertwerke Aktiengesellschaft. (See Eule, Martin, assignor.)
Siemens Schuckertwerke Aktiengesellschaft. (See Krüger, Albert, assignor.)
Silent, Harold C. (See Mitchell, D., and Silent.)
Silver Springs Bleaching & Dyeing Company, Limited, The. (See Hall, Archibald J., assignor.)
Simone, Frank, New York, N. Y. Ticket dispensing and registering machine. 1,812,642; June 30.
Simonel, George, Bloomington, and W. H. Johnson, Terre Haute, assignors to The Nurre Mirror Plate Company, Bloomington, Ind. Mirror mitering machine. 1,812,415; June 30.
Simplex Paper Corporation. (See Wood, Arthur H., assignor.)
Simplex Wire and Cable Company. (See Crowds, George J., assignor.)
Simpson, Kenneth M., assignor to International Chromium Process Corporation, New York, N. Y. Metallurgical process. 1,812,563; June 30.
Sinclair Refining Company. (See Apgar, Frank A., assignor.)
Sinclair Refining Company. (See Isom, Edward W., assignor.)
Sinclair Refining Company. (See Mendius, William, assignor.)
Singer Manufacturing Company, The. (See O'Neill, Thomas, assignor.)
Sklovsky, Max, assignor to Deere & Company, Moline, Ill. Method of and apparatus for making castings, and handling and conditioning the molding sand therefor. 1,812,121; June 30.
Skraup, Siegfried, Wurzburg, and O. Hirschler, Dusseldorf-Oberkassel, assignors to Rheinische Kampfer-Fabrik G. m. b. H., Dusseldorf-Oberkassel, Rhineland, Germany. Preparing 1,8-cinecol (eucalyptol). 1,811,868; June 30.
Slinde, Per, Kjeller, Norway. Device for releasing shells in aircraft. 1,812,759; June 30.
Sloan, Theodore H., Charlerol, Pa., assignor to Macbeth-Evans Glass Company. Pressing glassware. 1,812,564; June 30.
Sloan, Theodore H., Charlerol, Pa., assignor to Macbeth-Evans Glass Company. Free-pressing glassware having irregular edges. 1,812,565; June 30.
Smalley, Edwin L., Whitefish Bay, assignor to Hevi Duty Electric Company, Milwaukee, Wis. Furnace or heat treatment chamber cooling means. 1,811,979; June 30.
Smith, A. O., Corporation. (See Stresau, Richard, assignor.)
Smith, Anthony R., Elyriak, assignor to Steel and Tubes, Inc., Cleveland, Ohio. Automobile lock. 1,812,453; June 30.
Smith, Arthur J., assignor to Smith Engineering Company, Kansas City, Mo. Pipe coupling. 1,812,835; June 30.
Smith Engineering Company. (See Smith, Arthur J., assignor.)
Smith, Forrest H., Ayden, N. C. Drying house. 1,811,980; June 30.
Smith, Harold W., Utica, N. Y., assignor of one-half to W. A. Ainsworth. Guard for lawn mower wheels. 1,812,499; June 30.
Smith, John A., Chicago, Ill. Awning support and protector. 1,812,416; June 30.
Smith, Mack, Santa Monica, Calif. Glare eliminator. 1,812,177; June 30.
Smith, Robert. (See Powell, J. R., Sheely, and Smith.)
Smith, Theodore L., Concord, assignor to Gillette Safety Razor Company, Boston, Mass. Safety razor. 1,812,500; June 30.
Smith, William. (See Drescher, H. A. E., Smith, and Thomas.)
Smoot Engineering Corporation. (See Mawha, James K., assignor.)
Snadecki, William J., Westover, Va., assignor of one-third to F. L. Pigeon and one-third to R. W. Pigeon, Boston, Mass. Speed boat. 1,811,981; June 30.
Snyler, Clifford L., Detroit, Mich., assignor to Evans Products Company. Decking device. 1,812,807; June 30.
Società Anonima Industria Ammoniaca. (See Lopez, Francesco, assignor.)
Société Marcas & Dardel. (See Dardel, Marie P. L., assignor.)
Society of Chemical Industry in Basle. (See Jaeck, O., and Schütz, assignors.)
Soderberg, Andrew W. (See Oberg, W. C., and Soderberg.)
Solomon, Nat L., Brooklyn, N. Y. Hair net. Des. 84,553; June 30.
Soprani, Mario Castelfidardo, Italy. Sound action for accordians, harmonicas, and like instruments. 1,812,760; June 30.
Soustre, Jean A., Cendrieux, France. Knife adapted for multiple uses and comprising a monkey wrench. 1,811,982; June 30.
Spencer, Frederick W., Chicago, Ill. Drill chuck. 1,812,221; June 30.
Spencer, John A., Newtonville, assignor to Spencer Thermostat Company, Cambridge, Mass. Temperature controlled apparatus. 1,812,722; June 30
Spencer, Owen H., Indianapolis, Ind. Engine manifold construction and arrangement. 1,812,063; June 30.
Spencer, Owen H., Indianapolis, Ind. Engine port construction. 1,812,379; June 30.
Spencer, Owen H., Indianapolis, Ind. Engine control and ventilating means. 1,812,566; June 30.
Spencer Thermostat Company. (See Spencer, John A., assignor.)
Sperry, Samuel E., Hollis, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y. Matrix assembling mechanism for typographical machines. 1,812,808; June 30.
Sprague-Sells Corporation. (See de Back, William, assignor.)
Spring, George B., Newtonville, Mass. Reenforcement for poles. 1,811,899; June 30.
Springmann, Adolf, Schramberg, Germany. Fly catcher. 1,812,178; June 30.
Sproul, Donald F., Chicago, Ill., assignor to Cardwell Westinghouse Company. Bolster support. 1,821,723; June 30.
Spurgeon, Dee C., Los Angeles, Calif. Awning. 1,811,900; June 30.
Stackhouse, George A., Oakland, Calif., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Assembling springs. 1,812,611; June 30.
Stamm, John G., East Cleveland, Ohio. Hydraulic suction device. 1,812,724; June 30.
Standard Development Company. (See Rauney, Leo, assignor.)
Standard Engineering Works. (See Mills, Bertram M., assignor.)
Standard Oil Company of California. (See Gates, Leroy G., assignor.)
Standard Oil Development Company. (See Becker, Arman E., assignor.)
Standard Oil Development Company. (See Goodwin, Ralph T., assignor.)
Standard Oil Development Company. (See Lewis, Warren K., assignor.)
Standard Oil Development Company. (See Loomis, Nathaniel E., assignor.)
Standard Oil Development Company. (See Pugh, J. W., Tauch, and Warren, assignors.)
Standard Oil Development Company. (See Van Eaton, Ralph A., assignor.)
Standard Oil Development Company. (See Zick, William J., assignor.)
Standard Pressed Steel Co. (See Hollowell, H. T., and Bennett, assignors.)
Standard Steel Works. (See Gredell, Otto N., assignor.)
Standard-Trump Bros. Machine Company. (See Houseman, Harold E., assignor.)
Stanley, Carroll M., and F. J. Evans, Hazleton, Pa., assignors, by mesne assignments, to Oliver United Filters Inc., San Francisco, Calif. Attaching filter cloth. 1,812,725; June 30.
Stanley Works, The. (See Howe, Leon S., assignor.)
Steel and Tubes, Inc. (See Leckie, Herbert V., assignor.)
Steel and Tubes, Inc. (See Smith, Anthony R., assignor.)
Steele, Flake F., assignor to Pine Hall Brick & Pipe Co., Winston-Salem, N. C. Brick sander and method. 1,812,809; June 30.
Stein, Walter R., Brainerd, Minn. Nozzle holder. 1,812,064; June 30.
Steinmetz, Charles R., Oklahoma City, and H. F. McKinney, Okmulgee, Okla. 1,812,272; June 30.
Stelzner, Hermann, assignor to Dr. O. H. Dräger, Lubeck, Germany. Gas protective mask for animals, particularly for horses. 1,812,380; June 30.
Stevens, Edward W., Detroit, Mich, assignor to Chicago Pneumatic Tool Company, New York, N. Y. Peening apparatus. 1,812,726; June 30.
Stevens, Royale H., G. C. Norris, and W. N. Watson, Broken Hill, Northern Rodesia, South Africa, assignors to Rodesia Broken Hill Development Company Limited, Broken Hill, Northern Rodesia. Removal of phosphorus from metal bearing solutions. 1,812,761; June 30.
Steventon, Seth E., Mt. Carmel, and D. H. Wiggs, Danville, Ill. Safety door catch. 1,812,762; June 30.
Stewart, Duncan J., assignor to H. D. Colman, Rockford, Ill. Heat regulator. 1,812,668; June 30.
Stewart, John I., Houston, Pa. Pedal whirl. 1,812,810; June 30.
Stewart-Warner Corporation. (See Muzzy, William H., assignor.)
Stewart-Warner Corporation. (See Wheeler, Leonard H., assignor.)
Stich, Johannes, Berlin, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Telephone system. 1,812,222; June 30.
Stockly, Johann J., and R. Bartunek, Teltow, near Berlin, assignors to the Firm Vereinigte Glanzstoff-Fabriken A-G., Elberfeld, Germany. Separation of sodium sulphate from sulphuric acid. 1,812,310; June 30.
Stockton, Jack P., Spring Lake, N. J., assignor to Stromberg-Carlson Telephone Manufacturing Company. Phonograph. 1,812,454; June 30.

Stollberg, Charles, assignor to American Can Company, New York, N. Y. Container closure and opening device. 1,811,983; June 30.

Story, William E., jr., Worcester, Mass., assignor to General Electric Company. Photo-electric device. 1,812,763; June 30.

Story, William E., jr., Worcester, Mass., assignor to General Electric Company. Photo-electric device. 1,812,764; June 30.

Stowell, Byron F., assignor to Van Norman Machine Tool Co., Springfield, Mass. Diaphragm chuck. 1,812,455; June 30.

Strasser, Frederic, New York, N. Y. Solder for aluminum and its alloys. 1,812,567; June 30.

Stratford, Charles W., San Francisco, Calif. Process and apparatus for refining oils. 1,812,612; June 30.

Strauss, Benno, Essen, Germany, assignor, by mesne assignments, to General Electric Company. Sintered hard metal alloy and articles made thereof. 1,812,811; June 30.

Streepy, Milton E., Altoona, Pa. Tire chain. 1,812,568; June 30.

Street, Edward T., assignor to Downingtown Manufacturing Company, Downingtown, Pa. Suction roll. 1,812,812; June 30.

Streine, Frank H., assignor to The Streine Tool and Manufacturing Company, New Bremen, Ohio. Continuous automatic shearing machine. 1,812,122; June 30.

Streine Tool and Manufacturing Company, The. (See Streine, Frank H., assignor.)

Streker, Joseph A., Providence, R. I. Articulator. 1,812,381; June 30.

Stresau, Richard, Wauwatosa, assignor to A. O. Smith Corporation, Milwaukee, Wis. Electrically welding thick metal plates. 1,812,123; June 30.

Strobel, Ferdinand R., Philadelphia, Pa. Pin sorter and dispenser. 1,812,501; June 30.

Stromberg-Carlson Telephone Manufacturing Company, The. (See Powell, Winfred T., assignor.)

Strong, John E. (See Horton, Charles W., assignor.)

Stuart, Homer B., Detroit, Mich. Front wheel drive. 1,812,569; June 30.

Stuer, Bernhard C., Aachen, assignor to the firm Rhenania Verein Chemischer Fabriken Aktien-Gesellschaft, Aachen, Germany. Manufacture of barium hydroxide and strontium hydroxide. 1,812,250; June 30.

Stunz, William P., Lansdowne, Md., assignor to Safe Deposit and Trust Company of Baltimore, as trustee under the will of G. R. Webb. Multiplex transmitter. 1,812,570; June 30.

Stunz, William P., Lansdowne, Md., assignor to Safe Deposit and Trust Company of Baltimore. Telephonic instrument. 1,812,571; June 30.

Sturgis, Carl L., Brockton, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Hinge last. 1,811,901; June 30.

Sullivan Machinery Company. (See Halleck, Frank A., assignor.)

Sullivan Machinery Company. (See Johansen, Harry C., assignor.)

Sulphide Research Corporation Limited, The. (See Freeman, Horace, assignor.)

Sunbeam Electric Manufacturing Company. (See Richard, William E., assignor.)

Super Radiator Corporation. (See Benson, Merrill L., assignor.)

Sutcliffe, Arthur G., assignor to Ilg Electric Ventilating Company, Chicago, Ill. Portable ventilating outfit. 1,812,124; June 30.

Svade, Eric, Portland, Oreg. Hose reel. 1,812,065; June 30.

Svenska Ackumulator Aktiebolaget Jungner. (See Lundborg, Bror H., assignor.)

Svenska Aktiebolaget Bromsregulator. (See Browall, Bert H., assignor.)

Swan, Fred, Wichita, assignor to The Bridgeport Machine Company, Wichita, Kans. Tool dressing form. 1,812,025; June 30.

Swanson, Ernest R., Cranston, R. I., assignor to Universal Winding Company, Boston, Mass. Traverse-mechanism for winding machines. 1,812,382; June 30.

Swanson, Peter, Ely, Minn. Switch stand lock. 1,812,179; June 30.

Swedish American Prospecting Corporation. (See Zuschlag, Theodor, assignor.)

Swindell-Dressler Corporation. (See Dressler, Philip d'H. assignor.)

Symons, Harry L., Wimbledon, London, assignor to Roads Colloidal, Limited, London, England. Apparatus for emulsifying liquids and for other purposes. 1,812,727; June 30.

Tabb, Elizabeth M., Mahwah, N. J. Brassière. 1,812,273; June 30.

Taber, George H., Los Angeles, Calif. Brake release device. 1,812,502; June 30.

Tabulating Machine Company, The. (See Braitmayer, Otto E., assignor.)

Tabulating Machine Company, The. (See Bryce, James W., assignor.)

Tabulating Machine Company, The. (See Maby, Adelbert C., assignor.)

Taft, Patrick M., Holyoke, Mass. Jacket for coverings for steam or other pipes. 1,811,984; June 30.

Taggart, Charles R., San Francisco, Calif. Lathe dog. 1,812,180; June 30.

Talbot, Frank A., assignor of forty-four one-hundredths to H. H. Harris, Greenville, S. C., and eleven one-hundredths to G. H. Powell, Washington, D. C. Adjustable combustion chamber control. 1,812,572; June 30.

Tapp, William C., assignor of one-half to R. N. Hart, Louisville, Ky. Internal combustion engine. 1,812,456; June 30.

Tatlow, John V., Beaver, Wash. Shingle. 1,812,223; June 30.

Tauch, Ernest. (See Pugh, J. W., Tauch, and Warren.)

Tavalin, Samuel, Astoria, N. Y. Brush. 1,812,457; June 30.

Teale, Wilbur, and H. F. McLauthlin, Oakland, Calif., assignors to Hydro-Oil Fire Corporation, Tacoma, Wash. Fluid proportioning device. 1,812,728; June 30.

Teeters, Wilson J., Lyons, Nebr. Rotary gasoline motor. 1,812,729; June 30.

Telefonaktiebolaget L. M. Ericsson. (See Nilson, C. E. J., assignor.)

Telefon Aktiebolaget L. M. Ericsson. (See Nilson, C. E. J., and Lienzén, assignors.)

Terman, Frederick E., Stanford University, Calif. Electric detector and frequency changing system. 1,812,066; June 30.

Texas Company, The. (See Adams, Joseph H., assignor.)

Thomas, Adolph A., New York, N. Y. Automobile bumper. 1,812,417; June 30.

Thomas, Arthur, Thornton Heath, assignor to The Accounting & Tabulating Corporation of Great Britain, Limited, London, England. Ribbon feeding mechanism. 1,812,251; June 30.

Thomas, John. (See Drescher, H. A. E., Smith, and Thomas.)

Thomas, John, assignor to Scottish Dyes, Limited, Carlisle, England. Preparing 2-chlor-anthraquinone. 1,812,274; June 30.

Thompson, Beriah M., Cheyenne, Wyo. Cleaning boilers. 1,812,275; June 30.

Thompson, Early G., assignor of forty-nine one-hundredths to E. M. Blacksher, Brewton, Ala. Roller skate. 1,812,383; June 30.

Thompson, Eugene C., Los Angeles, Calif. Shutter locking device for cameras. 1,812,181; June 30.

Thompson, Eugene C., Los Angeles, Calif. Compensating winding gear for cameras. 1,812,182; June 30.

Thompson, Milton W., Atlanta, Ga. Vehicle wheel. 1,812,573; June 30.

Thompson, Wilma F., New York, N. Y. Toy figure. Des. 84,554; June 30.

Thorn, J. S., Company. (See Doering, Albert L., assignor.)

Thornhill, Charles H., Presho, S. Dak. Bill board for stock car doors. 1,812,813; June 30.

Thurmond, George W., sr., Warrenville, S. C. Wheeled device for laying off land. 1,812,574; June 30.

Timken-Detroit Axle Company, The. (See Alden, Herbert W., assignor.)

Timken-Detroit Axle Company, The. (See Trbojevich, Nikola, assignor.)

Titterington, Morris M., assignor, by mesne assignments, to Pioneer Instrument Company, Incorporated, Brooklyn, N. Y. Inclinometer. 1,812,503; June 30.

Tobin, Kenneth J., and A. Wasberg, assignors to Camel Company, Chicago, Ill. Latching mechanism for hopper doors. 1,811,902; June 30.

Toledo Scale Manufacturing Company. (See Heitz, Frank F., assignor.)

Toncray, Millard H., assignor to Hudson Motor Car Company, Detroit, Mich. Vehicle seat. 1,812,067; June 30.

Trainer, James E., Barberton, Ohio, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Link for chain grate stokers. 1,812,125; June 30.

Trautvetter, George, assignor to E. G. Budd Manufacturing Company, Philadelphia, Pa. Construction and assembly of sheet metal doors. 1,812,024; June 30.

Trbojevich, Nikola, Highland Park, assignor to The Timken-Detroit Axle Company, Detroit, Mich. Generating gears. 1,812,384; June 30.

Treadwell, M. H., Company. (See Astrom, Carl P., assignor.)

Treibmann, Ernst, Leipzig, Germany. Electrode for unipolar high-frequency curative treatment. 1,812,224; June 30.

Tretolite Company. (See De Groote, M., Monson, and Keiser, assignors.)

Troyer, Nelson, Seattle, Wash., assignor to Continental Can Company, Inc., New York, N. Y. Packing for shafts. 1,812,385; June 30.

Trupar Manufacturing Company. (See Lindsay, Lynn G., assignor.)

Turkus, George, London, England, assignor to Babcock & Wilcox Company, New York, N. Y. Air heater. 1,812,458; June 30.

Turner, Alonzo G., McCammon, Idaho. Can perforator. 1,812,386; June 30.

U. G. I. Contracting Company, The. (See Chrisman, Charles S., assignor.)

Uher, Edmond, jr., Budapest, Hungary, assignor to Uhertype Aktiengesellschaft, Glarus, Switzerland. Mechanism for producing linear displacements and in photographical typesetting machines in connection with them. 1,812,276; June 30.

Uhertype Aktiengesellschaft. (See Uher, Edmond, jr., assignor.)

Underwood Elliott Fisher Company. (See Kupetz, Adolph G., assignor.)

Underwood Elliott Fisher Company. (See Nemcovsky, Louis A., assignor.)

Underwood & Underwood, Inc. (See Viken, Antonius J., assignor.)

Underwood, Western, Santa Monica, Calif. Lighting post. Des. 84,555; June 30.

Union Metal Manufacturing Company, The. (See Rastetter, Harry O., assignor.)

Union Special Machine Company. (See Ericsson, Arvid, assignor.)

Union Special Machine Company. (See Rubel, C. F., and Gratsch, assignors.)

Union Switch & Signal Company, The. (See Ackerly, Donald G., assignor.)

Union Switch & Signal Company, The. (See Bone, Herbert L., assignor.)

Union Switch & Signal Company. (See Brooks, C. A., and Pelikan, assignors.)

Union Switch & Signal Company, The. (See Dowling, Philip H., assignor.)

Union Switch & Signal Company, The. (See Kemmerer, Ralph R., assignor.)

Union Switch & Signal Company, The. (See Lazich, Branko, assignor.)

Union Switch & Signal Company, The. (See Mishelevich, Benjamin, assignor.)

Union Switch & Signal Company, The. (See Parrill, Easton E., assignor.)

Union Switch & Signal Company, The. (See Shaw, Noble C., assignor.)

Union Switch & Signal Company, The. (See Vanhorn, James J., assignor.)

Union Switch & Signal Company, The. (See Vantassel, H. C., and Pfiasterer, assignors.)

United Metal Box Co. Inc. (See Hammer, Samuel, assignor.)

United Reproducera Corporation. (See Minton, John P., assignor.)

United Shoe Machinery Corporation. (See Bertrand, Frederic E., assignor.)

United Shoe Machinery Corporation. (See Brogan, Michael F., assignor.)

United Shoe Machinery Corporation. (See Heys, John J., assignor.)

United Shoe Machinery Corporation. (See Lund, Thomas, assignor.)

United Shoe Machinery Corporation. (See Sturgis, Carl L., assignor.)

United Shoe Machinery Corporation. (See White, Melbourne W., assignor.)

United States Radium Corporation. (See Paul, John E., assignor.)

U. S. Slicing Machine Company. (See Folk, Joseph, assignor.)

United Steel & Wire Company. (See Macomber, Lynn W., assignor.)

Universal Draft Gear Attachment Co. (See Camp, Percy B., assignor.)

Universal Gear Shift Corporation. (See Hodgkins, Albert A., assignor.)

Universal Oil Products Company. (See Egloff, G., and Benner, assignors.)

Universal Oil Products Company. (See Oberle, Alfred, assignor.)

Universal Oil Products Company. (See Seguy, Jean D., assignor.)

Universal Rotary Bit Company, The. (See Gildersleeve, A. M., and Dean, assignors.)

Universal Winding Company. (See Searle, Chester F., assignor.)

Universal Winding Company. (See Swanson, Ernest R., assignor.)

"Universelle" Cigarettenmaschinenfabrik J. C. Muller & Co. (See Hohn, Max P. E., assignor.)

Upson Company, The. (See Harney, Francis W., assignor.)

Upton, John H., Dunsmuir, Calif. Cutting implement. 1,812,387; June 30.

V. D. Limited. (See Vigneron, Jean Baptiste J. A., assignor.)

Van Bree, Hubert, assignor to Racine Universal Motor Company, Racine, Wis. Hair clipper. 1,811,903; June 30.

Van Degrift, Thomas C. (See Lee, C. L., and Van Degrift.)

Van Eaton, Ralph A., Corona, N. Y., assignor to Standard Oil Development Company. Internal combustion engine and operating the same. 1,812,841; June 30.

Van Etten, William V., Bellingham, Wash. Dirigible guidelight mounting mechanism for automobiles. 1,812,418; June 30.

Vanhorn, James J., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Remote control apparatus. 1,812,225; June 30.

Van Lammeren, Willem P., Voorschoten, Netherlands. Propeller. 1,812,814; June 30.

Van Norman Machine Tool Co. (See Stowell, Byron F., assignor.)

Vantassel, Harry C., Pittsburgh, and G. R. Pfiasterer, assignors to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for the control of highway crossing signals. 1,812,183; June 30.

Vereinigte Glanzstoff-Fabriken A.-G. (See Stockly, J. J., and Bartunek, assignors.)

Vereinigte Stahlwerke Aktiengesellschaft. (See Klinkenberg, Adolf, assignor.)

Vickers-Armstrong Limited. (See Pratt, Hartley B., assignor.)

Victor, Alexander F., New York, N. Y. Footage indicator for motion-picture cameras. 1,812,068; June 30.

Victor Talking Machine Company. (See La Rue, William D., assignor.)

Vielwerth, Peter. (See von Horvath, E., and Vielwerth.)

Vierling, Karl, Ludwigshafen-on-the-Rhine, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Fermentation of tobacco. 1,812,459; June 30.

Vigneron, Jean Baptiste J. A., La Rochelle, France, assignor to V. D. Limited, London, England. Trawling gear. 1,812,613; June 30.

Viken, Antonius J., Jackson Heights, assignor to Underwood & Underwood, Inc., New York, N. Y. Tripod head particularly adapted for use in connection with a portrait camera. 1,812,614; June 30.

Vogel, Willard L., Los Angeles, Calif., assignor of one-tenth to P. W. Prutzman. Monobrom derivative of fluorescein. 1,812,669; June 30.

Vogt, Curt, Berlin, Germany. Coin counting device. 1,812,815; June 30.

Volf, Christian A., jr., Weehawken, N. J., assignor to M. T. Quigg, New York County, N. Y. Sound resonating and amplifying device. 1,811,985; June 30.

Von Horvath, Edmund, and P. Vielwerth, Munich, Germany. Removing the moldy smell and taste of tainted cereals and the like. 1,811,869; June 30.

Wachtel, Elmer M., assignor to Hamilton Manufacturing Company, Two Rivers, Wis. Operating room cabinet or similar article. Des. 84,556; June 30.

Wagnon, Hamilton D., Palouse, Wash. Manufacturing paper pulp. 1,812,575; June 30.

Wahl, William F., Milwaukee, Wis. Automobile vacuum tank funnel. 1,812,670; June 30.

Wales, George F., Buffalo, N. Y. Spring mounting for presses and the like. 1,811,987; June 30.

Walker, Edward E., assignor to Erie Malleable Iron Company, Erie, Pa. Metal wheel. 1,812,226; June 30.

Walker, Edward E., assignor to Erie Malleable Iron Company, Erie, Pa. Wheel. 1,812,227; June 30.

Walker, Jack E., assignor to Long-Turney Corporation, Los Angeles, Calif. Flush valve. 1,812,388; June 30.

Walker, Paul, Chicago, assignor to Morris Paper Mills, Morris, Ill. Liner and divider for cartons. 1,812,126; June 30.

Wall, Eugene W., assignor to Kali Manufacturing Co., Philadelphia, Pa. Sulphonated substances and preparing the same. 1,812,615; June 30.

Wallace, William S., et al, trustees. (See Degand, Gust.)

Walsh, Frank W., Vancouver, British Columbia, Canada. Brake equalizer. 1,812,184; June 30.

Ward Leonard Electric Company. (See Kouyoumjian, Haroutium K., assignor.)

Warner, Albert C. (See Cadman, A. B., and Warner.)

Warner Electric Brake Corporation. (See Cadman, A. B., and Warner, assignors.)

Warner Electric Brake Corporation. (See Whyte, John, assignor.)

Warner, Eva A. (See Warner, Fred W., assignor.)

Warner, Fred W., Denver, Colo., assignor of one-half to E. A. Warner. Toy call box. 1,812,228; June 30.

Warren, Thomas E. (See Pugh, J. W., Tauch, and Warren.)

Wasberg, Axel. (See Tobin, K. J., and Wasberg.)

Waterbury Tool Company, The. (See Ellis, Arthur L., assignor.)

Watson, William M. (See Stevens, R. H., Norris, and Watson.)

Weaver, Calus E., Schenectady, N. Y., assignor to General Electric Company. Power wrench. 1,812,816; June 30.

Webb, George R. (See Stunz, William P., assignor.)

Weide, Rudolph. (See Duncan, J. K., and Weide.)

Weidmann, Albert, Buffalo, N. Y. Captive cap. 1,811,904; June 30.

Weiner, Jacob, Company. (See Weiner, Jacob, assignor.)

Weiner, Jacob, Newark, N. J., assignor to J. Weiner Company, Inc., New York, N. Y. Mail distributing device. 1,812,419; June 30.

Weiner, Samuel E., assignor to H. H. Newberger, Chicago, Ill. Cap. 1,812,420; June 30.

Weissenborn, Albert B., assignor to Appleton Wire Works, Inc., Appleton, Wis. Treating Fourdrinier wire belts. 1,811,870; June 30.

Welikes, Anthony, Rochester, N. Y. Shock absorber. 1,812,817; June 30.

Wellington Machine Company, The. (See Gannett, Chauncey W., assignor.)

Wellton, Otto G., Trollhattan, Sweden. Device for transmitting motion from a rectilinearly reciprocating member to a rotatable member. 1,812,460; June 30.

Wels, Franz, assignor of one-half to C. Kronig, Schloss Harta, near Hohenelbe, Czechoslovakia. Dirigible sledge or sleigh. 1,812,252; June 30.

Welton, Park E. (See Lockert, W. H., and Welton.)

Wendt, Wesley E., assignor to Delco-Light Company, Dayton, Ohio. Electrical apparatus. 1,812,026; June 30.

Wente, Edward C., New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated. Acoustic device. 1,812,389; June 30.

Wertheimer, Moses. (See Katz, Harry, assignor.)
Wertz, Roy O., assignor to The Ohio Electric Manufacturing Co., Cleveland, Ohio. Conveying magnetic material. 1,812,505; June 30.
West End Thread Company, The. (See Keith, Nathan D., assignor.)
West, William C., assignor to West Process Pavement Co., Inc., Louisville, Ky. Asphaltic material and preparing same. 1,812,730; June 30.
Western Electric Company. (See Baker, John H. E., assignor.)
Western Electric Company. (See Long, Maurice B., assignor.)
Western Electric Company. (See Melhuish, Laurence E., assignor.)
Western Electric Company. (See Runquist, E. M., and Yancey, assignors.)
Western Electric Company. (See Wente, Edward C., assignor.)
Western Union Telegraph Company, The. (See Ferguson, Cyrus C., assignor.)
Westinghouse Electric and Manufacturing Company. (See Jordan, R. H., Hadley, and Dohner, assignors.)
Westinghouse Electric & Manufacturing Company. (See Loewy, Raymond, assignor.)
Westinghouse Lamp Company. (See MacRae, Duncan, assignor.)
Westling, Carl J., Chicago, Ill. Valve. 1,812,069; June 30.
Westman, Francis C., Toronto, Ontario, Canada. Rotary ice scoring machine. 1,812,731; June 30.
West Process Pavement Co. (See West, William C., assignor.)
Wetmore, Minor P., assignor to The American Thermos Bottle Company, Norwich, Conn. Bottle conveyer. 1,812,390; June 30.
Wheary, George H., and B. M. Hamlin, assignors to Wheary Trunk Company, Racine, Wis. Luggage carrier. 1,812,185; June 30.
Wheary Trunk Company. (See Wheary, G. H., and Hamlin, assignors.)
Wheeler, Leonard H., assignor to Stewart-Warner Corporation, Chicago, Ill. Pumping gasoline gauges. 1,812,027; June 30.
White, Melbourne W., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe and shank stiffener therefor. 1,811,912; June 30.
White, Rollin H., Cleveland Heights, Ohio. Tractor. 1,812,543; June 30.
Whitehead & Kales Company. (See Judd, Irving H., assignor.)
Whitehead, Robert H., assignor of one-tenth to C. S. Merrill, Salt Lake City, Utah. Non-leaking fountain pen. 1,812,229; June 30.
Whitehead, Thomas C., Detroit, Mich. Tray compartment for refrigerating cabinets. 1,812,070; June 30.
Whiting & Davis Company. (See Berkley, Richard H., assignor.)
Whittemore, Rex F., Pomona, Calif. Headlight. 1,811,988; June 30.
Whitworth, Stanley, South Bend, assignor to Bendix Brake Company, South Bend, Ind. Brake shoe. 1,812,028; June 30.
Whyte, John, Beloit, Wis., assignor to Warner Electric Brake Corporation, South Beloit, Ill. Brake. 1,812,671; June 30.
Whyte, John, Beloit, Wis., assignor to Warner Electric Brake Corporation, South Beloit, Ill. Brake. 1,812,836; June 30.
Wickware, Walter H., Ottawa, Ontario, Canada, assignor to International Paper Company. Core cap. 1,812,421; June 30.
Wiese, Franz, Berlin-Wilmersdorf, Germany, assignor to the Firm: Gillette Safety Razor Ges. m. b. H., Vienna, Austria. Safety razor. 1,812,422; June 30.
Wiggs, David H. (See Steventon, S. E., and Wiggs.)
Wilkes-Barre Can Company. (See Coughlin, J. M., and Ross, assignors.)
Wilkinson, George D., Oak Park, and E. D. Pellegrin, Des Plaines, Ill., assignors to Cribben & Sexton Company, Chicago, Ill. Range. Des. 84,557; June 30.
Williams, John P., Bayside, assignor to Duplex Electric Company, New York, N. Y. Automatic sound signaling and regulating system for microphones used in electric alarm systems. 1,812,616; June 30.
Willits, Frederick E., Fairport, N. Y. Woven wire fabric machine. 1,812,506; June 30.
Willman, Daniel, Hartford City, Ind. Illuminated license holder. 1,811,989; June 30.
Willys-Overland Company, The. (See Fleming, Charles A., assignor.)
Wilson, Donald P., assignor to L. M. Decker Co., Omaha, Nebr. Washing machine dolly. 1,812,029; June 30.
Wilson-Jones Company. (See Hamilton, Roy E., assignor.)
Winne, Harry A., Schenectady, N. Y., assignor to General Electric Company. Motor control system. 1,812,818; June 30.
Winter, Murray, Wrentham, assignor, by mesne assignments, to The Sentry Company, Taunton, Mass. Heating steel for hardening. 1,812,837; June 30.
Wireless Specialty Apparatus Company. (See Priess, William H., assignor.)
Wireless Specialty Apparatus Company. (See Proctor, J. A., and Bailey, assignors.)
Wirth, Dorsey M., Bucyrus, Ohio. Belt buckle. 1,811,990; June 30.
Wisner, Abram C., Jackson, Mich., and C. L. Redfield, Chicago, Ill. Wheel unit. 1,812,127; June 30.
Wisner, Abram C., Jackson, Mich., and Casper L. Redfield, Chicago, Ill. Wheel unit. 1,812,128; June 30.
Witham, George S., sr., Hudson Falls, N. Y. Paper making machine. 1,812,278; June 30.
Wolf, Benedikt, Newark, assignor to Essex Specialty Co., Inc., Berkeley Heights, N. J. Package for fireworks devices. 1,812,311; June 30.
Wollensak, Arthur C., Milwaukee, Wis. Drive for motor vehicles. 1,812,819; June 30.
Wood, Arthur H., assignor to Simplex Paper Corporation, Adrian, Mich. Basket liner. 1,812,423; June 30.
Wood, Henry R., Sierra Madre, Calif., assignor, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass. Apparatus for producing shingle strips. 1,812,424; June 30.
Wood, Leo E., Cerro Gordo, Iowa. Snowplow. 1,812,186; June 30.
Wood Newspaper Machinery Corporation. (See Roesen, Oscar C., assignor.)
Woodsmall, Harry C. (See James, P. H., and Woodsmall.)
Worthington Pump and Machinery Corporation. (See Grace, John F., assignor.)
Worthington Pump and Machinery Corporation. (See Riesner, Michael, assignor.)
Wosse, Gerd, Chicago, Ill. Eyebrow stencil. 1,812,425; June 30.
Wray, Daniel L., Shorham-by-Sea, and H. G. Chrismas, Cranleigh, England. Apparatus for recording the delivery of measured quantities of liquids. 1,812,576; June 30.
Wright, Claude R. (See Quillin, O. I., and Wright.)
Wright, Richard H. (See Dalton, John T., assignor.)
Yancey, Thornton M. (See Runquist, E. M., and Yancey.)
Yonkese, Joseph G., Brooklyn, N. Y. Apparatus for generating motive fluids. 1,812,277; June 30.
Young, James H., assignor to H. H. Robertson Company, Pittsburgh, Pa. Protected metal article. 1,812,732; June 30.
Young, John M., Brooklyn, assignor to American Can Company, New York, N. Y. Method of and machine for scoring can ends. 1,811,986; June 30.
Young, L. A., Spring & Wire Corporation. (See Stackhouse, George A., assignor.)
Ytterberg, Arle, Hogberget, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Circuit breaking contacts provided with condensers. 1,812,312; June 30.
Zappulla, Joseph, Bay Shore, Long Island, N. Y. Comb. Des. 84,558; June 30.
Zappulla, Joseph, Bay Shore, Long Island, N. Y. Hand mirror. Des. 84,559; June 30.
Zechlau, Walter, Berlin, Germany. Piston for internal combustion engines. 1,812,391; June 30.
Zehnder, John L. (See Fay, A., and Zehnder.)
Zick, William J., Heathcroft, London, England, assignor to Standard Oil Development Company. Detergent composition. 1,812,507; June 30.
Zinsmaster Baking Company. (See Binger, Delmar M., assignor.)
Zorn, Hermann. (See Galle, E., and Zorn.)
Zucker, Milton. (See Moore, C. G., and Zucker.)
Zuschlag, Theodor, assignor to Swedish American Prospecting Corporation, New York, N. Y. Method of and apparatus for locating terrestrial conducting bodies. 1,812,392; June 30.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 30TH DAY OF JUNE, 1931.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). **Includes patents, reissues, and designs.**

Acid manufacture, Citric. F. J. Cahn. 1,812,130; June 30.
Acid (sulphite cellulose waste), Manufacture of valuable products from lignin sulphonic. J. Baddiley, A. Shepherdson, and A. J. Hallwood. 1,812,675; June 30.
Acoustic device. E. C. Wente. 1,812,389; June 30.
Acoustometer. C. A. Andree. 1,812,030; June 30.
Adding and listing machine. G. J. Barrett. 1,812,130; June 30.
Adding machine. G. J. Barrett. 1,811,840; June 30.
Advertising device. W. Nowack and H. Buwert. 1,812,547; June 30.
Advertising device. O. I. Quillin and C. R. Wright. 1,812,715; June 30.
Aerial, Loop. A. G. Harms. 1,812,695; June 30.
Agglomerated products, Manufacturing. M. H. Hue. 1,811,935; June 30.
Air, apparatus for distributing and circulating. G. L. Arms. 1,812,072; June 30.
Air cooled furnace wall. H. H. Baumgartner. 1,812,315; June 30.
Air for air cleaning tables, Distributing and circulating. G. L. Arms. 1,812,073; June 30.
Air heater. G. Turkus. 1,812,458; June 30.
Air in dry separating tables, Apparatus for controlling. R. W. Arms. 1,812,071; June 30.
Aircraft or other brake. C. Sexton. 1,812,806; June 30.
Airplane. T. Dugan. 1,812,143; June 30.
Alarm: *See*—
Kettle alarm.
Alloy and articles made thereof, Sintered hard metal. B. Strauss. 1,812,811; June 30.
Alpha- and beta-anthraquinones, Separation of substituted. H. A. E. Drescher, W. Smith, and J. Thomas. 1,812,260; June 30.
Anchor, Rail. C. B. Shepherd. 1,812,414; June 30.
Animal-racing device. A. Fay and J. L. Zehnder. 1,812,473; June 30.
Annealing. F. G. Carrington. 1,812,320; June 30.
Antiglare or antidazzle device for lamps. I. Geary. 1,812,779; June 30.
Antislip fabric. L. B. Chisholm. 1,811,843; June 30.
Anvil, Fabricated blade. H. G. Allen. 1,812,188; June 30.
Arms, Adjusting means for overhanging. B. P. Graves. 1,812,649; June 30.
Articulator. J. A. Streker. 1,812,381; June 30.
Asphaltic material and preparing same. W. C. West. 1,812,730; June 30.
Atomizer attachment for vacuum cleaners. C. Keller. 1,812,207; June 30.
Attachable washer. R. Leitzke. 1,812,657; June 30.
Autographic register. L. F. Hagemann. 1,812,478; June 30.
Autographic register. F. E. Pfeiffer. 1,812,605; June 30.
Automobile body. D. M. Klausmeyer. 1,812,487; June 30.
Automobile body. J. Ledwinka. 1,812,441; June 30.
Automobile body. A. H. Leamy. Des. 84,529; June 30.
Automobile lock. A. R. Smith. 1,812,453; June 30.
Automotive machine and distant control therefor. K. Davis. 1,812,085; June 30.
Awning. D. C. Spurgeon. 1,811,900; June 30.
Awning, Window. H. W. McCurdy. 1,812,638; June 30.
Axle hanger, Adjustable. C. W. Gannett. 1,812,827; June 30.
Bags, Method of and implement for closing. H. Rumsey, jr. 1,811,866; June 30.
Bail and applying same. W. E. Lusk and W. H. Potter. 1,812,597; June 30.
Bait, Artificial. L. E. Carr. 1,812,235; June 30.
Bait, Artificial trolling. J. Gluck. 1,812,782; June 30.
Balancing machine. F. T. McDonough and A. F. Moyer. 1,812,353; June 30.
Band saw wheel. A. G. Carter. 1,811,916; June 30.
Bar: *See*—
Draw bar. Rail joint bar.
Barium hydroxide and strontium hydroxide, Manufacture of. B. C. Stuer. 1,812,250; June 30.
Base for a display stand or similar article. V. N. Siegel. Des. 84,552; June 30.
Base for lamp or analogous articles. F. Pallone. Des. 84,538; June 30.
Base for motion picture projection machines. A. Dina. 1,811,881; June 30.
Basket liner. A. H. Wood. 1,812,423; June 30.
Bathroom fixture. L. Bloch. Des. 84,508; June 30.
Battery charging system, Automatic. E. F. Geiger. 1,812,628; June 30.
Battery ignition apparatus. W. Dorn. 1,812,517; June 30.
Bearing, Guide. W. H. Cater. 1,812,471; June 30.
Bed. H. G. Kimble. 1,812,298; June 30.
Bed, Folding. H. Blase and K. B. Cowan. 1,812,618; June 30.
Bed, Folding. E. Cocks. 1,812,082; June 30.
Bed, Folding. R. H. Hutchins. 1,811,936; June 30.
Belt for personal wear. E. S. Mix. 1,812,214; June 30.
Belts, Treating Fourdrinier wire. A. B. Weissenborn. 1,811,870; June 30.
Binder for sewing machines. T. O'Neill. 1,812,830; June 30.
Binder, Loose leaf. R. E. Hamilton. 1,812,435; June 30.
Bit: *See*—
Drilling bit.
Block for pavements and coverings. L. Pessione. 1,812,711; June 30.
Blow out preventer. B. M. Jensen. 1,812,297; June 30.
Board: *See*—
Drawing board.
Board for stock car doors, Bull. C. H. Thornhill. 1,812,813; June 30.
Boat, Speed. W. J. Snadecki. 1,811,981; June 30.
Boiler: *See*—
Fire tube boiler.
Boiler. L. Hartung, jr. 1,812,094; June 30.
Boiler. G. H. Irwin. 1,811,938; June 30.
Boilers, Apparatus for continuous blow down for. L. D. Kensig. 1,812,050; June 30.
Boilers, Cleaning. B. M. Thompson. 1,812,275; June 30.
Boilers, Particular construction of tubular. M. Eule. 1,812,472; June 30.
Bolster support. D. F. Sproul. 1,812,723; June 30.
Bolt: *See*—
Key bolt.
Bone, Fast dycing. E. C. Bertolet. 1,812,734; June 30.
Borax, Purifying. W. A. Kuhnert. 1,812,347; June 30.
Bottle conveyer. M. P. Wetmore. 1,812,390; June 30.
Box: *See*—
Toy call box.
Box or similar container. C. C. Boone. Des. 84,509; June 30.
Brace. R. W. Haulbrook and W. J. Cotton. 1,812,529; June 30.
Brace and arch support, Combined ankle. W. J. Hoggson. 1,812,149; June 30.
Bracket: *See*—
Shade and curtain bracket.
Bracket for boxes, Adjustable. G. R. Riggs. 1,812,756; June 30.
Brake: *See*—
Aircraft or other brake. Track brake.
Momentum actuated brake.
Brake. R. A. Goepfrich. 1,812,000; June 30.
Brake. J. Whyte. 1,812,672; June 30.
Brake. J. Whyte. 1,812,836; June 30.
Brake adjusting fixture. J. W. Peterson. 1,812,018; June 30.
Brake apparatus, Nonkicking. L. G. Gates. 1,812,091; June 30.
Brake control, Fluid pressure. E. G. McCauley. 1,812,269; June 30.
Brake control on pedal, Vacuum. G. P. Berry. 1,812,463; June 30.
Brake drums, Making. G. M. Evans. 1,811,999; June 30.
Brake equalizer. F. W. Walsh. 1,812,184; June 30.
Brake for motor vehicles. E. Poulet. 1,812,551; June 30.
Brake lever, Adjustable. W. S. Lee and T. P. Chase. 1,812,492; June 30.
Brake mechanism. N. A. Christensen. 1,812,037; June 30.
Brake mechanism. H. Perrot. 1,812,168; June 30.
Brake operating connection. R. S. Sanford. 1,812,021; June 30.
Brake operating means. G. F. Michael. 1,812,011; June 30.
Brake operating mechanism. R. S. Sanford. 1,812,022; June 30.
Brake release device. G. H. Taber. 1,812,502; June 30.
Brake shoe. S. Whitworth. 1,812,028; June 30.
Brake slack adjuster for railway cars. P. B. Camp. 1,812,256; June 30.
Brakes, Automatic slack adjuster for. B. H. Browall. 1,811,913; June 30.
Brakes on railway cars and the like, Automatic slack adjuster for. B. H. Browall. 1,811,914; June 30.
Braking apparatus, Railway. H. L. Bone. 1,812,191; June 30.
Braking apparatus, Railway. H. L. Bone. 1,812,193; June 30.

Braking apparatus, Vehicle. N. A. Christensen. 1,812,036; June 30.
Braking attachment for vehicle motors. W. H. Hewitt. 1,812,787; June 30.
Brassière. E. M. Tabb. 1,812,273; June 30.
Bread and making same, Pan loaf. D. M. Binger. 1,812,769; June 30.
Bric-a-brac, Article of. F. Carder. Des. 84,515; June 30.
Brick sander and method. F. F. Steele. 1,812,809; June 30.
Brooders, Feeding and drinking attachment for. O. F. Carpenter. 1,812,684; June 30.
Brush. S. Tavalin. 1,812,457; June 30.
Brush and receptacle, Fountain shaving. H. R. Priest. 1,811,965; June 30.
Brush, Denture. S. M. Edison. 1,812,826; June 30.
Buckle, Belt. R. Boyd. 1,812,233; June 30.
Buckle, Belt. D. M. Wirth. 1,811,990; June 30.
Buckle, Shoe. L. M. Bayan. Des. 84,506; June 30.
Buckle, Shoe. C. G. King. Des. 84,523–4; June 30.
Buffer, Manicurist's. N. W. Chapman. 1,812,431; June 30.
Building construction. J. H. Maher. 1,812,055; June 30.
Building structure. L. Brandt. 1,812,195; June 30.
Bulb shaping device. J. F. Donovan and F. J. Malloy. 1,812,776; June 30.
Bumper and truck carrier, Combined. E. V. Barker. 1,812,075; June 30.
Bumper, Automobile. A. A. Thomas. 1,812,417; June 30.
Bundling press. W. Lindemann. 1,812,797; June 30.
Burner: *See*—
Sulphur burner.
Bushing puller. W. R. Rodzikinas. 1,811,968; June 30.
Cabinet. S. Hammer. 1,812,404; June 30.
Cabinet or similar article, Operating room. E. Wachtel. Des. 84,556; June 30.
Cabinet, Cooler. J. H. Pratt and F. B. Hunt. 1,811,863; June 30.
Cable armoring. J. J. Gilbert. 1,812,630; June 30.
Cable clamp. C. W. Kemper and J. T. Kemper. 1,811,942; June 30.
Cables, Method of and apparatus for forming. E. M. Rundquist and T. M. Yancey. 1,811,897; June 30.
Cage or coop. L. W. Macomber. 1,812,598; June 30.
Calculating mechanism for adding and listing machines. G. J. Barrett. 1,812,129; June 30.
Cam mechanism. J. T. Dalton. 1,812,738; June 30.
Can ends, Method of and machine for scoring. J. M. Young. 1,811,986; June 30.
Can labeling machine. C. C. Krone. 1,812,007; June 30.
Cap. S. E. Weiner. 1,812,420; June 30.
Cap, Captive. A. Weidmann. 1,811,904; June 30.
Car draft sill, Railway. W. M. Sheehan. 1,811,977; June 30.
Car retarder apparatus, Railway. F. Frölich. 1,812,691; June 30.
Car structure. W. M. Sheehan. 1,811,976; June 30.
Car Tandem hot metal. C. P. Astrom. 1,812,314; June 30.
Car underframe, Railway. W. M. Sheehan. 1,811,975; June 30.
Carbon black, Manufacture of. G. C. Lewis. 1,811,854; June 30.
Carbon black, Manufacture of. G. C. Lewis. 1,811,889; June 30.
Carbon from substances such as carbonmonoxide and carbonmonoxide containing gases, Preparing active elementary. H. C. J. Aarts. 1,812,230; June 30.
Carbonaceous product. R. T. Goodwin. 1,812,589; June 30.
Carrier: *See*—
Luggage carrier.
Cash register. S. Brand. 1,812,194; June 30.
Cash register. M. M. Goldberg. 1,812,001; June 30.
Cash register. W. H. Robertson. 1,812,020; June 30.
Casing for a refrigerating, mixing, and dispensing machine. E. L. Reynolds. Des. 84,547; June 30.
Casing, Weighing scale. L. D. Chambers. Des. 84,516; June 30.
Casting apparatus. M. C. Hutto. 1,811,937; June 30.
Castings, and handling and conditioning the molding sand therefor, Method of and apparatus for making. M. Sklovsky. 1,812,121; June 30.
Castings free from pipes and blow holes, Production of. W. Rohn. 1,812,172; June 30.
Catalytic apparatus. A. O. Jaeger. 1,812,341; June 30.
Catch for windows and the like, Safety. A. J. Drapeau. 1,812,288; June 30.
Catch, Safety door. S. E. Steventon and D. H. Wiggs. 1,812,762; June 30.
Cellulosic material and making the same. O. Jaeck and F. Schütz. 1,812,790; June 30.
Cereals and the like, Removing the moldy smell and taste of tainted. E. von Horvath and P. Vielwerth. 1,811,869; June 30.
Chain fastening means, Tire. R. Hatfield. 1,812,697; June 30.
Chain, Tire. M. E. Streepy. 1,812,568; June 30.
Chains and apparatus therefor, Making. C. M. Lamb. 1,812,052; June 30.
Chair: *See*—
Railway joint chair.
Chair. D. H. Brown. Des. 84,514; June 30.
Charcoal, Making active. E. Berl. 1,812,316; June 30.
Chart, Variable. G. S. Merrill. 1,812,752; June 30.
Check rower. W. Scott. 1,811,973; June 30.
Christmas tree support stand. J. J. Danner. 1,811,918; June 30.
Chromium compound of azo dystuffs, Complex. H. Krzikalla and F. Bluemmel. 1,812,345; June 30.
Chuck. S. H. Earl. 1,812,144; June 30.
Chuck. R. H. Jellicoe. 1,812,006; June 30.
Chuck. D. C. Page and R. H. Jellicoe. 1,812,017; June 30.
Chuck, Diaphragm. B. F. Stowell. 1,812,455; June 30.
Cigar banding machine. F. X. Malocsay. 1,812,704; June 30.
Cigarettes and the like provided with imprints, Dressing. M. P. E. Hohn. 1,812,294; June 30.
Circuit breaker, Automatic. J. Sachs. 1,811,970; June 30.
Circuit breaker, Automatic. J. Sachs. 1,812,842–4; June 30.
Circuit breaker, Automatic. J. Sachs. 1,812,846; June 30.
Circuit breaker, Automatic. J. Sachs. 1,812,847–8; June 30.
Circuit breaker, Thermostatic. R. H. Maple. 1,812,162; June 30.
Circuit maker or breaker. H. Flach and G. Barthelmie. 1,812,329; June 30.
Circuit maker, Periodic. W. A. Gammack and D. G. Knox. 1,812,090; June 30.
Circuit, Noise suppressing. V. E. Legg. 1,811,947; June 30.
Circuit, Railway track. B. Lazich. 1,812,208; June 30.
Circuits, Railway track. H. L. Bone. 1,812,102; June 30.
Circuits, Railway track. B. Mishelevich. 1,812,164; June 30.
Clamp: *See*—
Cable clamp. Hood clamp.
Clamp collar. H. O. Rastetter. 1,812,117; June 30.
Cleaner attachment, Suction. E. F. Martinet. 1,812,493; June 30.
Clip for securing articles to cloth. T. Kovacs. 1,812,536; June 30.
Cloth, Attaching filter. C. M. Stanley and F. J. Evans. 1,812,725; June 30.
Cloth cutting machine. P. Jenkins. 1,812,406; June 30.
Cloth matching machine. M. E. Popkin. 1,812,368; June 30.
Clutch. S. M. D. Miller. 1,812,163; June 30.
Clutch. C. F. Searle. 1,811,974; June 30.
Coal, apparatus for burning granulated. W. B. Chapman. 1,812,080; June 30.
Coating composition. F. C. Hahn. 1,812,335; June 30.
Coating composition and articles coated therewith. A. M. Collins. 1,812,544; June 30.
Coil winding machine. H. W. Lillibridge. 1,812,849; June 30.
Coin counting device. C. Vogt. 1,812,815; June 30.
Coin selector. F. C. Myer. 1,812,165; June 30.
Comb. J. Zappulla. Des. 84,558; June 30.
Combustion chamber control, Adjustable. F. A. Talbot. 1,812,572; June 30.
Compartments for aeroplanes, Detachable floating. L. Blériot. 1,812,317; June 30.
Composing room machine. E. Cheshire. 1,812,685; June 30.
Compressor control apparatus. F. Neale. 1,812,057; June 30.
Compressor, Variable capacity. M. Riesner. 1,812,607; June 30.
Computing attachment for liquid dispensing devices. J. Beall. 1,812,676; June 30.
Concrete block groin or sea wall. C. T. Leeds and W. K. Barnard. 1,812,300; June 30.
Concrete molding, Method of and apparatus for pressure. W. M. Meacham. 1,811,950; June 30.
Condenser. J. F. Grace. 1,812,591; June 30.
Condenser and making it, Electrical. W. H. Priess. 1,812,664; June 30.
Condenser, Electrical. A. Jayet. 1,812,241; June 30.
Condenser, Electrical. J. A. Proctor and W. M. Bailey. 1,812,713; June 30.
Conducting bodies, Method of and apparatus for locating terrestrial. T. Zuschlag. 1,812,392; June 30.
Contacts provided with condensers, Circuit breaking. A. Ytterberg. 1,812,312; June 30.
Container closing machine. A. J. Chamberlain. 1,812,584; June 30.
Container closure and opening device. C. Stollberg. 1,811,983; June 30.
Container for liquids or article of similar nature. P. Santurello. Des. 84,550; June 30.
Container, Thermic. A. Jost. 1,812,243; June 30.
Control cross talk, Means to. H. A. Affel and A. Carpe. 1,811,905; June 30.
Control cross talk, Means to. A. Carpe. 1,811,915; June 30.
Control device for pumping apparatus. S. J. Merritt. 1,811,952; June 30.
Control system for transmission of signals. O. R. Miller. 1,811,858; June 30.
Conveyer. G. C. Davis. 1,812,287; June 30.
Conveyer duct. G. Bernert. 1,812,678; June 30.

Conveyer for skein or yarn driers. A. O. Hurzthal and H. Bogaty. 1,812,789; June 30.
Cooling means, Furnace or heat treatment chamber. E. L. Smalley. 1,811,979; June 30.
Cooling system for internal combustion engines. W. E. Richard. 1,812,665; June 30.
Cord, Compensating condyle. A. G. Bjorklund. 1,812,031; June 30.
Core cap. W. H. Wickware. 1,812,421; June 30.
Core for metal casting molds. C. L. Lee and T. C. Van Degrift. 1,812,491; June 30.
Corset. Y. Saynisch. 1,812,758; June 30.
Cotter key puller. C. H. Buckle and G. R. McPhail. 1,812,682; June 30.
Counterweight for car dumpers, External. W. E. Erickson. 1,812,040; June 30.
Coupling: *See*—
Pipe coupling. Trailer coupling.
Shaft coupling.
Coupling. E. W. Davis. 1,812,038; June 30.
Cover, Container. H. T. Reynolds. 1,811,967; June 30.
Cover, Removable book. L. G. Kitcat. 1,812,594; June 30.
Cradle. R. M. Hursh. 1,812,699; June 30.
Current limiting reactor, Electric. G. A. Burnham. 1,811,877; June 30.
Currents, Apparatus for reducing crosstalk. E. Peterson. 1,811,963; June 30.
Cushion filler. J. R. Powell, M. L. Sheely, and R. Smith. 1,812,019; June 30.
Cutter: *See*—
Twine cutter.
Cutting and welding machine, Portable. J. L. Anderson. 1,811,835; June 30.
Cutting holes, Method of and machine for. H. Hentschel and H. Greggersen. 1,812,239; June 30.
Cutting implement. J. H. Upton. 1,812,387; June 30.
Cylinder head for internal combustion motors. R. Friedl. 1,812,289; June 30.
Dampening device. J. Schultz. 1,812,720; June 30.
Decking device. C. L. Snyder. 1,812,807; June 30.
Decorative device. L. Propp. 1,812,116; June 30.
Deflector for slicing machines. J. Folk. 1,811,845; June 30.
Dental impression band. W. P. Lace. 1,812,008; June 30.
Dephlegmating apparatus. G. Egloff and H. P. Benner. 1,812,261; June 30.
Derivatives from sulphite cellulose waste, Manufacture of new. A. J. Hallwood. 1,812,693; June 30.
Desk. J. R. McCargar. Des. 84,532; June 30.
Desk, Portable. H. T. Hallowell and F. Bennett. 1,812,694; June 30.
Detector and frequency changing system, Electric. F. E. Terman. 1,812,066; June 30.
Detergent composition. W. J. Zick. 1,812,507; June 30.
D-handles, Forming. W. A. Ready. 1,812,373; June 30.
Die press. O. J. Groehn. 1,812,046; June 30.
Dirigible and airplane, Trihydro. V. E. Edwards. 1,812,627; June 30.
Dirigible sledge or sleigh. F. Wels. 1,812,252; June 30.
Dishpan, basin, and the like, Splashless. C. R. Ross. 1,811,896; June 30.
Disintegrating and conveying mechanism, Material. G. Degand. 1,812,324; June 30.
Dispenser. H. E. Crosby. Des. 84,517; June 30.
Display device. W. C. Bower. 1,812,318; June 30.
Display device. J. L. Rice. 1,812,171; June 30.
Disturbing elements, Apparatus for reducing. C. R. Keith. 1,811,941; June 30.
Divided materials, Process and mechanism for separating intermixed. R. Fenis. 1,812,365; June 30.
Door construction. J. E. Scott. 1,182,120; June 30.
Door counterbalancing device, Press box. J. Behle and H. Linnartz. 1,812,281; June 30.
Door, Hopper car. E. H. Holmes. 1,811,848; June 30.
Doorlock, Dump car. A. Germek. 1,812,780; June 30.
Doors, Construction and assembly of sheet metal. G. Trautvetter. 1,812,024; June 30.
Doors, Method and apparatus for clinching. C. L. Eksergian. 1,812,395; June 30.
Draft rigging, Railway. H. J. Lounsbury. 1,812,101; June 30.
Drain fitting, House. S. Cavalieri. 1,812,583; June 30.
Drainer and siruper, Combined. W. de Back. 1,811,908; June 30.
Drawbar. D. F. Ainslie. 1,812,733; June 30.
Drawing board attachment. R. S. Glenn. 1,812,744; June 30.
Drawing board attachment. C. A. Green. 1,812,477; June 30.
Drawing board, Panoramic. W. J. Helmer. 1,812,264; June 30.
Dressing stand, Child's. H. D. Nusbaum. Des. 84,535; June 30.
Drill chuck. F. W. Spencer. 1,812,221; June 30.
Drilling apparatus. H. C. Johansen. 1,811,939; June 30.
Drilling bit. G. B. Louderback. 1,812,210; June 30.
Drilling device. A. M. Gildersleeve and C. L. Dean. 1,812,475; June 30.
Drilling machines and the like, Feed mechanism for. W. P. Hunt. 1,812,533; June 30.
Drilling mechanism. R. E. Schroder. 1,812,719; June 30.
Drive assembly for kitchen appliances, Duplex motor. R. K. Gullberg. 1,812,651; June 30.
Drive for automobiles, Front wheel. G. F. Nus. 1,812,801; June 30.
Drive for motor vehicles. A. C. Wollensak. 1,812,819; June 30.
Drive, Front wheel. H. B. Stuart. 1,812,569; June 30.
Drive mechanism, Speedometer. J. Berge. 1,812,510; June 30.
Drive, Silent chain. H. E. Hayward. 1,812,095; June 30.
Driving mechanism. A. L. Ellis. 1,812,587; June 30.
Drum, Self cleaning mixing. J. Eggert. 1,812,823; June 30.
Drying house. F. H. Smith. 1,811,980; June 30.
Educational device. J. Meyerhoff. 1,812,110; June 30.
Egg case filler machine. E. J. Kanabay. 1,812,486; June 30.
Elastic material. E. S. Axline. 1,812,279; June 30.
Electric connector, Separable. F. W. Rogers. 1,812,609; June 30.
Electric controlling apparatus. H. K. Kouyoumjian. 1,812,299; June 30.
Electric machine, Dynamo. A. Kayser. 1,812,748; June 30.
Electric switch. J. D. Hilliard. 1,812,746; June 30.
Electric switch. G. Léopold. 1,812,157; June 30.
Electric switch. G. J. Meuer. 1,812,410; June 30.
Electrical apparatus. W. E. Wendt. 1,812,026; June 30.
Electrical connecting device. D. W. Johnson and A. H. Nero. 1,812,343; June 30.
Electrical contact. H. Rabezzana. 1,812,495; June 30.
Electrical translating apparatus. P. H. Dowling. 1,812,202; June 30.
Electrically heated apparatus for drying coffee and the like. C. Nielloud. 1,812,016; June 30.
Electrode for unipolar high-frequency curative treatment. E. Treibmann. 1,812,224; June 30.
Electron emitting device and method of making. D. MacRae. 1,812,103; June 30.
Electron tube. A. Krüger. 1,812,489; June 30.
Electrooptical transmission system. F. Gray. 1,812,402; June 30.
Electrooptical transmission system. H. E. Ives. 1,812,405; June 30.
Electroresponsive devices, Control of. R. Paxton. 1,812,754; June 30.
Electroresponsively controlled mechanism. J. Sachs. 1,812,845; June 30.
Electro-surgical instrument and control. D. E. Roberts. 1,812,608; June 30.
Elevator lubricator. E. R. McKinzie. 1,812,540; June 30.
Emulsion. F. W. Atack. 1,812,074; June 30.
Engine: *See*—
Gas engine. Internal-combustion engine.
Engine and operating the same, Internal combustion. R. A. Van Eaton. 1,812,841; June 30.
Engine control and ventilating means. O. H. Spencer. 1,812,566; June 30.
Engine head, Internal combustion. G. H. Freers. 1,812,474; June 30.
Engine manifold construction and arrangement. O. H. Spencer. 1,812,063; June 30.
Engine port construction. O. H. Spencer. 1,812,379; June 30.
Engine stand. J. G. Collins. 1,812,585; June 30.
Engines, Carbureting and lubricating device for internal combustion. C. T. Huddle. 1,812,436; June 30.
Engines, Fuel feeding system for internal combustion. W. H. Muzzy. 1,812,013; June 30.
Engines, Ignition mechanism for internal combustion. O. Odee and P. P. E. Richards. 1,812,700; June 30.
Engines, Isothermal fuel inlet means for internal combustion. F. A. Bullington. 1,812,197; June 30.
Excavator. A. Orloff. 1,812,662; June 30.
Fabric: *See*—
Antislip fabric.
Fabric and making the same, Pile. H. Mellor. 1,812,602; June 30.
Fabric and making the same, Pile. W. S. Nutter. 1,812,640; June 30.
Fabric cutting machines. C. B. Bergson. 1,812,645; June 30.
Fabric, Knitting plated. H. E. Houseman. 1,811,849; June 30.
Fabrics, Cross-dyeing. A. S. Roberts. 1,812,554–7; June 30.
Fan. A. Leimbach. 1,812,596; June 30.
Fan, Motor driven. R. H. Jordan, D. L. Hadley, and D. R. Dohner. Des. 84,521; June 30.
Fan structure. F. J. Rayfield. 1,812,060; June 30.
Fastener. J. V. Berry. 1,811,993; June 30.
Fastener, Hair. E. Bossart. 1,811,842; June 30.
Fastener, Rail. M. Crym. 1,812,140; June 30.
Fastening feeding system. T. Lund. 1,811,891; June 30.
Feeder, Poultry. J. C. Palmer. 1,812,166; June 30.
Felt, Paper maker's drier. T. Hindle. 1,812,148; June 30.
Fertilizer distributor. B. Drew. 1,812,739; June 30.
Fiber from bagasse or like stalks, Liberating. G. A. Richter. 1,811,864; June 30.
Fibrous material, Coated. R. E. Garrett. 1,811,925; June 30.
Field pointing machine. H. Parker. 1,811,894; June 30.
Field threading and squaring machine. H. Parker. 1,811,893; June 30.
Figures on textile material by mercerization, Producing fancy. E. Gminder. 1,811,846; June 30.

Filaments, Stretch-spinning artificial. C. Herrmann. 1,812,592; June 30.
Film spool, Photographic roll. P. Goldacker. 1,811,926; June 30.
Filter, Continuous. A. L. Genter. 1,812,042; June 30.
Filter discharging mechanism. W. Gardella. 1,812,648; June 30.
Filter, Fluid. B. H. Lundborg. Re18,114; June 30.
Filter press, Tapered tube. H. H. Cannon. 1,812,773; June 30.
Filtering device. J. H. Butler. 1,812,736; June 30.
Finish remover. J. G. Davidson. 1,812,321–2; June 30.
Firearms, Device for loading. L. Orlando. 1,812,363; June 30.
Fire tube boiler, Vertical. C. S. Chrisman. 1,812,513; June 30.
Firework devices, Package for. B. Wolf. 1,812,311; June 30.
Fishhook and weed guard, Combined. J. E. Pflueger. Re18,117; June 30.
Fishing apparatus. A. H. Harrington. 1,812,632; June 30.
Fishing reel. W. Shakespeare, jr. 1,812,220; June 30.
Fittings to stranded structures, Applying. G. C. Burd. 1,812,646; June 30.
Flanged shapes, Making. W. C. Oberg. 1,812,246; June 30.
Flasher, Neon lamp. J. Hotchner. 1,812,340; June 30.
Flotation, Process of. I. H. Derby and O. D. Cunningham. 1,812,839; June 30.
Fluid, Apparatus for heating or vaporizing. M. M. Clayton. 1,812,198; June 30.
Fluid proportioning device. W. Teale and H. F. McLauthlin. 1,812,728; June 30.
Fluids, Apparatus for generating motive. J. G. Yonkese. 1,812,277; June 30.
Fly catcher. A. Springmann. 1,812,178; June 30.
Foldable table. N. N. Brown. 1,812,196; June 30.
Folding machine. J. W. Anthony. 1,811,871; June 30.
Folding unit. O. C. Roesen. 1,812,716; June 30.
Foot, Artificial. E. R. Leaf. 1,812,156; June 30.
Form, Tool dressing. F. Swan. 1,812,025; June 30.

Induction meter. H. Fröhlich. 1,812,331; June 30.
Induction meter. H. Fröhlich and T. Hausch. 1,812,332; June 30.
Induction meter. R. Pudelko. 1,812,371; June 30.
Ink ribbon winding and measuring mechanism. A. L. Foster. 1,812,588; June 30.
Insect trap. R. J. Carballo. 1,812,512; June 30.
Insulating material. A. J. Russ. 1,812,306; June 30.
Insulator. G. Jansson. 1,811,887; June 30.
Internal combustion engine D. A. Davison and G. E. Davison. 1,812,323; June 30.
Internal combustion engine. W. C. Tapp. 1,812,456; June 30.
Iodine in the form of rods, pencils, or the like, Preparing compressed. F. Hammer. 1,812,238; June 30.
Iron rest. F. R. Plaxco and I. L. Foster. 1,812,270; June 30.
Ironing machine A. Hammer. 1,812,263; June 30.
Jack: *See*—
Lifting jack.
Jacket for coverings for steam or other pipes. P. M. Taft. 1,811,984; June 30.
Jar. F. S. Maddaford. Des. 84,531; June 30.
Jar closure. A. M. Algeo. 1,812,873; June 30
Jar wrench. A. Ragonese fu Mario. 1,812,705; June 30.
Joist and floor construction, Arch. H. F. Frease. 1,812,690; June 30.
Kettle alarm. G. Landman. 1,811,853; June 30.
Keyboard for pianos, Auxiliary. A. Frascani. 1,812,524; June 30.
Key bolt. J. P. Northey and R. V. Northey. 1,812,216; June 30.
Key bushing for rock-bit reamer pins. W. Brauer. 1,812,681; June 30.
Key can opener. H. Mock. 1,812,111; June 30.
Key cutting machine. M. Falk. 1,811,922; June 30.
Kiln, Lime. A. Ackerman. 1,812,672; June 30.
Kite. O. Nye. Des. 84,536; June 30.
Knife adapted for multiple uses and comprising a monkey wrench. J. A. Soustre. 1,811,982; June 30.
Knitting machines, Attachment for. C. F. Johnson. 1,812,700; June 30.
Lacquer, Cellulose ester. H. Finkelstein. 1,812,145; June 30.
Ladder, Universal. J. C. Ruse. 1,812,119; June 30.
Lambrequin. M. R. Oberting. Des. 84,537; June 30.
Lamp. N. T. Gordon. 1,812,745; June 30.
Lamp, Arc. H. J. Brunk. 1,812,469; June 30.
Lamp, Electric table. F. S. Parmenter. Des. 84,539; June 30.
Lamp, Therapeutic. N. E. Goodrich. 1,811,883; June 30.
Last, Hinge. C. L. Sturgis. 1,811,901; June 30.
Latch construction. J. E. Gloekler. 1,812,334; June 30.
Latch, Door. C. M. Norton. 1,812,411; June 30.
Latching, Mechanism for hopper doors. K. J. Tobin and A. Wasberg. 1,811,902; June 30.
Lathe dog. C. R. Taggart. 1,812,180; June 30.
Laundry equipment, Domestic. T. W. Chadburn. 1,812,430; June 30.
Leather, Process and apparatus for tanning. R. Chavand. 1,812,257; June 30.
Lens system. P. Rudolph. 1,812,717; June 30.
Letter folding machine. R. N. Pierson and C. H. Carlson. 1,811,964; June 30.
Level indicator. A. R. Le Bailly. 1,811,946; June 30.
Leveling rod, Self computing. C. H. Mills. 1,811,859; June 30.
Life preserver, Valve controlled. O. Hellrich. 1,811,847; June 30.
Lifting jack. H. Albertine. 1,812,577; June 30.
Light control system. R. H. Ranger. 1,811,895; June 30.
Light controlling system, Automobile. G. Z. Michaels. 1,812,355; June 30.
Light mounting mechanism for automobiles, Dirigible guide. W. V. Van Etten. 1,812,418; June 30.
Lighter. G. Kollstede. Des. 84,526; June 30.
Lighting post. W. Underwood. Des. 84,555; June 30.
Linear displacements and in photographical typesetting machines in connection with them, Mechanism for producing. E. Uber, jr. 1,812,276; June 30.
Liner and divider for cartons. P. Walker. 1,812,126; June 30.
Link for chain grate stockers. J. E. Trainer. 1,812,125; June 30.
Liquid, plastic, granular, and other similar substances, Device for measuring and depositing measured quantities of. J. Morton. 1,811,957; June 30.
Liquids and for other purposes, Apparatus for emulsifying. H. L. Symons. 1,812,727; June 30.
Liquids, Apparatus for recording the delivery of measured quantities of. D. L. Wray and H. G. Christmas. 1,812,576; June 30.
Liquids, Apparatus for the sterilization of. W. Matzka. 1,812,105; June 30.
Loading machine. F. A. Halleck. 1,811,927; June 30.
Lock: *See*—
Automobile lock. Nut lock.
Door lock. Switch stand lock.
Gear shift lock. Tire carrier lock.
Lock for bottle refrigerators. C. A. Frick. 1,812,826; June 30.
Lock for tilting bodies, Automobile. C. G. Clement. 1,811,995; June 30.
Lock washer untangling device. A. O. Brooke. 1,812,468; June 30.
Locking device, Bearing. J. B. Hawley, jr. 1,812,784; June 30.
Locking device for cameras, Shutter. E. C. Thompson. 1,812,181; June 30.
Locomotive frame. J. G. Blunt. 1,812,582; June 30.
Locomotive, Internal combustion engine-operated. C. N. Scott. 1,812,834; June 30.
Loom for weaving, Shuttleless. O. Shimwell. 1,812,562; June 30.
Loom reed motion and mechanism. H. Haywood. 1,812,481; June 30.
Looms for weaving, Driving and controlling mechanism of. J. H. and T. Hindle. 1,812,206; June 30.
Looms, Shuttle-guard for. E. Egli and E. Schoch. 1,812,236; June 30.
Loop for buttons or the like, Fastening. G. H. Francisco. 1,812,330; June 30.
Loose material, Apparatus for hoisting and distributing. J. P. Faber. 1,812,328; June 30.
Loud speaker. J. P. Minton. 1,812,213; June 30.
Lubricant. A. E. Becker. 1,812,766; June 30.
Lubricating apparatus. W. Z. Linders. 1,812,798; June 30.
Lubricating system. H. J. Murphy. 1,811,958; June 30.
Lubricating system for sleeve valve engines. C. A. Fleming. 1,812,825; June 30.
Lubrication system, Pressure. E. W. Davis. 1,812,084; June 30.
Lubricator: *See*—
Elevator lubricator.
Luggage carrier. G. H. Wheary and B. M. Hamlin. 1,812,185; June 30.
Luminous device. J. E. Paul. 1,812,058; June 30.
Machine and method for assembling springs. G. A. Stackhouse. 1,812,611; June 30.
Machine for cutting designs in glass. P. H. James and H. C. Woodsmall. 1,812,485; June 30.
Machine for gluing cartons. C. G. G. Schmidt. 1,812,666; June 30.
Machine for handling fibrous material. A. H. Olson. 1,812,412; June 30.
Machine for perforating rim lugs. W. N. Booth. 1,812,133; June 30.
Machine for planing the surfaces of pavements. C. R. Blood and H. J. Humbert. 1,812,771; June 30.
Machine for riveting spokes of vehicle wire wheels. W. N. Booth. 1,812,032; June 30.
Machine for the manufacture of hollow articles. J. J. Jensen. 1,812,242; June 30.
Magnet core. W. Ehlers. 1,812,740; June 30.
Magnetic material, Conveying. R. O. Wertz. 1,812,505; June 30.
Mail distributing device. J. Weiner. 1,812,419; June 30.
Manifold, Exhaust. G. M. Bellanca. Re18,115; June 30.
Manometer gauge. M. O. Jensen. 1,812,152; June 30.
Mask for animals, particularly horses, Gas protective. H. Stelzner. 1,812,380; June 30.
Match book. A. C. Potter. Des. 84,546; June 30.

Material spray apparatus. J. P. Rosenfeld. 1,811,969; June 30.
Matrix assembling mechanism for typographical machines. S. E. Sperry. 1,812,808; June 30.
Mesh attaching machine. R. H. Berkley. 1,812,078; June 30.
Metal, Apparatus for shaping sheet. O. J. Groehn and L. S. Lamb. 1,812,045; June 30.
Metal article, Protected. J. H. Young. 1,812,732; June 30.
Metal carbonyls, Production of. W. Gaus, A. Mittasch, and L. Schlecht. 1,812,399; June 30.
Metal, Method and apparatus for preventing adherence of molten. H. V. Leckie. 1,812,409; June 30.
Metal plates, Electrically welding thick. R. Stresau. 1,812,123; June 30.
Metal rods, Production of drawn. J. T. Moltrup. 1,812,359; June 30.
Metal sulphides and making sulphur dioxide, Process of and apparatus for oxidising. H. Freeman. 1,812,397; June 30.
Metal wheel. E. E. Walker. 1,812,226; June 30.
Metal working machine, Sheet. P. R. Hahnemann. 1,812,479; June 30.
Metallic articles, Treating. O. A. Bassett. 1,811,909; June 30.
Metallurgical process. K. M. Simpson. 1,812,563; June 30.
Meter: *See*—
Gas meter. Induction meter.
Metering apparatus. M. O. Schur and E. P. Cook. 1,811,898; June 30.
Microphone, Cheek. E. Nolke. 1,812,114; June 30.
Milking apparatus. L. Dinesen. 1,812,086; June 30.
Mill: *See*—
Rubber mill.
Mill plant and operating same, Rolling. W. C. Oberg and A. W. Soderberg. 1,812,247; June 30.
Milling and drilling machine. G. Meiling. 1,812,601; June 30.
Mineral waters and producing same, Artificial. W. Schoeller. 1,812,560; June 30.
Mirror and framing the same. S. Hammer. 1,812,403; June 30.
Mirror, Hand. J. Zappulla. Des. 84,559; June 30.
Mirror mitering machine. G. Simonel and W. H. Johnson. 1,812,415; June 30.
Mixer. A. J. Sackett. 1,812,450; June 30.
Mixer and feed, Fuel. W. A. Danielson. 1,812,775; June 30.
Mixing and blending system. J. H. Morrow. 1,812,604; June 30.
Mixing machine, Rotary. C. Forville. 1,812,146; June 30.
Mold for inner tubes and the like, Vulcanizing. P. De Mattia. 1,812,821; June 30.
Molding composition. K. Ripper. 1,812,374; June 30.
Momentum actuated brake. A. B. Cadman and A. C. Warner. 1,812,683; June 30.
Monobrom derivative of fluorescein. W. L. Vogel. 1,812,669; June 30.
Mooring apparatus, Mobile. J. A. Garcia. 1,812,237; June 30.
Mother of pearl, Manufacture of colored imitation. A. F. Caprio. 1,812,283–4; June 30.
Motion from a rectilinearly reciprocating member to a rotatable member, Device for transmitting. O. G. Wellton. 1,812,460; June 30.
Motion, Securing eccentric. W. Messinger. 1,812,109; June 30.
Motor: *See*—
Gasolene motor.
Motor control system. H. A. Winne. 1,812,818; June 30.
Mounting, Lamp socket. C. E. Godley. 1,812,476; June 30.
Mounting, Truck tank. O. N. Gredell. 1,812,093; June 30.
Mower accessory, Lawn. S. E. Pierce. 1,811,862; June 30.
Mower, Lawn. C. R. Steinmetz and H. F. McKinney. 1,812,272; June 30.
Musical instruction, Mechanism for use in. G. A. Rogers. 1,811,865; June 30.
Nail polisher. M. Cade. 1,812,772; June 30.
Nozzle. J. T. Lally. 1,812,794; June 30.
Nut, Curve threaded. E. Helin. 1,812,785; June 30.
Nut lock. T. R. Brumfield. 1,812,319; June 30.
Nuts and means therefor, Manufacturing curve threaded. E. Helin. 1,812,205; June 30.
Nuts, Producing curved thread. E. Helin. 1,812,147; June 30.
Oil and gas wells under reduced pressure, Operating. W. K. Lewis. 1,812,267; June 30.
Oil and making it, Synthetic drying. A. M. Collins. 1,812,849; June 30.
Oil from the earth by mining operations, Recovery of. L. Ranney. 1,812,305; June 30.
Oil, Treating hydrocarbon. J. D. Seguy. 1,812,308; June 30.
Oils, Process and apparatus for refining. C. W. Stratford. 1,812,612; June 30.
1,8-cineol (eucalyptol), Preparing. S. Skraup and O. Hirschler. 1,811,868; June 30.
Operators of sound locating devices, Training. H. B. Ely. 1,811,997; June 30.
Optical system. M. Astafiev. 1,812,765; June 30.
Ore flotation process. I. H. Derby and O. D. Cunningham. Re18,116; June 30.
Ornament, Shoe. L. M. Bayan. Des. 84,507; June 30.
Ornaments, Electrically illuminated. A. J. Scandura. 1,812,378; June 30.
Ornamental material, Insert for same and making same. W. B. Bragger and V. F. Nekarda. 1,812,134; June 30.
Outlet fitting, Terminal. R. Eckstein. 1,812,396; June 30.
Oven, Traveling. J. H. N. Pelkman. 1,811,962; June 30.
Packing device, Oil well. B. S. Minor. 1,812,358; June 30.
Packing for shafts. N. Troyer. 1,812,385; June 30.
Panel unit, Transparent. G. Leibe. 1,812,796; June 30.
Paper making machine. G. S. Witham, sr. 1,812,278; June 30.
Paper pulp, Manufacturing. H. D. Wagnon. 1,812,575; June 30.
Paper sorting machine. P. F. Denner and J. C. Estes. 1,812,201; June 30.
Paradichlorobenzene to fruit trees, Application of. M. Y. Kachline. 1,812,535; June 30.
Pantograph, Parallelogram-type. P. Käppler. 1,811,940; June 30.
Partition for railway cars. C. E. Johnson. 1,811,888; June 30.
Pedal whirl. J. I. Stewart. 1,812,810; June 30.
Peening apparatus. E. W. Stevens. 1,812,726; June 30.
Pen, Fountain. B. R. Bell. 1,811,992; June 30.
Pen, Fountain. E. C. Berry. 1,811,874; June 30.
Pen, Non-leaking fountain. R. H. Whitehead. 1,812,229; June 30.
Perforator, Can. A. G. Turner. 1,812,386; June 30.
Petroleum emulsions, Breaking. M. De Groote, L. T. Monson, and E. H. Keiser. 1,812,393; June 30.
Petroleum oil, Process and apparatus for heating. A. Oberle. 1,812,217; June 30.
Petroleum to prevent corrosion, Treatment of crude. C. D. Gifford. 1,812,629; June 30.
Pharmaceutical product. R. Gruter. 1,812,528; June 30.
Phonograph. J. P. Stockton. 1,812,454; June 30.
Phonograph disk. A. A. Penteado. 1,812,550; June 30.
Phonograph record. C. J. Mensman. 1,812,751; June 30.
Phosphorus from metal bearing solutions, Removal of. R. H. Stevens, G. C. Norris, and W. N. Watson. 1,812,761; June 30.
Photo-electric device. W. E. Story, jr. 1,812,763–4; June 30.
Photography. J. J. Reilly and W. A. Gilmartin. 1,812,448; June 30.
Piano attachment. N. Mednikoff. 1,812,706; June 30.
Picture hanger. R. C. Boswell. 1,812,254; June 30.
Picture projection machines, Adjusting apparatus for motion. A. Dina. 1,811,880; June 30.
Picture projector, Motion. W. H. Meyer. 1,812,212; June 30.
Pin and making same, Tubular. W. J. Gagnon. 1,812,743; June 30.
Pin and needle stand. W. Rusilas. Des. 84,549; June 30.
Pin sorter and dispenser. F. R. Strobel. 1,812,501; June 30.
Pipe cleaning device. P. Dahlen. 1,812,200; June 30.
Pipe coupler, Train. E. O. Hermann. 1,812,047; June 30.
Pipe coupling. A. J. Smith. 1,812,835; June 30.
Pipe fittings, Process of and apparatus for manufacturing metal. F. C. Fantz. 1,812,522; June 30.
Pipe fittings with tangential ends, Manufacturing metal. F. C. Fantz. 1,812,523; June 30.
Pipe racking device. H. N. Marsh. 1,812,351; June 30.
Pipe union. T. H. Redfield. 1,812,553; June 30.
Piston. S. D. Hartog. 1,812,696; June 30.
Piston for internal combustion engines. W. Zechlau. 1,812,391; June 30.
Plane, Power driven. F. M. Quinsler. 1,812,755; June 30.
Planes, Clamping lever for. J. M. Burdick. 1,812,820; June 30.
Plant for heating motor vehicles. C. de la Barre de Nanteuil. 1,812,259; June 30.
Planters, Anti-side-slip attachment for corn. C. O. Petersen. 1,812,663; June 30.
Plastic materials, Forming apparatus for. F. W. Harney. 1,812,631; June 30.
Plate or similar article. G. Fulton. Des. 84,520; June 30.
Platform, Lift truck. E. J. Powell. 1,812,218; June 30.
Pliers, Punching or cutting. F. D. Lingwood. 1,812,350; June 30.
Plug and guide for well casings, Float. R. F. Hill. 1,811,885; June 30.
Plug connection, Electrical. C. C. Jones. 1,812,153; June 30.
Poles, Reenforcement for. G. B. Spring. 1,811,800; June 30.
Pontoon for seaplanes and like bodies. J. Hone. 1,812,265; June 30.
Position indicator, Front wheel. A. M. Bach. 1,812,674; June 30.
Potassium nitrate, Producing. P. Höfer. 1,812,531; June 30.
Potassium sulphate from polyhalite, Recovery of. G. F. Ransom. 1,812,497; June 30.
Power actuator. C. S. Bragg and V. W. Kliesrath. 1,811,994; June 30.
Power transmission, Two speed. W. A. Caldwell. 1,812,511; June 30.
Power unit. J. R. Cole. 1,812,258; June 30.
Power wrench. C. E. Weaver. 1,812,816; June 30.

Precooler for vacuum pumps. J. F. Grace. 1,812,590; June 30.
Press: *See*—

Reamer and underreamer. J. Grant. 1,812,043; June 30.
Reel: *See*—
Fishing reel. Steel tape reel.
Hose reel.
Reel. J. A. Riley. 1,812,805; June 30.
Refrigerating apparatus. O. F. Nelson. 1,812,113; June 30.
Refrigerating apparatus. F. W. Rabe. 1,812,170; June 30.
Refrigerator. I. Lundgaard. 1,812,102; June 30.
Register: *See*—
Autographic register. Cash register.
Regulator: *See*—
Heat regulator.
Regulator system. E. R. Morton. 1,811,860; June 30.
Relay, Electrical. N. C. Shaw. 1,812,175; June 30.
Relay, Electromagnetic. C. E. J. Nilson. 1,812,545; June 30.
Releasing device for mail bags. J. L. de Give. 1,812,688; June 30.
Remote control apparatus. J. J. Vanhorn. 1,812,225; June 30.
Resin compound and preparing the same, Synthetic. C. G. Moore and M. Zucker. 1,812,639; June 30.
Resinous material and making the same. R. H. Kienle and W. J. Schelber. 1,812,749; June 30.
Resinous product and preparing the same. J. A. Nieuwland. 1,812,541; June 30.
Ribbon feeding mechanism. A. Thomas. 1,812,251; June 30.
Rim mounting device, Wheel. J. W. Holt. 1,812,338; June 30.
Rim, Tire carrying. W. N. Booth. 1,812,033; June 30.
Road machine. J. B. Jarmin. 1,812,296; June 30.
Road machine. J. B. Jarmin. 1,812,342; June 30.
Road stand, Adjustable. J. H. Farrar. 1,812,689; June 30.
Rod: *See*—
Leveling rod.
Roll. W. C. Oberg. 1,812,248; June 30.
Rolls and making the same, Dented. J. W. B. Ladd. 1,812,655; June 30.
Rolling mills, Bar stock feed for. J. W. Hughes. 1,812,004; June 30.
Rope. H. G. Metcalf. 1,812,354; June 30.
Rubber cords and cables, Process and apparatus for marking. G. J. Crowdes. 1,812,686; June 30.
Rubber mill. W. H. Lockert and P. E. Welton. 1,812,528; June 30.
Safety appliance. J. Krell. 1,812,245; June 30.
Safety propeller. K. Schapel. 1,812,451; June 30.
Salts, Decomposing. H. B. Bishop. 1,812,770; June 30.
Sander for busses and other vehicles. R. R. Elston. 1,812,521; June 30.
Sash ventilator. C. H. Larson. 1,812,595; June 30.
Saw filing machine. S. Leone. 1,812,636; June 30.
Scabbard, Sanitary knife. A. V. Nies. 1,812,802; June 30.
Scale, Weighing. F. F. Heltz. 1,812,633; June 30.
Screw for the aerodynamic brakage of aeroplanes and the like, Self rotating air. G. Serragli. 1,811,867; June 30.
Screw machines, Thread cutting means for automatic. J. H. Mansfield and C. F. Penrose. 1,812,660; June 30.
Sealing attachment for machines for applying crown corks to bottles or other containers. W. O. P. Rieck. 1,812,804; June 30.
Seat: *See*—
Vehicle seat.
Seat back, Reclining. P. Cota. 1,811,917; June 30.
Securing the heads of hammers, picks, axes, and similar tools. A. W. Rogers. 1,812,375; June 30.
Separator. E. W. McCullough. 1,812,108; June 30.
Septic tank. A. W. Goulding. 1,812,401; June 30.
Sewing machine, Button. A. Ericsson. 1,812,327; June 30.
Sewing machines, Oil collector for. C. F. Rubel and E. E. Gratsch. 1,812,377; June 30.
Shade and curtain bracket, Window. L. Bruno. 1,812,429; June 30.
Shade, Lamp. S. Goldfinger. 1,812,783; June 30.
Shaft coupling, Flexible. T. C. Dobbins. 1,812,141; June 30.
Shaft flange, Bull wheel. J. Proper. 1,811,966; June 30.
Sharpener, Drill. A. E. Peters. 1,812,304; June 30.
Shearing machine, Continuous automatic. F. H. Streine. 1,812,122; June 30.
Sheet material, Mechanism for cutting. L. Kirschbraun. 1,812,654; June 30.
Sheets and plates, Making. C. W. Bennett. 1,812,508; June 30.
Shell construction. L. M. McBride. 1,812,010; June 30.
Shells in aircraft, Device for releasing. P. Slinde. 1,812,759; June 30.
Shingle. J. V. Tatlow. 1,812,223; June 30.
Shingle strips, Apparatus for producing. H. R. Wood. 1,812,424; June 30.
Shingles and the like, Apparatus for impregnating bundles of. H. E. Gosch. 1,812,291; June 30.
Shock absorber. J. A. Knight. 1,812,051; June 30.
Shock absorber. A. Welikes. 1,812,817; June 30.
Shock absorber, Fluid or hydraulic. J. C. Eckhard. 1,812,519; June 30.
Shock absorber, Vehicle. E. H. Kreider. 1,812,244; June 30.
Shoe. D. Boten. Des. 84,510–13; June 30.
Shoe. P. S. Costello. 1,812,622; June 30.
Shoe. W. E. Ebling. Des. 84,519; June 30.
Shoe and shank stiffener therefor. M. F. Brogan. 1,811,911; June 30.
Shoe and shank stiffener therefor. M. W. White. 1,811,912; June 30.
Shoes, Making. A. D'Alessandro. 1,811,879; June 30.
Shovel. C. S. MacKenzie. 1,812,160; June 30.
Shutter, Dissolving. G. A. Mitchell. 1,812,056; June 30.
Shuttle boxes, Replenishing. H. H. Burdett. 1,812,079; June 30.
Shuttle, Filling replenishing. F. E. Douglas. 1,812,087; June 30.
Shuttle, Sewing machine. N. D. Keith. 1,812,098; June 30.
Sign, Advertising. N. Kopp. Des. 84,527; June 30.
Sign, Display. C. L. Lewis. 1,812,209; June 30.
Sign exhibitor, Movable. S. Caller. 1,812,621; June 30.
Sign, Street car. K. Klug. 1,812,344; June 30.
Signal for automobiles, Gasoline reserve. W. H. Muzzy. 1,812,012; June 30.
Signal monitoring device. A. M. Curtis. 1,812,625; June 30.
Signal transmitter, Non-interference. C. M. Sackman. 1,812,173; June 30.
Signals, Apparatus for the control of highway crossing. H. C. Vantassel and G. R. Pfiasterer. 1,812,183; June 30.
Signaling, Railway. C. A. Brooks and J. M. Pelikan. 1,812,135; June 30.
Signaling, Railway. E. E. Parrill. 1,812,167; June 30.

Signaling system. W. A. Knoop. 1,812,635; June 30.
Signaling system, Telephone and telegraph. G. C. Cummings. 1,812,624; June 30.
Silencer. K. J. Reynolds. 1,812,413; June 30.
Silk is subjected to the action of caustic alkalis, Process in which viscose. A. J. Hall. 1,812,204; June 30.
Skate, Roller. E. G. Thompson. 1,812,383; June 30.
Skylight construction. G. H. Lenke. 1,812,009; June 30.
Slub detector. E. Bloom. 1,812,428; June 30.
Snowplow. L. E. Wood. 1,812,186; June 30.
Socket and mounting same, Headlight. G. H. Coulter and S. F. Arbuckle. 1,812,623; June 30.
Socket, Electric lamp. R. Eckstein. 1,812,434; June 30.
Socket for fishing tools, Combination trip. E. E. Pryor. 1,812,059; June 30.
Soda fountain. F. B. Hunt. 1,811,851; June 30.
Sodium sulphate from sulphuric acid, Separation of. J. J. Stockly and R. Bartunek. 1,812,310; June 30.
Solder for aluminum and its alloys. F. Strasser. 1,812,567; June 30.
Sole construction for apparel shoes. J. W. Lake and W. T. Finks. 1,812,490; June 30.
Soles, Pressing. J. J. Heys. 1,811,884; June 30.
Solid materials, Mechanical preparation of pulverized. M. Madore. 1,812,799; June 30.
Solids, Method and apparatus for treating. T. A. Dickson. 1,811,920; June 30.
Sound action for accordions, harmonicas, and like instruments. M. Soprani. 1,812,760; June 30.
Sound and photography, Synchronized. H. W. Rogers. 1,812,449; June 30.
Sound-chamber and set-frame therefor. L. de Forest. 1,812,687; June 30.
Sound reproducer. W. C. Jones. 1,812,634; June 30.
Sound reproducing means. F. H. Owens. 1,812,303; June 30.
Sound reproducing system. J. C. Benjamin. 1,811,841; June 30.
Sound reproduction. D. G. Blattner. 1,812,619; June 30.
Sound reproduction. L. I. Reed. 1,812,219; June 30.
Sound resonating and amplifying device. C. A. Volf, jr. 1,811,985; June 30.
Sound signaling and regulating system for microphones used in electric alarm systems, Automatic. J. P. Williams. 1,812,616; June 30.
Sound transmission. H. D. Arnold. 1,811,839; June 30.
Spark plug. R. T. Hurley. 1,812,438; June 30.
Speed mechanism, Variable. L. M. Sheridan. 1,812,176; June 30.
Speed recording mechanism. M. H. Damerell. 1,812,083; June 30.
Spotlight, Adjustable. W. W. Gehersky. 1,812,290; June 30.
Spray device. E. H. Braatelien. 1,812,234; June 30.
Sprayer, Pocket perfume. M. P. L. Dardel. 1,811,919; June 30.
Spring means, Motor suspension. A. Partin. 1,811,961; June 30.
Spring mounting for presses and the like. G. F. Wales. 1,811,987; June 30.
Spring suspension system. O. K. Kjolseth. 1,812,793; June 30.
Spring suspension, Vehicle. J. T. McIntosh. 1,812,661; June 30.
Stabilizing device. F. D. W. Searing. 1,812,174; June 30.
Stand: *See*—
Christmas tree support stand. Road stand.
Engine stand. Tire stand.
Stapling machine for fiber board blanks. H. G. Allen. 1,812,189; June 30.
Starter attachment for automobiles. A. C. McCurdy. 1,812,352; June 30.
Starting and pumping systems for motor vehicles, Combined. V. G. Apple. 1,811,836; June 30.
Starting apparatus, Engine. C. Marcus. 1,811,949; June 30.
Starting switch, Motor. W. S. Pfeifer. 1,812,712; June 30.
Steel for hardening, Heating. M. Winter. 1,812,837; June 30.
Steel, Structural. A. Klinkenberg. 1,812,155; June 30.
Steel tape reel. E. G. Lange. 1,811,945; June 30.
Stencil, Eyebrow. G. Wosse. 1,812,425; June 30.
Stock quotation indicator. H. S. Martin. 1,812,600; June 30.
Strainer. J. S. Judell. 1,811,852; June 30.
Submarine, Apparatus for assisting the crew of a sunken. S. Leone. 1,812,637; June 30.
Submarine mine. H. B. Pratt. 1,812,370; June 30.
Substance from a gaseous mixture, Eliminating a. F. Lopez. 1,812,750; June 30.
Suction feed device, Limited. W. H. Muzzy. 1,812,014; June 30.
Suction roll. E. T. Street. 1,812,812; June 30.
Sulphonated substances and preparing the same. E. W. Wall. 1,812,615; June 30.
Sulphur burner. M. J. Leahy. 1,812,795; June 30.
Support, Abdominal. I. M. Pease. 1,812,115; June 30.
Support and protector, Awning. J. A. Smith. 1,812,416; June 30.
Support, Flexible. G. Flintermann. 1,811,923; June 30.
Support for boxes and the like. R. J. Gaskill. 1,812,203; June 30.
Support for holding spectacles above the line of vision. H. Lodde and J. Dieckmann. 1,811,855; June 30.
Support for lateral arm awnings, Assembly. F. A. Anton. 1,811,907; June 30.
Support, Spinet lamp. A. B. McCutcheon. Des. 84,533; June 30.
Support, Train pipe coupler. E. O. Hermann. 1,812,048; June 30.
Switch: *See*—
Electric switch. Starting switch.
Switch mechanism, Control. L. O. French. 1,812,647; June 30.
Switch or commutating means. F. Gray. 1,812,828; June 30.
Switch point, Multi-angular. D. E. Anderson. 1,812,644; June 30.
Switch stand lock. P. Swanson. 1,812,179; June 30.
Switching device for radio and phonograph combinations. M. B. Long. 1,811,856; June 30.
Synchronism and automatic phase correction, Method and apparatus for. W. F. Funk and E. T. Kruglak. 1,812,778; June 30.
Table: *See*—
Foldable table. Indexing table.
Table and bench, Folding. C. W. Horton. 1,812,483; June 30.
Tamp and pick, Combined humidor. W. Moses. 1,812,753; June 30.
Tank: *See*—
Septic tank.
Taper turner. G. A. Perry. 1,812,366; June 30.
Telegraph repeater. C. C. Ferguson. 1,812,824; June 30.
Telephone exchange system. J. H. E. Baker. 1,812,617; June 30.
Telephone exchange system, Automatic. A. F. Dixon. 1,811,844; June 30.
Telephone system. J. Stich. 1,812,222; June 30.
Telephone system, Automatic and semiautomatic. C. E. J. Nilson and D. L. Llenzén. 1,812,516; June 30.
Telephone system, Remote control magneto. W. T. Powell. 1,812,641; June 30.
Telephonic instrument. W. P. Stunz. 1,812,571; June 30.
Temperature controlled apparatus. J. A. Spencer. 1,812,722; June 30.
Temperature regulator for hollow rotatable elements. L. C. Price. 1,812,802; June 30.
Terminal connection for electric circuit wires. A. Schneider. 1,812,307; June 30.
Testing system and apparatus, Stroboscopic. W. D. La Rue. 1,812,348; June 30.
Thermometer. H. H. Boyce. 1,812,679–80; June 30.
Thermostat. R. H. Russell. 1,812,718; June 30.
Thermostatic element. A. O. Hurxthal. 1,812,788; June 30.
Thymol, Producing. W. Schoeller, H. Jordan, and R. Clerc. 1,812,561; June 30.
Ticket dispensing and registering machine. F. Simone. 1,812,642; June 30.
Timepiece winding mechanism. M. Bloch. 1,812,581; June 30.
Timing mechanism for egg boilers and the like. F. E. Hummel and J. J. Noeth. 1,812,266; June 30.
Tire. N. La Jone. Des. 84,528; June 30.
Tire carrier lock. L. Blackmore. 1,812,466–7; June 30.
Tire protector. G. H. Pappas. 1,812,710; June 30.
Tire stand, Collapsible. H. B. Gibbs. 1,812,781; June 30.
Tobacco, Fermentation of. K. Vierling. 1,812,459; June 30.
Tongs. C. J. Jorgensen. 1,812,747; June 30.
Tongs, Welder's. F. B. Dreyer. 1,812,142; June 30.
Tool, Abrading. A. F. Krausz. 1,812,488; June 30.
Tool for cutting box strapping and the like. L. S. Howe 1,812,484; June 30.
Tool, Machine. E. J. Kearney and J. B. Armitage. 1,812,702; June 30.
Tool retainer. G. T. Harcourt. 1,812,652; June 30.
Tool, Scraping. J. H. Hill. 1,812,482; June 30.
Tool, Spring winding and setting. C. McFarland. 1,812,494; June 30.
Tool, Vertical spindle machine. E. P. Bullard, jr. 1,811,876; June 30.
Tools, Feed mechanism for machine. A. B. Leet. 1,812,656; June 30.
Toy. R. L. Hudson. 1,811,934; June 30.
Toy call box. F. W. Warner. 1,812,228; June 30.
Toy figure. W. F. Thompson. Des. 84,554; June 30.
Toy locomotive and the like, Structural. R. H. Shepard 1,812,498; June 30.
Toy, Mechanical. W. W. Harris. 1,811,929; June 30.
Track brake, Railway. W. Bieseler. 1,812,190; June 30.
Tractor. R. H. White. 1,812,543; June 30.
Tractor hitch. E. W. Johnson. 1,812,049; June 30.
Traffic controlling apparatus, Railway. D. C. Ackerly. 1,812,187; June 30.
Traffic controlling apparatus, Railway. R. R. Kemmerer. 1,812,154; June 30.
Traffic controlling system, Railway. L. E. Melhuish. 1,811,857; June 30.
Trailer coupling. C. E. Berggren. 1,812,768; June 30.
Trailer coupling. D. G. Hottmann. 1,812,240; June 30.
Transformer, Welding. T. M. Hunter. 1,811,886; June 30.

Transmission volume control. D. Mitchell and H. C. Silent. 1,811,954–5; June 30.
Transmitter, Multiplex. W. F. Stunz. 1,812,570; June 30.
Trap: *See*—
Insect trap.
Tray, Ash. E. H. Lewis. 1,812,158; June 30.
Tray compartment for refrigerating cabinets. T. C. Whitehead. 1,812,070; June 30.
Treads to steel subtreads, Securing. L. Del Turco. 1,812,504; June 30.
Tripod head particularly adapted for use in connection with a portrait camera. A. J. Viken. 1,812,614; June 30.
Truck construction, Equalizing. M. G. Hilpert. 1,811,931; June 30.
Tube: *See*—
Electron tube.
Tube securing means. F. W. Krone. 1,811,944; June 30.

Twine cutter. R. Beaver. 1,812,462; June 30.
2-chlor-anthraquinone, Preparing. J. Thomas. 1,812,274; June 30.
Type hold open arm, Fusible. D. R. Lasier. 1,812,408; June 30.
Typewriters, Variable escapement for. B. M. Des Jardins. 1,812,394; June 30.
Typewriting machine. A. G. Kupetz. 1,812,100; June 30.
Typewriting machine. L. A. Nemcovsky. 1,812,447; June 30.
Undergarment for children, Combination. M. Brazzell. 1,812,255; June 30.
Underreamer. G. C. Deakins. 1,812,039; June 30.
Underreamer, Expanding. J. Grant. 1,812,044; June 30.
Utensil, Kitchen. E. H. Ryerson. 1,812,062; June 30.
Vacuum tube device. J. R. Robertson. 1,812,558; June 30.
Valve. C. J. Westling. 1,812,069; June 30.
Valve, Flush. C. S. Nasmyth. 1,812,301; June 30.
Valve, Flush. J. E. Walker. 1,812,388; June 30.
Valve for air brake systems, Feed. A. W. Nicholson. 1,812,361; June 30.
Valve for internal combustion engines, Inlet. J. and J. H. S. Gardner. 1,812,262; June 30.
Valve for internal combustion engines, Rotary. A. L. Harding. 1,811,928; June 30.
Valve for steam or other fluids and liquids, Stop. H. L. Mason. 1,812,104; June 30.
Valve mechanism, Thermostatic. O. J. Kuenhold. 1,812,346; June 30.
Valve operating mechanism for flushing tanks, Outlet. A. F. Curtain. 1,811,878; June 30.
Valve, Proportioning. G. F. Naab. 1,812,015; June 30.
Valve, Water closet. W. J. Collison. 1,812,774; June 30.
Valves, Auxiliary apparatus for tire. W. R. Royer. 1,812,610; June 30.
Vanillin and l-vanillin, Production of. F. Boedecker. 1,812,132; June 30.
Varnishing and printing machine for bands. K. Christian. 1,812,514; June 30.
Vase. J. M. Caughlin and O. P. Ross. 1,812,737; June 30.
Vehicle and tailboard construction. F. O. Black. 1,812,580; June 30.
Vehicle, Convertible. H. S. Goodman and C. Roehri. 1,812,002; June 30.
Vehicle, Motor. H. W. Alden. 1,811,837; June 30.
Vehicle, Motor. A. L. Knapp. 1,812,703; June 30.
Vehicle seat. M. H. Toncray. 1,812,067; June 30.
Vehicle wheel. M. W. Thompson. 1,812,573; June 30.
Vehicles and the like, Transporting. I. H. Judd. 1,812,097; June 30.
Vending machine. J. Berland. 1,812,232; June 30.
Ventilating outfit, Portable. A. G. Sutcliffe. 1,812,124; June 30.
Ventilator: *See*—
Sash ventilator.
Vinyl chloride, Catalytic process for the preparation of J. A. Nieuwland. 1,812,542; June 30.
Vinyl derivatives of acetylene and preparing the same. J. A. Nieuwland. 1,811,959; June 30.
Vise, Quick acting. A. J. Jameson. 1,812,096; June 30.
Vulcanizer and method of vulcanizing. E. Blaker. 1,812,282; June 30.
Vulcanizing apparatus. K. B. Kilborn. 1,812,792; June 30.
Wagon loader and excavator. A. W. Haiss. 1,812,292; June 30.
Wagon, Self discharging. W. Ludowici. 1,812,539; June 30.
Wagons, Implement for moving railway. G. Meyer. 1,812,603; June 30.
Wall structure, Retaining. J. A. Oursler. 1,812,364; June 30.
Washer: *See*—
Attachable washer. Gas washer.
Washing blue prints and other photoprints. H. J. Brunk. 1,812,470; June 30.
Washing machine dolly. D. P. Wilson. 1,812,029; June 30.
Watchcases, Making. E. S. Irelan. 1,812,150; June 30.
Watch crystals, Article of manufacture for wrist. J. Pief. 1,812,367; June 30.
Water, Purifying. G. W. Dooley. 1,812,516; June 30.
Water softener. L. G. Lindsay. 1,811,890; June 30.
Water to sprayers and the like, Apparatus for controlling the passage of. D. Elder. 1,812,586; June 30.
Weather strip apparatus. F. L. Michaels. 1,812,840; June 30.
Web roll changer. H. V. Ball and W. Ogden. 1,811,872; June 30.
Weed killer. W. H. Bergmann. 1,812,427; June 30.
Welding. G. T. Jacocks. 1,812,151; June 30.
Welding apparatus, Electric. H. S. Holmes. 1,812,295; June 30.
Well drilling apparatus. W. Sheldon. 1,812,721; June 30.
Wheel: *See*—
Band saw wheel. Metal wheel.
Grinding wheel.
Wheel. E. E. Walker. 1,812,227; June 30.
Wheel construction, Vehicle. J. W. Holt. 1,812,337; June 30.
Wheel disk. J. H. Hunt. 1,812,437; June 30.
Wheel unit. A. C. Wisner and C. L. Redfield. 1,812,127–8; June 30.
Wheeled device for laying off land. G. W. Thurmond, sr. 1,812,574; June 30.
Wheels, Mechanism for truing and dressing. F. J. Hohnhorst and F. J. Kroeger. 1,811,933; June 30.
Wheels, Securing means for demountable. J. H. Hunt. 1,812,005; June 30.
Windmill. E. J. Espinosa. 1,812,741; June 30.
Windmill. A. C. Gilley. 1,812,400; June 30.
Windmills, Arrangement of. C. E. Carroll. 1,812,137; June 30.
Windshield supporting means, Tonneau. T. B. Nisbet. 1,812,362; June 30.
Winding and tightening mechanism. J. K. Duncan and R. Weide. 1,812,433; June 30.
Winding machines, Traverse mechanism for. E. R. Swanson. 1,812,382; June 30.
Window. P. H. Esbjornson. 1,812,041; June 30.
Window, Sliding and swinging. G. Drewes. 1,812,325; June 30.
Window structure, Metallic. A. L. Doering. 1,812,822; June 30.
Wire fabric machine, Woven. F. E. Willits. 1,812,506; June 30.
Wire fastening means. J. G. Osborne and W. W. Hicks. 1,811,892; June 30.
Wrench: *See*—
Jar wrench. Power wrench.
Wrench for spark plugs, Side wire gap. H. Rabezzana. 1,812,496; June 30.
Yarn control, Multiple suture. E. C. Hinchliff. 1,812,653; June 30.
Zinciferous material, Reduction of. F. G. Breyer. 1,811,910; June 30.

CLASSIFICATION OF PATENTS

ISSUED JUNE 30, 1931

NOTE.—First number = class, second number = subclass, third number = patent number

1— 11: 1,812,189
15: 1,812,188
39: 1,811,891
2— 22: 1,812,579
41: 1,812,115
42: 1,812,273
44: 1,812,529
80: 1,812,255
1,812,791
237: 1,812,593
263: 1,812,758
3— 7: 1,812,156
4— 56: 1,812,388
67: 1,811,878
287: 1,811,852
5— 22: 1,812,618
44: 1,811,936
59: 1,812,298

CARNEGIE LIBRARY OF ATLANTA

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 407—No. 1 TUESDAY, JUNE 2, 1931 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each. PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Reissue Application—Patent Involved in Interference Practice

U. S. Patent Office, *Washington, May 19, 1931.*

(Order No. 3,193)

My attention has been called to the fact that, in some instances, a reissue of a patent has been granted while the patent was involved in an interference.

In *Lattig and Goodrum* v. *Dean*, 111 O. G. 301, 1904 C. D. 255, the Commissioner, with reference to a case in which the claims in issue had been omitted in the reissue, said: "It was irregular and improper to permit such reissue during the progress of the interference."

Hereafter, if an application for reissue of a patent is filed while the patent is involved in interference, that application must be called to the attention of the Commissioner before any action by the Examiner is taken thereon.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,542,035, M. R. Cone, Dispersions of bituminous materials and process of making same, decided June 4, 1930, claims 1, 2, 8, 4, 5, 6, 7, 8, 9, 10, 11, 12, 18, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, and 27.

Pat. 1,680,840, O. L. Barnebey, Process of separating and recovering gases, decided May 12, 1931, claims 15 and 20.

Pat. 1,750,442, R. T. Todd, Electrical welding machine, decided May 9, 1931, claims 1, 2, 3, 4, 5, 6, 7, and 8.

Pat. 1,779,758, R. Trechcinski, Telephone system, decided May 14, 1931, claim 1.

Adjudicated Patents

(C. C. A. Okla.) Jones patent, No. 1,102,152, for process of pumping oil wells, *Held* invalid. *Jones-McLaughlin* v. *Amerada Petroleum Corporation*, 47 F.(2d) 828.

(D. C. N. Y.) Hyatt patent, No. 1,322,792, for manufacture of tops for bottle stoppers, claim 1 *Held* valid and infringed. *Embossing Co.* v. *L. Mundet & Son*, 47 F.(2d) 938.

(C. C. A. Del.) De Forest patent, No. 1,466,701, for method of and means for controlling electric currents by and in accordance with light variation, *Held* not infringed. *Stanley Co. of America* v. *General Talking Pictures Corporation*, 47 F.(2d) 817.

(D. C. and C. C. A. Pa.) Garlinghouse patent, No. 1,571,544, for measuring device for bulk materials, claims 1 to 7 *Held* valid and infringed, and claim 8 *Held* not infringed. *Blaw-Knox Co.* v. *Erie Steel Const. Co.*, 47 F.(2d) 895 and 899.

(C. C. A. Pa.) Downs patent, No. 1,604,739, for apparatus for promoting catalytic reactions, *Held* valid and infringed. *Selden Co.* v. *Barrett Co.* 47 F.(2d) 867.

(C. C. A. Del.) Ries patent, No. 1,607,480, for method of reproducing photographic sound records, *Held* not infringed. *Stanley Co. of America* v. *General Talking Pictures Corporation*, 47 F.(2d) 817.

(C. C. A. Del.) De Forest patent, No. 1,693,071, for sound-recording attachment for motion picture cameras, *Held* not infringed. *Id.*

(C. C. A. Del.) De Forest patent, No. 1,695,414, for talking moving picture machine, *Held* not infringed. *Id.*

Condition of Applications Under Examination at Close of Business May 16, 1931

(Total number of applications awaiting action, excluding Trade-Mark Division, 95,377; Trade-Mark Division, 1,266. Oldest new case, Aug. 23, 1930; oldest amended, Aug. 28, 1930. The dates given are 1930 except where † indicates 1931.)

DECISIONS IN PATENT AND TRADE-MARK CASES

Supreme Court of the District of Columbia

DESHELL LABORATORIES, INC., *v.* E. R. SQUIBBS & SONS ET AL. AND THOMAS E. ROBERTSON, COMMISSIONER OF PATENTS

Equity No. 49,053. Decided March 31, 1931

SECTION 4915 Revised Statutes—BILL DOES NOT LIE TO REVIEW DECISION DISSOLVING INTERFERENCE.

Where a bill in equity under the provisions of section 4915 Revised Statutes was filed to review a decision of the Board of Appeals in the Patent Office dissolving an interference *Held* that the bill should be dismissed since the court is without jurisdiction, there having been no final refusal of a patent within the meaning of the section.

Mr. Nelson J. Jewett, Mr. Edward S. Rogers, and *Mr. Henry M. Huxley* for the Plaintiff.

Mr. T. A. Hostetler for the Commissioner of Patents.

BAILEY, *J.*:

I think that the action of the Board of Appeals of the Patent Office in dissolving the interference and holding that the plaintiff cannot make a certain claim was interlocutory only in that the plaintiff had not yet been refused the patent by the Commissioner of Patents within the meaning of section 4915 Revised Statutes. The bill will therefore be dismissed without prejudice to filing a bill in equity in the event that he should finally be refused a patent by the Commissioner.

U. S. Court of Customs and Patent Appeals

IN RE SCHMIDT AND UFER

No. 2,535. Decided January 12, 1931

PATENTABILITY—PROCESS OF MANUFACTURING METHANOL.

Claims for a process of manufacturing methanol using certain specified catalytic substances *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. Hauff & Warland and *Mr. William E. Warland* for Schmidt and Ufer.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals affirming the decision of the Primary Examiner denying claims 7, 8, 9, 11, 12, and 13 in appellants' application for an alleged invention relating to a process for the manufacture of methanol.

Claims 7, 8, 12, and 13 relate to the use of a catalytic substance substantially free from iron, nickel, and alkali compounds. Claims 9, 11, and 12 relate to the use of a combination catalyst containing copper and substantially free from iron and nickel. Claims 7 and 9 are illustrative, and describe the process in issue. They read:

7. The process of manufacturing methanol by catalytically reducing the oxids of carbon with hydrogen, which consists in passing a mixture of one volume of oxids of carbon and at least one volume of hydrogen at a pressure of at least 30 atmospheres and at a temperature of at least 200 degrees centigrade and no more than about 500 degrees centigrade over a contact mass containing a catalytically acting element and an element selected from a group between the third and eighth groups of the periodic system and the even numbered lines of the large periods, but substantially free from alkali compounds, iron and nickel being present, if at all, only in small amounts together with other catalytically acting metals.

9. The process of manufacturing methanol by catalytically reducing the oxids of carbon with hydrogen, which consists in passing a mixture of one volume of oxids of carbon and at least one volume of hydrogen at a pressure of at least 30 atmospheres and at a temperature of at least 200 degrees centigrade and no more than about 500 degrees centigrade over a contact mass containing copper and an element selected from a group between the third and eighth groups of the periodic system and the even numbered lines of the large periods, iron and nickel being present, if at all, only in small amounts together with other catalytically acting metals.

The references are: Mittasch et al., 1,201,850; Mittasch et al., 1,569,775; Dreyfus, (Br.), 108,855; Patart, (Fr.), 540,543.

The tribunals below held that, as the patents to Patart and Dreyfus did not mention the presence of alkali compounds, they should be considered as disclosing catalytic agents free from such compounds; that, as the patent to Mittasch et al., No. 1,569,775, owned by appellants' assignee, did not disclose the presence of iron or nickel in their catalytic compounds, this reference should be considered as disclosing catalysts free from such substances; and that, therefore, claims 7, 8, 12, and 13 were not patentable over the prior art. In this connection, the Board of Appeals, among other things, said:

* * * The applicants' view would appear to support the procedure of obtaining a patent upon the Patart or Dreyfus process, just as disclosed by such patentees, and merely adding to the claims and the description that an alkali compound was absent, and, afterwards, obtaining another patent for the identical process already patented, and stating in such last patent that iron and nickel were absent, and, still later, obtaining another patent for this same identical process and stating that some other unnecessary element was absent, and so on indefinitely. We deem the prior art supports the holding that there was nothing inventive in using the process as described by these patentees and leaving out such substances as these patentees have not stated should be present. As to the proportions of the parts and the pressures and temperatures employed by the applicants, these are all fairly disclosed in the prior art.

With reference to claims 9, 11, and 12, the Patent Office tribunals concurred in holding that, as the patents to Patart and Dreyfus disclosed the use of copper as a catalyst and, as the patent to Mittasch et al., No. 1,201,850, disclosed the advantages of using certain metals, compounds thereof, and mixtures of two or more of such metals as catalytic agents, there was no invention in simply combining copper, disclosed in Patart and Dreyfus, with some of the metals disclosed in the patent to Mittasch et al., No. 1,201,850.

In this connection, the Examiner said:

* * * no invention is seen to be involved in using in the Patart process copper associated with one of the other catalysts of the type named. It is considered that this would be an obvious thing to try out by those investigating the various catalysts in connection with methanol synthesis in view of Mittasch's use of mixtures.

The Board of Appeals concurred in the views expressed by the Examiner, and said:

* * * To merely select two or more of these materials, which the prior art teaches may be used jointly as the catalytic compound, would involve nothing more than the mere following of the teachings of the prior art.

It is argued by counsel for appellants that, although alkali compounds are not declared to be pres-

ent in the catalysts disclosed in the patents to Patart and Dreyfus, and iron and nickel are not mentioned as being present in the patent to Mittasch et al.,—No. 1,569,775—it does not necessarily follow that these patentees disclosed, or had in mind, the *exclusion* of these substances.

We are unable to accept this view. Regardless of the commercial practice prior to, or after the disclosures in the patents to Patart, Dreyfus, and Mittasch et al.—No. 1,569,775—the failure of Patart and Dreyfus to mention the presence of alkali compounds, and the failure of Mittasch et al., to mention the presence of iron and nickel, ought to have been and was, in our opinion, sufficient to suggest to one skilled in the art that the presence of those substances in catalytic agents was not necessary. Furthermore, it is definitely stated in the patent to Mittasch et al.—No. 1,201,850—that an alkali may or may not be added to the catalytic agents therein disclosed.

With reference to claims 9, 11, and 12, it is argued by counsel that appellants' disclosure of a catalytic compound containing copper is not definitely shown in any of the patents of record; that a new and useful result has been obtained by a new combination of old elements; and that, therefore, these claims are patentable over the references of record.

Patart and Dreyfus each disclosed the use of copper as a catalyst. Mittasch et al.—No. 1,201,850—disclosed the use of catalysts composed of certain metals and mixtures of two or more of them. In view of these disclosures, it would seem to be reasonable to conclude that one skilled in the art would readily deduce that a catalyst composed of copper and some of the metals or mixtures disclosed by Mittasch et al.—No. 1,201,850—might be successfully employed in the manufacture of methanol. Nor are we impressed with the proposition that a combination catalyst, resulting from experiments plainly suggested by the prior art, would be patentable, even though it produced new and useful results.

It appears from the record that about a year after appellants' claims had been finally rejected by the Primary Examiner, counsel proposed to amend appellants' application by incorporating four new claims, Nos. 14 to 17, directed to the exclusion of alkali. The exclusion of iron and nickel from the process was not mentioned therein.

In rejecting the proposed amendment, the Examiner said:

> * * * Because applicant has thought up a new argument to present as to why claims rejected are not considered by him to be anticipated is no reason why the final rejection should be set aside at the last moment for the reconsideration of claims and the entry of new claims. A case could never be closed if such practice is followed.

Due to the fact that the proposed claims had not been considered by the Primary Examiner, the Board of Appeals declined to review them.

It also appears that claims 18 to 21 were not before the Primary Examiner, but were first submitted to the Board of Appeals, and that the board declined to consider them.

It is earnestly urged by counsel for appellants that this court give consideration to all of these claims.

We are of opinion that the Primary Examiner was entirely justified in rejecting the proposed amendment—claims 14 to 17—for the reasons pointed out in his decision. Claims 18 to 21 were not properly before the Board of Appeals. Accordingly, they will not be considered by this court. *In re Schneider*, 17 C. C. P. A. (Patents) 952, 39 F.(2d) 278; *In re Stern*, 17 C. C. P. A. (Patents) 1234, 40 F.(2d) 1000.

The decision is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE BONIDE CHEMICAL COMPANY, INC.

No. 2,575. Decided February 3, 1931

TRADE-MARKS—REGISTRABILITY—"CROW-TOX"—FOR PREPARATION FOR PROTECTING SEEDS AGAINST BIRDS AND ANIMALS.

The term "crow-tox" *Held* equivalent to "crow-poison" and not registrable as a preparation for protecting seeds against birds and animals, whether that preparation be poisonous or not.

APPEAL from the Patent Office. Affirmed.

Mr. Richard R. Martin for Bonide Chemical Company, Inc.

Mr. T. A. Hostetler for the Commissioner of Patents.

GARRETT, *J.*:

Appellant, Bonide Chemical Company, Inc., made application in August, 1928, for registration, under the Trade-Mark Act of February 20, 1905, of the compound word Crow-Tox as a trade-mark for use on a "preparation for protecting seed against birds and animals and for invigorating seeds".

Registration was denied by the Examiner and his decision was affirmed by the Commissioner of Patents. Appeal was then taken to this court.

It appears that when the Examiner first came to consider the application, after the formality of publication had been complied with, he reached the conclusion that registration should be denied upon the ground that the word was merely descriptive of the goods on which it was used, being of the impression that the preparation was poisonous in character and thinking "crow-tox" to be the equivalent of "crow-poison". He so held, citing *Larvex Corporation* v. *Walter*, which appears to be 151 MS. Dec. 763, by the Commissioner of Patents, rendered September 7, 1928.

Thereupon appellant amended his original combined petition and statement by inserting therein the word "non-poisonous", so that it read "* * * has adopted and used the trade mark shown in the accompanying drawing for a *non-poisonous* preparation * * *".

Upon consideration of the application as thus amended the Examiner adhered to his former decision, saying:

> It is immaterial whether or not a mark is truly or falsely descriptive. (See *in re National Phonograph Co.*, 128 O. G. 1295, 1907 C. D. 550.)

In affirming the decision of the Examiner, the Commissioner (Assistant Commissioner Moore) said:

> The law * * * specifically provides that no trade-mark which consists "merely in words or devices which are descriptive of the goods with which they are used, or of the character or quality of such goods," shall be registered; and the courts have uniformly held that marks which are deceptive are not entitled to protection as a property right * * *.
>
> The Trade-Mark Act does not forbid registration of descriptive words or devices as trade-marks, but only those which are descriptive of the goods, or the character of quality of the goods, with which they are used. Therefore, in order to determine whether words or devices used as trade-marks are descriptive of the goods or are deceptive, it is necessary to ascertain the probable effect such words or devices, when given their usual meaning, have upon the public mind. The meaning of some descriptive words or devices used as trade-marks is so foreign to the qualities or characteristics of the class of goods with which they are used as to render it unlikely that they would ever be regarded as used descriptively or deceptively. In such cases the marks are arbitrary and fanciful and form proper technical trade-marks. It is where the meaning of the words or devices is descriptive of the qualities or characteristics of the class of goods with which they are used as trade-marks that their registration is prohibited by the Trade-Mark Act.
>
> The applicant's mark is primarily for a preparation for protecting seed against birds and animals. It is common practice to include a poison in preparations of this class. The applicant's trade-mark "Crow-Tox" would therefore suggest to the mind of the public that the goods with which the mark is used is a poison, the word "tox" being defined the same as "toxic" and "toxico" from the Greek "toxicon," poison, a combining form.
>
> It is contended by the applicant, however, that its mark is not descriptive of the goods, as the goods contain no poison for crows. This being true, then the mark is deceptive, as one wishing to purchase a poison for crows would be deceived into purchasing the applicant's non-poisonous preparation.

The contention made before us appears to be, in substance, the same as that recited to have been made before the commissioner. It is very frankly conceded by learned counsel for appellant that "crow-tox" has the same meaning as "crow-poison", and that if the preparation of appellant were, in fact, poisonous, the word would be descriptive of the character and quality of the goods and hence its registration would be barred by the express terms of the statute.

This concession as to the real meaning of "crow-tox" is, we think, correct. There are in common use in the English language many words derived wholly, or in part, from the Greek word "toxicon" which means poison. Examples are "toxic", "toxicant", "toxication", "toxicologist", "toxicomania", "toxiferous", "toxin", and the like. This class of words is related to, and carries to all the suggestion of, poison. This suggestion is, of course, conveyed by the use of the syllable "tox".

In Funk & Wagnalls New Standard Dictionary "tox" as a complete word is not found, but it is given and defined thus:

> tox-[1]. Same as toxico—
>
> tox-[2]. Same as toxo—
>
> tox., toxicol., abbr. Toxicology.

Toxic as a word is there defined: "1. Pertaining to or having the nature of poison; poisonous; as, a *toxic* substance."

In Webster's New International Dictionary "tox" as a complete word is listed as being obsolete. It there appears thus:

> tox, *v. t.* To intoxicate. *obs.*

We think, therefore, that "crow-tox" is in all respects, as regards its meaning, the same as "crow-poison." Hence the effort to register it under appellant's amended application, raises the somewhat novel question whether, under the registration statute, a word may be registered as a trade-mark when it is used upon a preparation which it, in fact, misdescribes. It does not speak the truth. If it did, admittedly, it would not be registrable. Since it speaks falsely, may it be admitted as not descriptive?

It is argued that this proceeding is purely statutory and that the Patent Office and this court are bound by the naked words of the statute; that we have no concern, when descriptiveness is the only issue involved, except to ascertain the bald fact of whether the mark is merely descriptive—that is, whether it is truly descriptive; that the law is so drawn as to encourage registration, and that there is a requirement that no trade-mark shall be refused registration, except in designated cases, which "is just as imperative as the prohibition of the proviso against registration in cases specified", citing *Beckwith* v. *Commissioner of Patents*, 274 O. G. 613, 252 U. S. 538, 1920 C. D. 471.

Fully recognizing the fact that the proceeding is purely statutory, we nevertheless cannot acquiesce in this contention to the extent that appellant's insistence would lead.

By the terms of the statute, *ownership* is an express prerequisite of the right to register. The opening words of the trade mark registration act are "That the *owner* of a trademark * * * may obtain registration * * *". (Italics ours.)

This court, following many decisions of the Court of Appeals of the District of Columbia (our predecessor in this particular line of trade-mark jurisdiction) and of other courts having jurisdiction of trade-mark questions, including the Supreme Court of the United States, has had several occasions to point out that in passing the Trade-Mark Registration Act, Congress added nothing to and took nothing from the common-law principles applying or relating to trade-mark ownership. *B. F. Goodrich Co.* v. *Kenilworth Mfg. Co.*, 17 C. C. P. A. (Patents) 1105, 395 O. G. 6; *Sun-Maid Raisin Growers of California* v. *American Grocer Co.*, 17 C. C. P. A. (Patents) 1034, 1037, 395 O. G. 3, and numerous cases therein cited. *In re Plymouth Motor Corp.*) 18 C. C. P. A. (Patents) ——, 404 O. G. 269.

In the *Sun-Maid Raisin Growers* case, supre, we said:

> Congress, by the enactment of the Trade-Mark Act of 1905 never intended to authorize the registration of a trade-mark the use of which could be prevented by resort to common law. (See *California Packing Corp.* v. *Tillman & Bendel, (Inc.)*, Patent Appeal No. 2341, 17 Ct. Cust. & Pat. Appls. 1048, —— F.(2d) ——, and *B. F. Goodrich Co.* v. *Hockmeyer, (Zip-On Mfg. Co., substituted)*, Patent Appeal No. 2208, 17 Ct. Cust. & Pat. Appls. 1068, —— F.(2d) ——, both decided concurrently herewith. Also see *Yale Electric Co.* v. *Robertson*, 26 F.(2d) 972, and *Levy* v. *Uri*, 31 App. D. C. 441.)

Bearing upon this question also are declarations of *American Steel Foundries* v. *Robertson*, 269 U. S. 372, 342 O. G. 711.

Trade-mark ownership primarily is a matter growing out of adoption and use of a mark, but in order actually to have valid title to a mark which the

courts will protect other elements than these must be present. Use is an indispensable attribute, and it must be a legal use, justified upon sound principles of truth and morality. Such principles are basic in all law.

We are at a loss to understand how one can acquire legal title—an ownership protectable in the courts—of a mark (there being no ownership except when predicated upon use) which it is proposed to apply to a product and by it indicate that the product is of a particular character or quality, when, in fact, it has no such quality, and then secure registration of the mark, on its face descriptive, upon the statement that it is not descriptive because false and misleading. It is inconceivable that Congress ever intended that any such result should be accomplished under the registration statute, notwithstanding the declaration that no mark, save certain excepted ones, should be refused registration.

There is argument by the appellant that as a matter of fact there is no foundation "for the conclusion that any purchaser of a material to keep crows away from seed corn would be misled by the use of the trade mark Crow-Tox on a material non-poisonous". The only reason for this given by appellant is; "No farmer would be anxious to purchase such a material having poisonous qualities by preference". It is also pointed out that there was filed in the hearing in the Patent Office, or with the amended application, "a copy of one of the circulars used in advertising and selling applicant's material upon which there is shown underscored in ink the statements 'Crow-Tox is non-poisonous and will not injure any kind of corn. Neither will it clog any planter or kill birds or animals'."

This argument is beside the issue. It is the word of the mark, not the statement of an advertising circular which appellant seeks to register, and the fact that a farmer might not buy crow poison by preference has no bearing upon the merits of the question. As a matter of fact, basing our conclusion upon common observation and experience in life, we do not doubt but many farmers would, at frequent intervals, much prefer poison for these pestiferous creatures.

There is little direct authority to be found in judicial decisions upon the purely registration feature of such marks. This is probably due to the fact that there have been few instances where attempts have been made to register marks upon their face descriptive, but avowed in the application not to be, for the reason that it was intended to use them upon products that would not conform to the implication or meaning of the marks.

The precedents of the Patent Office tribunals are cited in their decisions, supra.

Worden v. *California Fig Syrup Co.*, 187 U. S. 516, was a proceeding in equity. Defendant there sought an injunction against plaintiff to prevent use by the latter of the words "Syrup of Figs" or "Fig Syrup", or any colorable imitation thereof, on certain products, alleging its (defendant's) right to exclusive use of such mark. In plaintiff's defense it was alleged and proved that defendant's preparation did not, in fact, include any fig syrup. The case reached the Supreme Court of the United States and that tribunal in the course of its opinion said (197 U. S. 528):

> We find, however, more solidity in the contention, on behalf of the appellants, * * *; that where any symbol or label claimed as a trade mark is so constructed or worded as to make or contain a distinct assertion which is false, *no property can be claimed on it*, or, in other words, the right to the exclusive use of it cannot be maintained. (Italics ours.)

Authorities were then cited.

In *Levy* v. *Uri*, 31 App. D. C. 441, 135 O. G. 1363, the Court of Appeals of the District of Columbia reversed a decision of the Commissioner of Patents and denied registration of the word "Brookwood" as a trade-mark for whisky, because it was found that the proposed registrant had, in printed matter accompanying the mark, represented the product to be rye whisky, when as a matter of fact it was a blend, saying (31 App. D. C. 446):

> It is our conclusion that, because of the misleading statements on the labels containing the mark, appellee *can claim no property right therein*, and is not entitled to claim the benefits of the trademark act. (Italics ours.)

The distinction between the Levy case and that at bar is that in the latter it is the mark itself which misleads, and not merely statements accompanying it on the label.

Many authorities bearing upon the issue are cited in this latter decision, and others are *Federal Products Co.* v. *Lewis*, 57 App. D. C. 338, 367 O. G. 3; *Coffin Redington Co.* v. *Turner*, 1917 C. D. 187, 46 App. D. C. 449, 242 O. G. 751.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE NESS

No. 2,588. Decided February 3, 1931

1. PATENTABILITY—INVENTION—SELECTING AND ASSEMBLING PARTS OF PRIOR MECHANISMS.
   "We think it is well settled that there is no patentable invention in selecting and assembling parts of prior mechanisms used in the same art where the result produced is nothing more (though it may be better) than the sum of the results due the individual elements."
2. SAME—BACK-FLASHER ARRESTERS.
   Claims for back-flasher arresters *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. Byrnes, Townsend & Brickenstein, and *Mr. C. H. Potter*, *Mr. Warren J. Willis*, and *Mr. Euegen L. Greenewald* for Ness.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

Appellant's claims in this case relate to improvements in back-flash arresters. They are seven in number and all were successively rejected by the Examiner and by the Board of Appeals of the Patent Office. Appeal was then taken to this court.

It will be sufficient to quote numbers 1, 3, and 7:

> 1. A flash arrester comprising a casing adapted to be coupled in a gas supply line and containing a replaceable cartridge comprising finely divided, difficultly fusible, unbonded material of a size that will pass through screening of about 40 to 90 meshes to the inch.
>
> 8. A back flash arrester comprising a casing adapted to be coupled in a gas supply line and containing a confined layer of finely divided unbonded alundum forming a porous high-temperature resistant wall between the outlet and the inlet of said casing.
>
> 7. A flash arrester comprising an internally threaded tubular section having an internal shoulder, screen means bearing against said shoulder, a porous body of finely-divided refractory material disposed against said screen means and against the adjacent inside surface of said tubular section, and perforated means having external threads whereby it may be screwed into said section to hold said material in place and to exert various pressures thereon whereby its thickness and porosity may be varied.

The references cited in the decision of the Board of Appeals are:

Emerson et al., 802,380, October 24, 1905; Ellis, 1,170,055, February 1, 1916; Armstrong, 1,176,017, March 21, 1916; Berry, 1,828,485, January 20, 1920; Fregonara, 1,457,059, May 29, 1923; Schröder, 1,497,197, June 10, 1924; Harmer (Br.), 17,972, of 1913. Thorpe—"Dictionary of Applied Chemistry", page 180, (1921).

Appellant, in his application, concedes the evolvement by others of devices designed for stopping the back flash of flames from blowpipes thus preventing explosion in acetylene gas tanks, but insists that he has succeeded in making improvements, inventive in their nature, over the prior art. His brief says:

> Appellant's principal achievements in the present invention are to provide an improved flash-back arrester which is reliable in its operation; which is adapted to be set for any one of a variety of gas pressures; which will not get out of order; which meets the rigid requirements of the board of fire underwriters; and which is simple to construct and install.
>
> Appellant has discovered that an extremely efficient flash-back arrester is obtained by inserting in the gas conduit a layer of finely divided unbonded refractory material that is non-corrosible and infusible under all the operating conditions to which it is subjected. The material which meets these requirements is finely divided unbonded alundum of a size that will pass through screening of from 40 to 90 meshes per inch.

The apparatus may be briefly described as an arrester comprising a casing having two end sections coupled by an intermediate internally threaded section which latter section contains a layer of granular material (defined in claim 3 as alundum), the material being unbonded, and confined at both sides by screens and disks, the disks being perforated and adjustably threaded into the intermediate section. It is specified that the alundum is of particles of a size which will permit their passage through screening of from 40 to 90 meshes to the inch. This material forms a porous high-temperature resistant wall between the outlet and the inlet of the casing.

In operation the gas from the tank or generator enters the arrester through a passage which leads it to the layer of alundum through which it flows, and by its passage therethrough it is subdivided. It then flows out through another passage to the supply line and gas burner, and the statement of the specification is that—

> Any back flash that gets back into the arrester will be extinguished immediately before it passes therethrough because of the subdivision of the gas by the layer of finely divided material and the screens and perforated discs carrying it.

It appears evident that if appellant has produced a patentable invention, the primary or fundamental element of that invention lies in the disclosure of granular, unbonded alundum divided into particles of a "size that will pass through screening of about 40 to 90 meshes to the inch". The other elements of the claims are, in the main, constituent means by which the use of the alundum, in the form designated is rendered practicable.

The patent to Ellis, supra, relates to a three section explosion arrester, the middle section—

> charged with finely divided granular material of a refractory nature, preferably of poorly conducting material such as crushed fire-brick, clay, pumice, magnesia and the like, the fragments preferably being screened between 15 and 20 mesh or thereabout, so as to afford fairly uniform grains. These are placed in the cylinders in the layers * * *. Between the layers wire screens are placed to form spaces which are charged with copper or aluminium fragments, such as copper tacks or aluminium granules of say about 20 mesh. * * *.

The patent to Armstrong discloses the use as a flame-arrester in an oxygen and acetylene torch, of a—

> mass of porous and non-inflammable material *b*, such as asbestos or any other suitable substance.

This material of Armstrong we understand to be unbonded.

The patent to Berry shows the use of a—

> porous cup or diaphragm 9 consisting of refractory material such as, for example, alundum which is porous enough to allow the passage of gas at ordinary pressure without materially impeding the flow. Any porous clay product will answer the requirements.

In Berry the cup or diaphragm is, as we understand it, a compacted article and not a mass comprised of unbonded granules. Within the cup are leaden pellets designed to be melted by the intense heat of the back flash when the porous cup itself is not sufficient fully to arrest the flame, and the metal—

> may be sufficient to stop the further passage of the flame by melting over and then sealing the top of the tank of metal shot or pellets, etc.

Fregonara discloses the use of "iron chips or any like permeable material", interposed in the spaces between certain discs; Schröder "a sleeve *i* containing a porous fireproof protective disc *k* of magnesium oxide inserted gas-tight therein".

The British patent to Harmer states that the filtering material is preferably coke and further says that patentee is aware that—

> it has already been proposed to employ porous ceramic material, graphite, metal gauze and sponge * * * with blowpipes generally,

and he makes "no claim thereto".

It is thus to be seen that in none of the prior art cited is use disclosed of unbonded granules of alundum, specifically named as alundum. The only use of alundum, specifically calling it by that name, is Berry who uses it in the form of a cup or diaphragm.

Aside from possibly the coke filter of the British patent, Ellis appears to be the only discloser of materials in granular form. He appears to have a layer of material such as "crushed fire-brick, clay, pumice, magnesia and the like" preferably "between 15 and 20 mesh or thereabout" and another layer of "copper tacks or aluminium granules of say about 20 mesh". The exact form of Armstrong's asbestos material is not disclosed.

Appellant's claim 3, supra, is the only one of his claims which specifically names alundum as the high-temperature resistant, and it is there described as "finely divided, unbonded". His claim 1 is the

only claim which attempts to define the size of the material, it being there described as—

of a size that will pass through screening of about 40 to 90 meshes to the inch.

It does not seem to us that claim 1, standing alone, is patentable over the disclosures in the prior art, unless it be so held by reason of the defining of the sizes of the granules into which the resistant material is divided—40 to 90 meshes. Claim 3, standing alone, would not be patentable unless there be held to be invention in substituting alundum in unbonded form (the granular unbonded form being taught by Ellis as to other materials) for the compact alundum cup or diaphragm of Berry.

Claim 7 does not present any matter relating to the material which differentiates it from either numbers 1 or 3, nor do claims 2, 4, or 6.

The prior art teaches the use of materials in granular form, as a *form* adapted to make a successful resistant. It teaches the use of porous alundum as a satisfactory resistant *material*. To put the material with its already disclosed and known attributes into a form or forms also already disclosed and known appears to be rather a matter of mechanical skill than one of invention. It is true that the particular sizes—40 to 90 mesh granules—claimed by appellant are not specifically disclosed in the prior art, but the very fact that so wide a variance in size is allowed himself by claimant strongly indicates that size is not of the essence of the matter but is a factor likewise merely within the power of determination by those skilled in the art. *In re Iwan*, 17 App. D. C. 506, 95 O. G. 441.

In *In re Williams*, 17 C. C. P. A. (Patents) 718, 722, 392 O. G. 737, we said:

There is no invention in changing the size and proportion of a device or machine so long as the construction and mode of operation remain the same.

Numerous authorities were there cited.

Under the view of the case as to the nonpatentability of the alundum feature, there appears to be no necessity of analyzing the other and more truly mechanical elements. Suffice it to say that the modifications of the mechanical prior art disclosed in the references, do not appear to reach the plane of inventiveness.

[1] We think it is well settled that there is no patentable invention in selecting and assembling parts of prior mechanisms used in the same art where the result produced is nothing more (though it may be better) than the sum of the results due the individual elements. *In re Bayer*, 17 C. C. P. A. (Patents) 614, 390 O. G. 4; *in re Appelburg and Gulliver*, 17 C. C. P. A. (Patents) 820, 394 O. G. 7.

[2] We find no error in the decision of the Board of Patent Appeals and the same is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE BENNER AND WERKING

No. 2,591. Decided February 3, 1931

PATENTABILITY—STORAGE BATTERIES.

Claims for a storage battery *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Geo. H. Souther, Mr. L. Edward Flaherty, and *Mr. J. E. Hutchinson, jr.*, for Benner and Werking.

Mr. T. A. Hostetler for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the action of the Examiner in rejecting all of the claims of the application of appellants, which claims read as follows:

1. A storage cell or battery assembly for deferred use comprising dry active electrodes and desiccated separators placed between said electrodes.
2. A storage cell or battery assembly for deferred use comprising preformed active electrodes and desiccated, treated, wooden separators placed between said electrodes.
3. A storage battery adapted to be activated by addition of electrolyte and comprising active electrodes assembled with desiccated, treated wooden separators.
4. The invention according to claim 3, in which the battery is hermetically sealed.
5. A storage battery capable of rapid activation and comprising active electrodes assembled with desiccated, treated wooden separators characterized by operative electrical conductivity after about three hours' immersion in electrolyte.

The references relied on are as follows:

Carpenter, 1,468,259, September 18, 1923, 136–176; Holland et al., 1,329,181, January 27, 1920, 136–176; Handler, 1,546,379, July 21, 1925, 136–150*x*; Gasche, 1,478,708, December 25, 1923, 136–176.

The application of appellants relates to a combination consisting of dry positive and negative electrodes and desiccated separators between them, which has been charged, thoroughly dried and sealed before being shipped and stored in the usual manner. The assembly is ineffective in this dry state to function as a battery, but when it is put into service it is only necessary to pour into it the required electrolyte. The separators employed are wooden and are especially adapted to retain their effectiveness when in a thoroughly dry condition.

In its discussion of the references the Board of Appeals said:

The patent to Handler describes a separator made up of wood which is intended to be employed in a dry condition and as particularly pointed out it may be artificially dehydrated. Appellant argues that there is a patentable difference between dehydration and desiccation. We do not consider that this point is well taken. Appellant also argues that it is not clear that the plates are charged in the Handler patent but on page 2, line 17 is found the statement that the battery is ready for use "upon adding the electrolyte" which would indicate that the plates had been previously charged. Appellant also seals up the battery after reducing it to a thoroughly dry condition and Handler does not touch upon this point. It is common, however, to seal up batteries under similar conditions as shown in Carpenter. It is true that Carpenter does not refer to thoroughly drying the battery but it is stated that it is thoroughly drained. It is therefore held that there would be no invention in sealing up the battery of Handler and when this is done it is considered that there is no substantial difference over the battery of Handler in the battery claimed by appellant.

In the specification of the Handler reference there is found the following statement:

It is the object of the present invention to provide a separator which may be stored either by itself or in association with the metal battery element as referred to without the necessity of being kept moist but which may be caused, either by active dehydrating or simply allowing the separator to dry out so as to become dry; that is, its moisture is reduced to the minimum amount consistent with the humidity of the atmosphere in which it is placed. In other words, the condition which is assumed by the body when placed in the atmosphere and without being artificially moistened or wetted.

The specification further states, speaking of the wooden separators:

* * * It is unnecessary, however, to maintain them moist but they may be permitted to dry out or may be artificially dehydrated and then maintained in this dry condition until required for use.

The reason for the drying of the wooden separators, as stated in appellants' specification, is that without such drying they are very likely to become cracked and warped and thereby rendered useless; and also, without such drying, the porosity of the separators due to shrinkage is greatly diminished. Appellants contend that there is a patentable difference between dehydrating the wooden separators and desiccating them, and insists that the process of dehydration will still leave some moisture in the separators, but through the process of desiccation all of the moisture is removed therefrom.

According to Webster's Dictionary, "dehydrate" means:

to deprive, or to be free, of water or the elements of water; to render free from water.

The same authority defines the word "desiccate" as meaning:

to exhaust or remove the moisture from—dry thoroughly, especially to free from moisture with a view to preserving.

Funk & Wagnalls Standard Dictionary defines "dehydrate" as meaning:

I. To deprive of water; anhydrate. II. To suffer loss of water.

while the same authority defines "desiccate" as meaning:

I. To exhaust or remove the moisture from; dry thoroughly; especially, to free from moisture with a view to preserving; as, *desiccated* fish or beef. * * * II. To become dry (*de*, thoroughly, + *siccus*, dry.)

As will be noted from the quotation given, the Board of Appeals found that there was no patentable difference between dehydration and desiccation.

We think that both Handler and appellants had exactly the same thing in mind, namely, the removal of moisture from the wooden separators, and that a process of dehydration, as disclosed by Handler, if carried out completely, will result in the desiccation of the wooden separators claimed by appellant. It is this element of desiccation which appellants contend renders the claims allowable.

Claim 4 contains the additional element of hermetically sealing the battery after the elements set out in appellants' specification have been assembled. The Board of Appeals found that it is common to seal up batteries under similar conditions, as shown in the Carpenter reference. We agree with the board that there would be no invention in sealing up the battery of Handler, and that when this is done there is no substantial difference over the battery of Handler in the battery claimed by appellants.

The decision of the Board of Appeals is affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

Notices of Cancellation

U. S. PATENT OFFICE, *Washington, May 5, 1931.*

Salomon Bros., their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Charles J. Wouters, of 3120 Harrison Street, Oakland, Calif., to effect the cancellation of the trade-mark registration of Salomon Bros., of 15 Burling Slip, New York, N. Y., No. 103,363, dated March 30, 1915, and the notice of such proceeding sent by registered mail to the said Salomon Bros. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Salomon Bros., their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, May 11, 1931.*

Quaker Hat Co., Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Hodshon-Berg, Incorporated, Fifth Avenue and 57th Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Quaker Hat Co., Inc., of 64–70 West 30th Street, New York, N. Y., No. 244,585, dated July 24, 1928, and the notice of such proceeding sent by registered mail to the said Quaker Hat Co., Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Quaker Hat Co., Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 2, 1931

[VOL. 407. No. 1]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 301,453. INDIANA LIMESTONE COMPANY, Bedford, Ind., and New York, N. Y. Filed May 28, 1930.

ILCO SAKS RUSTIC BUFF

No claim being made to the exclusive use of the words "Saks Buff," apart from the mark as shown in the drawing. Applicant is the owner of registration No. 281,038.

For Building Stone as it Comes from the Quarry.

Claims use since May, 1926.

Ser. No. 301,456. INDIANA LIMESTONE COMPANY, Bedford, Ind., and New York, N. Y. Filed May 28, 1930.

ILCO SANDERS RUSTIC

No claim being made to the exclusive use of the word "Sanders," apart from the mark as shown in the drawing. Applicant is the owner of registration Number 281,038.

For Building Stone as it Comes from the Quarry.

Claims use since May, 1926.

Ser. No. 312,670. THE PHILADELPHIA AND READING COAL AND IRON COMPANY, Philadelphia, Pa. Filed Mar. 28, 1931.

STŌK-R-KŌL

The exclusive use of the word "Kol" is disclaimed apart from the mark as shown on the drawing.

For Coal.

Claims use since Mar. 20, 1931.

Ser. No. 313,329. CARLL & SON, Washington, D. C. Filed Apr. 14, 1931.

WHITE HOUSE

For Garden, Field, and Flower Seed.

Claims use since 1913.

Ser. No. 313,608. OLD BEN COAL CORPORATION, Chicago, Ill. Filed Apr. 21, 1931.

DIXIANA

For Coal.

Claims use since Apr. 1, 1931.

Ser. No. 313,657. CARL FREUDENBERG, INC., Boston, Mass. Filed Apr. 22, 1931.

Wotan

For Leather.

Claims use since Mar. 31, 1931.

CLASS 2

Receptacles

Ser. No. 312,536. SONOCO PRODUCTS COMPANY, Hartsville, S. C. Filed Mar. 25, 1931.

HYDROTEX
SONOCO

For Paper Cones or Tubes for Winding Threads and Yarns.
Claims use since Feb. 1, 1930.

Ser. No. 313,155. LEAH H. ROBINSON, Duluth, Minn. Filed Apr. 9, 1931.

PARK A BITE

For Fabric Lunch Bags.
Claims use since Apr. 4, 1931.

CLASS 3

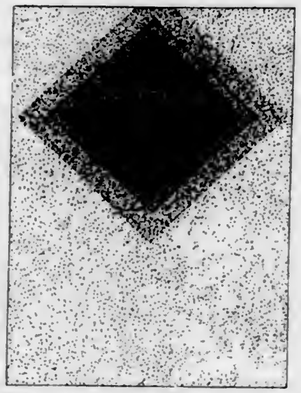
Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 311,375. DOROTHY GRAY, Bloomfield, N. J., and New York, N. Y. Filed Feb. 24, 1931.

Dorothy Gray

The trade-mark is a facsimile of the signature of applicant's predecessor in business.
For Toilet or Dressing Cases, Overnight Bags, and Fitted Hand Baggage.
Claims use since Mar. 16, 1920.

CLASS 4



Abrasive, Detergent, and Polishing Materials

Ser. No. 306,554. THE B-Y COMPANY, Providence, R. I. Filed Oct. 9, 1930.

In the drawing the parts lined with vertical parallel lines are red, and the parts lined with crossing vertical and horizontal lines are black. The words "Be-Wise" and the border lines are black.
For Washing Preparation for Silk and Rayon Fabrics and the Like.
Claims use since Aug. 20, 1930.

Ser. No. 307,432. FLORA HOLMES SHOEMAKER, doing business as The Frostilla Company, Elmira, N. Y. Filed Oct. 31, 1930.

The following color scheme is essential: The background is light grey; the area of the smallest diamond is black; the visible area of the middle diamond is dark blue and that of the largest diamond greyish blue. The lettering is in yellow or gold.
For Nonsaponaceous Beard-Softening Preparations Useful as an Aid Both During and After Shaving.
Claims use since Sept. 9, 1930.

Ser. No. 311,429. GABILLA, INCORPORATED, New York, N. Y. Filed Feb. 25, 1931.

MODA

For Toilet Soap.
Claims use since 1920.

Ser. No. 312,547. COLGATE-PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed Mar. 26, 1931.

Applicant makes no claim herein to the words "Crème à raser" or to the representation of the carton appearing on the drawing. The horizontal lining on the drawing denotes the color blue, the oblique lining denotes the color green and the cross-hatching denotes the color yellow.
For Shaving Cream.
Claims use since September, 1927.

Ser. No. 312,605. E. F. HOUGHTON & CO., Philadelphia, Pa. Filed Mar. 27, 1931.

GOLDEN
WONDER POWDER

No claim is made to the word "Powder" apart from the mark as shown.
For Compounds in Powdered Form for All Scouring Purposes.
Claims use since October, 1929.

Ser. No. 312,624. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed Mar. 27, 1931.

METSO

For Cleansing Compound Containing Silicate of Soda and Especially Useful for Industrial Cleaning of Food Containers, Metals, Glass, Ceramics, Textiles, and the Like.
Claims use since Oct. 10, 1930.

Ser. No. 312,780. WILLIAM T. VASSILATOS, doing business as The Crystal Shoe Polish Manufacturing Co., Chicago, Ill. Filed Mar. 31, 1931.

CRYSTAL
THE CRYSTAL SHOE POLISH AND DRESSING CO.

For Leather Dressings and Polishes for Shoes.
Claims use since Sept. 23, 1929.

Ser. No. 313,542. THOMAS HEDLEY & COMPANY, LIMITED, Newcastle-on-Tyne, England. Filed Apr. 20, 1931.

SUPEROL

For Toilet Soap.
Claims use since November, 1927.

Ser. No. 313,655. THE J. B. FORD COMPANY, Wyandotte, Mich. Filed Apr. 22, 1931.

Wyandotte
H-D-C

For Cleaning, Cleansing, and Detergent Materials Particularly Adapted for Kitchen and Family Use.
Claims use since January, 1931.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 281,038. R. B. MIZRAHI, doing business as Laboratorium Mizrahi, Mexico City, Mexico. Filed Mar. 20, 1929.

For Medicinal Cream for Skin Treatment, Liquid, Powder, and Cream Dentifrice; Cold Cream, Vanishing Cream, Eau de Cologne, Toilet Water, Perfume, Brilliantine, Lip Stick, Rouge, Face and Talc Powder.
Claims use since Dec. 1, 1925.

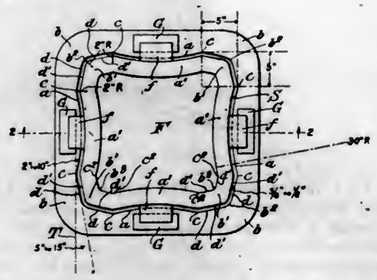
13,222.—*Title:* THE BEAUTY OF SEYMOUR TROY SHOES IS MORE THAN SKIN DEEP. For Shoes. SEYMOUR TROY & CO. INC., Brooklyn, N. Y. Published March 16, 1931.

REISSUES

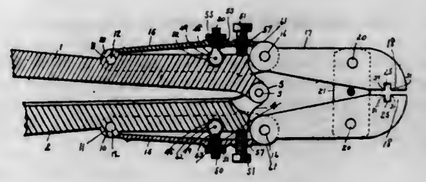


JUNE 2, 1931

18,083. BRAKE CONTROL. VINCENT BENDIX, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Original No. 1,656,263, dated Jan. 17, 1928, Serial No. 34,147, filed June 1, 1925. Application for reissue filed Apr. 11, 1929. Serial No. 354,430. 43 Claims. (Cl. 188—194.)

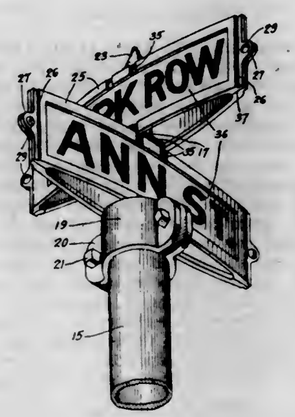
1. A vehicle having an axle and a wheel mounted for swivelling movement at the end of the axle, together with retarding means comprising, in combination with said parts, a drum rotating with the wheel, an expansible friction device within the drum having adjacent free ends, a floating member having a cam part between said free ends and having another part movable in applying the brake toward the swivelling axis from an idle position spaced some distance from the swivelling axis, and means engaging the other part of said member for operating the retarding means.

18,084. INGOT MOLD TOP. EMIL GATHMANN, Baltimore, Md., assignor to The Gathmann Engineering Company, Baltimore, Md., a Corporation of Maryland. Original No. 1,621,402, dated Mar. 15, 1927, Serial No. 658,371, filed Aug. 20, 1923. Application for reissue filed Mar. 12, 1929. Serial No. 346,460. 3 Claims. (Cl. 22—147.)



1. A mold top for ingot molds having a chamber provided with four primary side walls of convex contour and four widened corners, each provided with three curved salients intervening between the adjacent primary side walls of the feeder.

18,085. JELLY PREPARATION. ALBERT LEO, Chicago, Ill. Original No. 1,629,716, dated May 24, 1927, Serial No. 60,687, filed Oct. 5, 1925. Application for reissue filed Dec. 24, 1928. Serial No. 328,307. 7 Claims. (Cl. 99—11.)

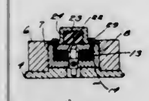


5. A jelly preparation comprising sugar having a coating formed thereon of a pectin containing substance and being in dry, granular form.

18,086. THREAD SWELLING TOOL. CHARLES F. ROBERTS, Utica, N. Y., assignor to Herbert S. Powell, Utica, N. Y. Original No. 1,762,562, dated June 10, 1930, Serial No. 303,089, filed Aug. 30, 1928. Application for reissue filed Mar. 16, 1931. Serial No. 524,418. 6 Claims. (Cl. 81—10.)

1. A thread swelling tool having cooperating jaws and means for actuating the same, said jaws being provided each on its work engaging face with a limited number of teeth materially spaced apart for penetration into the threads of an interposed bolt at spaced points to force the intervening portions of the bolt beyond the normal periphery thereof.

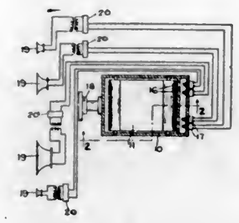
18,087. SIGN FRAME AND UPRIGHT. ABRAHAM SPRUNG, Brooklyn, and JOSEPH SPRUNG, New York, N. Y., assignors to Municipal Street Sign Co. Inc., New York, N. Y., a Corporation of New York. Original No. 1,529,752, dated Mar. 17, 1925, Serial No. 599,969, filed Nov. 10, 1922. Application for reissue filed Feb. 19, 1931. Serial No. 517,084. 10 Claims. (Cl. 40—145.)



9. A street sign comprising pairs of plates, frames for each pair of plates, said frames being outwardly convexed the central portion of adjacent sides of each pair of frames containing a recess, and an upright suited to enter into the mentioned recesses, said upright having a pair of substantially flat parallel surfaces contacting each pair of said recessed portions.

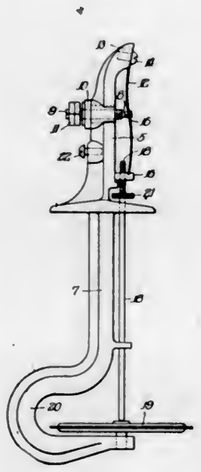
18,088. METHOD AND MEANS FOR WAVING HAIR. ELIAS WHITNEY BOYDEN, Spokane, Wash. Original No. 1,671,177, dated May 29, 1928, Serial No. 125,466, filed July 28, 1926. Renewed Apr. 4, 1928. Application for reissue filed Dec. 17, 1929. Serial No. 414,833. 8 Claims. (Cl. 132—33.)

8. A hair waving device comprising a generally tubular drier having a bore therethrough and provided on its ends with heat insulating collar guards, a stick heater adapted for insertion in the bore of said drier, said heater having an enlargement limiting insertion of said heater to dispose the free end thereof substantially at the inner edge of the collar guard adjacent thereto.



18,089. PICK-UP. FRANK L. CAPPS, Milford, Conn., and HARRY A. SUMMERS, Brooklyn, N. Y., assignors to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Original No. 1,760,114, dated May 27, 1930, Serial No. 354,854, filed Apr. 13, 1929. Application for reissue filed Aug. 6, 1930. Serial No. 473,419. 19 Claims. (Cl. 179—100.41.)

1. In an electric phonograph pick-up, an armature mounted for rocking movement about a pivot, a flexible spring member projecting from said armature and damping means enclosing the end of said spring.

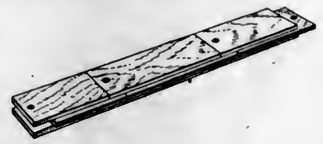


18,090. METHOD OF AND APPARATUS FOR RECORDING AND REPRODUCING SOUND. BERNARD KWARTIN, Brooklyn, N. Y. Original No. 1,781,550, dated Nov. 11, 1930, Serial No. 237,322, filed Dec. 2, 1927. Application for reissue filed Jan. 8, 1931. Serial No. 507,510. 8 Claims. (Cl. 179—1003.)

1. An apparatus for photographically producing upon a photographic film a plurality of individual records of sounds of distinctly different pitch characteristics, said apparatus comprising a casing, means for moving the film through the casing, a light enclosing chamber arranged to one side of and extending transversely of said film, said chamber being provided with a plurality of transversely spaced slots, a plurality of light sources within said chamber respectively located behind said slots for projecting light rays therethrough, said light sources being independently responsive to different electrical variations corresponding to sound vibrations of different pitch for recording the different sounds upon the film, and a plurality of sound responsive devices having dia-

phragms of varying mass and size each selectively responsive to sounds of different pitch for producing said different electrical variations.

18,091. CIRCUIT BREAKER AND CLOSER. FERDINAND A. PFEIFER, Springfield, Ohio, assignor of forty-nine per cent to Ellsworth Craig, Springfield, Ohio. Original No. 1,676,155, dated July 3, 1928, Serial No. 175,684, filed Mar. 16, 1927. Application for reissue filed Jan. 22, 1930. Serial No. 422,666. 20 Claims. (Cl. 200—140.)

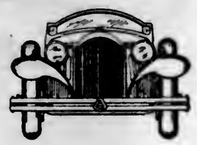


20. In a circuit breaker, the combination of a contact member, a conducting element disposed adjacent thereto and having a contact member thereon adapted to have cooperative relation with said first named contact member, said conducting element being disposed in a compound curved shape, said second named contact member being substantially at the dead center thereof, whereby any movement of said conducting element moves said second named contact member with respect to said first named contact member.

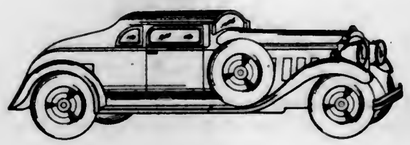
DESIGNS

JUNE 2, 1931

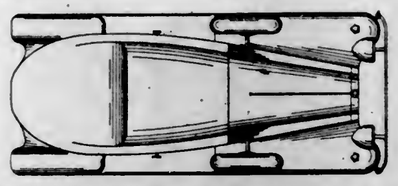
84,271. FLOORING UNIT. JAMES H. BODEN, Athens, Ohio. Filed Feb. 24, 1930. Serial No. 34,628. Term of patent 14 years.



The ornamental design for a flooring unit, as shown.



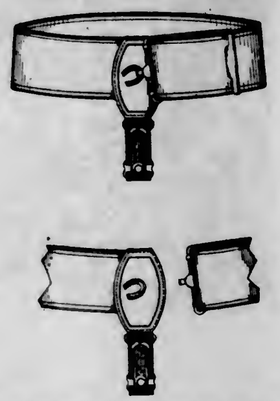
84,272. CHRISTMAS TREE ORNAMENT. PAUL BOEHLAND, Milwaukee, Wis. Filed Mar. 5, 1931. Serial No. 88,951. Term of patent 14 years.



The ornamental design for a Christmas tree ornament as shown.

84,273. AUTOMOBILE. TRUMAN H. BOWMAN, St. Louis, Mo. Filed Oct. 8, 1930. Serial No. 37,183. Term of patent 3½ years.

84,273—Continued.



The ornamental design for an automobile, as shown.

84,274. WEIGHING SCALE. WILLIAM BROOKE, New York, N. Y., assignor to Nathan Frankel, New York, N. Y. Filed Oct. 18, 1930. Serial No. 37,312. Term of patent 3½ years.

The ornamental design for a weighing scale, substantially as shown and described.

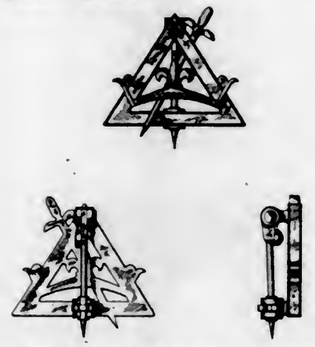
84,275. GARTER. TILLMAN CAHN, Elkins Park, Pa., assignor to Pioneer Suspender Company, a Corporation of Pennsylvania. Filed Apr. 17, 1931. Serial No. 39,517. Term of patent 14 years.

The ornamental design for a garter as shown and described.

84,276. CASING FOR FRUIT VENDING MACHINE. WELLS H. CLAUSSEN, Seattle, Wash., assignor to Apple Vender Co., Seattle, Wash., a Corporation of Washington. Filed Feb. 24, 1931. Serial No. 38,801. Term of patent 14 years.

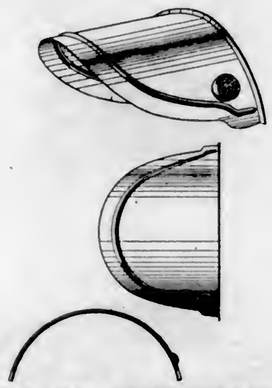
The ornamental design for a casing for fruit vending machine, as shown and described.

84,277. TEXTILE FABRIC. JOSEPH C. EARNSHAW, Philadelphia, Pa., assignor to Moss Rose Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 1, 1930. Serial No. 37,853. Term of patent 7 years.



The ornamental design for a textile fabric, substantially as shown

84,278. JAR. ALF C. EBBESEN, Chicago, Ill., assignor to Orange-Crush Company, Chicago, Ill. Filed Feb. 28, 1931. Serial No. 38,884. Term of patent 14 years.



The ornamental design for a jar as shown and described.

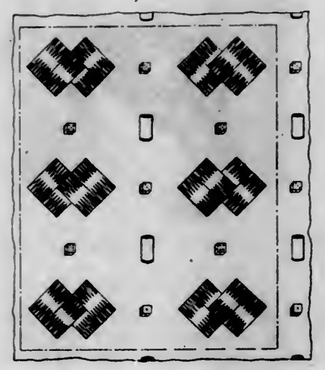
84,279. SODALITY PIN. GERALD A. FITZGIBBONS, St. Louis, Mo. Filed Mar. 10, 1931. Serial No. 39,014. Term of patent 3½ years.

The ornamental design for a sodality pin, as shown.

84,280. AUTOMOBILE HEAD LAMP VISOR. AUGUSTUS J. FRAME, Columbus, Ohio, assignor to Columbus Auto Brass Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 1, 1930. Serial No. 37,101. Term of patent 14 years.

The ornamental design for an automobile head lamp visor as shown.

84,281. WREATH. JOHN FREI, Jr., Chicago, Ill. Filed Nov. 20, 1930. Serial No. 37,729. Term of patent 7 years.



The ornamental design for a wreath as shown.

84,282. WREATH. JOHN FREI, Jr., Chicago, Ill. Filed Nov. 20, 1930. Serial No. 37,730. Term of patent 7 years.

The ornamental design for a wreath as shown.

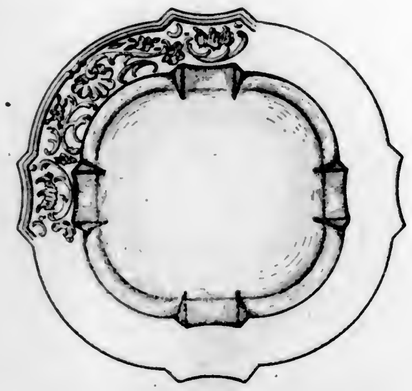
84,283. TEXTILE FABRIC OR SIMILAR ARTICLE. PERCEVAL S. GAULT, New York, N. Y. Filed Mar. 25, 1931. Serial No. 39,289. Term of patent 7 years.

The ornamental design for a textile fabric or similar article substantially as shown and described.

84,284. FINGER RING OR ARTICLE OF SIMILAR NATURE. EDWARD J. GROSS, New Rochelle, N. Y. Filed Apr. 17, 1931. Serial No. 39,518. Term of patent 7 years.

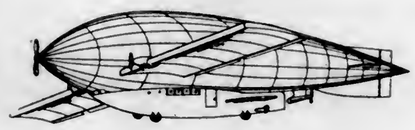
The ornamental design for a finger ring or article of similar nature, as shown.

84,285. FINGER RING OR ARTICLE OF SIMILAR NATURE. EDWARD J. GROSS, New Rochelle, N. Y. Filed Apr. 17, 1931. Serial No. 39,514. Term of patent 7 years.



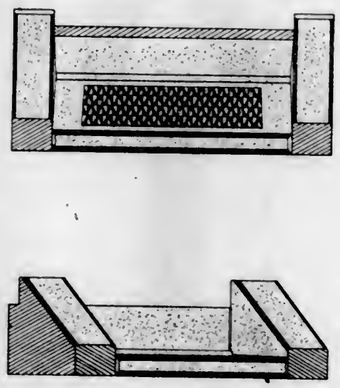
The ornamental design for a finger ring or article of similar nature, as shown.

84,286. FINGER RING OR ARTICLE OF SIMILAR NATURE. EDWARD J. GROSS, New Rochelle, N. Y. Filed Apr. 17, 1931. Serial No. 39,515. Term of patent 7 years.



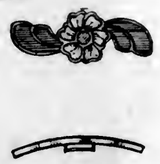
The ornamental design for a finger ring or article of similar nature, as shown.

84,287. PLATE OR SIMILAR ARTICLE. GEORG HEDLER, Arzberg, Germany. Filed Apr. 8, 1931. Serial No. 39,400. Term of patent 7 years.



The ornamental design for a plate or similar article as shown and described.

84,288. DIRIGIBLE AIRPLANE. JOHN W. S. HODGDON, Long Beach, Calif. Filed Oct. 14, 1929. Serial No. 33,029. Term of patent 3½ years.



The ornamental design for a dirigible airplane as shown.

84,289. SECTIONAL LAWN STEP. CHARLES A. JOHNSON, Duluth, Minn. Filed Feb. 12, 1931. Serial No. 38,628. Term of patent 14 years.

The ornamental design for a sectional lawn step, as shown.

84,290. SHOE ORNAMENT. CLIFFORD G. KING, Barrington, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Apr. 10, 1931. Serial No. 39,421. Term of patent 3½ years.

The ornamental design for a shoe ornament as shown.

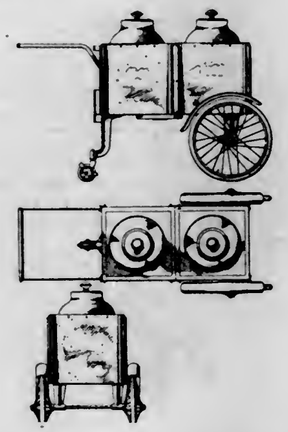
84,291. CHAIR. HENRY D. LEE, Berkeley, Calif., assignor to The Ashby Furniture Company, Incorporated, Berkeley, Calif., a Corporation of California. Filed Apr. 4, 1931. Serial No. 39,364. Term of patent 7 years.

The ornamental design for a chair, substantially as shown.

84,292. SOFA. HENRY D. LEE, Berkeley, Calif., assignor to The Ashby Furniture Company, Incorporated, Berkeley, Calif., a Corporation of California. Filed Apr. 4, 1931. Serial No. 39,365. Term of patent 7 years.

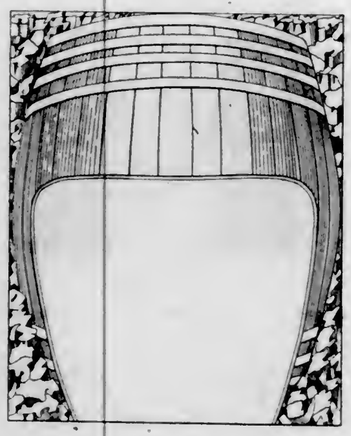
The ornamental design for a sofa, substantially as shown.

84,293. DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 2, 1931. Serial No. 38,902. Term of patent 8½ years.



The ornamental design for a dress substantially as shown.

84,294. DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 2, 1931. Serial No. 38,904. Term of patent 3½ years.



The ornamental design for a dress substantially as shown.

84,295. PORTABLE VENDER. WILLIAM S. LYNN, Knoxville, Tenn., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Sept. 10, 1930. Serial No. 36,923. Term of patent 14 years.

The ornamental design for a portable vender as shown.

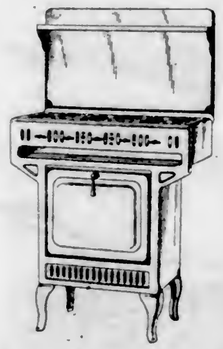
84,296. FRONT PANEL FOR A THIRST STATION. EDWIN MACK MORRIS, Galveston, Tex., assignor to Triple "XXX" Company, a Corporation of Texas. Filed Dec. 17, 1929. Serial No. 33,820. Term of patent 7 years.

The ornamental design for a front panel for a thirst station as shown and described.

84,297. BUCKLE. ARTHUR WILLIAM NAUS, New York, N. Y. Filed Mar. 9, 1931. Serial No. 39,011. Term of patent 14 years.

The ornamental design for a buckle as shown and described.

84,298. PENCIL SHARPENER. ANTON JOSEPH PALME, South Orange, N. J., assignor, by mesne assignments, to Eagle Pencil Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 11, 1930. Serial No. 37,243. Term of patent 14 years.



The ornamental design for a pencil sharpener, substantially as shown and described.

84,299. BRACKET FOR GAME TABLES. FRANK E. PAVELKA and HAROLD W. THOMPSON, San Antonio, Tex. Filed Mar. 13, 1931. Serial No. 39,078. Term of patent 14 years.

The ornamental design for a bracket for game tables as shown.

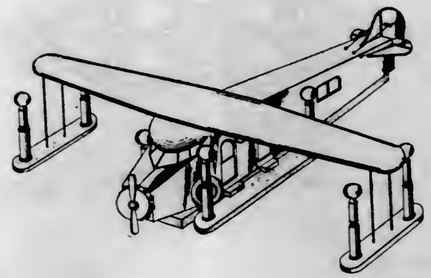
84,300. STOVE. HERBERT M. REEVES, Ironton, Ohio, assignor to Continental Stove Corporation, Ironton, Ohio. Filed Oct. 7, 1930. Serial No. 37,163. Term of patent 7 years.

The ornamental design for a stove, as shown.

84,301. LAMP. ALEXANDER RIMBERG, Brooklyn, N. Y. Filed Mar. 27, 1931. Serial No. 39,265. Term of patent 3½ years.

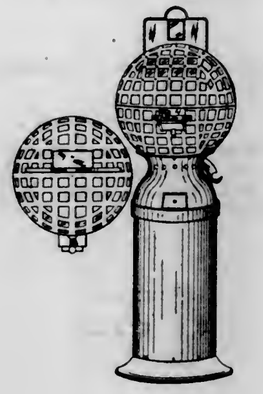
The ornamental design for a lamp as shown and described.

84,302. TEXTILE FABRIC. MATTHEW W. RYAN, Freeport, N. Y., assignor to Matthew W. Ryan Sons & Co., Inc., New York, N. Y. Filed Jan. 6, 1931. Serial No. 38,209. Term of patent 3½ years.



The ornamental design for a textile fabric as shown.

84,303. NECKLACE. JULES SCHWAB, New York, N. Y. Filed Apr. 3, 1931. Serial No. 39,359. Term of patent 3½ years.

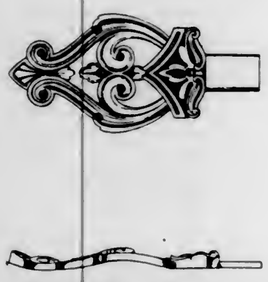


The ornamental design for a necklace, as shown.

84,304. FILLING STATION. JOHN L. SMITH, Shreveport, La. Filed Oct. 7, 1930. Serial No. 37,168. Term of patent 14 years.

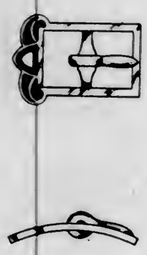
The ornamental design for a filling station, as shown.

84,305. CASING FOR A GOLF BALL PAINTING MACHINE. RALPH C. SMITH, Los Angeles, Calif. Filed Feb. 13, 1931. Serial No. 38,638. Term of patent 14 years.



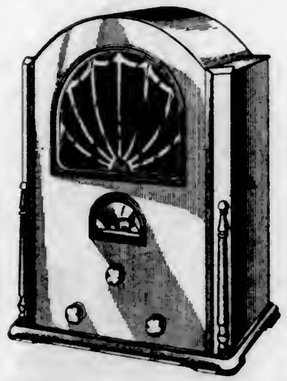
The ornamental design for a casing for a golf ball painting machine substantially as shown.

84,306. CENTER ORNAMENT FOR DRAPERY RODS OR THE LIKE. WALTER EDWARD SMITH, Providence, R. I., assignor to Kenney Manufacturing Company, Cranston, R. I., a Corporation of Rhode Island. Filed Mar. 25, 1931. Serial No. 39,236. Term of patent 7 years.



The ornamental design for a center ornament for drapery rods or the like, as shown.

84,307. END ORNAMENT FOR DRAPERY RODS OR THE LIKE. WALTER EDWARD SMITH, Providence, R. I., assignor to Kenney Manufacturing Company, Cranston, R. I., a Corporation of Rhode Island. Filed Mar. 25, 1931. Serial No. 39,237. Term of patent 7 years.



The ornamental design for an end ornament for drapery rods or the like, as shown.

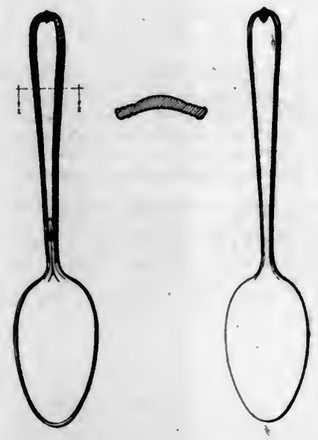
84,308. SHOE BUCKLE. WALTER EDWARD SMITH, Warwick Downs, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Apr. 6, 1931. Serial No. 39,383. Term of patent 7 years.

The ornamental design for a shoe buckle as shown.

84,309. RADIOCABINET. GERTRUDE E. THOMPSON, Elgin, Ill., assignor to Van Sicklen Corporation, Elgin, Ill., a Corporation of Delaware. Filed Mar. 26, 1931. Serial No. 39,254. Term of patent 3½ years.

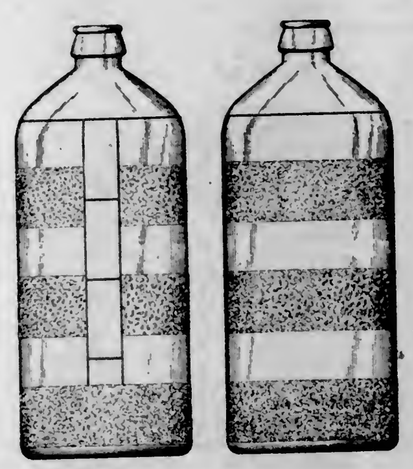
The ornamental design for a radiocabinet substantially as shown and described.

84,310. ELECTRIC LAMP. ROBERT TUCKER, Jamaica Plain, Mass. Filed Apr. 14, 1931. Serial No. 39,473. Term of patent 14 years.



The ornamental design for an electric lamp as shown.

84,311. SHOE ORNAMENT. HERBERT G. WHITEHOUSE, Newark, N. J., assignor to The Riker Company, a Corporation of New Jersey. Filed Mar. 14, 1931. Serial No. 39,096. Term of patent 7 years.

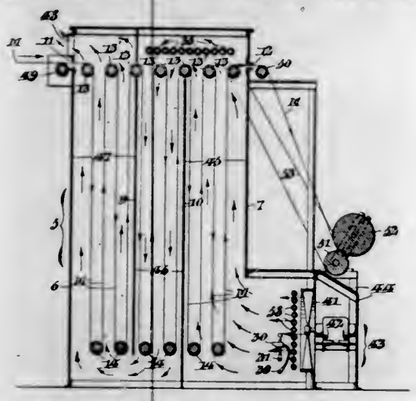


The ornamental design for a shoe ornament, as shown.

84,312. SPOON OR SIMILAR ARTICLE. FREDERICK RUSSELL WOODWARD, Attleboro, Mass., assignor to The Alvin Corporation, Providence, R. I. Filed Feb. 13, 1931. Serial No. 38,650. Term of patent 14 years.

The ornamental design for a spoon or similar article substantially as shown and described.

84,313. BOTTLE OR SIMILAR ARTICLE. WILLARD P. ZIMMERMAN, Muncie, Ind., assignor to Hemingray Glass Company, Muncie, Ind., a Corporation of Kentucky. Filed Mar. 6, 1931. Serial No. 38,979. Term of patent 14 years.

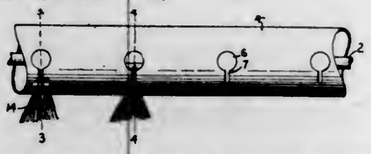


The ornamental design for a bottle or similar article substantially as shown and described.

PATENTS

GRANTED JUNE 2, 1931

1,807,580. COOLING AND CONDITIONING MACHINE. THOMAS ALLSOP, Philadelphia, Pa., assignor to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 24, 1929. Serial No. 334,843. 9 Claims. (Cl. 26—46.)

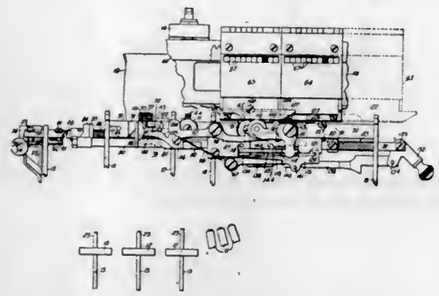


1. In a material cooling and conditioning equipment, the combination of an enclosure subdivided to define a tortuous course for the material treated, means inducing a flow of humidified atmospheric air through said enclosure in a direction alternatingly counter to and following that traveled by the material, heater means in the leading sections of the tortuous course with cooling means at the entrance for atmospheric air, and means automatically controlling the humidity and temperature conditions in the enclosure at a predetermined state irrespective of exterior atmospheric variations.

1,807,581. ELECTRICAL CONTACT TERMINAL. CHARLES FREDERICK WILLIAM BATES, Cleveland Heights, Ohio, assignor to The Ohio Instrument Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 5, 1928. Serial No. 317,491. 13 Claims. (Cl. 75—1.)

1. An electrical contact terminal containing 50% to 95% of metal from the group consisting of tungsten and molybdenum together with both copper and .2% to 5% silicon.

1,807,582. WARP BEAM. CARL D. BROWN, Hopedale, Mass. Filed Oct. 12, 1928. Serial No. 312,045. 8 Claims. (Cl. 242—125.)

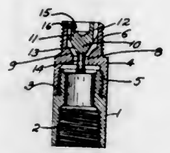


8. A warp beam comprising a cylindrical hollow metal barrel having a longitudinal series of apertures therethrough and a plurality of warp anchors bodily shiftable to cooperate with said apertures and unyieldingly engageable with the barrel in either of two positions and each adapted to have tied thereto a group of warp ends, the point of connection between each warp anchor and its group of warp ends lying outside the barrel periphery when the anchor is in one of the two positions and lying inside when the anchor is in the other position.

1,807,583. PRODUCTION OF ELEMENTAL SULPHUR FROM HYDROGEN SULPHIDE AND SULPHUR DIOXIDE. RAYMOND F. BACON, Bronxville, N. Y. Filed Apr. 13, 1927. Serial No. 183,437. 9 Claims. (Cl. 23—226.)

1. The improvement in the production of elemental sulphur by the reaction between hydrogen sulphide and sulphur dioxide characterized by subjecting the reacting gases to a sufficient pressure to substantially promote the reaction between hydrogen sulphide and sulphur dioxide with the formation of elemental sulphur.

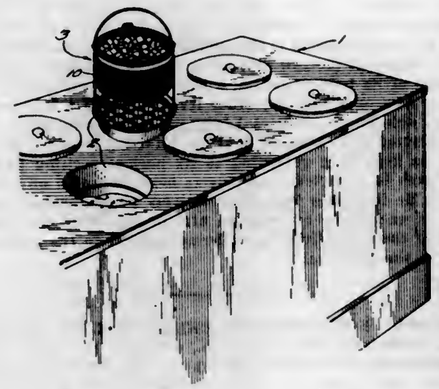
1,807,584. COMPUTING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed June 22, 1926. Serial No. 117,720. 18 Claims. (Cl. 235—59.)



1. In a computing machine, the combination of two totalizers, two actuators for performing like computations on said totalizers simultaneously, numeral keys common to both actuators, a reversing key for reversing the action of both actuators simultaneously in order to effect subtraction from both totalizers, a second key, and means controlled by said second key acting to reverse the action of one of the actuators and to make the other ineffective.

1,807,585. ANODE. JULIUS BECKER, Chicago, Ill. Filed May 13, 1927. Serial No. 191,278. 2 Claims. (Cl. 204—4.)

2. In combination, an electrolyte for the electro-deposition of chromium containing an aqueous solution of chromic acid and an anode comprising steel containing about 0.25% to about 15% of silicon.

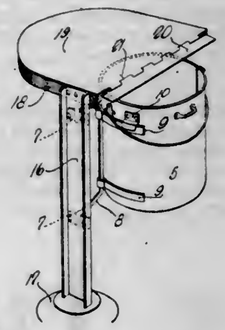


1,807,586. AUTOMATIC SHUT-OFF DEVICE. PETER C. CARLSTON, Salt Lake City, Utah. Filed Sept. 13, 1927. Serial No. 219,324. 1 Claim. (Cl. 284—18.)

An automatic shut-off device, comprising a first hollow body member, internal threads at one end thereof, the other end thereof being of reduced size and externally

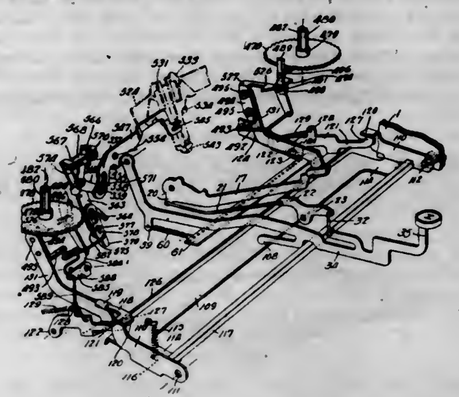
threaded, members extending radially across the bore of said other end, a second body member, also substantially cylindrical, internal threads in one end of said second body member adapted to engage the external threads on the first body member, a reduced externally threaded portion at the other end of said second body member, a radially extending wall across the bore of said second body member at the juncture of the two said portions thereof, there being an aperture formed therethrough and a frusto-conical valve seat formed therein, a valve comprising a atem adapted to extend through the said aperture and a frusto-conical portion adapted to contact said valve seat and a longitudinally grooved cylindrical body portion, said body portion of the valve having a slot therein, and a pin extending through the second body portion and into said slot.

1,807,587. SHARP FREEZING CONTAINER FOR ICE CREAM CABINETS. LLOYD G. COPEMAN, Flint, Mich., assignor to Copeman Laboratories Company, Flint, Mich., a Corporation of Michigan. Filed July 5, 1929. Serial No. 375,948. 4 Claims. (Cl. 62—111.)



1. A sharp freezing container for ice cream cabinets having vertically positioned receptacles, comprising a unit having a plurality of vertically spaced shelves, a plurality of vertical stays for connecting and positioning the shelves, and one or more ice cube trays positioned on said shelves, said vertical stays being so positioned as to permit horizontal removal of a tray from a shelf as the unit is raised from the ice cream cabinet receptacle.

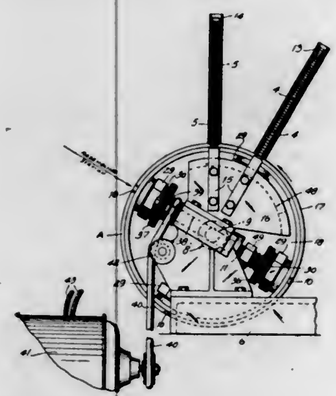
1,807,588. ELECTRICAL SOCKET. REUBEN ECKSTEIN, New York, N. Y. Filed Aug. 27, 1927. Serial No. 215,821. 2 Claims. (Cl. 173—358.)



1. In an electric socket, a bushing adapted to receive an electric element, a spring pressed contact for said element in said socket, an insulating disc mounted on said contact, said disc having a metallic film thereon making electrical connection with said contact and a metallic ring on the outer periphery of said disc making electrical contact with said film.

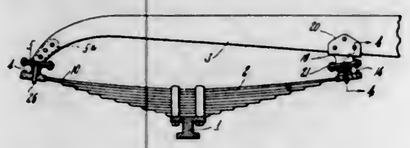
1,807,589. CONTAINER. AMASA EDMUNDS, Milwaukee, Wis. Filed Sept. 29, 1926. Serial No. 138,435. 4 Claims. (Cl. 45—75.)

1. A device of the character described, comprising a support, a table member, a bracket member movably mounted on the support, a pair of superimposed bracket arms carried by said bracket member, a container, and means carried by the container and readily detachably engageable over one of the arms to support the container therefrom whereby the container may be swung under or free of the table member, the table member forming a cover for the container when the container is swung under it.



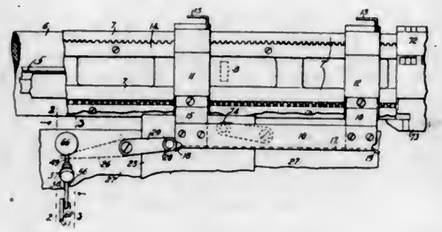
1,807,590. TYPEWRITING MACHINE. ALONZO B. ELY and EDWIN L. HARMON, Groton, N. Y., assignors to L C Smith & Corona Typewriters Inc., Syracuse, N. Y., a Corporation of New York. Original application filed Oct. 31, 1925, Serial No. 66,000. Divided and this application filed Oct. 8, 1927. Serial No. 224,903. 14 Claims. (Cl. 197—151.)

1. In a typewriting machine, a pair of ribbon spool rotating ratchet wheels adjacent opposite sides of the machine, means supporting said ratchet wheels to rotate about vertical axes, a pair of upright ratchet wheel driving pawls arranged to engage said ratchet wheels at their upper ends, means supporting said pawls intermediate their ends to vibrate fore and aft of the machine, an upright U-shaped rocking frame pivotally supported at



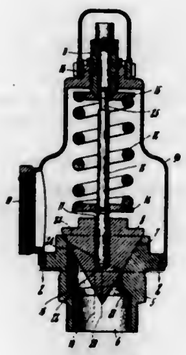
its lower end to vibrate about a horizontal axis extending transversely of the machine, links connected at their rear ends with the upright side arms of said rocking frame and connected at their forward ends with the lower ends of said pawls, said rocking frame having a pair of forwardly extending arms; a universal bar extending transversely of the machine forward of said rocking frame and having side arms extending forwardly therefrom pivotally supported at their forward ends to rock about a horizontal axis extending transversely of the machine, said universal bar arms having laterally extending lugs engaging over the forwardly extending arms of the rocking frame; a spring normally urging the universal bar upwardly; a spring normally urging said rocking frame rearwardly; and key levers arranged to depress said universal bar.

1,807,591. MEANS FOR ASSEMBLING NUTS AND BRIDGE WASHERS ON VALVE STEMS. JOHN A. FLEISCHLI, Clayton, and JOSEPH M. KOUNTZMAN, St. Louis, Mo., assignors to Cupples Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 7, 1929. Serial No. 384,100. 9 Claims. (Cl. 29—84.)



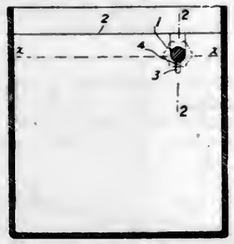
1. In an apparatus for applying nuts and bridge washers to the threaded valve stems of pneumatic tubes, an assembling station where said parts are assembled, delivery stations provided with a holder for the nuts, and a holder for the bridge washers, a carrier whereby the nuts and bridge washers are transferred from said holders to said assembling station, and driving means whereby said nuts are rotated to receive the valve stems at said assembling station.

1,807,592. MOTOR VEHICLE SUSPENSION. WILLIAM D. HARPER, Wellesley, Mass. Filed Jan. 11, 1928. Serial No. 245,924. 8 Claims. (Cl. 267—54.)



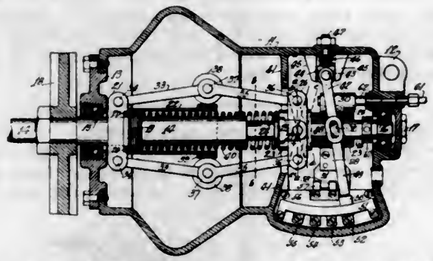
1. In a vehicle, an axle, a leaf spring supported by said axle with its ends extending to front and rear of the axle, a frame member, a coupling between one end of said spring and the frame member including a ball and cups embracing said ball and secured, respectively to the spring and the frame member, said cups being formed to embrace the ball at front and rear closely enough to prevent its rolling in those directions, while having open spaces at the sides of the ball which permit it to roll transversely.

1,807,593. COMPUTING MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed July 14, 1927. Serial No. 205,749. 2 Claims. (Cl. 235—59.)



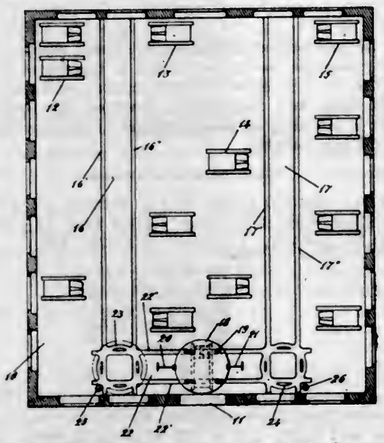
2. In a combined typewriting and calculating machine which includes a platen-carriage and a totalizer-truck connected together, and in which a set of numeral keys is a common feature of both the writing mechanism and the calculating mechanism, and the calculating mechanism of which includes a universal bar which is worked by means set in action by those keys whenever calculating is being done and which is movable on a pivotal axis, the combination of a rail attached to the totalizer-truck, a rail-actuated lever on which the rail acts when it is in a predetermined section of its path of travel, a bar-shifting lever having a power arm on which the other lever acts and a load-arm which acts on the universal bar, and a retaining latch so constructed and arranged that by it the bar-shifting lever may be kept from returning to its normal position until the latch is retracted, these levers being mounted on axes which lie in planes that are relatively perpendicular, one arm of each lever crossing an arm of the other, and the axis of the bar-shifting lever being parallel to the pivotal axis of the universal bar.

1,807,594. NONVIBRATING RELIEF VALVE. FRANK H. HOPKINS, Arlington, Mass., assignor, by mesne assignments, to Consolidated Ashcroft Hancock Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 8, 1927. Serial No. 218,341. 7 Claims. (Cl. 137—53.)



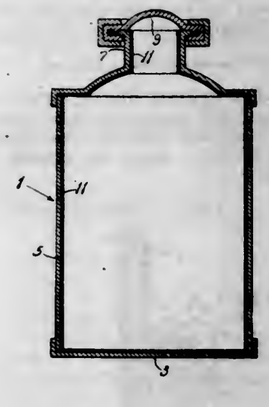
1. A relief valve comprising a fitting having a fluid passage and a tapering valve seat at one end of said passage eccentric thereto by an amount, less than the width thereof, such that the axis of the seat lies within the boundaries of the passage, combined with a loaded valve proper complemental to said seat.

1,807,595. ELECTRIC STORAGE BATTERY. WILLIAM E. KERSHAW, Gwynedd Valley, Pa. Filed Jan. 11, 1928. Serial No. 245,819. 3 Claims. (Cl. 136—162.)



1. A storage battery having cells and an intercell wall and provided below its electrolyte level and between its cells with a channel having an inverted pocket and through which electrolyte may flow and find its level in the different cells and having a single opening for filling electrolyte to the same level in all the cells.

1,807,596. SPEED CONTROL SYSTEM AND APPARATUS. MATTHEW H. LOUGHRIDGE, Bogota, N. J. Filed Apr. 18, 1927. Serial No. 184,778. 29 Claims. (Cl. 246—49.)



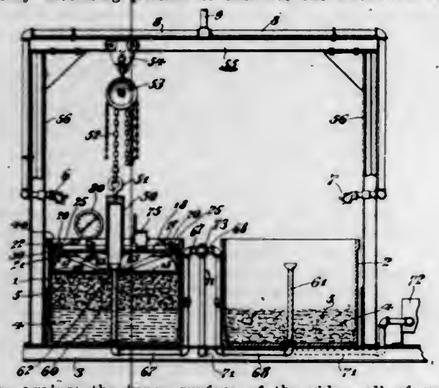
1. A centrifuge as described comprising a rotating shaft with pivotally connected arms, weights supported by said arms, a sliding cross-head on said shaft, said cross-head connected with said weights through a balanced connection and a detector device operated by said cross-head when said connection is unbalanced.

1,807,597. TRAVELING TURNTABLE EQUIPMENT FOR GARAGES. GOTHARD LOWENSTEIN, Brooklyn, N. Y. Filed Dec. 7, 1927. Serial No. 238,406. 4 Claims. (Cl. 104—44.)

1. In a building for the purpose described, the combination with a storage floor, of a carrier comprising a vehicle supporting platform and supporting casters therefor, said supporting casters being adapted to carry said platform along a linear path and being also adapted to follow angular movements of said platform about its vertical axis, and sunken individual tracks in said floor for the supporting casters at each side of said platform, guiding said carrier along a predetermined path of travel, the depth of said tracks substantially corresponding to the vertical distance between the lower surfaces of said casters and the edge of said platform.

1,807,598. METHOD OF PACKAGING ETHER AND THE PRODUCT THEREOF. EDWARD MALLINCKRODT, Jr., St. Louis, and HENRY V. FARR and LAWRENCE P. HALL, Ferguson, Mo., assignors to Mallinckrodt Chemical Works, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 20, 1929. Serial No. 415,440. 16 Claims. (Cl. 23—240.)

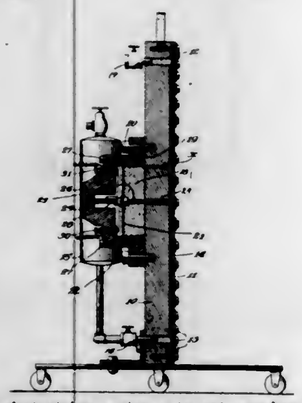
1. The package of ether comprising a can having its interior surface substantially covered with aluminum oxide, said can containing ether.



1,807,599. PROCESS OF PURIFYING ROSIN. ROBERT C. PALMER, JOHN L. BURDA, and ANTHONY F. OLIVER, Pensacola, Fla. Filed Dec. 26, 1929. Serial No. 416,750. 12 Claims. (Cl. 87—2.)

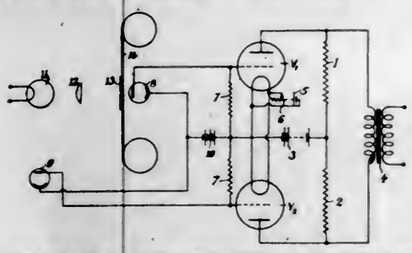
7. In the process of pre-purifying wood rosin as obtained in the solvent extraction of resinous wood after evaporation of the bulk of the solvent preliminary to a filtration of the rosin in solution through fuller's earth, the steps which comprise heating such rosin to remove terpenes, dissolving the residual rosin in a petroleum distillate, cooling the rosin solution to effect separation of pitchy matter, removing said pitchy matter, washing the remaining rosin solution with water to effect a further removal of impurities and recovering the pre-purified rosin in solution.

1,807,600. APPARATUS FOR IMPREGNATING FIBROUS MATERIAL WITH LIQUIDS. EDWIN S. PEARCE, Indianapolis, Ind. Filed June 16, 1927. Serial No. 199,229. 8 Claims. (Cl. 91—13.)



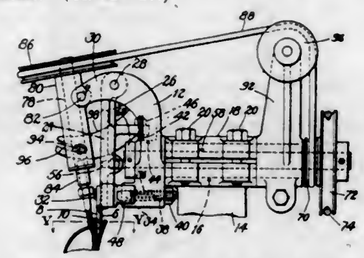
1. In apparatus of the character described, the combination of a receptacle adapted to receive a liquid and fibrous material to be impregnated by the said liquid, a piston which is adapted to operate in the said receptacle, which piston is provided at its outer upper edge with an upwardly extending flexible flange-like portion, means for

exerting lateral outward pressure against the said upwardly extending portion to increase the friction of the



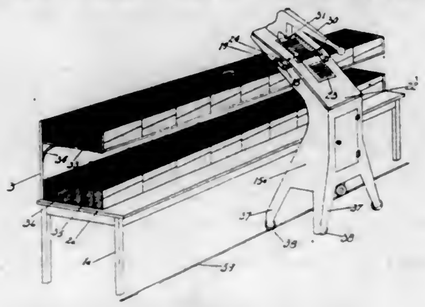
same against the inner surface of the side wall of said receptacle, means for releasing said pressure, and means for effecting evacuation of air from said receptacle.

1,807,601. SHOT STRING METER. PHILIP P. QUAYLE, Chevy Chase, Md., assignor to The Peters Cartridge Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 6, 1927. Serial No. 196,989. 18 Claims. (Cl. 73—51.)



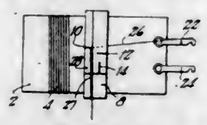
1. In a shot string meter a target member movable by a charge of shot impinging thereon, and means for registering the period of time said target member is so moved.

1,807,602. SOUND REPRODUCING SYSTEM. ARTHUR STANLEY RADFORD, Southall, and MICHAEL BOWMAN-MANIFOLD, Hayes, England, assignors to Victor Talking Machine Company, a Corporation of New Jersey. Filed Aug. 29, 1929, Serial No. 389,280, and in Great Britain Sept. 27, 1928. 8 Claims. (Cl. 179—100.3.)



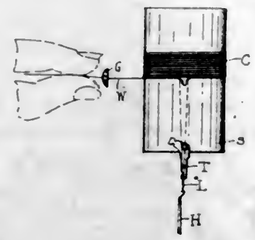
1. In apparatus for the reproduction of recorded sound, the combination of two thermionic valve amplifiers arranged in opposition and having a common output, two light sensitive devices one connected across the input of each amplifier, a common light source for said devices, and means for modulating the light passing from said source to one of said devices only.

1,807,603. STITCH-REMOVING MACHINE. LE ROY W. ROLLINS, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 2, 1926. Serial No. 152,250. 19 Claims. (Cl. 12—17.)



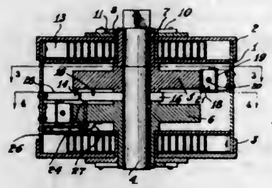
1. In a machine of the class described, in combination, a stitch removing tool adapted to engage the outer face of a welt, means for holding the welt against the tool, said means being constructed and arranged to co-operate with the tool to bend the welt thereby loosening the stitches therein, and means for rotating the tool to pull the stitches from the welt.

1,807,604. MANIFOLDING APPARATUS. JOHN Q. SHERMAN and ALBERT W. METZNER, Dayton, Ohio; said Metzner assignor to said John Q. Sherman. Filed Nov. 23, 1927. Serial No. 235,262. 7 Claims. (Cl. 282—1.)



1. In combination with a record system support, a manifolding machine movably mounted to transverse the space occupied by the records on the support, and means associated with said manifolding machine for securing together a plurality of sheets issuing in registry from said manifolding machine.

1,807,605. RADIO COIL. ROY F. SICKLES and FRANK W. SICKLES, Springfield, Mass. Filed Sept. 19, 1929. Serial No. 393,787. 7 Claims. (Cl. 175—359.)

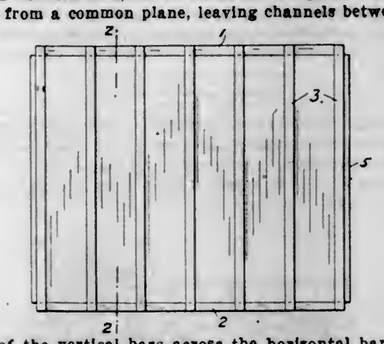


1. An inductance comprising in combination, a support, a spacing tape thereon having an end provided with entrance and outlet slits, a coil winding thereon having its ends extending through said slits and beneath parts of said tape whereby the coil is anchored.

1,807,606. RADIO COIL WINDING. ROY F. SICKLES and FRANK W. SICKLES, Springfield, Mass. Filed Sept. 19, 1929. Serial No. 393,788. 4 Claims. (Cl. 175—359.)

1. A support for a tapped inductance comprising in combination, a supporting tube having an opening in the side wall thereof, said opening being formed by a combined loop-slot and hook opening, said loop-slot having a side extending circumferentially of the tube and the hook opening having sides which extend angularly from said slot and longitudinally of said tube.

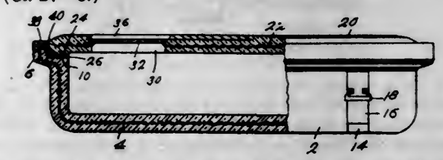
1,807,607. DOORCHECK. HENRY SMITH, London, England, assignor to Manhattan Electrical Supply Company, Inc., Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 4, 1927. Serial No. 210,618. 11 Claims. (Cl. 16—65.)



1. In a check for an oscillating body, a shaft rotatable responsive to oscillation of said body, a pair of friction brakes comprising drums associated with said shaft, means mounted on said drums cooperating with means mounted on said shaft for causing one of said brakes to retard rotation of said shaft in only one direction for a given portion of its travel, and means for causing the other of said brakes to retard rotation of said shaft in the opposite direction only for a portion of its rotation.

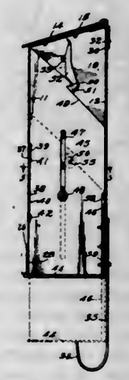
1,807,608. METHOD OF PREPARING A CALCIUM-CARBOHYDRATE COMPOUND. ERNST STERN, Berlin-Charlottenburg, Germany. Filed Oct. 2, 1926, Serial No. 139,233, and in Germany Oct. 12, 1925. 4 Claims. (Cl. 260—10.)

1. The method of producing a substantially soluble calcium compound of agreeable taste, comprising causing calcium hydroxide to act at a moderate temperature on a carbohydrate in the presence of water, gradually concentrating the mixture, finally drying in vacuo and adding an acid salt for neutralization.



1,807,609. SEPARATOR AND SPACER FOR STORAGE BATTERIES. CHARLES W. TERRY, Detroit, Mich. Filed Oct. 18, 1927. Serial No. 226,855. 1 Claim. (Cl. 136—145.)

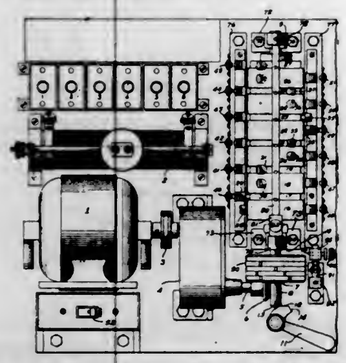
A storage battery separator and spacer comprising a grating consisting of horizontal top and bottom bars and spaced vertical bars, the two sets of bars projecting oppositely from a common plane, leaving channels between the



ends of the vertical bars across the horizontal bars, and a panel of porous material lying between the horizontal bars and against the face of the vertical bars.

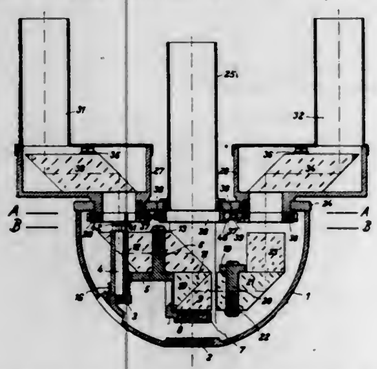
1,807,610. BURIAL CASKET. SAMUEL H. WILLIAMS and JOSEPH HENRY WILLIAMS, North Kansas City, Mo. Filed June 6, 1927. Serial No. 196,931. 2 Claims. (Cl. 27—8.)

1. A glass gasket consisting of a hollow body having an offset with vertical and horizontal faces of approximately equal dimensions and extending around in the upper portion of said body, said offset being of right-angular configuration in cross section and having a channel extending around in its vertical face, parallel ribs extending around upon the horizontal face of said offset, a lid adapted to fit within the offset and having a vertical margin paralleling the vertical face of said offset, said margin having a channel which registers with the first-mentioned channel when the lid is in place in the offset, and parallel grooves extending around in the underside of said lid and adapted to receive the ribs in the offset, said lid and grooves being of such size as to leave an intervening space of uniform and substantial width between the lid and the faces of the offset for the reception of suitable sealing material.



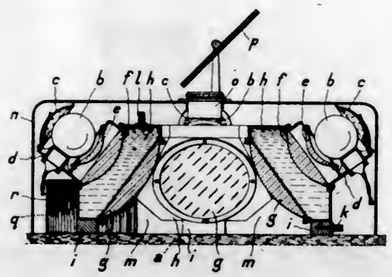
1,807,611. MAIL BOX. ANDREW ZAPART, Brooklyn, N. Y. Filed May 27, 1929. Serial No. 366,203. 5 Claims. (Cl. 232—45.)

1. A mail box comprising an outer receptacle, an inner receptacle, said inner receptacle being adapted for up-



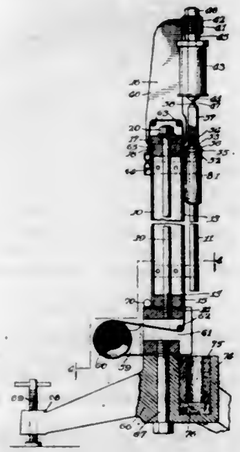
right shifting movement within said outer receptacle, and locking means between said two receptacles automatically operable on upward shifting of said inner receptacle within said outer receptacle for interlocking the two receptacles.

1,807,612. ELEVATOR DISPATCHING SYSTEM. CYRUS WHITE BASSETT, Maplewood, N. J., assignor to Elevator Supplies Company, Inc., Hoboken, N. J., a Corporation of New Jersey. Filed Sept. 9, 1925. Serial No. 55,249. 9 Claims. (Cl. 200—27.)



1. In a circuit controller, the combination of a shaft, means to rotate said shaft at different constant speeds, a plurality of discs mounted on said shaft, pins projecting from said discs, contacts arranged to be closed under the control of said pins, and means for regulating the position of said pins relative to said contacts, comprising an index wheel mounted on said shaft and having rows of equally spaced indentations and means whereby adjacent pins may be aligned in a desired position.

1,807,613. MICROSCOPE TUBE. WALTHER BAUERSFELD and MAX HÜBSCHMANN, Jena, Germany, assighors to the Firm: Carl Zeiss, Jena, Germany. Filed June 10, 1929, Serial No. 369,775, and in Germany June 16, 1928. 3 Claims. (Cl. 88—39.)

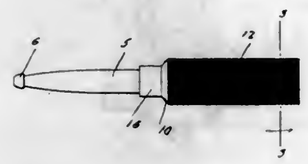


1. A microscope tube containing a housing body having an aperture for the insertion of an objective, one monocular and two binocular eyepiece tubes, of the three eyepiece tubes at least one being rigidly and at least one movably connected with the casing, and a ray dividing system comprising one light entrance surface and two light exit surfaces, the said system being pivotally mounted in the casing to turn out of an operative position into an inoperative one, in the operative position the said light entrance surface being situated behind the said aperture and the said two light exit surfaces in front of the said two binocular eyepiece tubes.

1,807,614. APPARATUS FOR EPISCOPIC PROJECTION. WALTHER BAUERSFELD and BRUNO GERSTENBERGER, Jena, Germany, assignors to the Firm of Carl Zeiss, Jena, Germany. Filed June 28, 1929, Serial No. 374,435, and in Germany June 29, 1928. 4 Claims. (Cl. 88—24.)

1. An apparatus for episcopic projection, containing a projecting objective, a plurality of sources of light arranged in a circle round the said objective, a plurality of condenser systems, the axes of these condenser systems being obliquely directed inward to the spot on which the object to be projected is to be placed, the said condenser systems being adapted to receive the rays emitted by one of the sources of light and to reflect them on the said spot, and, disposed between the sources of light and the said spot, a circular chamber adapted to hold cooling liquid, the said chamber being provided with openings permitting the rays coming from the sources of light to pass on to the said spot.

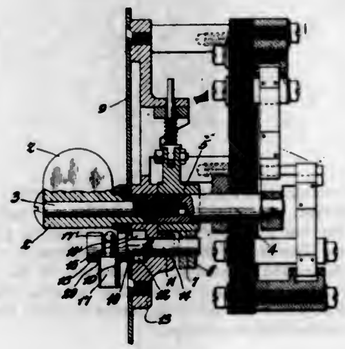
1,807,615. EDUCATIONAL APPARATUS. LEO BEHR, Ithaca, N. Y. Filed Dec. 23, 1926. Serial No. 156,564. 22 Claims. (Cl. 73—51.)



8. In a device of the class described, a pair of spaced vertical conductors, a drop, means to support the drop and release it in a position to fall alongside the conductors, and means for creating a high potential difference between the conductors at equal intervals of time comprising a transformer, means connecting the secondary with the vertical conductors, a condenser, a source of alternating current and means for alternately charging the condenser and discharging it through the primary of the transformer including a synchronous motor, a switch driven by the motor for closing the circuit on the condenser for a short interval adjacent to the peak of the base.

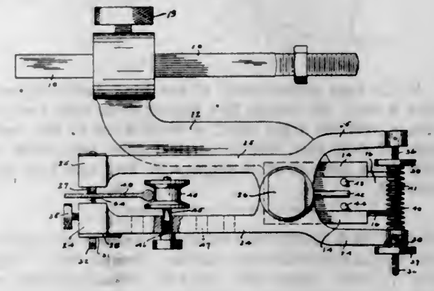
1,807,616. PROCESS OF MAKING CLEAR CHLORINATED RUBBER SOLUTIONS. NORRIS BOEHMER, Montclair, N. J. Filed Apr. 19, 1924. Serial No. 707,580. 7 Claims. (Cl. 134—17.)

1. A process which comprises washing chlorinated rubber to remove some of the water-soluble impurities therein, thereafter dissolving the partly purified chlorinated rubber in a solvent, and treating the solution thereof with quick lime.



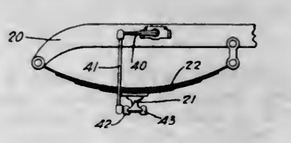
3. A clarified solution of chlorinated rubber in a mixture of about equal parts of aromatic hydrocarbon of the benzol series and acetone.

1,807,617. SMOKER'S MOUTHPIECE. FRED BOENIG and GEORGE H. DRESSER, Jamaica, N. Y. Filed May 13, 1929. Serial No. 362,792. 1 Claim. (Cl. 131—51.)



In a cigarette holder, a tubular member having an external annular shoulder between the ends thereof, an outer reticulated tubular guard receiving said annular shoulder and secured to the periphery thereof, an inner reticulated guard within said outer guard and secured on said tubular member in advance of said annular shoulder, a mouth piece detachably threaded into said tubular member and having means for supporting a cigarette, and a band of insulating material secured on said tubular member rearward of said annular shoulder and in contact therewith.

1,807,618. LOCKING MECHANISM. HERBERT L. BONE, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 5, 1930. Serial No. 473,269. 1 Claim. (Cl. 70—128.)

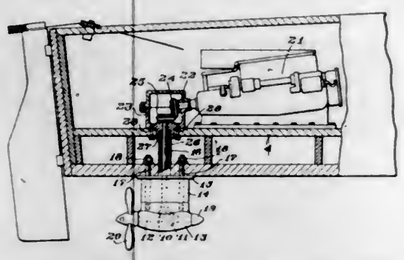


In apparatus for the control of railway traffic governing devices, a control unit comprising a manipulative control member, a pin insertible into said unit for preventing operation of said member, means requiring rotation of said pin to a given position before the latter can be withdrawn from said unit, an element engaged with said pin, means preventing rotation of said pin with respect to said element, and means cooperating with said element for blocking rotation of said pin with said element before said pin reaches the position permitting withdrawal.

1,807,619. FLOATING BULB EDGE GLASS TRIMMER. JOHN A. BOUSH, Vincennes, Ind., assignor to Blackford Window Glass Company, Vincennes, Ind., a Corporation of Indiana. Filed July 26, 1929. Serial No. 381,131. 11 Claims. (Cl. 33—42.)

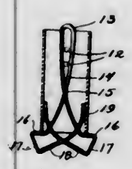
1. In a device for cutting glass, a cutter, means for holding the cutter, means for yieldingly pressing the cutter against the glass, supporting means, said holding and said pressing means being carried by said supporting means, said holding means being movably carried by the supporting means to permit travel thereof both laterally and normally of the glass, and spring means resisting lateral movement of said holding means away from said glass, and a stop limiting the travel of the holding means.

1,807,620. SHOCK ABSORBER. WILLIAM A. CHRYST, Dayton, Ohio, assignor to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 8, 1930. Serial No. 450,714. 12 Claims. (Cl. 188—88.)



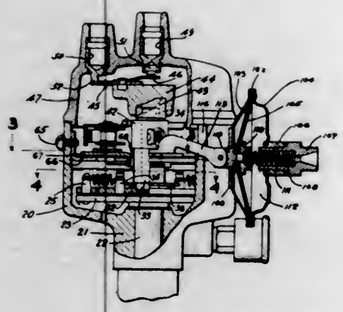
1. A double acting, hydraulic shock absorber comprising, in combination, a casing providing a cylinder; two pistons in said cylinder; a reciprocable piston operating member interposed between said pistons; and two elements connected between the two pistons, each element acting, in turn, as a fluid conduit and as a connecting link between the pistons, in response to movements of the piston operating member in both directions respectively.

1,807,621. SHOE STIFFENER AND PROCESS OF MANUFACTURE. ALBERT L. CLAPP, Danvers, Mass., assignor to Beckwith Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 12, 1923. Serial No. 662,224. 6 Claims. (Cl. 92—21.)



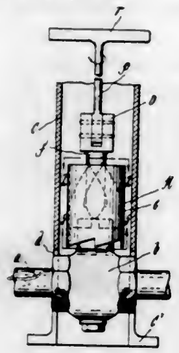
1. A shoe stiffener comprising a felt base including hair of original length, short hair, and insoluble gelatinous material fixed thereto, said base being saturated with thermoplastic material and cut and skived.

1,807,622. MOTOR BOAT DRIVE. CHARLES N. COLSTAD, Attleboro, Mass. Filed Aug. 1, 1930. Serial No. 472,405. 8 Claims. (Cl. 115—34.)



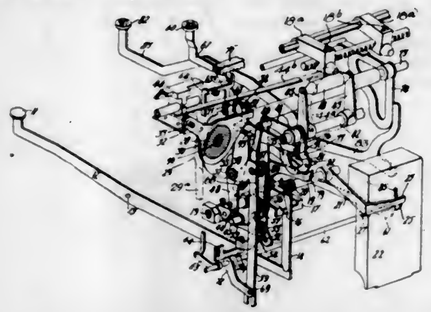
1. Motor boat construction of the kind described, comprising a keel, an engine bed spaced from said keel, an engine, a vertical drive shaft, a strut fixed to the under surface of said keel, and a vertical tube projecting upwardly from said strut through said keel and into said engine bed.

1,807,623. NECKTIE FASTENER. ALBERT G. DELMON and VENANCIO MARTINEZ LASTRA, Tampa, Fla. Filed Nov. 7, 1927, Serial No. 231,574. Renewed Dec. 27, 1930. 4 Claims. (Cl. 24—57.)



1. In a necktie holder, a tubular body member, adapted to be secured to a necktie, a spring loop having a bight portion engageable with a collar button and projecting above the tubular body, said loop having legs extending into said body and being slidable with respect to the body to project and retract said bight, and finger grips on the lower ends of said legs engageable with the bottom edge of the body upon the loop being retracted whereby to prevent accidental protraction of the loop.

1,807,624. IGNITION DEVICE. DALPHIN L. HITTLE, Anderson, Ind., assignor to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed Mar. 12, 1930. Serial No. 435,079. 10 Claims. (Cl. 123—117.)

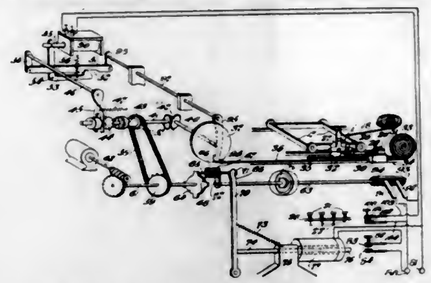


1. An ignition device for an internal combustion engine comprising, in combination, a circuit interrupter; a member for operating said interrupter; a stationary platform; a plate adjustably carried by the platform, said plate supporting the interrupter; ball-bearings interposed between the plate and platform; and fluid pressure controlled means connected to the plate for adjusting it relative to the interrupter operating member.

1,807,625. VALVE WRENCH. HENRICK J. HJORTH, Woburn, Mass. Filed May 28, 1930. Serial No. 456,482. 5 Claims. (Cl. 7—17.)

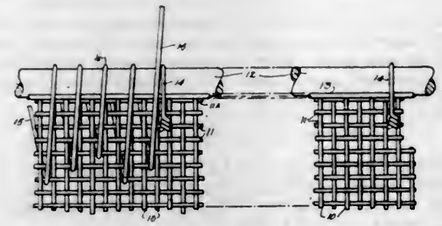
1. A wrench comprising a shank, separated lugs connected to the end of said shank and projecting beyond said end adapted to embrace the handle of a valve, and a shell surrounding said shank and connected thereto with an intermediate space for passage of granular material when the wrench is forced endwise into such material.

1,807,626. COMBINED TYPEWRITING AND COMPUTING MACHINE. ADOLPH G. KUPETZ, New Rochelle, N. Y., assignor, by mesne assignments, to Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 10, 1924. Serial No. 742,735. 8 Claims. (Cl. 235—60.)



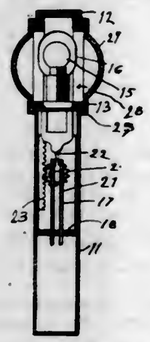
1. The combination of a carriage, a tabulating mechanism therefor, a motor, a computing-zone controller, means to set the zone-controller to a computive position, an eccentric driven by the motor, an actuator reciprocated by the eccentric at every revolution of the motor, and a tabulator controlled connection between zone-controller and actuator to enable the latter to move the zone-controller to ineffective position.

1,807,627. CARRIAGE RETURN FOR PUNCHING MACHINES. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed June 2, 1925. Serial No. 34,393. 20 Claims. (Cl. 164—112.)



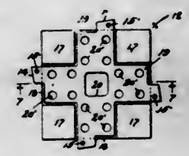
1. In a machine of the character stated, the combination of a card perforating mechanism, a punch set-up unit for said mechanism, a carriage carrying said unit and arranged to move across said perforating mechanism, a shaft controlling said perforating mechanism, means for operating said shaft, a device normally rendering said

CARNEGIE LIBRARY OF ATLANTA



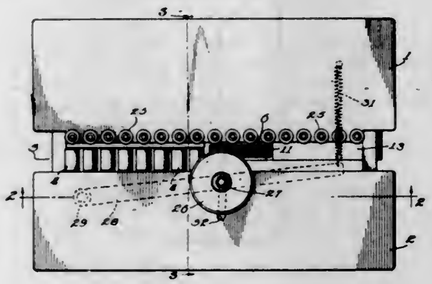
operating means ineffective, contact control means for controlling said device to cause said shaft to function, and means controlled by said shaft for causing said carriage to be returned to its starting point.

1,807,628. METHOD OF MAKING A SEAM FOR WOVEN WIRE BELTS. HAMILTON LINDSAY, Shaker Heights, Ohio, assignor to The Lindsay Wire Weaving Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 29, 1929. Serial No. 403,331. 3 Claims. (Cl. 245—10.)



1. A method of making a seam for a woven wire belt, comprising temporarily fastening a mandrel wire to each end of the fabric and across substantially the entire width thereof, passing a stitch-forming wire around each mandrel wire and back into the fabric, withdrawing each mandrel wire whereby loops project from each end of the fabric, bringing the ends together and interfitting the loops, and then passing a connecting wire smaller than the mandrel wire through said passageway.

1,807,629. VEHICLE TRAFFIC SIGNAL. FUSAJIRO MAMIYA, Los Angeles, Calif. Filed Sept. 16, 1929. Serial No. 392,923. 5 Claims. (Cl. 116—54.)

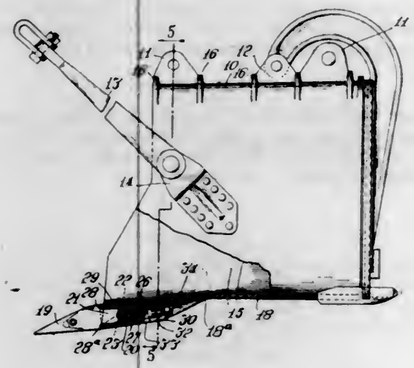


1. In an automobile signal device, a casing disposed at one side of the automobile, a semaphore pivotally mounted relative to the casing, and operative to angular display positions, a lever operatively mounted in the signal housing and having a relatively short arm and a relatively long arm, a link connected to the longer lever arm and to the semaphore, a rack member reciprocably mounted in the signal housing, and in operative engagement with the relatively short lever arm, a pinion engaging with the rack member, and actuating means for the pinion.

1,807,630. FIXTURE TILE. GERALD H. MCFARLIN, Rosemead, Calif., assignor to Tudor Potteries, Inc., a Corporation of California. Filed Oct. 15, 1929. Serial No. 399,818. 2 Claims. (Cl. 72—18.)

1. An article of manufacture comprising a fixture tile having a recessed back surface; a non-frangible apertured plate mounted in said recess; and means, comprising cement, partially covering said plate and extending through the apertures therein for securing said plate to said tile, said plate having projections extending beyond the edges of said tile and adapted to receive mechanical securing means.

1,807,631. BRANDING MACHINE. HARRY H. MCKEE and GUSTAVE SCHULER, Chicago, Ill., assignors to Swift and Company, Chicago, Ill., a Corporation of Illinois. Filed May 16, 1930. Serial No. 453,019. 8 Claims. (Cl. 101—5.)



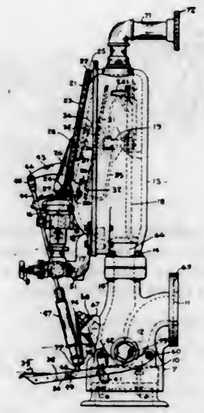
1. In a branding construction a series of horizontally disposed idler rollers for supporting articles which are pushed over the same, a series of vertically disposed guide rollers for guiding articles by engaging the sides thereof, a vertical resiliently mounted roller in position to engage the opposite sides of articles to be operated upon, a branding wheel mounted on a horizontal axis in position to engage the edge of an article passing between said rollers as it leaves the series of horizontally disposed supporting rollers.

1,807,632. EXCAVATING DIPPER. WALTER S. MCKEE, Chicago, Ill., assignor to Kensington Steel Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 3, 1928. Serial No. 251,548. 7 Claims. (Cl. 37—141.)

6. An excavating dipper comprising a unitary front wall made of cast metal and formed with hollow longitudinal reinforcements disposed in spaced relation to each other along the digging edge thereof and providing sockets for the reception of tooth base members, the marginal portion of

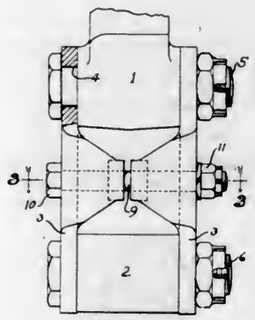
the dipper edge intervening between each pair of said sockets being flared outwardly to provide open recesses of

varying depths along the digging edge of the dipper and to provide also reinforcing webs which extend diagonally across the side walls of said hollow socket portions.



1,807,633. CHICK FEEDER. CHARLES H. MILLER, De Witt, Nebr. Filed Apr. 19, 1930. Serial No. 445,685. 2 Claims. (Cl. 119—52.)

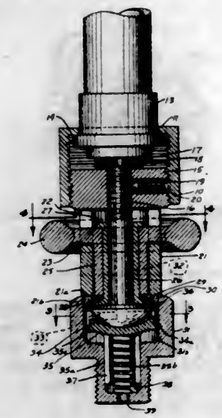
1. A feeder of the character set forth, comprising a hopper, a lid for the hopper arranged thereon in a downwardly and forwardly inclined position, a trough arranged at the front side of the hopper and communicating therewith and provided in its front wall with a feeding opening extending longitudinally of said wall and opening out through the upper edge thereof, and a lid for the trough arranged thereon in a downwardly and forwardly inclined position and extending beyond said wall to provide a guard for said feeding opening.



1,807,634. BEDPAN WASHER. JOSEPH H. OKUN, Brooklyn, N. Y., assignor to Kny-Scheerer Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1929. Serial No. 397,845. 8 Claims. (Cl. 141—1.)

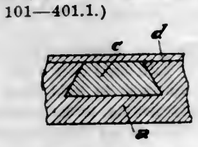
1. In a bedpan washer the combination of a base, an upright hollow body thereon, a pivoted door on said body, a baffle plate independently pivoted in said body and linked at its free end to the inside of said door, means for holding a bedpan on said baffle plate, a pedal pivoted in the lower part of said body and connected to said door, spraying means in said body connected to a source of water supply, means, on the closing of said door, for opening said source of water supply to said spraying means for a

predetermined period of time, a safety means to shut off said supply of water when the said door is opening and turn on said supply when said door is again during said predetermined period closed and drainage means in the lower portion of said body.



1,807,635. SPRING SHACKLE. BALFOUR READ, Detroit, Mich., assignor to Eaton Spring Corporation, a Corporation of Ohio. Filed Mar. 21, 1929. Serial No. 348,840. 12 Claims. (Cl. 267—54.)

1. A spring shackle, comprising a pair of spaced links having their mid-portions formed with a pair of tongues, each integral with one of said links, bent to terminally form bearings spaced from the links, and a bolt connecting the links and engaging said bearings.

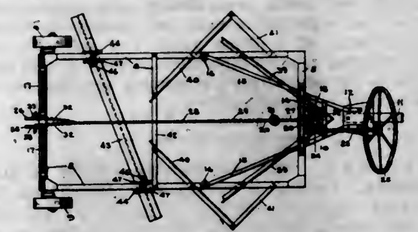


1,807,636. COUPLING. PHILIP T. ROBIN, Erie, Pa. Filed Aug. 11, 1930. Serial No. 474,442. 4 Claims. (Cl. 284—19.)

1. In a pressure coupling, the combination of a fitting having an inwardly opening check valve therein, a detachable coupling member having a head which may be pressed into the fitting to open the valve, said member having a

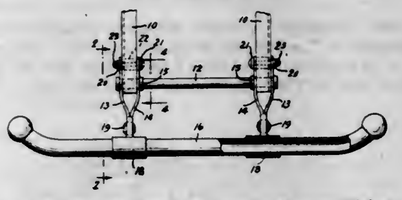
fluid passage through the same, and an expansible sealing ring movable along the member and expanded by the head into sealing contact with the inside of the fitting.

1,807,637. FORM CYLINDER FOR ROTARY INTAGLIO PRINTING MACHINES. ERNST SACHS, Goeggingen, near Augsburg, Germany, assignor of one-half to Maschinenfabrik Augsburg-Nuernberg, Aktiengesellschaft, Augsburg, Germany, and one-half to Asbern Maschinenfabrik-Aktiengesellschaft, Augsburg-Goeggingen, Goeggingen, near Augsburg, Germany. Filed Jan. 18, 1927, Serial No. 161,734, and in Germany Jan. 21, 1926. 5 Claims. (Cl. 101—401.1.)



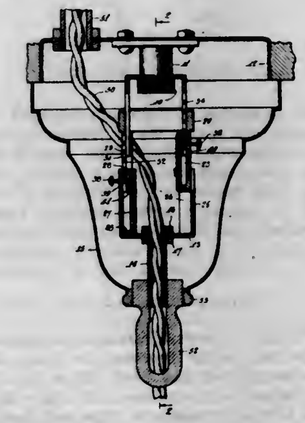
1. A form cylinder for intaglio printing machines provided with a groove opening through the cylindrical surface of the cylinder, said groove being of greater cross sectional width inwardly of the cylindrical surface of the cylinder than at said surface, a metal member disposed in said groove and conforming in cross sectional shape thereto, whereby said member is mechanically interlocked with the cylinder, and a metal coating electrolytically deposited on said cylinder and said member and electrolytically united with the latter.

1,807,638. HEAT EXCHANGE APPARATUS. EDWARD SEAVER, Needham, Mass. Filed Nov. 9, 1928. Serial No. 318,253. 10 Claims. (Cl. 257—248.)



1. Heat exchange apparatus comprising an entrance tube sheet, water tubes secured in the tube sheet, an entrance nozzle for each tube to guide water to the tube and extending outwardly beyond the tube sheet, the nozzle being of sufficient length to confine turbulence, the tube and nozzle being of the same internal diameter and abutting each other, the metal of the tube and nozzle being expanded to form a smooth and continuous inner bore.

1,807,639. ROAD MAINTAINER. JOHN STOCKER, Seward, Nebr. Filed Nov. 30, 1928. Serial No. 322,633. 3 Claims. (Cl. 37—160.)

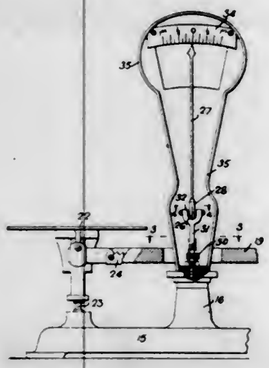


1. In a road maintainer arranged to be drawn by a tractor, a maintainer-frame, scraper-blades below and secured to said frame, an adjusting-frame mounted upon and extending forwardly of the maintainer-frame for a coupling with said tractor, a pair of crank-shafts each provided with a lever and having bearings on the maintainer-frame, wheels on the crank-shafts, a drum having bearings on the adjusting-frame, and a strand mounted on the drum and connected with the levers of the crank-shafts, said drum being rotatable for moving the crank-shafts in a circle's arc for elevating or lowering said maintainer-frame and scraper-blades.

1,807,640. AUTOMOBILE BUMPER. ADOLPH A. THOMAS, New York, N. Y. Filed June 17, 1930. Serial No. 461,687. 6 Claims. (Cl. 293—55.)

1. An automobile bumper structure comprising two bumper bars arranged in vertically spaced relation and mounted so as to be forced apart under the action of an impact, and spring means tensioned in a substantially vertical direction when the bumper bars strike an obstruction.

1,807,641. LIGHTING FIXTURE. NATHAN L. URELES, New York, N. Y. Filed Dec. 3, 1927. Serial No. 237,350. 5 Claims. (Cl. 240—85.)

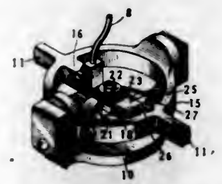


1. In a lighting fixture, a compound extension fitting, comprising an inner mounting yoke having a part adapted

for attachment upon an outlet box, an intermediate yoke having a frame displaceable along the arms of the first yoke and having arms protruding therebeyond, and an outer yoke part having arms slidable with respect to the arms of the intermediate part, and having an element for attachment of a fitting panel, and automatic lock means resisting relative separation of each of said parts relative to its neighbor and permitting approach of said parts to fully collapsed position.

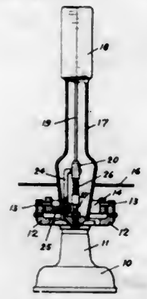
1,807,642. PROCESS FOR RECOVERY OF MANGANESE. CHARLES S. VADNER, Reno, Nev. Filed June 25, 1928. Serial No. 288,292. 4 Claims. (Cl. 23—117.)

2. The process of treating naturally oxidized or sufficiently roasted mineral matter and the like of the nature of complex ores containing manganese which consists in subjecting said finely ground ores to the action of an excess of sulphurous acid gas in the presence of water, separating the insoluble matter from the pregnant manganese solution passing same over additional manganese mineral matter whereby iron, lime, and other deleterious substances and excess of sulphurous fumes are eliminated, separating the precipitated and insoluble matter and recovering the manganese sulphate and manganese dithionate solution, reducing said resulting mixed solution to a dry mass, heating said dry mass gradually to a temperature sufficient to break down the manganese dithionate, converting same to manganese sulphate, passing on the eliminated sulphur dioxide gas for reuse and recovering the manganese sulphate, substantially as described.



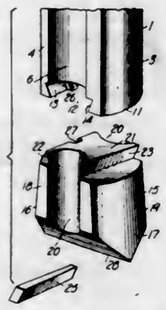
1,807,643. SCALE. GEORGE WALKER, Brooklyn, N. Y., assignor to The Jacobs Brothers Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Feb. 17, 1926. Serial No. 88,723. 33 Claims. (Cl. 265—59.)

1. A scale, including a rockingly-mounted beam, a spring adjacent said beam, means connecting said beam and spring and including rigid means fixed with respect to said beam and means providing a friction connection between said rigid means and said spring to cause said beam to tend to assume a neutral position, and a registering mechanism, one of the elements of the same being directly secured to said spring whereby any deflection of said beam beyond said position will be registered.



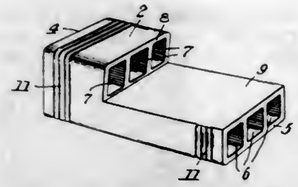
1,807,644. SCALE. GEORGE WALKER, Brooklyn, N. Y., assignor to The Jacobs Brothers Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 14, 1927. Serial No. 233,051. 21 Claims. (Cl. 265—59.)

1. A scale of the even-balance type and including, in combination, a rockingly mounted beam, a base for supporting the same, a spring extending in a horizontal plane, means for connecting one end of said strip with said base means for connecting the opposite end thereof



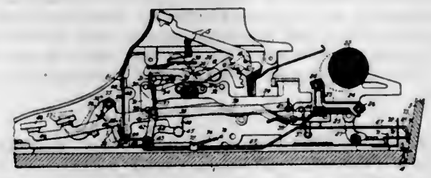
with said beam one of said connecting means including an element having sliding contact with the face of said strip.

1,807,645. SCALE. GEORGE WALKER, Brooklyn, N. Y., assignor to The Jacobs Bros. Co., Inc., New York, N. Y., a Corporation of New York. Original application filed Feb. 17, 1926, Serial No. 88,723. Divided and this application filed Sept. 28, 1928. Serial No. 309,052. 15 Claims. (Cl. 265—59.)



1. A scale including, in combination, a base, a beam rockingly mounted by said base and a coil spring having its opposite ends connected to said base and beam respectively, said spring flexing under movements of said beam to normally maintain the latter in neutral position.

1,807,646. DRILL BIT. WILLIAM WRIGHT, Tulsa, Okla., assignor to Oklahoma Iron Works, Tulsa, Okla., a Corporation of Oklahoma. Filed Dec. 29, 1927. Serial No. 243,263. 1 Claim. (Cl. 287—103.)

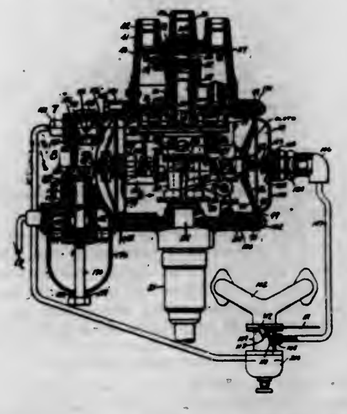


In a drill bit including a body member having a transverse dovetail groove, a head member having a dovetail tongue of less width than said groove, and a wedge movable in the groove in engagement with one side wall thereof to urge the tongue toward the opposite side wall of the groove, a key fixed to said last named side wall of the groove, the tongue being provided with a seat for said key whereby the operation of the wedge may cause the key to engage said seat.

1,807,647. CONDUIT AND CONNECTING MEANS THEREFOR. EDWIN BABB, Aultman, Ohio, assignor, by mesne assignments, to National Fireproofing Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 3, 1928. Serial No. 310,005. 19 Claims. (Cl. 247—32.)

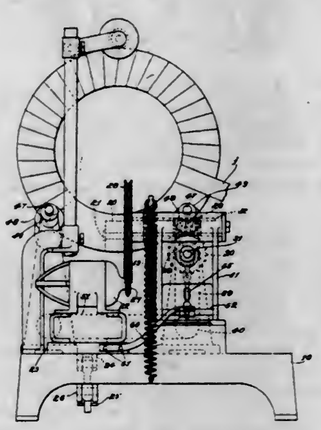
1. As a manufacture, means for connecting a conduit with a plurality of conduits extending therefrom comprising a unitary member having a portion of its wall cut away and at least one cooperating member having a portion adapted to enter the space provided by the cut away portion and abut the wall adjacent thereto.

1,807,648. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Nov. 20, 1928. Serial No. 320,689. 9 Claims. (Cl. 197—186.)



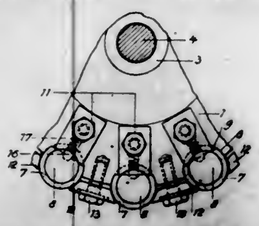
8. The combination of an element mounted to receive a case shifting movement, a case shift lock for locking said element in shifted position, a case shift key, intermediate actuating connections between said case shift key and said element that prevent the return of the latter to normal position when the case shift lock is effective, an enclosing case for the machine, and means controlled by a member of said case for automatically releasing said case shift lock.

1,807,649. SIGN. FRANK T. BROWN, Detroit, Mich., assignor of one-half to Solomon Dunn, Detroit, Mich. Filed Sept. 15, 1928. Serial No. 306,146. 1 Claim. (Cl. 40—32.)



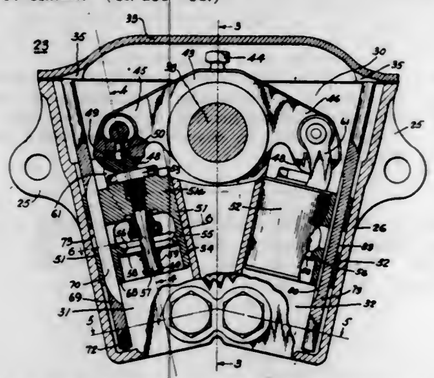
A device of the class described, comprising: a mirror; an endless light transmitting display belt extending around said mirror and bearing indicia adapted to be reflected in said mirror, means for supporting a portion of said belt in a plane on one side of said mirror, a magazine located adjacent said mirror a portion of said belt accumulating in loose folds within said magazine, and means for moving said belt to cause the images of said indicia to move across said mirror.

1,807,650. IGNITION TIMER AND FUEL PUMP UNIT. WILLIAM A. CHRYST and HERBERT C. WALTERS, Dayton, Ohio, assignors to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed Feb. 20, 1929. Serial No. 341,468. 14 Claims. (Cl. 123—195.)



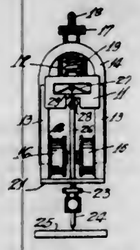
1. An ignition timer and pump unit comprising, in combination, a housing having openings in the walls thereof, an ignition interrupter closing one of the openings, a pump and operating mechanism closing another opening, a suction chamber closing still another opening and having a movable wall and communicating with an engine intake, pump and timer operating mechanism within the housing and including a common operating shaft extending outside the housing, and means associated with the shaft and suction chamber for controlling the timing of the ignition.

1,807,651. WRAPPING MACHINE. JASPER DERBY, Medford, Mass., assignor to Andrew Terkelsen, Newton, Mass. Filed Apr. 30, 1928. Serial No. 273,947. 4 Claims. (Cl. 242—6.)



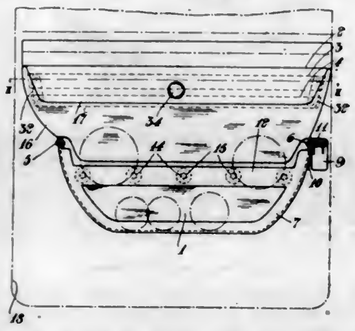
1. In a wrapping machine for annular articles, in combination, a rotatable shuttle, mechanism for rotating the shuttle, a motor for driving said mechanism, means for moving the motor into and out of operative relation to said mechanism, feed rolls for supporting and rotating the work, driving connections between said motor and feed rolls including a clutch, and means operable for actuating said clutch by moving said motor into and out of operative relation to said mechanism.

1,807,652. TURRET FOR MULTIPLE PUNCHING MACHINES. ERNST DIETRICH, Altenburg, Germany. Filed May 28, 1929, Serial No. 366,592, and in Germany June 1, 1928. 2 Claims. (Cl. 164—90.)



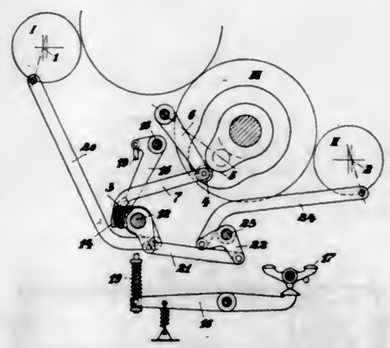
1. In a turret for multiple punching machines having a set of plungers, the combination with recesses in said turret of guiding bushes for said plungers each adapted to be inserted in one of said recesses, a clip adapted to hold said bush in said recess, means for detachably securing said clip to said turret so as to hold said bush, each bush being recessed at its upper end, and a stop on said turret which is adapted to enter said recess.

1,807,653. SHOCK ABSORBER. GEORGE W. ELSEY and WILLIAM A. CHRYST, Dayton, Ohio, assignors to Delco Products Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 29, 1929. Serial No. 351,036. 30 Claims. (Cl. 188—88.)



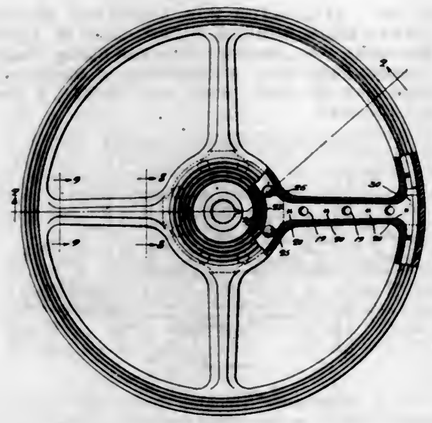
1. A shock absorber comprising in combination, a casing presenting a fluid chamber and a cylinder, an oscillatable lever supported within the fluid chamber, a link attached to the oscillatable lever, a resilient member on link, and a piston in the cylinder, yieldably clamped between the resilient member and the oscillatable lever.

1,807,654. MAGNETIC PICK-UP DEVICE. VICTOR H. EMERSON, New York, N. Y., assignor to Remsen Corporation, New York, N. Y., a Corporation of Delaware. Filed May 6, 1929, Serial No. 360,935. Renewed Oct. 11, 1930. 4 Claims. (Cl. 179—100.41.)



1. In a magnetic pick-up device for phonograph records, the combination, a frame with means for securing to a supporting arm, an armature pivotally mounted on said frame, a stylus secured to said armature engaging the phonograph record, a magnet having poles between which said armature vibrates and means for adjusting the position of said poles relative to the pivotal support of said armature.

1,807,655. PURSE. FREDRIK LEONARD ERIKSSON, Gefle, Sweden. Filed Dec. 3, 1928, Serial No. 323,469, and in Sweden Dec. 10, 1927. 2 Claims. (Cl. 150—37.)



1. A purse having an upper inlet opening adapted to allow the simultaneous introduction of a number of coins of different sizes, a normally closed bottom discharge opening adapted when open to effect the simultaneous discharge of several coins of different sizes contained in the purse above said discharge opening, said bottom discharge opening consisting of two hinged flaps, means for holding said flaps closed, and means for separating said flaps.

1,807,656. PLURAL COLOR PRINTING MACHINE. HANS FISCHER, Augsburg, Germany, assignor to Maschinenfabrik Augsburg-Nurnberg A. G., Augsburg, Germany, a Corporation of Germany. Filed Dec. 8, 1928, Serial No. 324,608, and in Germany Dec. 12, 1927. 5 Claims. (Cl. 101—184.)

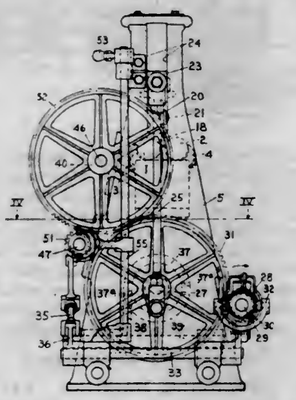
1. In a multi-color printing machine, a pair of printing mechanisms each comprising a pair of cooperating printing cylinders one of which is movable toward and from the other, a pair of ratchet members, connections between said ratchet members and said movable cylinders, respectively, whereby movement of each ratchet member in opposite directions effects movement of its related movable cylinder toward and from its companion cylinder, a reciprocal pawl cooperating with said ratchet members, means for reciprocating said pawl, and means whereby reciprocation of said pawl successively operates said ratchet members to successively move said movable cylinders toward their companion cylinders.

1,807,657. MOLDED STEERING WHEEL. HARVEY D. GEYER, Dayton, Ohio, assignor to Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 22, 1928. Serial No. 307,695. 7 Claims. (Cl. 74—33.)

7. A handwheel comprising: four stamped metal quadrants each having two spoke portions, a rim portion, and a hub ring portion, said quadrants mutually overlapping one another and spot welded together along said spoke portions to form a rigid wheel structure.

1,807,658. COMMUNICATION SYSTEM. FRANK W. GODSEY, Jr., New Haven, Conn., assignor of one-third to Wesley B. Hall, New Haven, Conn. Filed Apr. 29, 1929. Serial No. 358,945. 7 Claims. (Cl. 179—1.)

1. In a communication system, a pipe line for a transmitting medium, means at one point in said pipe line for setting up therein a continuous high frequency super-audible sound wave, means for impressing a sound wave of relatively low voice frequency on the high frequency sound wave, and means associated with said pipe line and remote from the means for setting up the high frequency sound wave for demodulating the high frequency sound wave to permit reception of the sound waves of relatively low voice frequency.

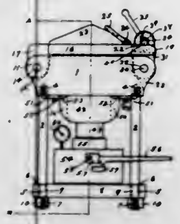


1,807,659. DETECTION OF SUSPENDED MATTER IN FLUIDS. HARRY CAMPBELL GRANT, Jr., New York, N. Y., assignor to Walter Kidde & Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 25, 1928. Serial No. 256,864. 2 Claims. (Cl. 88—14.)

1. The method of detecting suspended matter in a fluid which consists in causing a stream of the fluid to flow into the path of a light beam normally invisible to the observer, observing the illuminated suspended matter from a point out of the path of the light beam, and reflecting from a

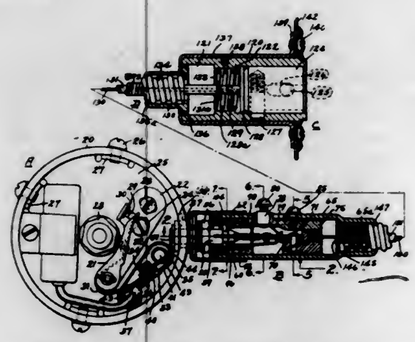
point also out of the path of the light beam an image of the illuminated suspended matter, the direct image and the reflected image seen together.

1,807,660. LEATHER STRETCHING MACHINE. JOSEPH H. HARRISON, Gomersall, near Leeds, England, assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Jan. 31, 1929, Serial No. 336,607, and in Great Britain Feb. 14, 1928. 23 Claims. (Cl. 149—20.)



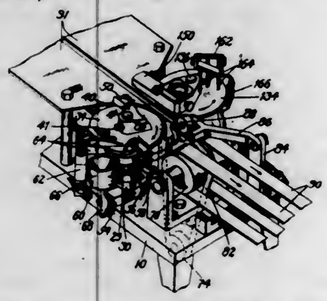
21. In a machine for stretching hides, skins, leather and other similar pieces of work, spaced members for engaging opposite surfaces of a piece of work, means for moving certain of the spaced members relatively to each other to effect folding of the piece of work over the edge of one of the members, a roll upon which the piece of work may be rolled to pull portions thereof past the spaced members to effect stretching operations on said portions, power means for operating the roll, manually operable means for initiating operation of said power means, and means for automatically throwing the power means out of operation.

1,807,661. MOLDING PRESS. GARABED G. HEGHINIAN, Baltimore, Md. Filed Dec. 3, 1928. Serial No. 323,419. 7 Claims. (Cl. 25—84.)



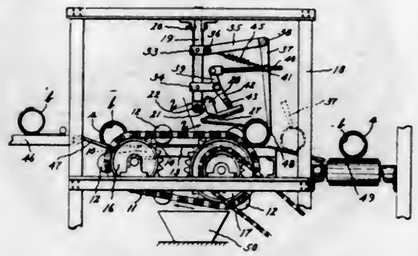
1. A press comprising a die body having a recess, a lower plunger in the said recess that has a central independently

movable part which is normally held above the remainder part when the plunger is at its lowest position, an upper abutment to press the material put into the said die when



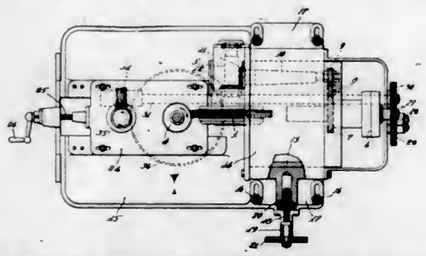
the plunger is forced up and means for successively moving the central part and then moving the surrounding part to compress the edges to a greater degree than the centre.

1,807,662. THEFT PREVENTIVE DEVICE. DALPHIN L. HITTLE, Anderson, Ind., assignor to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed Feb. 20, 1929. Serial No. 341,422. 18 Claims. (Cl. 200—19.)



2. In a device of the character described, the combination of locking means, a switch structure comprising a movable switch element, movement of which is adapted to be effected by movement of the said locking means, an armored connector leading from said switch structure to a controller unit, each end of said connector having a non-demountable connection with the controller unit and the switch structure, said switch structure embodying a locking means for non-demountably connecting the said switch structure and connector unit with an ignition element.

1,807,663. CEMENTING MACHINE. FAY D. KINNEY, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 22, 1929. Serial No. 334,254. 19 Claims. (Cl. 91—43.)

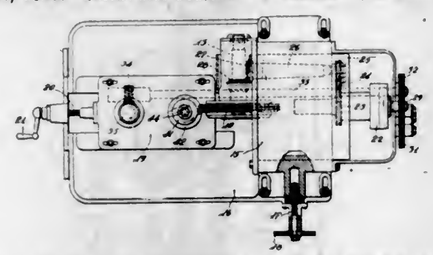


1. A machine for coating a work piece having a longitudinal rib therein, comprising driven work feeding members adjustably spaced from each other and yieldingly held toward each other, and means for maintaining a supply of liquid adhesive located above the work, said means being arranged to feed the adhesive by gravity upon the marginal edges of the work as it is advanced by the feeding members.

1,807,664. APPARATUS FOR REMOVING TRIMMED WASTE FROM RUBBER TUBES. PAUL W. LEHMAN, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 25, 1929. Serial No. 349,568. 6 Claims. (Cl. 164—38.)

1. In a rubber tube trimming device which includes a conveyor for tube mandrels and means for circumferentially trimming the end of the tube and cutting the waste portion longitudinally from the circumferential cut to the end of the tube, means for removing the waste portion from the mandrel which comprises means positioned to dig into and hold the waste portion of the tube as it is conveyed past the said means and means to strip the waste portion from the holding means after complete removal of the waste from the mandrel.

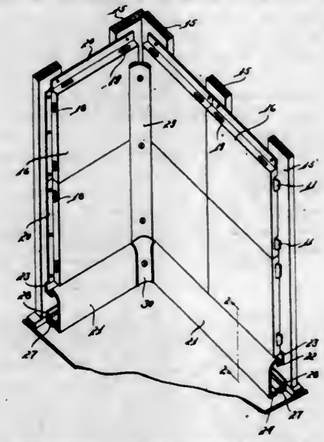
1,807,665. MACHINE AND TOOL FOR SHAVING GEAR TEETH. EDWARD W. MILLER, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed July 27, 1928. Serial No. 285,666. 22 Claims. (Cl. 90—2.)



1. A metallic edged cutting tool adapted to generate the face curves of gear teeth, having a helical rib with a continuous cutting edge formed by the intersection of its peripheral surface with one of its side faces, the convolutions of said rib being formed to admit the teeth of a gear between them with engagement of one side of such a tooth with such edge only.

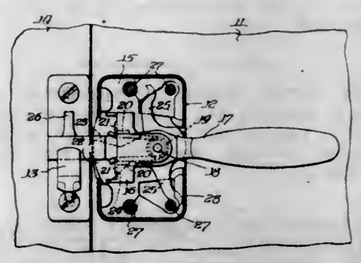
16. The combination with an edged gear finishing cutter having a helical rib with a cutting edge between the circumferential face and a side face thereof, and being otherwise constructed to clear the work entirely, of means for rotating said cutter about the axis of said cutting edge, means for supporting and rotating an unfinished gear wtih its medial plane radial to the cutting edge, means for effecting relative adjustments between the gear and cutter both radially and axially of the cutter, and means for further adjusting the gear angularly about its own axis relatively to the cutter.

20. The method of generating and finishing involute gear teeth having flanks within the base circle, which consists



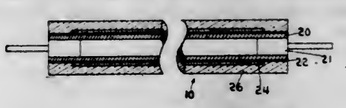
in first generating the involute faces by rotating a metal cutting tool, having a continuous helical cutting edge, about the axis of such helix, locating an unfinished gear in a position where its base circle is tangent to a straight line of action which intersects all the convolutions of said helical edge, and the diameter of the gear perpendicular to said line of action being at one side of all the convolutions of said edge, rotating the gear about its own axis simultaneously with the rotation of the cutter in a direction and at a speed such that its base circle at the tangent point with the line of action travels in unison with the axial displacement of successive points in the cutting edge along the line of action; and finishing the tooth flanks by relatively shifting the cutter and gear so that the cutting edge extends within the base circle of the gear and terminates short of, at, or beyond, said perpendicular diameter according as the tooth flanks are respectively wide, radial, or undercut, and repeating the simultaneous rotation of cutter and gear in the manner first set forth.

1,807,666. FORMED TRUING TOOL FOR HELICOIDAL ABRADING WHEELS. EDWARD W. MILLER, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed Aug. 31, 1928. Serial No. 303,309. 6 Claims. (Cl. 82—1.)



1. A machine for generating a helicoidal surface in an abrading wheel, comprising a tool having cutting points arranged in an involute curve developed from a base circle appropriate to the normal pitch desired to be produced in the helicoidal surface, means for rotating the abrading wheel about its axis, and means for rotating the truing tool about the axis of said base circle at a rate such that the linear travel of the base circle is equal to such normal pitch during the period of one rotation of the abrading wheel.

1,807,667. METAL WALL CONSTRUCTION. MICHEL MILLEVILLE, Detroit, Mich. Filed Feb. 23, 1929. Serial No. 342,075. 2 Claims. (Cl. 189—85.)

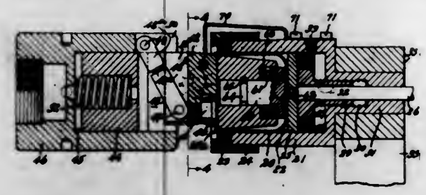


1. In a construction of the class described, a metallic mold board having one of its edges doubled upon itself to provide a structure U shaped in cross section, one of the legs of said U shaped structure being extended and adapted for being secured to a supporting body; a double U shaped construction at the opposite edge of said mold board one of said U shaped formations opening outwardly and the other opening inwardly of said mold board.

1,807,668. LATCH. EDWIN W. NORTH and LLOYD ANDERSON, Rockford, Ill., assignors to National Lock Co., Rockford, Ill., a Corporation of Delaware. Filed May 7, 1928. Serial No. 275,826. 11 Claims. (Cl. 292—332.)

1. In a latch, the combination of a base, a latch bolt pivoted thereon and capable of being moved to one of two opposite off-center positions, and an abutment member pivoted concentrically with respect to said latch bolt capable of being selectively adjusted with respect to the path of movement of the bolt to a position where it may be engaged thereby for holding the same in either of said off-center positions, the abutment member being provided with a pair of oppositely extending arms, either one of which is adapted to be engaged by one of the retaining screws for the latch for anchoring the abutment member.

1,807,669. MACHINE FOR OPERATING UPON HIDES, SKINS AND LEATHER. JOHN W. O'DONNELL, Salem, Mass., assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Feb. 1, 1929. Serial No. 336,897. 12 Claims. (Cl. 149—12.)



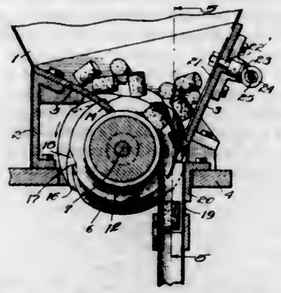
11. In a setting machine, a bed roll comprising a metal core, a soft rubber layer covering all the intermediate portion of the core and extending to within a short distance of each end of the core, and a sleeve or covering of relatively firm vulcanized rubber and wool composition providing a frictional surface for feeding pieces of work, said vulcanized composition being arranged over the soft rubber layer and over portions of the core beyond the soft rubber layer to provide end portions of the bed roll more unyielding than the intermediate portions of the bed roll, in combination with a bladed cylinder for operating upon a piece of work backed by the bed roll, said cylinder having blades helically arranged and extending in opposite directions from points between the ends of the cylinder, and a feed roll for co-operation with the bed roll in feeding the work past the cylinder, the relatively unyielding ends of the bed roll serving to counteract the tendency of the helically arranged blades to displace the work.

1,807,670. BEARING ALLOY. JOHN V. O. PALM and EDWARD C. KNUTH, Cleveland, Ohio, assignors to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 19, 1928. Serial No. 327,132. 1 Claim. (Cl. 75—1.)

A bearing alloy consisting of approximately 82 per cent. lead, 7½ per cent. cadmium, 7½ per cent. antimony, and 3 per cent. of zinc.

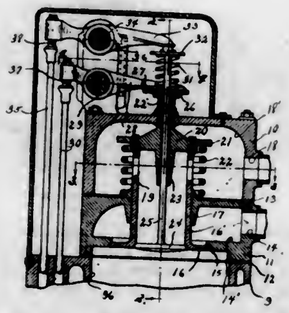
1,807,671. METAL SHEARING APPARATUS. ALVA W. PHELPS, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 17, 1928. Serial No. 255,127. 12 Claims. (Cl. 164—69.)

1. Apparatus for cutting a tubular work piece comprising a support for the work piece including an annular shear blade surrounding the work piece, a cutter movable against the interior of the piece to shear the piece against the annular shear blade, means for supporting the cutter, means for rotating one support relative to the other, means for clamping the work piece to the work piece support, and means cooperating with the clamping means for causing the cutter to move toward the annular shear blade during said relative rotary movement.



1,807,672. METHOD OF ORNAMENTING PRINTED HARD SURFACE FLOOR COVERINGS. HENNING W. PRENTIS, Jr., Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 9, 1928. Serial No. 311,336. 6 Claims. (Cl. 41—26.)

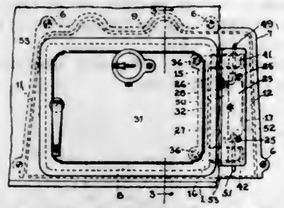
1. The method of making reversible floor coverings which consists in printing a succession of rug patterns on one surface of a long strip of goods, applying a running all-over pattern to the other surface of the goods without reference to said first patterns, cutting the rugs to length, and thereafter applying border patterns to the non-printed side of the goods.



1,807,673. CORK FEEDER. ARTHUR I. RISSER, Chicago, Ill., assignor to U. S. Bottlers Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed May 28, 1928. Serial No. 281,346. 2 Claims. (Cl. 226—92.)

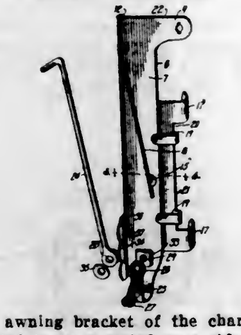
1. In a cork feeder, a hopper having a wall, a drum rotatably mounted in parallel relation with the wall and having a circumferential discharge groove complementing a portion of the wall to form an outlet, a plate in the

hopper in sealing relation with the upper portion of the drum, a bar mounted to swing over the surface of the wall, and yieldable means for reciprocating the bar.



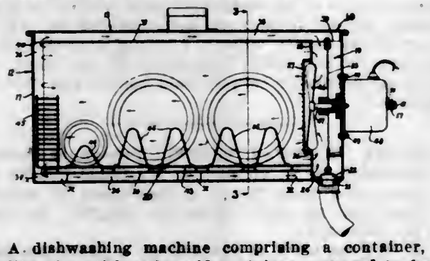
1,807,674. OVERHEAD VALVE CONSTRUCTION. LAWRENCE ROBERTSON, Detroit, Mich. Filed May 19, 1928. Serial No. 278,949. 2 Claims. (Cl. 123—188.)

1. A valve structure of the class described, comprising: a tubular member; a radially projecting valve-forming flange adjacent one end of said tubular member for closing an exhaust port communicating with a cylinder with which used; a head mounted on the opposite end of said tubular member, said tubular member having lateral openings formed therein adjacent said head and communicating with an intake manifold of said engine; a valve stem extended axially of said tubular member and projected through said head; extensions at opposite sides of said head for forming guides for said valve stem, one of said extensions projecting beyond the outer surface of said head; a valve head carried by said stem and engaging one end of said sleeve for controlling communication of said intake manifold with said cylinder; a cap on the upper of said extensions; a peripheral flange on said head; a spring engaging said flange for normally retaining said first mentioned valve in closing position; a spring engaging said cap for normally retaining said second mentioned valve in position; actuating means for moving said first mentioned valve to open position; and actuating means for moving said second mentioned valve to open position.



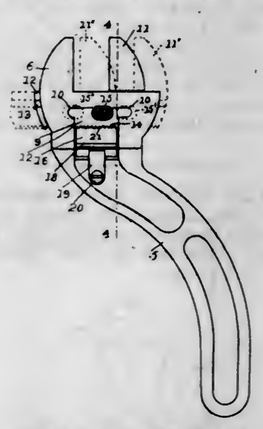
1,807,675. HINGE. MAX M. SUPPES, Elyria, Ohio, assignor to The Fox Furnace Company, Elyria, Ohio, a Corporation of Ohio. Filed Mar. 15, 1929. Serial No. 347,202. 4 Claims. (Cl. 189—46.)

1. In a heating apparatus, a door frame having top, bottom and side frame members, one of said side frame members having substantially horizontal spaced members, an upwardly facing hook member positioned beneath said spaced members, said spaced members having alined bearing apertures therethrough offset horizontally from said hook member, a closure member cooperable with said frame and having a hinge arm rigid therewith, the free end of said arm extending between said spaced members



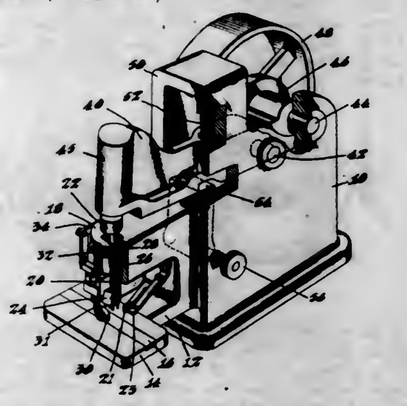
and having an aperture alined with said apertures, a hinge pin longitudinally reciprocable in said apertures and having a lateral arm cooperable with said hook member whereby said pin is held against withdrawal from said apertures.

1,807,676. AWNING BRACKET. TANDY B. THURMAN, Kansas City, Mo. Filed Dec. 13, 1928. Serial No. 325,860. 14 Claims. (Cl. 156—44.)



10. In an awning bracket of the character described, a plate adapted to be mounted on a side casing for supporting an awning roller and having an outwardly upwardly turned lower portion provided with a bolt-receiving opening, a recess in the inner face of the plate forming a boss on the outer face thereof and having an opening registering with the opening of the up-turned portion, a nut secured to the plate in said recess, and a bolt adapted to be passed through the opening of the up-turned portion and the end of the bail into the boss and nut for pivotally supporting the bail.

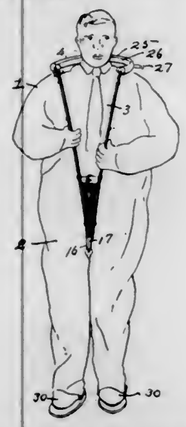
1,807,677. DISHWASHING MACHINE. MARTIN G. TORSON, Long Beach, Calif. Filed Jan. 30, 1929. Serial No. 336,081. 5 Claims. (Cl. 141—9.)



1. A dishwashing machine comprising a container, a plurality of partitions in said container arranged to form a central compartment providing passageways between the compartment and said container on the sides, ends and bottom thereof, said passageways and central compartment all being in communication with each other and means in one of said passageways to force water into said central compartment and to draw the water from the other passageways.

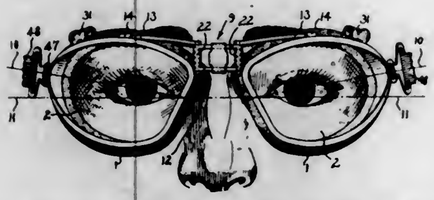
1,807,678. MONKEY WRENCH. WILLIAM V. VAN ETTEN, Bellingham, Wash. Filed July 19, 1928. Serial No. 293,889. 1 Claim. (Cl. 81—137.)

In an adjustable wrench, a fixed jaw fastened to a wrench head, said wrench head having a slideway opening therethrough from edge to edge and a tumbler opening therethrough from side to side thereof intersecting said slideway opening, a loose jaw, an arm fastened to said loose jaw at right angles with the work face thereof, engageable in said slideway for reciprocation and having a beveled outer edge with a toothed rack thereon, a thumb-hold pin fastened in said arm protruding from one side thereof through said intersection of said tumbler opening and said slideway opening, a bearing pin extended through said head across said tumbler opening parallel with said slideway, a tumbler mounted eccentrically on said bearing pin in said tumbler opening for oscillation and having a toothed rack thereon engageable with and disengageable from said arm rack by the oscillation of said tumbler on said bearing pin, a rib on the exposed surface of the tumbler lengthwise thereof adjacent the said thumb-hold pin to provide a thumb hold, a wrench handle fastened to said head, and a flat spring fastened to said handle and bearing on said eccentric tumbler to react and cause the same to return to engagement with said loose jaw arm.



1,807,679. PERFORATING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 16, 1928. Serial No. 285,858. 2 Claims. (Cl. 164—94.)

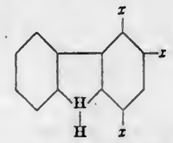
1. A machine for perforating shoe materials having, in combination, a frame, a work support carried thereby, a



sharp-edged tubular cutting tool guided for vertical reciprocation in the frame, a stop on the tool engaging the frame positively to terminate movement of the tool with its cutting edge in parallel relation to the work support, a spring for moving the tool to space the stop from the frame, and a spring-impelled hammer arranged to be raised and suddenly released to strike a sharp blow upon the tool, movement of the tool by the hammer being limited by engagement of said stop with the frame just as the cutting edge of the tool makes surface contact with a hard anvil.

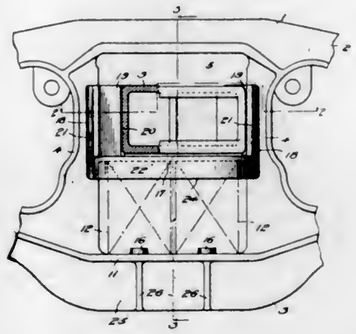
1,807,680. LIFE SAVING SUIT. WILLIAM LEE AUD, Poolesville, Md., assignor, by mesne assignments, to Safety Devices Corporation, Dover, Del., a Corporation of Delaware. Filed Mar. 26, 1929. Serial No. 350,050. 7 Claims. (Cl. 9—20.)

1. A suit of the character described having an entrance and exit opening, sealing strips extending along the margins of said opening, spring metal clamping strips extending along the margins of the opening and backing the sealing strips, said clamping strips being hinged at their lower ends and normally bowed or curved outwardly and upwardly toward their upper ends, whereby, upon drawing the upper ends of the spring strips together the sealing strips will be brought into sealing engagement and the spring strips put under elastic tension, and a fastening device for connecting the upper ends of said strips and maintaining them under such elastic tension.



1,807,681. GOGGLES. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Oct. 18, 1927. Serial No. 226,900. 14 Claims. (Cl. 2—14.)

1. In an eye protector mounting, an eye cup having orifices on opposite sides thereof, bearing means adjacent one of the orifices, a pair of slidable sleeves in the bearing means having oppositely arranged tapered bores, the smaller cross sections being adjacent, and means to lock the sleeves in position with a fixed space between them, said space opening into the orifice in the eye cup.

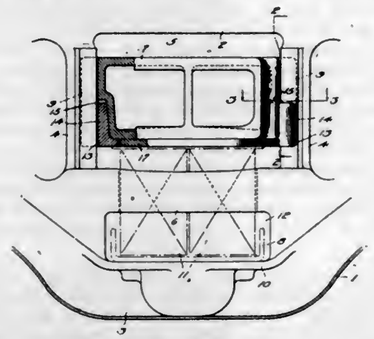


1,807,682. DIAZOTIZATION OF AMINO CARBAZOLE AND ITS DERIVATIVES. FRITZ BALLAUF, FRIEDRICH MUTH, and ALBERT SCHMELZER, Elberfeld, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1928, Serial No. 328,845, and in Germany Jan. 5, 1928. 13 Claims. (Cl. 260—46.)

1. The process which comprises diazotizing a compound of the general formula:

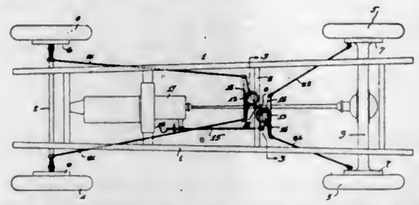
wherein one x stands for an amino group and the other x's stand for hydrogen or any monovalent substituent, and wherein the carbazole nucleus may be further substituted, and subjecting the diazocompound to a reaction customarily employed on diazotized aromatic amines for replacing the diazonium group by a monovalent substituent.

1,807,683. CAR TRUCK. DONALD S. BARROWS, Rochester, N. Y., assignor to The Gould Coupler Company, New York, N. Y., a Corporation of Maryland. Filed Oct. 10, 1927. Serial No. 225,237. 16 Claims. (Cl. 105—197.)



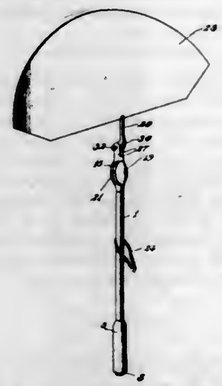
1. In a car truck, in combination, a side frame formed with a compression member, a tension member, struts interposed therebetween and spaced to leave a bolster opening, a bridge wall connecting said struts below the bolster opening, that portion of the tension member on opposite sides of the bridge wall being adapted to support bolster springs, bolster springs supported on said portions of the tension member, a bolster supported on said springs, and detachable front guides for said bolster with portions positioned between said bolster and the outer springs.

1,807,684. RAILWAY TRUCK. DONALD S. BARROWS, Rochester, N. Y., assignor to The Gould Coupler Company, New York, N. Y., a Corporation of Maryland. Filed Oct. 10, 1927. Serial No. 225,238. 10 Claims. (Cl. 105—197.)



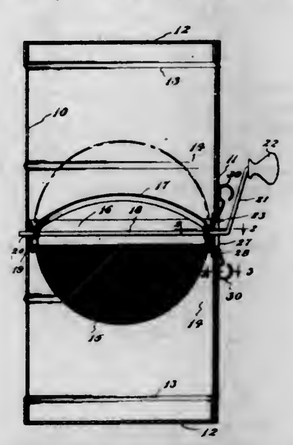
1. In a car truck, in combination, a side frame formed with a compression member, a tension member, struts interposed therebetween and spaced to leave a bolster opening, that portion of the tension member beneath the bolster opening being laterally widened for supporting bolster springs, a bridge member connecting said struts and formed as two laterally spaced portions permitting the reception of a plurality of longitudinally disposed springs therebetween, bolster springs supported on said

portions of the tension member between and on either side of said laterally spaced portions of the bridge member, a spring cap supported on the outer and inner springs



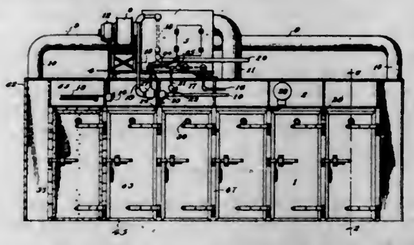
of said bolster springs, a bolster formed with inner guides and notched outwardly of said guides, and upstanding lugs on said spring cap received in said notches and forming removable outer guides for said bolster.

1,807,685. BRAKE EQUALIZER AND OPERATING DEVICE. FREEMAN J. BRADLEY, Ypsilanti, Mich. Filed May 7, 1928. Serial No. 275,660. 188—204.)



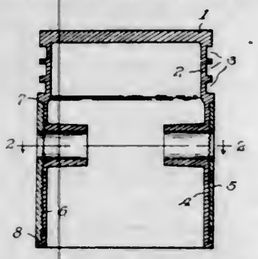
1. In a brake equalizer and operating device, a centrally pivoted member having cups formed on opposite sides of the pivot point thereof, rings rotatably surrounding said cups, arms integral with said rings, brake operating members extending from said arms, and means for swinging said member.

1,807,686. COMBINED PARASOL VANITY CASE AND COIN HOLDER. DAVID M. BRIGHT, Tellico Plains, Tenn. Filed July 13, 1928. Serial No. 292,573. 2 Claims. (Cl. 135—16.)



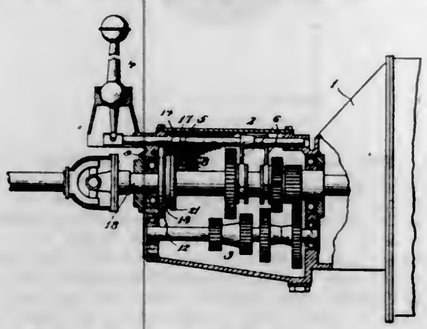
2. A device of the character described comprising a staff, a head in threaded engagement with one end of said staff, a handle having one end in threaded engagement with the other end of said staff and adapted to have threaded engagement with the head when the staff is removed, bearing ears projecting from the outer end of said head, a combined sunshade and fan having a shank provided at its free end with a side extension fitting between said ears, and a set screw passed through the ears and side extension whereby the combined sunshade and fan may be swung to adjusted positions and releasably secured.

1,807,687. SIFTER. FRANK CLARK, Dolliver, Iowa. Filed Sept. 5, 1930. Serial No. 479,949. 1 Claim. (Cl. 209—251.)



A sifter comprising a cylindrical container formed from a single sheet of metal having the ends crimped to provide a vertical seam, removable covers for the ends of said container, an agitator in the container, a reversible sieve in the container, a swivel latch fixedly secured to said sieve and having a flange journaled in an enlarged opening formed in said container at said seam, and oppositely disposed arms projecting from said flange and terminating in spring loops having recesses to receive said seam and maintain said sieve in either of its reversed positions.

1,807,688. DOUGHPROOFING APPARATUS. SANDER DEBUS, Hastings, Nebr. Filed July 6, 1928. Serial No. 290,769. 2 Claims. (Cl. 126—281.)

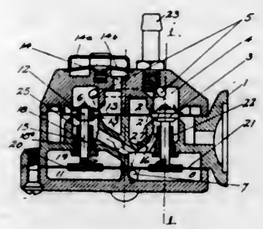


1. A dough-proofing apparatus comprising a housing, said housing having a ceiling and a roof with a chamber between the ceiling and the roof and also having inner and outer end walls, air heating and moistening mechanism mounted on the housing, an air conduit extending from said mechanism between the inner and outer end walls of the housing and provided with a plurality of nozzles discharging through the inner end walls, a return air conduit disposed between the ceiling and the roof of the housing and extending through the roof to the heating and moistening mechanism, and branch pipes extending laterally from said return air conduit and having their ends opening through the ceiling.

1,807,689. METHOD OF MAKING COMPOSITE PISTONS. HORACE B. DEPUTY, Detroit, Mich. Filed Aug. 20, 1928. Serial No. 300,682. 2 Claims. (Cl. 22—204.)

1. The process of making composite pistons consisting of first heating a metallic sleeve to expand same, placing the expanded sleeve in a heated mold, and then flowing molten metal having a higher co-efficient of expansion than the metal of the sleeve into the mold to engage the entire inner periphery of the sleeve.

1,807,690. SAFETY DEVICE. JOSEPH J. EHEMANN and BENJAMIN F. SINOER, Lancaster, Pa. Filed May 4, 1929. Serial No. 360,582. 2 Claims. (Cl. 192—4.)



1. In a safety device for reverse gears, the combination of a stationary case, a loose ring mounted concentrically within the case, a cap retaining the ring in the case, a hub rotatable within the ring, a split brake band encircling the ring and normally holding the same against rotation and having its ends provided with abutments, brake elements disposed between the hub and the ring whereby to permit rotation of the hub in one direction and prevent rotation of the hub in the opposite direction, and a cam lever mounted on the cap with its head bearing upon the side of one of said abutments and extending laterally therefrom and shiftable whereby to expand the band and release the ring to permit rotation of the ring with the hub or contract the band about the ring and prevent rotation of the ring.

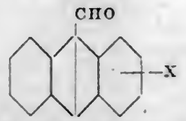
1,807,691. LUBRICATOR. ARAH CLARE FOX, Grand Rapids, Mich. Filed Dec. 22, 1928. Serial No. 327,942. 13 Claims. (Cl. 184—37.)

11. A lubricator for attachment to an oscillating member comprising a base, a weight slidable therein, a cylinder mounted on said base, a piston in said cylinder, a threaded rod attached to said piston, means for holding said rod against rotation, a nut on said rod and held against sliding in said cylinder, a bushing surrounding said rod and fixed in said cylinder, a ratchet on said bushing, a pair of pawl carriers adjacent said ratchet, pawls on said carriers and engaging said ratchet, connecting means between said carriers and weight for actuating said carriers by movement of said weight in either direction, a collar mounted eccentrically on said bushing, another carrier surrounding said collar and held against rotation, a ratchet carried by said nut, a pawl on said last named carrier and engaging said last named ratchet, a plunger adapted to release said last named pawl from said last named ratchet, and an operating member carried by the free end of said rod and adapted to engage said plunger.

1,807,692. APPARATUS FOR AUTOMATICALLY ESTABLISHING A PULSATING MOTION OF AIR IN TWO CONDUITS. GEORG KARL VILHELM JOHANSON, Lidingo, Sweden, assignor to Svenska Aktiebolaget Gasaccumulator, Lidingo, Sweden. Filed July 6, 1928, Serial No. 290,859, and in Sweden July 18, 1927. 7 Claims. (Cl. 31—62.)

3. In an apparatus for establishing a pulsating motion of air in two conduits, a vacuum duct, a vibratory diaphragm, a two-way valve between the vacuum duct and the two conduits and lying wholly on one side of said diaphragm and a valve spindle connecting said valve to this side of the diaphragm, an atmospheric duct, a second vibratory diaphragm, a second two-way valve between the atmospheric duct and the two conduits and lying wholly on one side of said diaphragm and a valve spindle connecting the second valve to this side of the second diaphragm.

1,807,693. PROCESS FOR INTRODUCING AN ALDEHYDIC GROUP INTO CYCLIC COMPOUNDS. GEORG KALISCHER and HEINZ SCHEYBA, Frankfort-on-the-Main, and KARL KELLER, Mainkur, near Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 30, 1928, Serial No. 250,718, and in Germany Feb. 2, 1927. 4 Claims. (Cl. 260—136.)



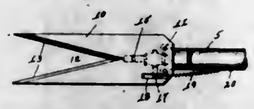
1. Process for introducing an aldehydic group into cyclic compounds which process comprises acting with a formylaminocompound of the general formula:

$$HCO{-}N\begin{matrix}X_1\\X_2\end{matrix}$$

wherein X_1 and X_2 represent hydrogen or aryl or X_1 represents aryl and X_2 represents alkyl in the presence of an acid condensation agent containing chlorine on carbo- and heterocyclic compounds containing a labile hydrogen atom, and in which other hydrogen atoms may be replaced

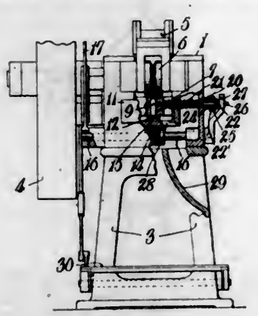
by halogen or by other monovalent substituents attached to a carbon atom of the ring by means of a carbon-, oxygen- or sulfur-atom.

3. As new compounds aldehydes of the anthracene series corresponding probably to the general formula:



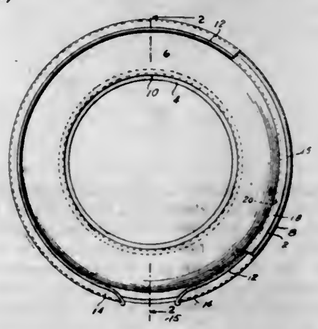
wherein X means hydrogen or a halogen, which are when dry crystalline substances, having a definite melting point, capable of the characteristic reactions of aldehydes.

1,807,694. PRODUCTION OF NITROGENOUS VAT DYESTUFFS. MAX ALBERT KUNZ, Mannheim, and KARL KOEBERLE, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 22, 1928, Serial No. 314,312, and in Germany Nov. 17, 1927. 8 Claims. (Cl. 260—61.)



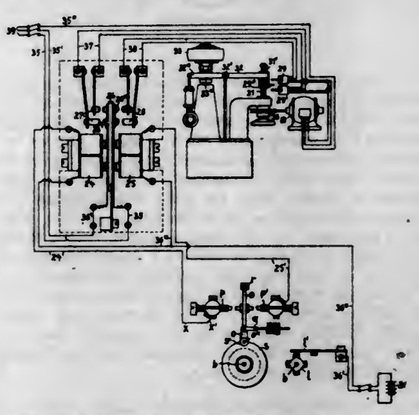
1. A process of producing new vat dyestuffs, which comprises reducing a nitrodibenzanthrone with an amount of a reducing agent insufficient for complete reduction and condensing the resulting mixture of nitro- and aminodibenzanthrone.

1,807,695. WEED EXTERMINATOR. AMUND C. LEE, Viroqua, Wis. Filed Sept. 25, 1929. Serial No. 395,062. 1 Claim. (Cl. 47—49.)



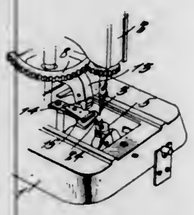
A tool of the character described comprising a tubular handle, a blade connected to the lower end of said handle having a V-shaped slot in its lower edge providing cutting edges and also having a slotted opening in its upper portion, a discharge pipe extending from the lower end of the handle beneath the blade, a valve mounted in said discharge pipe, a lever connected with said valve having one end disposed for engagement with the ground to open said valve and with its opposite end inserted through the slotted opening of the blade to limit the opening and closing movement of the lever, and a spring connected to the inserted end of said lever, for automatically closing said valve.

1,807,696. FORGING MACHINE. JOSEPH LESICKO, Livingston, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 17, 1925. Serial No. 23,946. 24 Claims. (Cl. 76—5.)



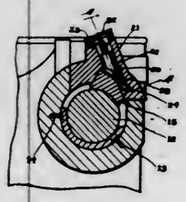
1. A forging machine having a movable die, means for positively feeding a work piece including an operating member, means for ejecting the work piece from the machine independently of movement of said die, and means for interconnecting said feeding and ejecting means to enable said ejecting means to be actuated by said operating member.

1,807,697. COVER FOR SPARE TIRES OF AUTOMOBILES. GEORGE ALBERT LYON, Allenhurst, N. J. Filed Dec. 21, 1928. Serial No. 327,552. 22 Claims. (Cl. 150—54.)



4. A multipart tire cover including a side plate for disposition over a side of the tire, and a substantially circular rim formed to extend about the periphery of the tire and having an inherent resiliency toward and capable of contracting the rim to a diameter less than the normal outer diameter of the tire, said rim and said plate being so proportioned to each other that when the rim is on the tire one side of the rim is in holding engagement with said plate.

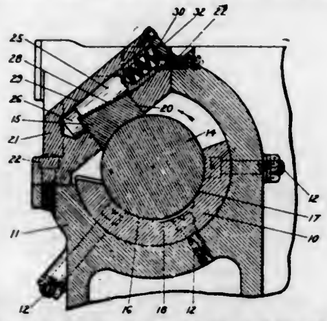
1,807,698. FINE SPEED GOVERNOR FOR MOTOR ENGINES. ROBERT MICHL, Kosice, Czechoslovakia, assignor, by mesne assignments, to The Hammond Clock Company, Chicago, Ill., a Corporation of Delaware. Filed May 18, 1925, Serial No. 31,186, and in Germany May 26, 1924. 5 Claims. (Cl. 290—40.)



1. The combination with a coarse regulator for a turbo generator set, a distribution system supplied by the generator set, a fine regulating device for exact speed regulation, a motor for operating said device, a control circuit for said motor, a differential gearing including a planet pinion, a synchronous motor in the system for driving one side of the gearing, a standard time piece for driving the other side of said gearing, a contact lever for closing said circuit, a disk associated with the contact lever and controlling the movement thereof, a current interrupter controlled by the synchronous motor for temporarily interrupting said circuit, as and for the purpose set forth.

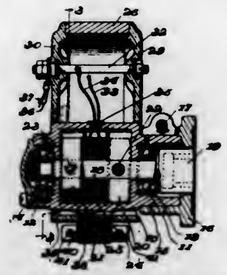
1,807,699. BUTTONHOLE MACHINE. HENRY C. MILLER, Waterford, N. Y. Original application filed Aug. 25, 1922, Serial No. 584,323, Patent No. 1,640,283, dated Aug. 23, 1927. Divided and this application filed Mar. 24, 1927. Serial No. 178,001. 10 Claims. (Cl. 112—68.)

1. A machine including means to cut a button-hole from a fabric to leave a margin of such fabric within the outline of the button-hole, said machine including stitching mechanism having a needle for sewing the edge of the button-hole, with the needle of the stitching mechanism automatically folding said margin of fabric back onto the fabric beyond the edge of the button-hole in the stitching operation.



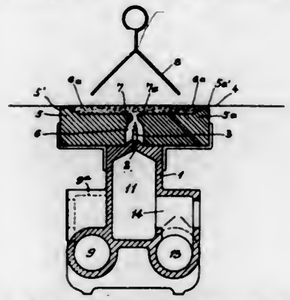
1,807,700. SELF ADJUSTING BEARING FOR SPINDLES. CHARLES H. NORTON, Plainville, Conn., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 1, 1925, Serial No. 53,806. Renewed Mar. 12, 1930. 2 Claims. (Cl. 308—66.)

1. A bearing for a grinding wheel spindle comprising a lower fixed bearing member arranged to serve as the sole bearing support for the spindle, a floating bearing shoe maintained in engagement with a small portion of the upper part of the spindle to steady the same, means to hold the shoe from lateral movement, a locking pin which is mounted in contact with the shoe and is biased towards movement inwardly so as to maintain contact with the shoe, a guideway for said locking pin having a thrust receiving wall arranged at such an angle relative to the surface of the bearing shoe engaging the locking pin that the latter will follow up any inward movement of the shoe and prevent outward movement thereof, and means for manually locking said pin in its operative position and thereby preventing inward movement of the locking pin under the influence of its bias.



1,807,701. BEARING. CHARLES H. NORTON, Plainville, Conn., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 8, 1930. Serial No. 434,261. 11 Claims. (Cl. 308—66.)

1. A spindle bearing comprising a fixed bearing member constituting the sole locating bearing for a spindle which sustains the radial thrust of the spindle under the normal conditions of usage, a floating bearing shoe serving to hold the spindle properly against the fixed bearing member, means to prevent lateral movement of the shoe, a follow up member contacting with and freely movable towards the floating shoe, and self-adjusting means cooperating with said member to bias it towards movement into firm contact



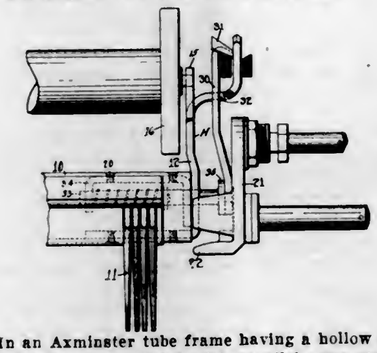
with the shoe, said member and floating shoe being so arranged that the shoe may move only inwardly towards the spindle.

1,807,702. TACHOMETER. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a Corporation of New York. Filed Feb. 2, 1929. Serial No. 337,076. 6 Claims. (Cl. 171—209.)

1. In an electrical tachometer, a permanent magnet having spaced pole pieces, magnetic means arranged to bridge the air gap between the pole pieces and disposed at equal distances from both said pole pieces and adjustable toward and away from said pole pieces to vary the reluctance and the number of lines of force traversing said gap, and common means for supporting said magnet and said means in adjusted relation.

1,807,703. METHOD OF AND APPARATUS FOR SINGEING TEXTILE FABRICS. WALTER OSTHOFF, Barmen, Germany. Filed Nov. 19, 1929, Serial No. 408,203, and in Germany Aug. 9, 1929. 5 Claims. (Cl. 26—3.)

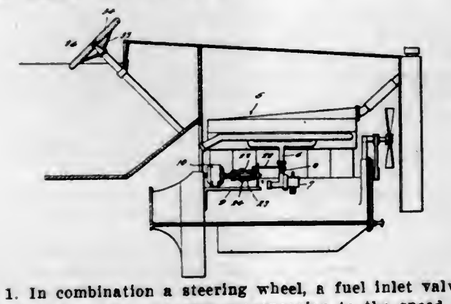
1. Method of singeing textile fabric with gaseous or vapourous fuel according to which a rich excess of oxygen is supplied to the fuel with the primary air before the formation of flame and the ignition of the flame is effected on glowing or incandescent walls after which a combustion



of the textile fibres to be singed with non-luminous flame is effected by the excess oxygen which is heated to a high temperature in the flame.

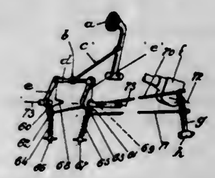
1,807,704. CHEWING GUM AND METHOD OF MAKING THE SAME. ARCHIE PAPPADIS, Norfolk, Va. Filed Dec. 14, 1927. Serial No. 240,084. 2 Claims. (Cl. 99—16.)

1. A compound for chewing gum consisting of the following ingredients substantially in the proportions specified by percentage, beeswax 6%; sweet pure olive oil 4%; granulated mastic gum 50%; sugar syrup 35%; lemon juice 5%, and a trace of rose oil as a flavoring.



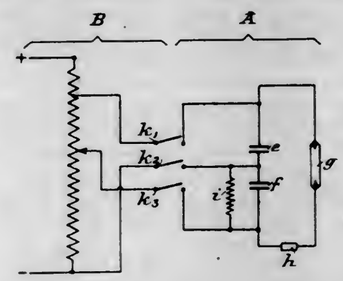
2. A process for producing a chewing gum consisting in first heating beeswax until liquified; mingling sweet pure olive oil until a thorough admixture is obtained, after which granulated mastic gum is added and the mass thoroughly agitated, to which sugar syrup containing lemon juice is added and the mass thoroughly agitated until a homogeneous admixture is obtained and the mass poured on a suitable slab, and adding a trace of rose oil during said pouring.

1,807,705. TUBE FRAME FOR AXMINSTER LOOMS. OSCAR V. PAYNE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 21, 1927. Serial No. 234,591. 7 Claims. (Cl. 139—10.)



1. In an Axminster tube frame having a hollow tubular bar, and a hanger provided with parallel arms projecting into and secured to the hollow bar, a pair of parallel spaced legs formed on one of the arms located in the tubular bar and extending transversely of the latter, a plunger slidably mounted in said legs, resilient means tending to hold said plunger in normal outward position relatively to the hanger, and a rigid hook member mounted directly on the plunger and moving therewith, said hanger having a slot spaced from the plunger to receive and guide the upper portion of the hook.

1,807,706. ACCELERATION CONTROL. ALLAN RINNE, Orr, Minn. Filed Nov. 14, 1929. Serial No. 407,147. 4 Claims. (Cl. 137—139.)

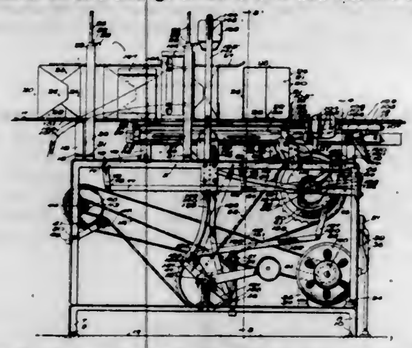


1. In combination a steering wheel, a fuel inlet valve, an electric motor, a governor responsive to the speed of the electric motor, a connection between the governor and the valve, an electric circuit for an electric motor, a rheostat in said circuit and incorporated with the steering wheel, and means on the rim of the steering wheel for operating said rheostat.

1,807,707. BRAKE OPERATING DEVICE FOR MOTOR VEHICLES. LOUIS ROUANET, Ivry-Port, France, assignor to Compagnie d'Applications Mecaniques, Ivry-Port, Seine, France, a French Company. Original application filed Mar. 9, 1925, Serial No. 14,255, and in France Mar. 21, 1924. Divided and this application filed Dec. 14, 1927. Serial No. 240,017. 9 Claims. (Cl. 188—204.)

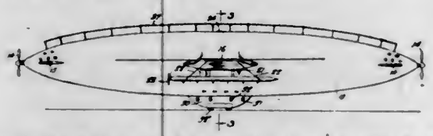
1. A brake device arrangement comprising means for transmitting braking forces from a main brake operating member to brake shoes operating devices, auxiliary power devices, and means controlled by the steering mechanism to introduce variable actions of the said auxiliary power devices in the transmissions of the said braking forces.

1,807,708. PROCESS OF AND MEANS FOR TIMING ELECTRIC FUSES. HERBERT RÜHLEMANN, Sommerda, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany, a Corporation of Germany. Filed Dec. 16, 1929, Serial No. 414,499, and in Germany June 14, 1929. 2 Claims. (Cl. 102—38.)



1. An electrical time ignition device comprising an electrical igniting means, a spark gap, two condensers, a circuit connecting said condensers in opposition to one another, and also including, in series therewith, the igniting means and the spark gap, a high resistance shunted across the terminals of one of said condensers, and a source of electricity capable of simultaneously delivering two different voltages, variable with respect to one another, and connections whereby said voltages may be temporarily applied to the respective condensers to charge the same.

1,807,709. WRAPPING MACHINE. OSCAR SANDBERG, Battle Creek, Mich., assignor to Johnson Automatic Sealer Co., Ltd., Battle Creek, Mich., a Partnership Association Limited of Michigan. Filed Apr. 27, 1929. Serial No. 358,661. 22 Claims. (Cl. 93—2.)

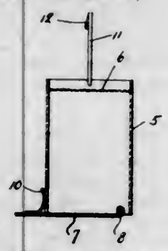


1. In a machine of the character described, means for advancing a package with a wrapper thereon to be folded,

a quadrilateral linkage carried by said means, a folder mounted on said linkage to move with and relative to the

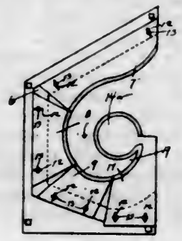
package advancing means, and means for operating the quadrilateral linkage whereby said folder may fold the wrapper on said package.

1,807,710. AIRSHIP. JOHN C. SCHLEICHER, New York, N. Y. Filed Aug. 18, 1928. Serial No. 300,447. 3 Claims. (Cl. 244—6.)



1. In an airship, a rigid buoyant body tapered at each end, propellers at each end of said body, projections extending laterally from opposite sides of and rigid with the body, wings foldably secured to and extending horizontally from the extensions, means to hold the wings extended, resilient plates positioned at opposite edges and upon opposite sides of the wings and having their inner edges secured to said wings and their free edges disposed toward the leading and trailing edges of the wings, and means secured to the free edges of the plates whereby the plates may be independently controlled.

1,807,711. PRODUCT AND PROCESS FOR PREVENTING THE SOLVENT ACTION OF SULPHURIC ACID ON IRON AND STEEL. JOHN G. SCHMIDT, Philadelphia, Pa., assignor to E. F. Houghton and Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1928, Serial No. 263,594. Renewed Apr. 23, 1930. 10 Claims. (Cl. 148—8.)

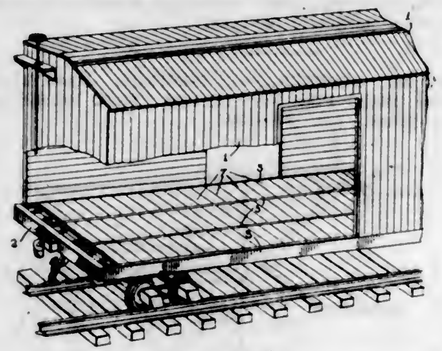


1. The process of pickling iron and steel objects which comprises subjecting said objects to the action of a solution of sulphuric acid to which has been added a reaction product of an aryl thiourea and an aldehyde.

1,807,712. BASS BOMB. GORDON E. SPOFFORD, Buzzards Bay, Mass. Filed Aug. 19, 1930. Serial No. 476,279. 2 Claims. (Cl. 43—4.)

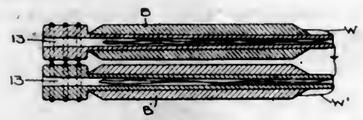
1. A device for the purpose specified, comprising a body adapted to contain live bait, a perforated closure for one end of the body, a normally closed valve for the opposite end of the body, and means to facilitate securing the device to a fish line.

1,807,713. HALVING AND PITTING DEVICE. ALBERT M. SWANSON, Colton, Calif. Filed Feb. 15, 1929. Serial No. 340,128. 3 Claims. (Cl. 146—30.)



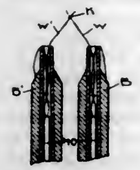
1. In a device of the character described, a blade carrier angular block, means for supporting said block, a plurality of blades secured in spaced relation to the inner portion of said block, means for adjusting said blades to and from a central point, the edge of each of said blades converging into the next of said adjacent blades.

1,807,714. BARGE. JOHN L. TAYLOR, West View Borough, Pa. Filed Nov. 23, 1928. Serial No. 321,382. 7 Claims. (Cl. 114—79.)



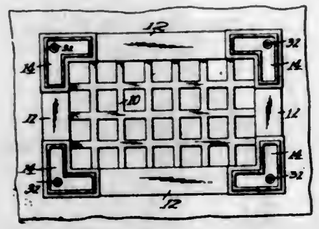
1. A barge having its bottom, end and side walls composed of longitudinally extending tubular supporting ribs, said ribs being spaced transversely, and two series of plates welded to said ribs to form inner and outer spaced air-tight walls, said ribs separating the space between said walls into a series of air chambers.

1,807,715. RAILROAD CAR FLOOR AND METHOD OF CONSTRUCTING THE SAME. MAX D. TUCKER, Detroit, Mich., assignor to The Evans Auto Loading Co., Inc., Detroit, Mich. Filed Dec. 9, 1929. Serial No. 412,889. 8 Claims. (Cl. 105—422.)



1. In a car floor, sectional cross boards assembled in the floor in a manner to permit forceful breakage of an intermediate or end board for removal with the remaining boards moved into edge contacting relations.

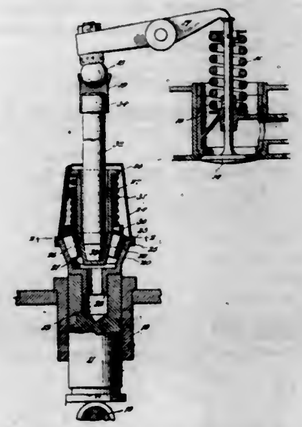
1,807,716. BOBBIN FOR WEFT REPLENISHING LOOMS. RICHARD GREENLEAF TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 7, 1930. Serial No. 473,598. 8 Claims. (Cl. 139—257.)



1. In a weft replenishing mechanism, a pair of weft yarn carrying bobbins having their weft ends tied together and a portion of the tied ends inserted internally in one of the bobbins.

1,807,717. METHOD OF HANDLING WEFT ENDS OF WEFT CARRIERS. RICHARD GREENLEAF TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 14, 1930. Serial No. 475,283. 8 Claims. (Cl. 139—257.)

1. The method of controlling weft ends in a weft replenishing mechanism which consists in providing two bobbins having a continuous weft wound thereon, inserting a reserve of weft in one of said bobbins, and transferring one of said bobbins and leaving the other to act as a thread holder for the transferred bobbin.



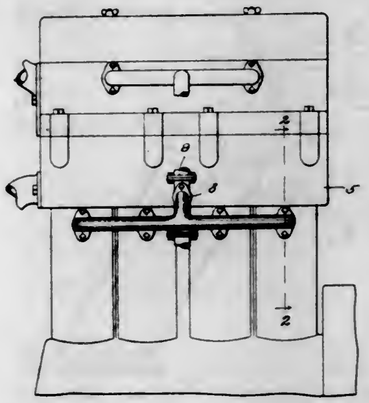
1,807,718. GRATING AND FRAME THEREFOR. MELCHER G. WERME, Worcester, Mass., assignor to Wickwire Spencer Steel Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 4, 1930. Serial No. 472,870. 2 Claims. (Cl. 189—84.)

1. A grating comprising a body of perforated metal of substantial thickness, and an enclosing frame formed of a plurality of strips of sheet metal recessed to receive the edges of said perforated body, each strip having portions thereof partially severed therefrom and projected rearward and bent to embrace portions of said perforated body, thereby securing said strips in position.

1,807,719. VALVE ACTUATING MECHANISM. CALVIN C. WILLIAMS, Philadelphia, Pa. Filed Apr. 7, 1927. Serial No. 181,787. 5 Claims. (Cl. 123—90.)

1. An automatic take-up device including a female clutch member, a tubular male clutch member extending therein, clutch elements interposed between said members, a spring acting on the male member and said elements and urging said elements to coact with the members, said male member being closed at its lower end to provide a socket for an element operable to open a valve, and a cap

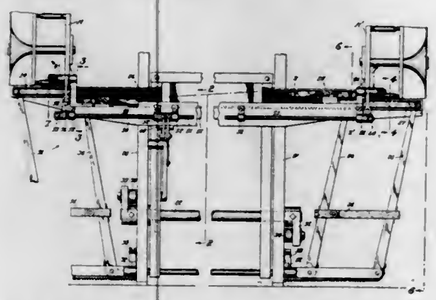
fixed to said female member and housing the male member, the cap being disposed to limit the male member against displacement out of the female member.



1,807,720. AROMATIC N-AMINO-ALKYL-AMINO ALDEHYDES. AUGUST WINGLER, Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 6, 1928, Serial No. 259,604, and in Germany Apr. 16, 1927. 4 Claims. (Cl. 260—136.)

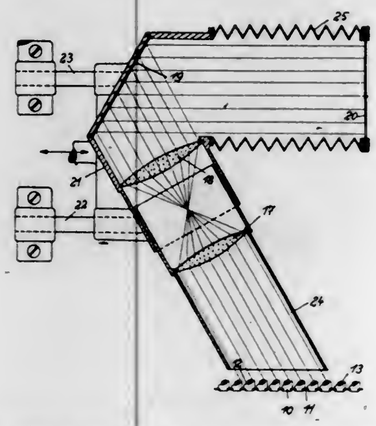
1. As new products the compounds of the general formula

wherein A stands for hydrogen, alkyl or aminoalkyl, B stands for aminoalkyl and Ar stands for an aromatic residue which may be substituted, being generally yellowish colored oils with strong basic properties which can be distilled in vacuo without decomposition and being easily soluble in water in form of their inorganic salts.



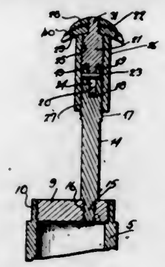
1,807,721. ENGINE. IDUS G. YOUNG, Lequire, Okla. Filed Apr. 2, 1927, Serial No. 180,546. Renewed Apr. 20, 1931. 1 Claim. (Cl. 123—196.)

In an internal combustion engine, cylinders having openings arranged intermediate the ends thereof, an aux-



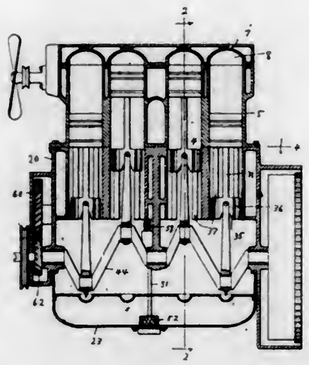
iliary manifold secured adjacent to the openings for receiving material from the openings, pistons operating in the cylinders, said pistons having curved grooves formed in the outer surface thereof, said grooves being substantially narrow at their upper ends and widened throughout their lengths, and said grooves adapted to deliver material to the openings and manifold.

1,807,722. WEFT REPLENISHING DOUBLE SHUTTLE LOOM. LESTER W. BALSER and EVERETT E. CLARK, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 26, 1929. Serial No. 342,794. 9 Claims. (Cl. 139—243.)



1. A double shuttle loom having, in combination, a pair of shuttles, a magazine for each shuttle, means to transfer weft carriers from said magazines to said shuttles by direct downward movement, and a pair of shuttle boxes for each shuttle located so that the paths of travel of the two shuttles are substantially equal in length but are differently disposed transversely of the loom by an amount not less than the length of a shuttle, each magazine being positioned above a shuttle box which is beyond the path of travel of the other shuttle, whereby transfer to each shuttle may be effected free from interference by the other shuttle.

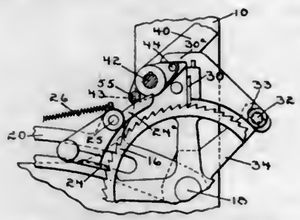
1,807,723. APPARATUS FOR TURNING CIGARETTES RIGHT SIDE UP AS THEY ARE FED TO THE PACKING MACHINE. MARTIN BERGER, Freital-Deuben, near Dresden, Germany, assignor to United Cigarette Machine Company Aktiengesellschaft, Dresden, Germany. Filed July 1, 1929, Serial No. 375,264, and in Germany May 23, 1928. 6 Claims. (Cl. 226—5)



1. A device for enabling the turning of cigarettes on a conveyor as they are fed to a packing machine comprising optical means adapted to throw a stationary image of the moving cigarettes for the purpose of enabling an appliance to be operated to turn any desired cigarette shown in the image; and means for observing the image.

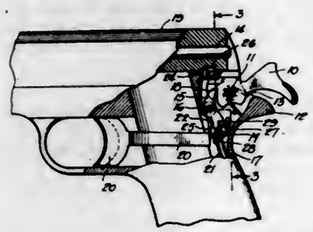
1,807,724. SHAVING KIT. FRANK BOSANAC, Schumacher, Ontario, Canada. Filed May 31, 1930. Serial No. 458,599. 1 Claim. (Cl. 30—12.)

A safety razor shaving kit of the character described, comprising a tubular handle, a screw plug closure for one end thereof, a screw threaded plug in the opposite end of the handle, a stem having one of its ends eccentrically connected to the screw threaded plug, the opposite end of the stem having screw threads and being bifurcated, an extension having a slotted reduced flat portion adapted to be received between the bifurcated end of the stem, a pivot pin passing through the bifurcated end of the stem and through the slot of the flattened reduced portion of the extension, screw threads formed on the extension corresponding to the screw threads on the stem, an internally screw threaded sleeve adapted to be screwed upon the screw threads of the stem and the extension whereby the same may be held in an extended position, and a razor blade holder carried by the outer end of the extension.



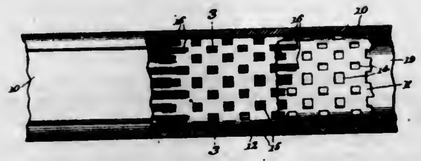
1,807,725. INTERNAL COMBUSTION ENGINE. HERBERT H. BRACKMAN, Colfax, Ill. Filed Nov. 16, 1928. Serial No. 319,908. 1 Claim. (Cl. 74—14.)

An internal combustion engine of the class described comprising a cylinder block having a plurality of vertical bores therein, a plurality of vertically reciprocating pistons mounted in the bores and having depending bars rigidly coupled thereto, a crank case having a horizontal crank shaft journalled therein, a closed vertically disposed casing between the crank case and the cylinder head, said casing formed with vertical chambers in registration with the cylinder bores at their upper ends and the crank case on their lower ends, lateral brackets on



the opposed side walls of the casing within said chambers, vertically disposed guide rods supported on the brackets in spaced relation to the walls of the chambers, cross heads formed on the lower ends of said depending bars provided with vertical grooves slidable on said guide rods, and connecting rods journalled at their opposite ends to the crank shaft and cross head respectively.

1,807,726. TAKE-UP MECHANISM FOR LOOMS. ALLEN E. BRICKMAN, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 11, 1929. Serial No. 399,056. 4 Claims. (Cl. 139—304.)



1. A loom take-up mechanism comprising a ratchet, a feed pawl, a holding pawl, a shipper lever, a release lever, and means by which either lever may be rendered effective to disable either pawl.

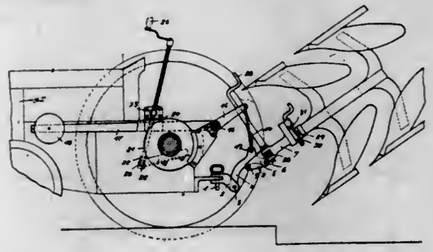
1,807,727. SAFETY LOCK FOR FIREARMS. ARCHIBALD R. BRINKERHOFF, Los Angeles, Calif. Filed Feb. 12, 1930. Serial No. 427,857. 13 Claims. (Cl. 42—7.)

12. A firearm having a hammer, a sear, and a trigger for releasing the sear from the hammer, and trigger controlled means co-acting with the sear to lock the hammer in cocked position so long as the trigger is held depressed.

1,807,728. PNEUMATIC TIRE. ANDRE L. BROUSSARD, New Orleans, La., assignor of nine-tenths to E. O. Broussard, New Orleans, La. Filed Aug. 23, 1929. Serial No. 387,998. 1 Claim. (Cl. 152—18.)

An improved pneumatic tire comprising a casing, a pair of sheath plates extending circumferentially and transversely of the tread of the tire incorporated in the casing, and having openings therein disposed in transverse rows, the openings of one plate being offset from the openings in the other plate, and cords vulcanized in the casing, each strand of the cords being looped about one edge of the upper plate and secured thereto, said strand being carried down and about the edge of the lower plate in engagement with the lower surface of the lower plate thence through the first opening in the lower plate and the second opening in the upper plate, the strand being brought along the upper surface of the upper plate and passed downwardly through the third openings of the upper and lower plates, the strand being passed beneath the surface of the lower plate and passed upwardly and looped about the other edges of the plates, the strand being carried across the upper surface of the plate, said strand being threaded in the opposite direction through the same openings but in an alternate sense, the strand crossing itself alternately in the openings of the upper and lower plates.

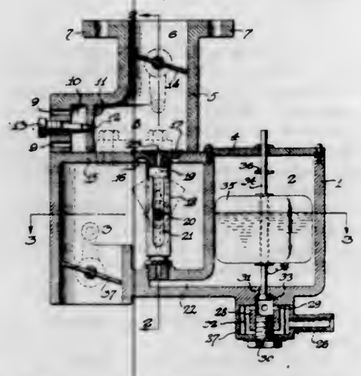
1,807,729. NEW ω-HALOGEN-METHYL DERIVATIVES OF PHENOL AND ITS HOMOLOGUES AND A NEW PROCESS OF PREPARING THE SAME. ARNOLD BRUNNER, Frankfort-on-the-Main-Hochst, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 26, 1930, Serial No. 447,761, and in Germany Feb. 26, 1929. 7 Claims. (Cl. 260—154.)



1. The process which comprises reacting upon a member of the group consisting of phenol and its homologues with formaldehyde in the presence of a concentrated hydrogen halide solution.

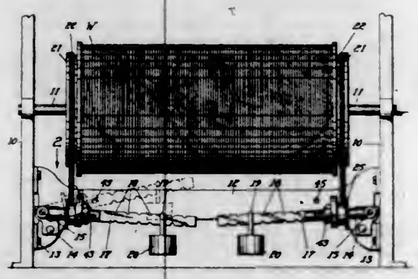
1,807,730. WEFT DETECTOR FOR LOOMS. GEORGE A. BUFFINGTON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 28, 1929. Serial No. 417,215. 4 Claims. (Cl. 139—287.)

1. In a feeler tip for a loom weft detector arm, a support on the arm, a U-shaped wire slidably mounted on the support and limited as to rearward movement, and a coiled spring around the wire holding the latter yieldingly in rear position and having the coils thereof disposed to engage the weft to be detected.



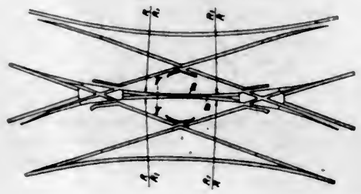
1,807,731. OPERATOR FOR AGRICULTURAL CULTIVATING IMPLEMENTS. MAX EHRICKE, Leipzig-Plagwitz, Germany, assignor to the Firm Rud.Sack, Leipzig-Plagwitz, Germany. Filed May 24, 1926, Serial No. 111,327, and in Germany Feb. 17, 1926. 6 Claims. (Cl. 97—47.)

1. A device to be used in connection with traction engines for agricultural implements serving for the treatment of the soil, said device comprising an agricultural implement, a support mounted rotatably in a vertical plane on a traction engine, means for fixing said agricultural implement to said support so that the total weight



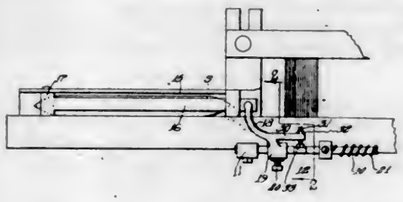
of said implement will be transmitted to said support in raised condition of said implement, and lifting means adapted to act on said support to so adjust the latter that it will carry said implement in freely lifted condition.

1,807,732. CARBURETOR. ERNANI M. FABRIZI and GIUSEPPE BERTI, Detroit, Mich., assignors of one-third to Vincent Giuliano, Detroit, Mich. Filed Aug. 8, 1929. Serial No. 384,261. 2 Claims. (Cl. 261—59.)



1. In a carburetor, the combination of a casing formed with a float chamber and with an air inlet chamber, means for supplying fuel to the float chamber, means regulating the flow of fuel into the float chamber including a float, a member forming a mixing chamber positioned above the air chamber and communicating with said air chamber through an opening in a wall of the casing, said opening providing an upwardly facing valve seat, an air valve to seat on said seat, a tubular sleeve on the air valve, a post fixed in the casing with its upper end extending through the opening in the casing wall which affords communication between the mixing chamber and the air chamber, said post being formed with a restricted fuel passage extending axially therethrough and opening at its upper end into the mixing chamber and communicating at its lower end with the fuel chamber, and a valvular member extending transversely through said post and interrupting said fuel passage, said valve sleeve being formed with elongated openings in opposite sides thereof through which said valvular member extends.

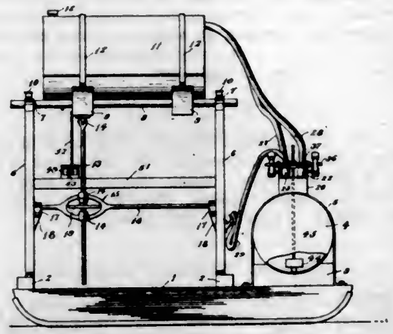
1,807,733. LET-OFF FOR LOOMS. VICTOR A. FOISY, Worcester, Mass., and CARL J. LINDEGREN, Providence, R. I., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 21, 1928. Serial No. 263,471. 6 Claims. (Cl. 188—83.)



3. In a let-off for a loom having a frame and a warp beam, a lever pivotally mounted with respect to the frame, connections between the lever and the beam whereby the lever acts when in normal position to retard movement of the beam, a plunger mounted in said lever for sliding and angular movement relatively to said lever, said plunger when in a given angular position being restrained against movement toward the frame and said plunger when in another angular position relatively to the lever being movable into holding engagement with respect to the frame of the loom to hold the lever in such a position as to render the same ineffective to retard movement of the beam.

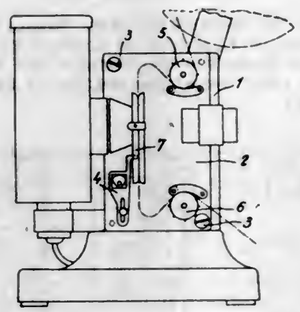
1,807,734. RAIL POINT. ERICH FRICKE, Dortmund, Germany, assignor to Firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Filed July 7, 1930, Serial No. 466,238, and in Germany July 15, 1929. 6 Claims. (Cl. 246—416.)

1. Double slip points with points disposed outside the diamond arrangement of the tracks in which the centre section passed over by rolling stock on both sides consists of two rails in direct contact, which are securely connected together for example by filling pieces and bolts.



1,807,735. PROTECTOR MECHANISM FOR LOOMS. ANTHONY D. GARGOLINSKI, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1929. Serial No. 384,933. 3 Claims. (Cl. 139—345.)

1. In a protector mechanism for a loom having a protector rod and a shuttle binder, a protector finger mounted on the rod to engage the binder, a dagger secured to the protector rod and moving therewith, means to prevent longitudinal movement of the finger relatively to the rod, and a connection between the finger and the dagger independent of the said means and communicating an operating force from the finger to the dagger.

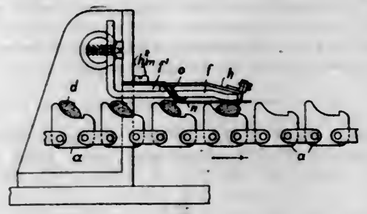


1,807,736. MIXING DEVICE. JOHN A. GIRD, Cedar Lake, Litchfield, N. Y. Filed Nov. 26, 1929. Serial No. 409,985. 7 Claims. (Cl. 137—68.)

1. A device of the class described comprising a mixing tank, stock containers associated with the tank, means for conducting water to the tank, a valve controlling admission of water to the tank, valves controlling the flow of stock

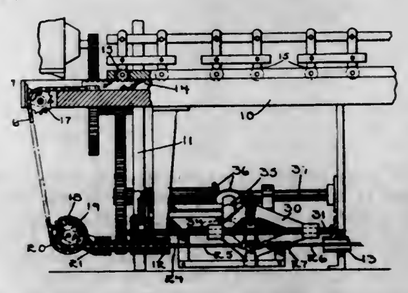
from the containers to the tank, and a float in the tank for opening the valves and closing the valve when the water level rises in the tank.

1,807,737. MOTION PICTURE PROJECTOR. LEO GOLDHAMMER, Munich, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Jan. 22, 1929, Serial No. 334,281, and in Germany Jan. 20, 1928. 4 Claims. (Cl. 88—18.)



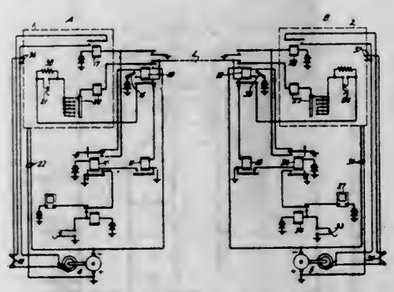
1. For a motion picture projector adapted to exhibit cinematographic films of different dimensions and provided with a driving mechanism, a plurality of plates of exactly the same size, mounted on each of the said plates in operative combination a film gate and means to forward a film band, said elements being of different size to operate with films of different dimensions, and means to secure such a plate easily interchangeable in the projector, and the film driving means in operative engagement with the said driving mechanism.

1,807,738. APPARATUS FOR TURNING CIGARETTES AND SIMILAR ROD-SHAPED ARTICLES RIGHT-SIDE UP WHEN FEEDING SAME TO PACKING MACHINES. PAUL GOTTSCHALK, Dresden, Germany, assignor to United Cigarette Machine Company Aktiengesellschaft, Dresden, Germany. Original application filed July 5, 1929, Serial No. 376,067, and in Germany Mar. 2, 1929. Divided and this application filed Aug. 1, 1930. Serial No. 472,444. 5 Claims. (Cl. 226—5.)



1. Apparatus for turning cigarettes and similar rod-shaped articles right-side up when packing same comprising in combination a conveyor feeding the cigarettes to a packing machine, a member adapted to engage with the seam of the cigarettes lying on the conveyor in the wrong position so as to impart to them a turning movement and a

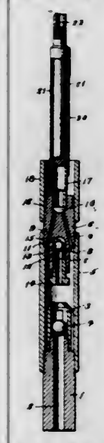
spring arranged in such a manner that it is raised by the cigarette partly turned by the said member and prevents



the same from falling back with the result that during the ensuing relative movement between the conveyor and the spring the complete turning of the cigarette is effected.

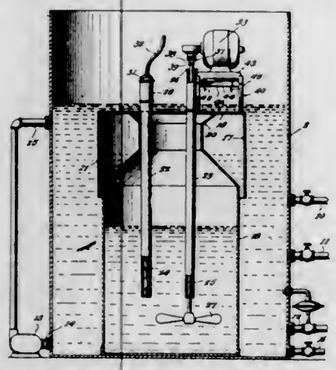
1,807,739. PROTECTOR MECHANISM FOR NARROW WARE LOOMS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 17, 1930. Serial No. 453,869. 4 Claims. (Cl. 139—138.)

1. In a narrow ware loom, a driving member for a plurality of shuttles, actuating mechanism for said member, and a giveway connection between said actuating mechanism and said member, said giveway connection comprising a connecting member positioned between portions of said driving member and said actuating mechanism, and said connecting member being bodily displaceable by abnormal actuating pressure thereon.



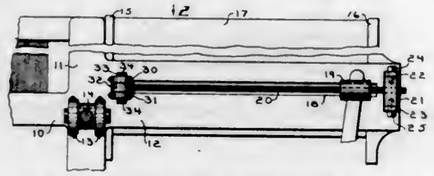
1,807,740. TELEGRAPH SYSTEM. GEORGE J. KNANDEL, Newark, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 9, 1929. Serial No. 406,071. 4 Claims. (Cl. 178—4.1.)

1. In a telegraph system, two stations, a line connecting said stations, a signaling current source at each station having like poles connected to ground, a transmitting and receiving device at each station, means responsive to



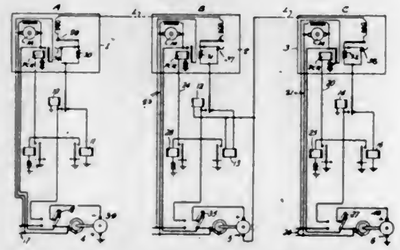
signal transmission from one station for conditioning the receiver at the other station for reception of said signals, means for conditioning the receiver at the call originating station for reception of said signals, and means for causing the current of said transmitted signals to flow through the receivers at both stations in the same direction regardless of which station is the call originating station.

1,807,741. DEEP WELL PUMP. FRANK C. KNISS and RICHARD N. VICKERS, Smackover, Ark. Filed May 28, 1930. Serial No. 456,634. 2 Claims. (Cl. 103—155.)



1. A pump comprising a lower standing valve, a sleeve coupled to and extending upwardly from said standing valve, a coupling body in the upper end of said sleeve having upwardly diverging passages leading from a central chamber at its lower end and upwardly converging passages leading to a central chamber at its upper end, the first-mentioned passages communicating with the space above the body and the last-mentioned passages communicating with the space below the body and within the coupling sleeve, a valve within the chamber in the lower end of the coupling body, a casing coupled to the upper end of said body, a cylinder secured in the upper end of said body within said casing and communicating with the upper chamber in the body, and a plunger working closely within said cylinder.

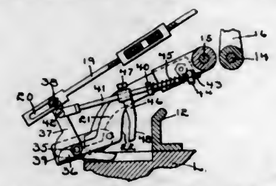
1,807,742. PASTEURIZING APPARATUS. WILLIAM R. LAIRD, Sioux Falls, S. Dak., assignor to Allied Laboratories, Incorporated, Chicago, Ill., a Corporation of Delaware. Filed Mar. 1, 1930. Serial No. 432,574. 6 Claims. (Cl. 257—108.)



1. A pasteurizing device comprising an open bottom hood adapted to form a cover for a container having a flared mouth and adapted to provide an annular space between the wall of the hood and the wall of the container, said hood and said container being adapted to be submerged whereby the hood is sealed to the container with liquid, a pair of tubes carried by the hood, a thermometer in one of the tubes, an agitator carried by the other tube, and a motor removably mounted on the hood and adapted to actuate said agitator.

1,807,743. PICKER SPINDLE MOUNTING FOR LOOMS. CARL J. LINDEGREN, Providence, R. I., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 17, 1929. Serial No. 363,842. 11 Claims. (Cl. 139—158.)

1. In a loom having a lay movable back and forth in a given path and having a picker to move along the lay to propel a shuttle, a picker spindle along which the picker moves, and means to pivotally connect the lay and spindle, the axis of the pivot being substantially perpendicular to the spindle.

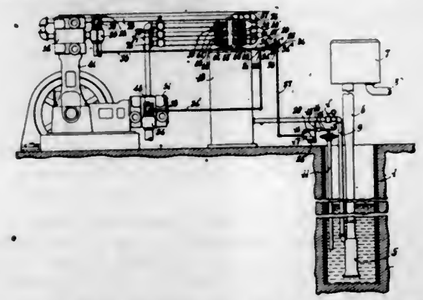


1,807,744. TELEGRAPH SYSTEM. HAROLD F. MAY, Valley Stream, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 9, 1929. Serial No. 406,070. 3 Claims. (Cl. 178—4.1.)

1. In a telegraph system, a plurality of stations, a metallic conductor interconnecting said stations, a signal receiver at each station, means at each station for sending telegraph signals over said conductor to operate the receivers at the other stations, a source of current at each station normally disconnected from said conductor, means at a calling station for connecting its source to said conductor, and means at a called station responsive to the flow of current in said conductor for starting and maintaining the receiver in operation during the sending of telegraph signals over the condnctor, said last means serving to discontinue the operation of the receiver when current ceases to flow in said conductor for a prolonged interval.

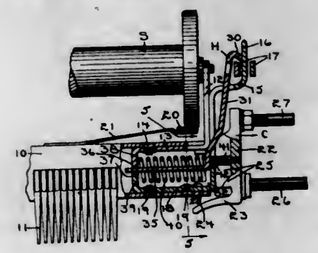
1,807,745. THREAD CUTTER. ANTHONY F. MIFFITT, Rockville, Conn., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 2, 1929. Serial No. 410,902. 6 Claims. (Cl. 139—264.)

1. In a weft replenishing loom having a lay and a shuttle feeler movable from normal position to shuttle feeling position prior to transfer and arranged to be engaged by the lay and restored to normal position following the transfer, a combined cutter and clamp pivoted to the shuttle feeler, a rod pivotally connected to the cutter and clamp and guided on the shuttle feeler, an operating finger secured to the rod and depending therefrom to have engagement with the lay, and means to open the clamp and to move the operating finger in a direction to-



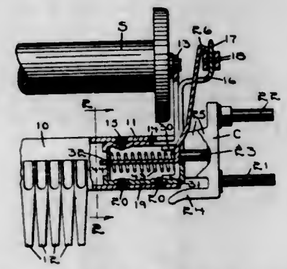
ward the lay as the shuttle feeler is moved toward shuttle feeling position, said lay engaging the finger to operate the cutter and clamp while the shuttle feeler is still in feeling position, the lay and finger being so proportioned as to have operating contact with each other during movement of the shuttle feeler toward normal position to retain the thread clamp in thread holding position.

1,807,746. STRINGED MUSICAL INSTRUMENT. EMANUEL MOOR, Mont Pelerin sur Vevey, Switzerland, assignor of part interest to the Firm of C. Bechstein, Pianofortefabrik A. G., Berlin, Germany. Filed Apr. 10, 1930, Serial No. 443,182, and in Germany Apr. 17, 1929. 6 Claims. (Cl. 84—275.)



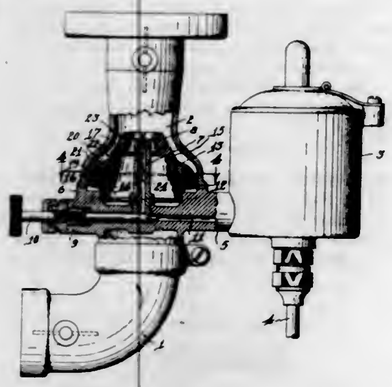
1. Stringed musical instrument comprising a hollow box-shaped resounding body, a sectional top portion on said body comprising two transversely and adjacently disposed substantially similar outwardly convex sections and a uniformly arched bottom section opposite said top portion and side walls connecting the convex sections to the bottom section and conforming to the contour of the edges of said sections.

1,807,747. PUMPING SYSTEM. JOHN OLIPHANT, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 16, 1923. Serial No. 639,265. 16 Claims. (Cl. 103—232.)



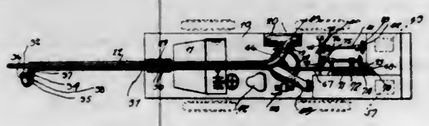
1. In a fluid pumping mechanism, a compressor, a pumping mechanism supplied thereby, unloading means for said compressor and means for controlling the operation of said unloading mechanism including a fluid actuated piston, a valve controlling the supply and exhaust of pressure to and from said piston, means normally causing interruption of the supply of fluid to said piston and the exhaust of fluid therefrom, and means including a diaphragm operative to move said last mentioned means and a down pipe projecting into a chamber from which said pump raises liquid for controlling the operation of said valve by variations in level of the liquid pumped.

1,807,748. TUBE FRAME FOR AXMINSTER LOOMS. OSCAR V. PAYNE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 5, 1929. Serial No. 411,934. 21 Claims. (Cl. 139—10.)



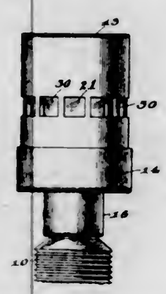
1. In a tube frame for an Axminster loom operating with a transporting chain, a longitudinal bar out of alignment with the chain, a bracket carried by the bar and having a portion to support a spool and also a portion to engage the chain, a pair of spaced parallel arms formed as parts of the bracket, a rigid hook slidably mounted on the tube frame and having an upwardly extending chain engaging hook by which the tube frame is supported on the chain, said hook having at the lower end thereof spaced guide ears to slide between and be guided by the arms, and resilient means to hold the hook normally in chain engaging position.

1,807,749. TUBE FRAME FOR AXMINSTER LOOM. OSCAR V. PAYNE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 10, 1930. Serial No. 443,134. 12 Claims. (Cl. 139—10.)



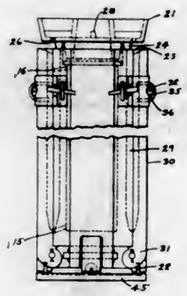
1. In a tube frame for an Axminster loom operating with a transporting chain, a tubular bar, a chain engaging bracket having a pair of substantially parallel arms extending into and secured to the hollow bar, a chain engaging hook having a portion extending between the arms and slidable with respect thereto, a tongue rigid with the hook and lying intermediate the arms, a resilient member around the tongue to urge the hook member normally into chain engaging position, and a removable guide plate for the tongue separate from and positioned by said arms, said plate being normally held in position by the spring.

1,807,750. CARBURETOR. SIDNEY L. PICARD, Detroit, Mich. Filed Dec. 5, 1928. Serial No. 323,989. 5 Claims. (Cl. 261—62.)



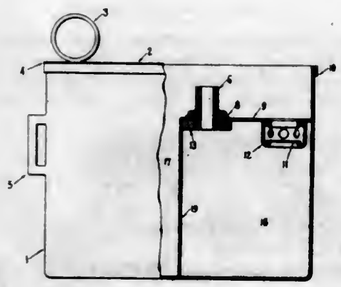
1. In a carburetor, a mixing body, a collar seated in said body and having an inner conical wall, the upper end of said collar being conical exteriorly, and a pair of shutters pivotally connected to said collar and adapted to seat against the conical surfaces of said conical upper end.

1,807,751. COTTON PICKER. THOMAS R. POST, Wilmington, N. C. Substitute for application Serial No. 148,242, filed Nov. 18, 1926. This application filed Feb. 23, 1928. Serial No. 256,457. 17 Claims. (Cl. 56—13.)



1. In a cotton picker of the pneumatic type, a wheel supported movable platform, a support at the forward end of said platform having a swivel joint at its upper end, a pneumatic tube carried by the joint and projecting in advance of the platform, said tube being mounted for reciprocation on means carried by said joint, and a cotton boll engaging mouth on the forward end of said tube.

1,807,752. AUTOMOBILE TIRE INDICATOR OR GAUGE. MEYER J. POSTER, New York, N. Y. Filed Apr. 8, 1930. Serial No. 442,672. 3 Claims. (Cl. 116—34.)

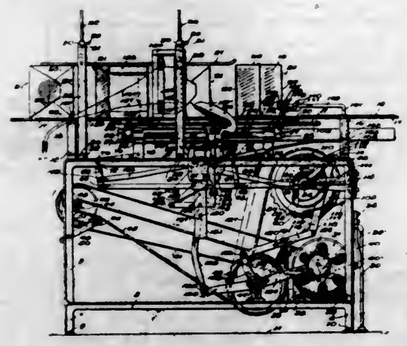


1. An automobile tire pressure gauge or indicator, comprising a casing closed at its outer end and having sight openings intermediate its ends, a base portion connected to the inner end of the casing, said base portion having an inwardly extending threaded part adapted to detachably engage with a valve stem, said base portion having an opening therethrough registering with the valve stem and having a bar adapted to engage the pin of the valve for maintaining the same open when the base portion is in position, a transparent cylinder mounted in the casing and having an opening through its inner end to receive air from the base portion, a piston slidably mounted in the transparent cylinder and having surface portions of different colors adapted to register past the sight openings during the movement of the piston, and a spring carried in the outer end of the cylinder for engaging against the outer end of the piston to urge the latter inwardly against the air pressure.

1,807,753. CLUSTER MOLD. ROBERT G. REDMANN, Bristol, Conn. Filed July 8, 1929. Serial No. 376,820. 6 Claims. (Cl. 22—142.)

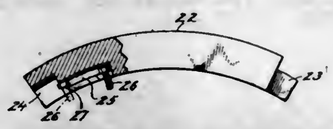
1. A cluster mold comprising an elongated column of polygonal form of cross-section, the sides of said column constituting each an individual mold part, a separable mold part cooperating with each of said first named mold parts, and a common pouring cup structure for the different molds surmounting said column.

1,807,754. DEVICE FOR SAVING LIFE FROM DROWNING. LAWRENCE KENNEDY RICHEY, Detroit, Mich. Filed Nov. 1, 1929. Serial No. 404,027. 1 Claim. (Cl. 9—19.)



The combination of a water tight metal container of two compartments, a water valve, a gas valve, a rubber lined fabric bag, a cotton bag containing calcium carbide, and container under slight vacuum, and a ring grip for opening same, so arranged as to permit gas formed by a chemical reaction to inflate the bag by a single act of a person whose life is in danger from drowning.

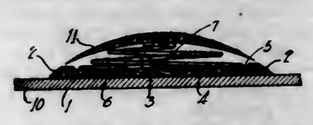
1,807,755. SOLUTIONS, COMPOSITIONS, OR PREPARATIONS FOR TEXTILE AND LIKE PURPOSES AND THEIR APPLICATIONS. CHARLES FIELD RYLEY and GEORGE ALEC AWCOCK, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed July 28, 1924, Serial No. 728,799, and in Great Britain June 27, 1924. 12 Claims. (Cl. 91—68.)



1. Yarns adapted to be subjected to weaving, knitting or other textile operations, said yarn being sized with a composition containing a salt of a resinous acid and a fatty lubricating agent.

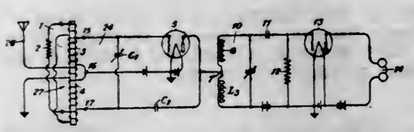
1,807,756. WRAPPING MACHINE. OSCAR SANDBERG, Battle Creek, Mich., assignor to Johnson Automatic Sealer Co., Ltd., Battle Creek, Mich., a Partnership Association Limited of Michigan. Filed Apr. 19, 1929. Serial No. 356,565. 35 Claims. (Cl. 93—2.)

1. In a machine of the character described, package wrapping means, package supporting means extending past the package wrapping means, pivoted means for successively registering packages on the supporting means with respect to said package wrapping means, package advancing devices for moving the registered packages in succession from the registering means along the supporting means and past the wrapping means, and means for moving said package advancing devices along closed paths to engage, advance, and release the successive packages.



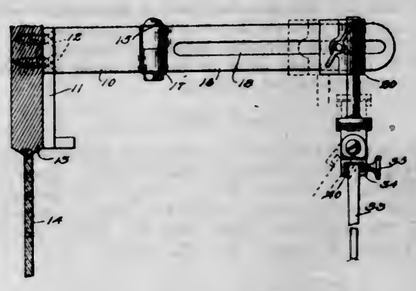
1,807,757. COMBINED WHEEL FIN AND WEIGHT. THEODORE G. SCHMEISER, Fresno, Calif. Filed Feb. 27, 1929. Serial No. 343,027. 2 Claims. (Cl. 301—40.)

1. A fin for tractor wheels, comprising an annular body formed of segmental sections, tongue and groove connections between the ends of the sections, said sections being formed with channels extending circumferentially thereof and inwardly from the groove ends of the sections so that one end of each channel is in communication with the adjacent groove to permit a bolt to be inserted into the channel through the groove and the closing of said end by the tongue of an adjacent section when inserted into the groove.



1,807,758. COIL SPRING METATARSAL ARCH SUPPORT. WILLIAM SEIGLE, Hinton, Okla. (Cl. 36—71.) Filed Feb. 3, 1930. Serial No. 425,669. 4 Claims.

1. The combination with a coil spring metatarsal arch support having a conical coil spring for supporting the metatarsal arch of a human foot, of a flat fibrous base adapted to be attached to the top surface of a shoe sole,

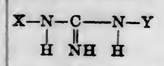


said base having skived edges and having a perforation in its rear central portion for receiving the free end portion of the lower loop of said spring.

1,807,759. PREVENTION OF PARASITIC OSCILLATIONS. HAROLD C. SILENT, Los Angeles, Calif., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed Nov. 9, 1928, Serial No. 318,194. Patent No. 1,785,819, dated Dec. 23, 1930. Divided and this application filed Mar. 27, 1930. Serial No. 439,389. 4 Claims. (Cl. 250—20.)

1. A translating device comprising in combination, a balanced bridge having a secondary transformer winding in each balancing arm, a primary circuit inductively coupling said secondary windings, an auxiliary transformer individual to each said balancing arm with a primary winding in series therewith, a series connection for the secondaries of said auxiliary transformers such that a voltage active in said primary circuit first mentioned induces opposed voltages in said auxiliary secondary windings, whereas a voltage active in the bridging arm of said bridge induces additive voltages in the auxiliary secondary windings.

1,807,760. MOUNTING FOR ANTIGLARE DEVICES. PHILO VERNON SNOW, Chicago, Ill. Filed June 22, 1929. Serial No. 372,945. 2 Claims. (Cl. 296—97.)



2. In a device of the character described, a bracket arranged for attachment to a fixed support, an arm pivotally connected to the bracket, a carriage mounted for longitudinal movement on the arm, a split sleeve carried by the carriage and provided with a vertically disposed bore, a rod adjustably mounted in said bore in a substantially vertical position, means for securing the carriage and rod in adjusted positions independently of each other, a second bracket mounted upon the rod and swiveled for adjustment coaxially of the rod, and a glare screen pivotally mounted in said bracket and adjustable about an axis transverse to that of the bracket.

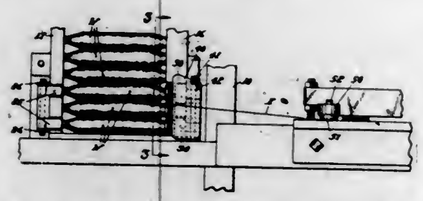
1,807,761. PROCESS OF IMPROVING THE RESISTANCE OF DIAZO-TYPES TO WATER. EDUARD SPRÖNGERTS, Wiesbaden-Biebrich, Germany, assignor to Kalle & Co. Aktiengesellschaft, Wiesbaden-Biebrich, Germany. Filed July 19, 1929, Serial No. 379,585, and in Germany July 30, 1928. 5 Claims. (Cl. 95—7.)

1. Process of improving the resistance of diazo-types to water which consists in incorporating into the layers aryl derivatives of guanidine.

2. Process of improving the resistance of diazo-types to water which consists in incorporating into the layers compounds of the following formula:

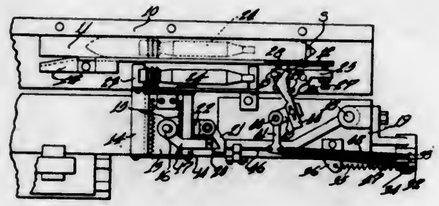
wherein X stands for aryl residue and Y stands for H the group

or an aryl residue.



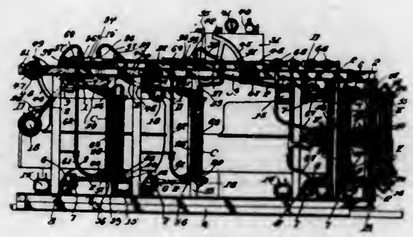
1,807,762. MERCERIZATION OF PIECE GOODS. FRITZ THIES, Hellerau, near Dresden, Germany. Filed Mar. 4, 1927, Serial No. 172,853, and in Germany Mar. 10, 1926. 5 Claims. (Cl. 8—20.)

1. In elastic mercerization apparatus and in combination, impregnation and squeezing mechanism comprising a set of pairs of heavy rollers with guide rollers between the pairs and adapted for giving an up and down zig-zag course to the fabric to be mercerized and a short straight approach of such fabric into the bites of the said rollers, and means for thereafter heating and stretching the fabric, rollers in a heated chamber to which the fabric is passed from such impregnation and squeezing mechanism, these rollers being adapted for entrainment by the moving fabric, and widthwise treatment rollers also adapted for being entrained by the moving fabric substantially as set forth.



2. A method of obtaining elastic mercerization of woven material comprising the alternate and successive steps of impregnating the material with a mercerizing solution, and applying pressure thereto without impairing the swelling thereof, and thereafter heating the impregnated material to the boiling point of the entrained solution and stretching the heated material.

1,807,763. GIVEWAY AND THREAD GUIDING DEVICE FOR WEFT CARRIER MAGAZINES. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1929. Serial No. 341,158. 5 Claims. (Cl. 139—251.)



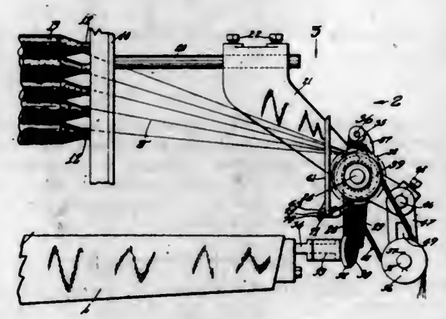
1. In a magazine having vertically disposed weft carrier guideways, a separate giveway device for each end of the lowermost weft carrier in said guideways, an additional separate giveway device for each end of the weft carrier second above said lowermost weft carrier, the intervening weft carrier being held from lateral displacement by the fixed side walls of the magazine guideway and the pair of giveway devices engaging one weft carrier remaining in operative position when the pair of giveway devices engaging the other weft carrier yield to permit removal of said weft carrier from said magazine.

1,807,764. WEFT REPLENISHING DOUBLE SHUTTLE LOOM. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 14, 1930. Serial No. 420,763. 5 Claims. (Cl. 139—242.)

1. In a double shuttle weft replenishing loom, a weft detector controlled member movable from non-indicating to indicating position at weft exhaustion, transfer mechanism, a controller therefor, a regularly moving element to have operative relation with the controller, and a connection between the member and controller to move the latter into engaging position relatively to the element when the member moves to indicating position, the element to thereafter move the controller into operative position relative to the transfer mechanism to initiate transfer, the connection yielding as the controller has the latter movement while the member remains in indicating position.

1,807,765. CLEANING, SANDING AND POLISHING MACHINE. MICHAEL VARGO, Detroit, Mich., assignor of one-seventh to Fred Chestenick, one-seventh to Ernest W. Hodge, one-seventh to Wilfred A. Poirier, one-seventh to Charles H. Dildine, one-seventh to Herman L. Shrock, and one-seventh to Alex Galant, Detroit, Mich. Filed Sept. 27, 1929. Serial No. 395,684. 1 Claim. (Cl. 15—21.)

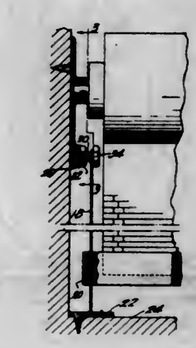
An apparatus of the class described comprising a frame open at its ends, brush carrying frames hingedly connected with the sides and top of the frame, each brush frame comprising a pair of arms pivotally connected with the main frame, with the pivots of the two arms in alignment, a gear on the pivot of one arm, a motor, a gear on the shaft thereon engaging the before mentioned gear, a shaft journaled in said arm and having a gear thereon meshing with the first mentioned gear, a brush shaft removably arranged in the outer ends of the arms, gearing connecting the shaft in the arm with said brush shaft, a brush having a centrally arranged bore receiving the said brush shaft, spring means connected with the brush frames at the sides of the main frame for pressing the brushes thereof against a body and means associated with the brush frames at the top of the body for adjusting the brushes thereof against the top portions of the body.



1,807,766. PROCESS FOR THE PRODUCTION OF ALKALI PHOSPHATES FROM COMPOUNDS OF METAL AND PHOSPHORUS. CONWAY, BARON VON GIERSEWALD, HANS WEIDMANN, and GERHARD ROESNER, Frankfort-on-the-Main, Germany, assignors to American Lurgi Corporation, New York, N. Y., a Corporation of New York. Filed May 5, 1930, Serial No. 450,057, and in Germany May 31, 1929. 9 Claims. (Cl. 23—106.)

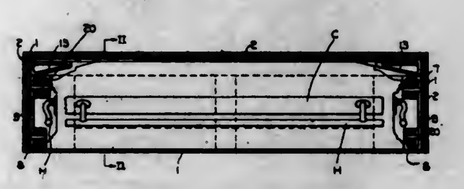
1. A process for the production of alkali phosphates, which comprises gradually introducing a metal-phosphorus alloy in divided form into molten alkali sulphate, and extracting the resulting alkali phosphate from the transposition product in known manner.

1,807,767. PROCESS FOR THE CONVERSION OF FERRO-PHOSPHORUS INTO FERRIC PHOSPHATE ($FePO_4$) BY ROASTING IN AIR OR OTHER GASES CONTAINING OXYGEN. CONWAY, BARON VON GIERSWALD, and HANS WEIDMANN, Frankfort-on-the-Main, Germany, assignors to American Lurgi Corporation, New York, N. Y., a Corporation of New York. Filed May 5, 1930, Serial No. 450,058, and in Germany May 29, 1929. 7 Claims. (Cl. 23—105.)



1. A process for the production of ferric phosphate which comprises treating ferro-phosphorus at elevated temperature with oxygen-containing gases in the presence of a substance of the group consisting of alkali and alkaline earth metal compounds.

1,807,768. WEFT END CONTROL FOR MAGAZINE LOOMS. WILLIAM M. WATTIS, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 14, 1929. Serial No. 347,087. 2 Claims. (Cl. 139—247.)

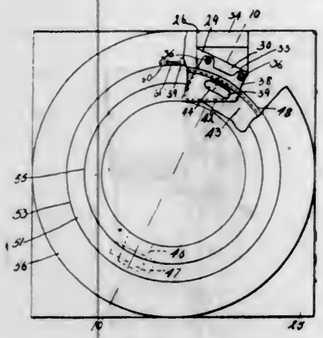


1. In a weft replenishing mechanism for looms having a reserve supply of bobbins from which extend weft ends, an upper roll, a lower roll, an element mounted on the rolls and movable thereby and having a friction surface over which weft ends extend to be supported thereby, and a clearer located between the rolls to clear said element of any weft ends remaining on the friction surface as the element rotates.

1,807,769. GUIDE WIRE TAKE-UP DEVICE. BERTRAM T. WILEMAN, Detroit, Mich., assignor to Carl A. Boehm, Dover, N. J. Filed Jan. 10, 1931. Serial No. 507,787. 1 Claim. (Cl. 156—26.)

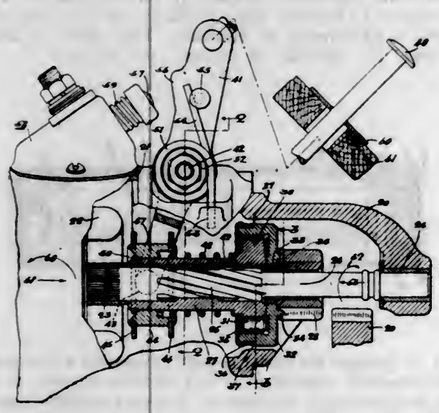
In a roller shade bracket, an adjustable screw mounted in said bracket and having an aperture in which the free end of a shade guide wire is inserted, said wire being adapted to be pulled tight by turning said adjusting screw and secured in said tightened position by means of a lock nut on said screw.

1,807,770. CORRUGATED PAPER PACKAGE FOR BURIAL CASKETS. GEORGE B. BEAMAN, Crafton, Pa., assignor to Superior Paper Products Company, Carnegie, Pa., a Corporation of Delaware. Filed Sept. 19, 1929. Serial No. 393,673. 3 Claims. (Cl. 27—1.)



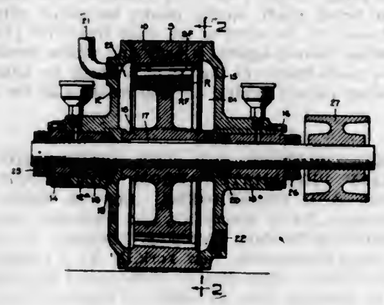
1. A package for burial caskets comprising a box made of cardboard, consisting of two sections adapted to fit one over the other in telescopic fashion to provide double side walls for the box, said box including packing means for protecting the casket from being scratched or otherwise damaged by wall contact, said means consisting of detachable packing members formed of folded corrugated cardboard and having upper and lower yieldable fender sections spaced from each other and adapted to be placed between the walls of the box and the casket to engage the upper and lower edges thereof and hold the casket in place in the box.

1,807,771. REMOVABLE DIAPHRAGM FOR GAS METERS. HARRY L. BERRY, Atlantic City, N. J. Filed May 22, 1928. Serial No. 279,768. 4 Claims. (Cl. 73—1.)



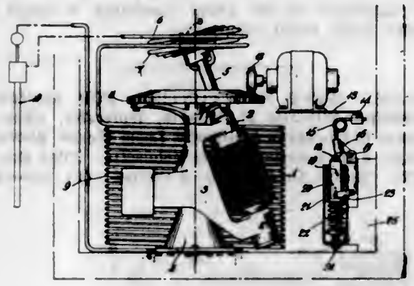
1. A device of the kind described comprising a plate, a pocket section having an aperture and mounted on said plate in substitution for a portion of the original pocket, a diaphragm structure having apertures therein and including a bracket having an aperture, and means to de-

tachably connect the bracket with the substituted pocket section and thereby complete a communication between



the interior of the diaphragm structure and the pocket through the apertures in the diaphragm, bracket and substituted pocket section.

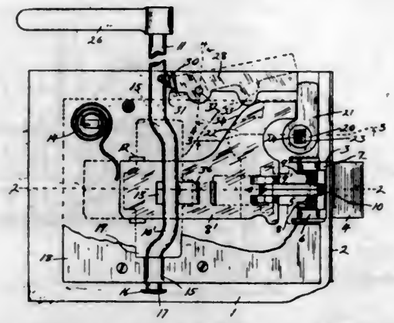
1,807,772. ENGINE STARTING APPARATUS. WILLIAM A. CHRYST, Dayton, Ohio, assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 13, 1927. Serial No. 213,396. 7 Claims. (Cl. 74—7.)



1. Engine starting apparatus comprising in combination, an electric motor, a pinion movable endwise into mesh with the gear of an engine to be started, devices for connecting the pinion and motor including an axially free one-way clutch and a shaft having a helically splined portion and means for slidably connecting the pinion with the splined portion, the direction of the lead of the spline being so related to the direction of rotation of the shaft that operation of the motor will thrust the pinion endwise toward the gear, a motor switch, a manually operable device for operating the motor switch and for moving the pinion into mesh with the gear and including a spring for transmitting motion to the pinion in order to permit closing the motor switch in case the teeth of the pinion abut the engine gear teeth before meshing whereby the turning of the shaft by the motor will produce endthrust upon the pinion to assist the spring in meshing the pinion rapidly with the gear.

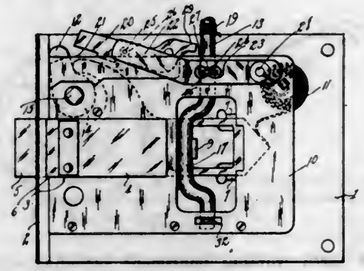
1,807,773. COLLOIDAL MILL. BAYLIS M. DAWSON, Newton, Mass., assignor, by mesne assignments, to Fritz Ziegler, jr., New York, N. Y. Filed Mar. 30, 1925. Serial No. 19,281. 5 Claims. (Cl. 83—13.)

1. A colloidal mill for disintegrating and emulsifying materials, comprising relatively movable members having cooperating drum faces between which the materials ot be disintegrated are adapted to flow, the faces of both members being provided with parallelly arranged alternating teeth and channels disposed in a direction generally transverse to the movement of one of said members, the face width of the teeth being less than the width of the channels.



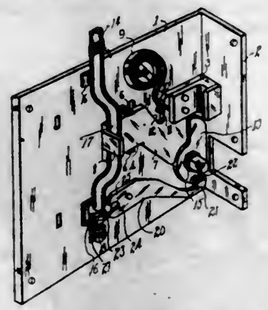
1,807,774. AUTOMATIC REFRIGERATION. JAY G. DE REMER, Greenwich, Conn., assignor, by mesne assignments, to J. G. Deremer Research Corporation, Jersey City, N. J., a Corporation of New Jersey. Filed June 8, 1926. Serial No. 114,440. 3 Claims. (Cl. 62—4.)

1. A refrigerating system comprising in combination an evaporator arranged in heat exchanging relation to the compartment to be cooled, a condenser, a compressor, a motor for driving the same and thermostatic means responsive to conditions outside said compartment for varying the capacity of the compressor.



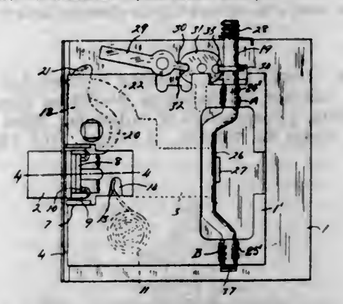
1,807,775. DOOR LOCK. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed Jan. 28, 1924. Serial No. 689,108. 3 Claims. (Cl. 292—224.)

1. In a lock, the combination with a case plate, a locking bolt carried thereby, and a bar slidably mounted upon the case plate and operatively connected to said bolt, said bar having an upstanding arm and a lateral projection, of means for retracting said bolt including a rollback engageable with said arm and an upright member engageable with said lateral projection, and means for rendering said rollback inoperative including a part located between said rollback and upright member and having a cam portion, and an element projecting laterally from the



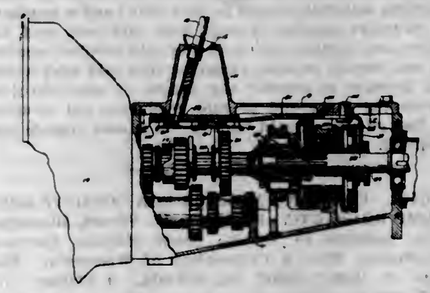
upright member engageable with said cam portion, said part having a projection adapted to be engaged by said arm for rendering said part inoperative.

1,807,776. DOOR LATCH. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed Aug. 11, 1925. Serial No. 49,507. 32 Claims. (Cl. 292—165.)



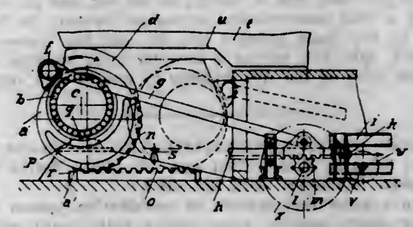
1. In a latch, the combination with a bolt retracting member, of a second bolt retracting member mounted for rectilinear and rotary movement, means for rendering the first member inoperative including a pivoted dog engageable with said first member, and a pivoted arm for actuating said dog controlled and rendered effective by the manipulation of the second mentioned retracting member.

1,807,777. DOOR LATCH. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed Aug. 11, 1925. Serial No. 49,508. 26 Claims. (Cl. 292—165.)



1. In a latch, the combination with a bolt retracting member, of an upright spindle journaled in aligned bearings for rotary movement, and means for dogging the first member rendered effective or ineffective by the manipulation of the spindle.

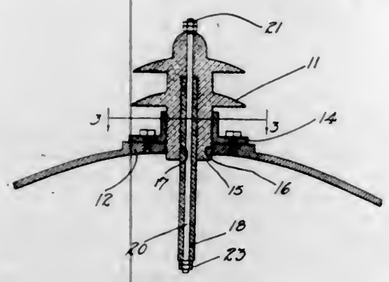
1,807,778. LOCK CONSTRUCTION. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed May 10, 1926. Serial No. 108,168. 9 Claims. (Cl. 292—224.)



1. In a lock, the combination with a bolt retracting member, of a second bolt retracting member mounted for rectilinear movement, and means for dogging the first member including an element engageable with the first member, and actuating means for said element including a rocker having a slotted connection with said element, and a part carried by the second mentioned retracting member engageable with said rocker.

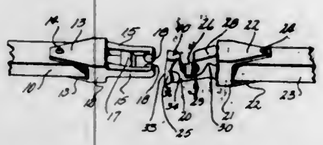
1,807,779. OVERGEAR SHIFT MECHANISM. HAROLD DREW, Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 25, 1927. Serial No. 215,413. 21 Claims. (Cl. 74—89.)

1. Change speed mechanism comprising two shift members positioned in one plane and a third shift member positioned in a parallel plane, means to engage and shift said shift members, said third shift member having an opening through which said means passes to engage one or the other of the two first-mentioned shift members.



1,807,780. LIFTING MACHINERY, ESPECIALLY FOR THE ENDS OF PIVOT BRIDGES. FRIEDRICH DUWE, Mainz-Kastel, Germany, assignor to Maschinenfabrik Augsburg-Nurnberg A. G., Nuremberg, Germany, a Corporation of Germany. Filed Aug. 2, 1929, Serial No. 382,946, and in Germany Aug. 13, 1928. 2 Claims. (Cl. 94—35.)

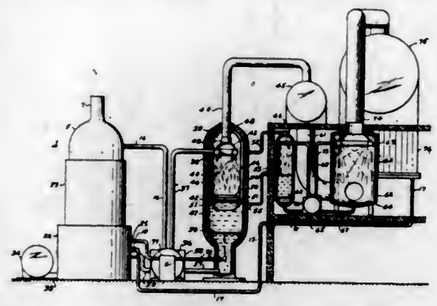
1. In lifting machinery, two parallel tracks, rolling disks movable therealong, means for positively moving



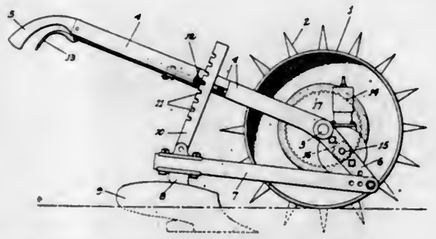
said disks in either direction, a rotatable shaft eccentrically mounted in said disks, and a lifting member carried by said shaft intermediate said disks so as to be moved therewith from a lower to a higher position, and vice versa.

1,807,781. INSULATOR. HAROLD C. EDDY, Los Angeles, Calif., assignor to Petroleum Rectifying Company of California, a Corporation of California. Filed Mar. 22, 1924. Serial No. 701,059. 4 Claims. (Cl. 173—311.)

1. A device for conducting an electric current through a conducting wall of a tank without electrical contact therewith comprising: an organic body of high dielectric and mechanical strength secured in an opening in said wall; a nonorganic member formed of relatively brittle insulating material secured in said body; and a conductor rod structure passing through both said body and said member and holding said body and said member together, said non-organic member extending into said tank a sufficient distance to prevent any danger of short-circuiting between the inner end of said conductor rod structure and that portion of said tank in which said organic body is secured.



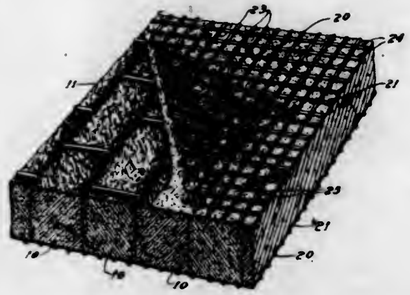
1,807,782. COUPLING MEMBER FOR CONDUIT RODS, PUMP RODS, ETC. FREDERICK W. FUCHS, Milwaukee, Wis., assignor to Turbine Sewer Machine Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 3, 1930. Serial No. 432,604. 9 Claims. (Cl. 287—103.)



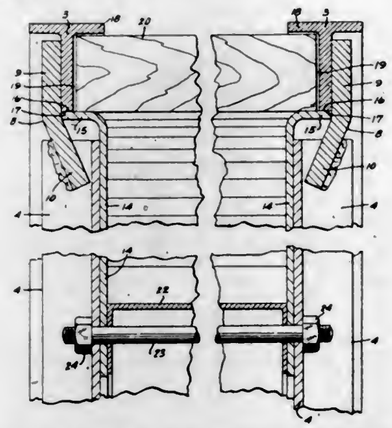
1. A coupling of the described class, comprising the combination with a forked member having inwardly facing end studs and an intermediate hinge pin, of a web member provided with a bearing socket for said pin and having a head piece adapted to engage between the fork arms in the space between the pin and the crown of the fork, said web having a shoulder piece socketed on opposite sides of the web member to receive said studs.

1,807,783. STEAM GENERATING SYSTEM. FRAZER W. GAY, Newark, N. J. Filed Apr. 12, 1929. Serial No. 354,557. 5 Claims. (Cl. 122—31.)

5. In a generating system, in combination, means for heating liquid metallic alloy, and a boiler, said boiler having a lower internal liquid space and an upper internal vapor space, means for spraying the hot metallic alloy supplied from said heating means into said boiler, for evaporating the liquid in said liquid space and for superheating the vapor in said vapor space, and means for protecting the walls of said boiler from the great heat of said hot metal and the superheated vapor.

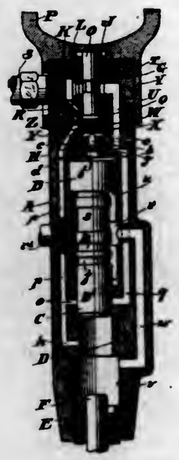


1,807,784. EARTH WORKING IMPLEMENT. RALPH N. GEFFROY, Stockton, Calif. Filed Nov. 18, 1929. Serial No. 407,954. 2 Claims. (Cl. 97—59.)



1. An earth working implement including a ground bearing wheel, a bar turnably mounted in connection therewith and projecting rearwardly therefrom, an arm depending from the bar at its forward end at an angle thereto and rigid therewith, a beam pivoted on said arm for both vertical and longitudinal adjustment and extending rearwardly therefrom, a tool depending from the rear end of the beam, an arm upstanding from the tool, and adjustable connection means between the last named arm and bar.

1,807,785. SHEET INSULATION. WILLIAM R. GILLIES, Chicago, Ill., assignor to Union Asbestos and Rubber Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 12, 1927, Serial No. 160,697. Renewed July 20, 1929. 6 Claims. (Cl. 139—408.)

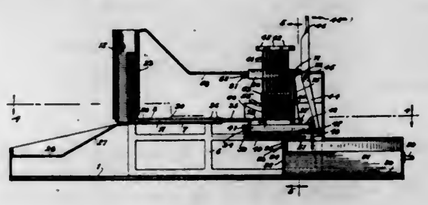


2. An insulating material comprising a plurality of longitudinally spiraled asbestos rovings disposed side by side and constituting the woof strands of a loosely woven fabric, a plurality of asbestos cords disposed transversely of said rovings and looped about the same as warp strands, said cords preserving the individuality of said rovings, but said rovings lying against each other to form a layer of substantially uniform heat insulating quality, and an outer layer comprising a sheet of loosely woven asbestos fabric having intersections of its woof and warp knotted.

1,807,786. CABLE REEL. ETHAN N. HESCOCK, Westfield, N. J., assignor to Henry B. Newhall Corporation, Garwood, N. J., a Corporation of New Jersey. Filed Dec. 18, 1929. Serial No. 414,913. 10 Claims. (Cl. 242—77.)

1 A. new article of manufacture comprising a cable reel having heads formed of structural shapes of metal bent to form substantially circular rims, a hub, spokes, and side plates out of line with the rim and provided with means to compensate for any irregularity in the curvature of the rim, said means being secured to the rim.

1,807,787. FLUID ACTUATED PERCUSSIVE TOOL. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 11, 1928. Serial No. 311,775. 5 Claims. (Cl. 121—27.)

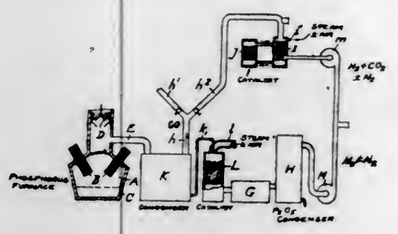


1. In a fluid actuated percussive tool, the combination of a cylinder having a reciprocating piston and an exhaust port located intermediate the ends of the cylinder, a valve chest and a fluid actuated inlet valve having a ring groove around its central portion, a port passing transversely through the valve and communicating at both ends with said ring groove, a longitudinal port communicating with the front end of said valve and with the said transverse port, a passage leading through the wall of the cylinder from an annular groove in said valve chest, said annular groove being adapted to cooperate with the ring groove and the longitudinal passage in said valve for relieving compression from the rearward end of the cylinder, a passage communicating with the valve chest and with the rearward end of said cylinder, a second passage communicating with the valve chest and with the cylinder at a point between the front end of the cylinder and the exhaust port, said first passage being controlled by said valve and admitting pressure fluid to the rear end of the cylinder, said second passage being controlled by the piston and admitting pressure fluid to the front end of the cylinder, a third passage in said cylinder leading from the front end of the cylinder to the rearward end of said valve chest, grooves in said piston providing communication between said second passage and said third passage for carrying pressure fluid to the rear end of said valve chest to throw said valve forwardly to close the passage leading from the valve chest to the rearward end of the cylinder.

1,807,788. ALLOY OF LEAD AND ANTIMONY. PAUL KEMP, Vienna, Austria. Filed Sept. 30, 1929, Serial No. 396,403, and in Austria July 27, 1929. 1 Claim. (Cl. 75—1.)

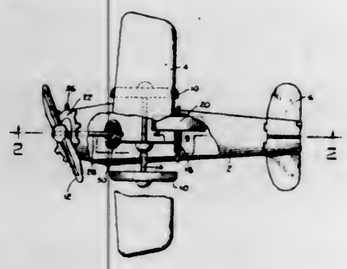
As a new article of manufacture, a lead-antimony alloy of greater than normal hardness, comprising a maximum of 10% antimony, from approximately 0.2% to approximately 2% arsenic and from approximately 0.1% to approximately 2% tin, the tin content being substantially one fifth to the antimony content.

1,807,789. CHANGE-MAKING DEVICE. RICHARD KUENSTLER, Washingtonville, N. Y. Filed Oct. 4, 1930. Serial No. 486,312. 11 Claims. (Cl. 133—4.)



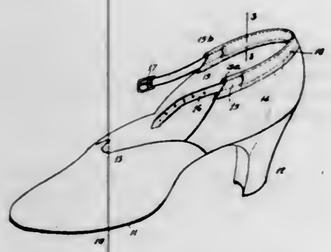
1. A device of the class described comprising coin-stack supports, means for ejecting coins from each of the stacks, said ejection means having normally elevated parts, a slide for moving the coin-ejectors, and means for selecting and depressing the elevated parts on certain of said coin-ejectors to locate said depressed parts in the path of movement of the slide.

1,807,790. METHOD OF PRODUCING HYDROGEN AND PHOSPHORIC ACID. FRANS GEORG LILJENROTH, Stocksund, Sweden, assignor, by mesne assignments, to du Pont Ammonia Corporation, Wilmington, Del., a Corporation of Delaware. Filed May 20, 1924, Serial No. 714,546, and in Sweden Aug. 28, 1922. 1 Claim. (Cl. 23—165.)



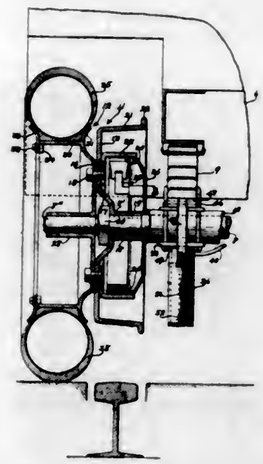
A process of treating phosphates which comprises heating a mixture including phosphate material, a solid reducing agent and a siliceous material, to a temperature incapable of liberating any substantial amount of its phosphorus, by combustion of gas in direct contact therewith, further

heating the charge to a temperature sufficient to drive off substantially all its phosphorus in the elemental condition,



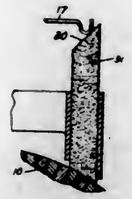
and separating the phosphorus from the fixed gas present, and utilizing a part of said fixed gas, at least, in said first mentioned step.

1,807,791. TOY. LOUIS MARX, New York, N. Y. Filed Feb. 27, 1929. Serial No. 343,030. 14 Claims. (Cl. 46—48.)



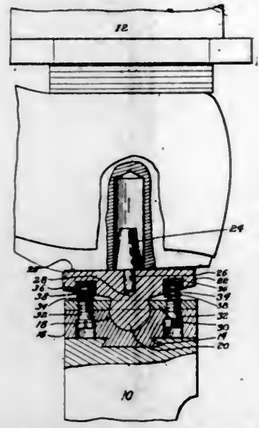
1. In a toy, a momentum motor, means driven thereby, contacting rotatable members for coupling the momentum motor and the driven means, said members being only lightly urged into contact, so that the driven means is automatically uncoupled during the energization of the momentum motor.

1,807,792. SHOE. CHARLES MILLER, Long Island City, and ARTHUR A. LIVERS, New York, N. Y. Filed Nov. 19, 1930. Serial No. 496,624. 2 Claims. (Cl. 36—58.5.)



1. A lady's low shoe having heel and sole portions, a vamp portion, a counter portion extending around the heel and forwardly thereof and having its upper portion free of the vamp, said counter portion having at its upper edge strap-receiving means, and an adjustable strap independent of the vamp portion and received in said strap-receiving means, whereby adjustment of said strap tensions the upper portion of said counter to cause this portion to conform to the heel of the wearer.

1,807,793. TRUCK WITH CONVERTIBLE WHEEL STRUCTURE AND COOPERATING JACK MEANS. RAY K. MOORE, Freeport, Ill., assignor of one-half to William J. Laffey, Chicago, Ill. Filed Oct. 13, 1930. Serial No. 488,358. 4 Claims. (Cl. 105—215.)

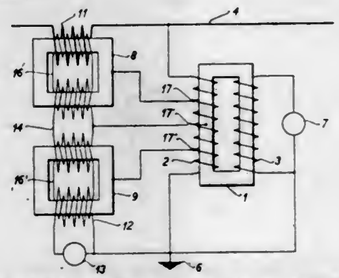


1. A vehicle comprising an axle with an extended end part for receiving my wheel structure, a convertible wheel structure comprising a wheel member having a hub mountable on said axle and providing a substantially complete wheel for travel on the railway, and another wheel member having a hub supportable on the extended shaft part and having resilient tire means for traveling on the highway, said wheel members being readily securable together and the outer wheel member being again readily detachable from the inner one.

1,807,794. BRUSH AND CURRENT COLLECTOR. HORACE D. MUNDAY, Schenectady, N. Y. Filed May 18, 1928. Serial No. 278,749. 6 Claims. (Cl. 171—323.)

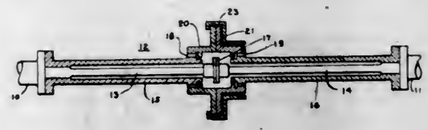
1. In a current collecting device designed automatically to eliminate flat spots from a commutator, the combination with said commutator of a brush containing, in excess of 10 per cent, an ingredient having substantially the abrasiveness of emery and a brush holder supporting said brush and pressing the same into contact with the commutator, the brush, brush holder and commutator being so constructed and arranged as to cause said brush to press against low spots of said commutator with substantially less pressure than against high parts of the commutator, whereby during rotation of said commutator the high parts thereof are abraded to the level of the low parts.

1,807,795. JACK-TOP. ELMER R. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 27, 1924. Serial No. 734,477. 8 Claims. (Cl. 1—41.)



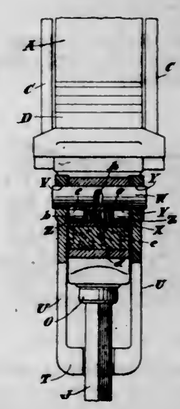
1. In a heeling machine, the combination with a jack-post, of a last-supporting bed-plate mounted thereon for universal angular movement, and means arranged to hold the bed-plate yieldably in a definite normal angle.

1,807,796. MEANS APPLICABLE FOR USE IN CONVEYING HOT VISCOUS MATERIALS, SUCH AS BITUMEN, TAR, SUGAR, AND THE LIKE. LESLIE KIRKPATRICK REID, Ashton-on-Mersey, England, assignor to D. Anderson & Sons Limited, London, England. Filed July 12, 1929, Serial No. 377,773, and in Great Britain Sept. 13, 1928. 3 Claims. (Cl. 137—75.)



1. A conduit for hot viscous materials comprising in combination a lower half pipe section formed as a single length and an upper half pipe section composed of a plurality of lengths the adjacent ends of which are joined in lapped relation by metal straps applied over the said lapped joints and secured by hinged bolts on the said lower section.

1,807,797. CURRENT TRANSFORMER. SIGURD RUMP, Zurich, Switzerland. Filed June 25, 1930, Serial No. 463,587, and in Germany June 10, 1929. 6 Claims. (Cl. 175—358.)

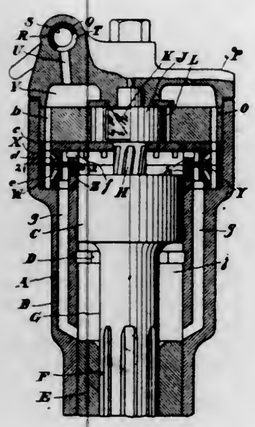


1. In a transformer arrangement, a current transformer having a plurality of cores, a primary winding, a secondary winding and an intermediate winding connecting the cores; and a voltage transformer, the cores and the intermediate winding of said current transformer being connected with said voltage transformer at different points thereof, both of said transformers being grounded.

1,807,798. COUPLING. IRA SHORT, Essington, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 23, 1925. Serial No. 17,712. 7 Claims. (Cl. 64—96.)

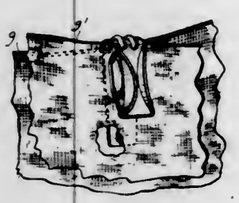
1. In a coupling for transmitting torque, the combination of a torsionally flexible member for connecting adjacent shaft sections, a rigid member secured to each section, a flange flexibly connected to each rigid member, clamping means for holding the flanges in sufficient frictional engagement to prevent relative rotational movement during the transmission of a uniform torque but ineffective to prevent such movement upon a pulsation in the torque, means operated by a relative movement of the flanges for permitting fluid under pressure to supplement the holding action of the clamping means, and means for subsequently dissipating the fluid pressure in such manner as to damp the reflexive movement of the flexible member and the return of the rigid members to their normal relative positions.

1,807,899. STEEL RETAINER. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 16, 1929. Serial No. 399,946. 3 Claims. (Cl. 121—32.)



1. In a steel retainer, comprising in combination with a front head and a collared drill steel, an enlargement on the front head having an aperture, a yoke for retaining the drill steel in the front head, side arms on the yoke, a shaft in the aperture forming a pivot for the yoke, a plurality of holding means reciprocable in the aperture, common actuating means acting against the holding means to press said holding means into engagement with the side arms for holding the yoke in the retaining position, and a rubber buffer in the aperture to cushion the yoke.

1,807,800. VALVE FOR ROCK DRILLS. WILLIAM A. SMITH, Sr., and WILLIAM A. SMITH, Jr., Phillipsburg, N. J., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 7, 1928. Serial No. 304,560. 2 Claims. (Cl. 121—19.)



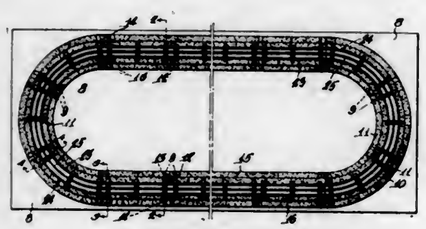
1. In a fluid actuated rock drill, the combination of a cylinder and a piston, an exhaust port for the cylinder

controlled by the piston, a valve chest in the cylinder comprising a pair of ring plates arranged in contacting face to face relationship and having bores to form a continuation of the cylinder, an annular valve chamber in the valve chest, inlet passages leading from the ends of

the valve chamber to the ends of the cylinder, a supply passage leading from a source to constantly supply pressure fluid to both ends of the valve chamber, and an annular plate valve reciprocable in the valve chamber to control communication between the supply and inlet passages.

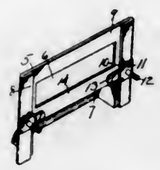
1,807,801. PINNING CLAMP. ALBERT STENGER, Portland, Oreg. Filed Sept. 16, 1929. Serial No. 392,843. 7 Claims. (Cl. 24—259.)

1. A pinning clamp comprising an elongate, U-shaped body, one leg of said body projecting beyond the other, the other leg having an inturned extension adapted to bear with clamping force on the inner surface of the other leg, thereby to hold the material clamped between the said legs firmly but without tearing or cutting, the extremity of said inturned extension being turned upwardly toward the inner surface of the shorter leg, whereby to prevent the material clamped therebetween from becoming lapped around the said extremity.



1,807,802. REEL CRUTCH. DONALD R. STEVENS, Ridgewood, N. J., assignor to The Watson Machine Company, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 17, 1927. Serial No. 240,681. 2 Claims. (Cl. 254—94.)

1. A reel crutch including in combination an upright member having at its upper end an arm projecting laterally therefrom, said arm being adapted for entering one end of the hollow hub of a reel, said upright member comprising an upper and lower section telescopically slidable relatively to each other, means for securing said sections in adjusted position, a handle projecting from the upper portion of the device in a direction opposite to

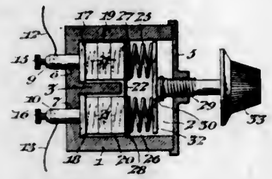


the direction of the projecting arm and a second handle projecting from said device at an angle to said first mentioned handle.

1,807,803. TOY RAILROAD TRACK EMBANKMENT. CHARLES F. STONE, Upper Darby, Pa. Filed Jan. 18, 1930. Serial No. 421,703. 6 Claims. (Cl. 238—10.)

6. In a toy railroad, a simulated ballast material comprising crushed stone and glue.

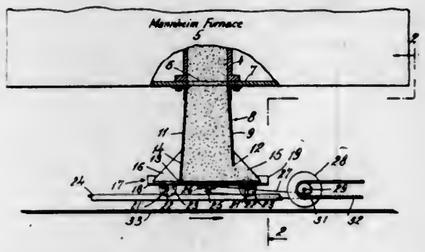
1,807,804. CARD HOLDER. ELMER B. STONE, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 6, 1929. Serial No. 383,937. 3 Claims. (Cl. 40—8.)



1. A card holder comprising a plate having a display opening and composed of sheet metal having overturned ends resting against said plate and creating a space for a card, said overturned ends being formed to provide recesses between said ends and said plate, and fastening bolts each having a head located in one of said recesses and projecting through said overturned ends to receive a fastening member at the outer end thereof.

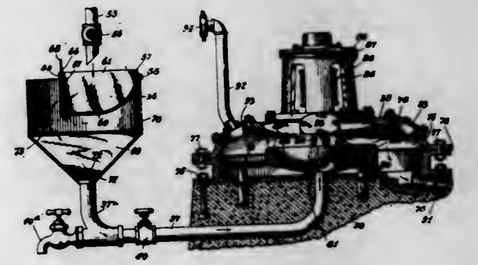
1,807,805. PREPARATION OF COLORED REPRODUCTIONS BY IMBIBITION. BERTHA SUGDEN (now by marriage Bertha Sugden Tuttle), Boston, Mass., assignor to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed Apr. 30, 1926. Serial No. 105,861. 21 Claims. (Cl. 101—149.)

11. A film or surface coating comprising hardened gelatine containing a hardening agent and an organic acid therein and bearing a surface imprinted image of an acid dye absorbed uniformly into the acid hardened gelatine surface to a depth substantially proportionate to the amount and light density of the respective color portions of the image, said dye comprising a component of high pentrability and a component of low penetrability.



21. The method of imbibition printing gelatinous films which comprises wetting a suitable printing matrix bearing the image to be reproduced in the several degrees of development corresponding to the several contrasts presented therein with a solution containing a gelatine-penetrative dye and a small proportion of a dye having a color substantially without effect upon the first, which restrains diffusion thereof, and contacting the thus wet matrix surface with the film surface.

1,807,806. VARIABLE RESISTANCE UNIT. TORRENCE A. SWARTZ and WILMER P. UHLER, Tottenville, N. Y., assignors to The S. S. White Dental Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 27, 1925. Serial No. 5,015. 5 Claims. (Cl. 201—51.)



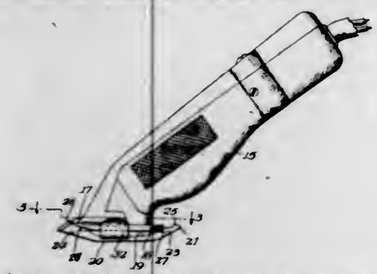
2. A variable resistance unit free from all sliding contacts in the electrical circuit, comprising a casing, two parallel resistance elements adapted to vary in resistance according to the pressure thereon, a bridge bar in electrical contact with adjacent ends of the elements so that said elements and bar are connected electrically in series, an equalizing bar, springs interposed between the ends of said bars, and means to move said equalizing bar to vary the compression of said springs.

1,807,807. APPARATUS FOR DISCHARGING SALT CAKE FROM MANNHEIM FURNACES. MICHAEL D. SWORDS, Chicago, Ill., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1928. Serial No. 250,058. 3 Claims. (Cl. 214—18.)

1. The combination comprising a Mannheim furnace, a stationary hopper for receiving salt cake from the furnace, said hopper being positioned substantially vertically and forming a straight unobstructed passageway, a movable discharger positioned beneath said hopper and engaging the lower surface of a column of salt cake in the hopper to seal the hopper against access of air to the furnace, the lower rim of said hopper being spaced a short distance from the discharger on three sides thereof to allow clearance between the hopper and discharger, one side of the hopper in the direction of movement of the discharger being spaced from the surface thereof a sufficient distance to allow salt cake to be removed from the hopper, and means for moving the discharger in contact with the lower portion of the mass of salt cake to remove salt cake from the hopper by frictional contact therewith at a rate not exceeding the rate at which salt cake from the furnace is received by the hopper.

1,807,808. EMULSION AND PROCESS THEREFOR. HARRY L. SYMONS, Wimbledon, London, England, assignor to Roads Colloidal, Limited, London, England. Filed June 25, 1923. Serial No. 647,421. 16 Claims. (Cl. 134—1.)

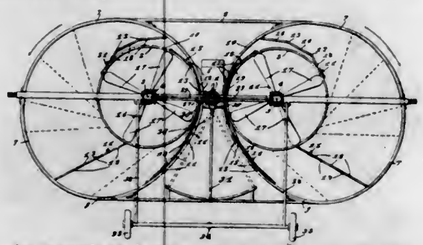
1. The hereindescribed process of disintegrating matter dispersed in a liquid which consists in subjecting said liquid together with said matter to the mechanical action of a mill to cause the disintegration of said matter while continuously maintaining a head of liquid above said mill to form a liquid seal therefor, and continuously supplying said liquid and said matter to said head to maintain the same at the desired level and to insure a steady flow through said mill, substantially as specified.



1,807,809. COMPOSITION FOR IMBIBITION PRINTING. BERTHA SUGDEN TUTTLE, Boston, Mass., assignor to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Original application filed Apr. 30, 1926, Serial No. 105,861. Divided and this application filed May 27, 1927. Serial No. 194,853. 8 Claims. (Cl. 8—6.)

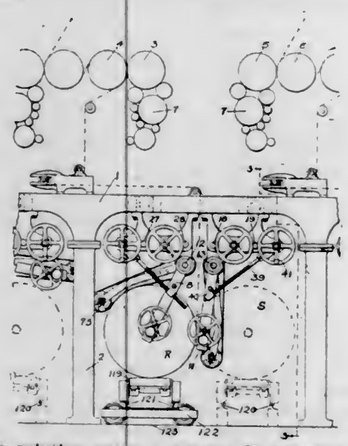
4. A liquid composition for imbibition printing of films, comprising a gelatine penetrative dye and a dye characterized by high viscosity.

1,807,810. PROCESS FOR MAKING A FOAMY BODY. JOHN A. RICE, Berkeley, Calif., assignor to The Bubblestone Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 26, 1924. Serial No. 728,279. 6 Claims. (Cl. 252—6.)



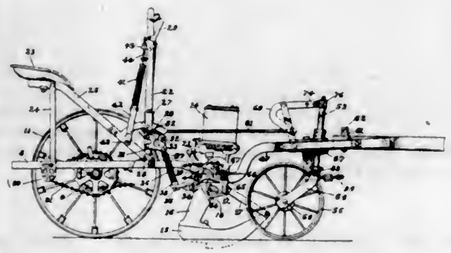
1. The process of producing a foam for cellular concrete which comprises mixing a foaming agent with a stabilizing colloidal solution of a cellulose derivative, and converting the resulting mixture into foam.

1,807,811. HAIR CUTTER ATTACHMENT. WILLIAM J. VAN OSDEL, Chicago, Ill. Filed Jan. 30, 1929. Serial No. 336,116. 9 Claims. (Cl. 30—1.)



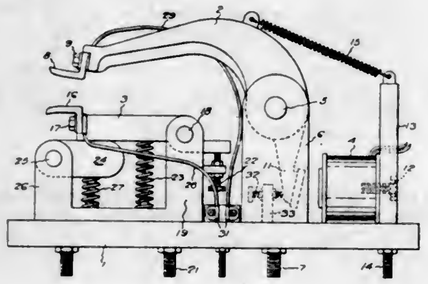
1. As an article of manufacture, a freely attachable and detachable reversible gage or guard plate for hair clippers and comprising a plate proper having toothed portions along its front and rear edges, and means for detachably securing the same to the bottom cutter plate of the clipper in either of its positions with respect thereto.

1,807,812. AEROPLANE. PETER J. WAGNER, Haffey, Pa. Filed Sept. 19, 1930. Serial No. 483,043. 15 Claims. (Cl. 244—13.)



1. An aeroplane having wings made up of relatively rigid sections having fold-permitting connections between them, means for causing the outer edge of the wings to follow a substantially circular path, and means for causing the inner edge of the wings to follow a circular path eccentric to the first mentioned path.

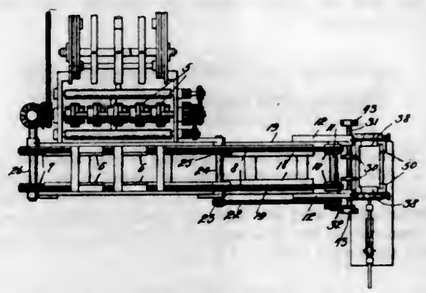
1,807,813. ROLL CHANGER. BRUCE CLARK WHITE, deceased, New York, N. Y., by Marie Louise White, executrix, New York, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed May 6, 1927. Serial No. 189,212. 15 Claims. (Cl. 242—58.)



1. In a printing press, a paper roll, a pair of hanging arms pivoted at their upper ends to a supporting frame, means for transporting said roll into position to be loaded in the arms, means for attaching said roll to said arms while said roll is on said transporting means, and means for moving said arms to lift said roll clear of the transporting means.

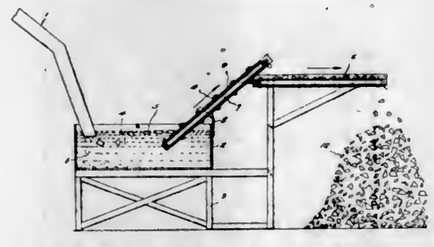
1,807,814. PLANTER. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 29, 1927. Serial No. 216,083. 17 Claims. (Cl. 111—56.)

1. In an agricultural implement, the combination of two frames, each wheel supported, means connecting said frames for relative pivotal movement, a furrow opener supported by one of said frames, and means for raising and lowering said latter frame and said furrow opener through an approximately rectilinear path in adjusting the working depth of the furrow opener.



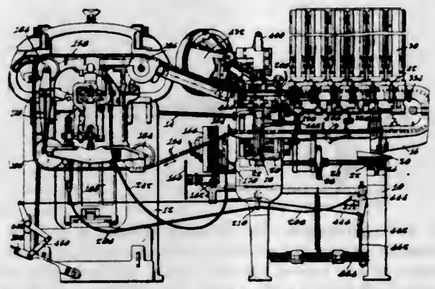
1,807,815. CONTROL APPARATUS. HAROLD E. WHITE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 6, 1927. Serial No. 181,315. 6 Claims. (Cl. 200—87.)

1. In a switch, in combination, a movable contact member, a movable shock-absorbing mass mounted independently of the contact member, and means for maintaining the shock-absorbing mass in position to absorb momentum imparted to the contact member.



1,807,816. DEVICE FOR STACKING SHEET METAL AND THE LIKE. JOHN H. YOUNG and WILBUR G. FRINK, Middletown, N. Y., assignors to The Borden Company, New York, N. Y., a Corporation of New Jersey. Original application filed Aug. 4, 1926, Serial No. 126,990. Divided and this application filed Aug. 19, 1927. Serial No. 214,131. 4 Claims. (Cl. 271—86.)

1. A sheet stacking device comprising, a hopper consisting of vertically arranged walls providing a receptacle having an open upper end adapted to receive sheets delivered one at a time into the hopper, holding means pivotally mounted in the upper end of the hopper for catching each sheet as it descends in the hopper, and cam

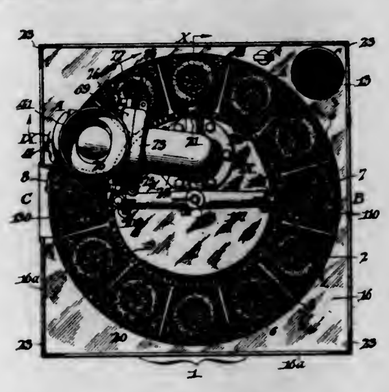


actuated means for turning the holding means to release the sheet held thereby and for returning the holding means into initial position.

1,807,817. PROCESS FOR TREATING COAL. CHARLES P. ANDERSON, Scarbro, W. Va. Filed Jan. 29, 1930. Serial No. 424,314. 4 Claims. (Cl. 209—173.)

1. A method of treating coal comprising immersing screened run of mine coal in an aqueous solution containing a salt of an alkali metal of a specific gravity to cause the pure coal to float, and permit the heavier impurities to sink, permitting the floating coal to remain in the solution until it has mechanically entrained the maximum amount of the solution and thereafter continuously conveying the coal from the receptacle and causing the coal to permanently retain all of the adsorbed salt.

1,807,818. HEEL MAKING MACHINE. FRED ASHWORTH, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 20, 1922. Serial No. 537,946. 45 Claims. (Cl. 12—50.)

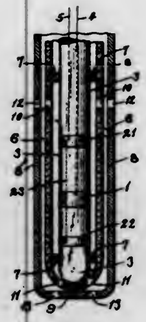


1. A heel building machine comprising an endless chain lift collector, means for delivering lifts to the collector, and mechanism controlled by movement of the endless chain for actuating said means to deliver lifts to the collector.

1,807,819. DEVICE FOR LOADING EXPLOSIVES IN WELLS. MAX A. ALTGELT, New Braunfels, Tex. Filed Apr. 25, 1930. Serial No. 447,247. 4 Claims. (Cl. 102—4.)

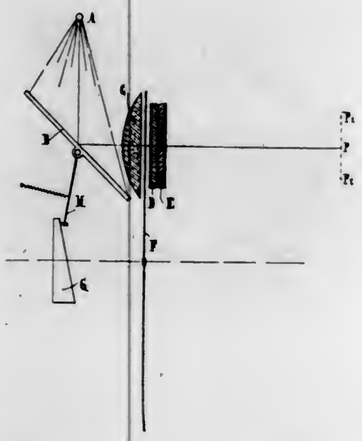
1. In a device of the character described, the combination of an elongated tubular container open at one end, separate supporting elements at the open end of the container, and means detachably connecting said elements to normally hold them in position to span said open end and support a body in said container.

1,807,820. COOKING APPARATUS. JOHN C. BERGNER, Lansdowne, Pa., assignor to Doughnut Machine Corporation, New York, N. Y., a Corporation of New York. Continuation of application Serial No. 152,607, filed Dec. 4, 1926. This application filed July 10, 1929. Serial No. 377,536. 24 Claims. (Cl. 53—7.)



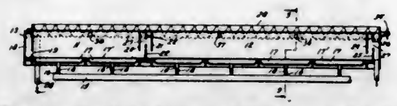
1. In apparatus for cooking articles such as doughnuts with hot liquor, the combination of a circular receptacle to hold the liquor, means for progressing the articles afloat and definitely separated one from another in the liquor over a single circular path, means for introducing the articles at the beginning of the path, means for turning over the articles at an intermediate point in the path, and means for subsequently ejecting the articles from the apparatus.

1,807,821. CONDUCTIVITY CELL. LEO BEHR, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 9, 1929. Serial No. 331,333. 7 Claims. (Cl. 175—183.)



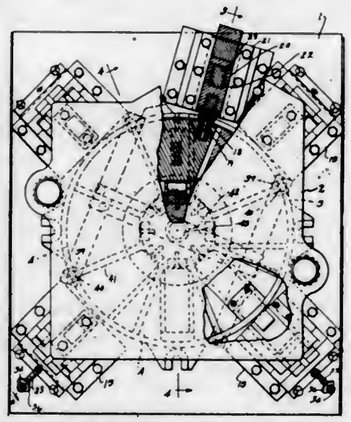
1. A conductivity cell having a single direct inter-electrode path comprising an electrode, a second composite

electrode comprising electrode elements spaced from each other and from said first named electrode, a low resistance connection between said electrode elements, a structure within which said electrodes are disposed having



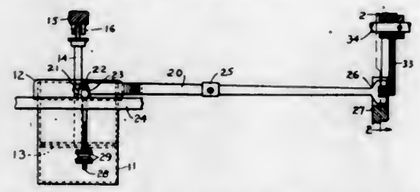
an aperture between which and said first named electrode one of said electrode elements is disposed, and an apertured housing of material capable of producing polarization effects.

1,807,822. REMOVAL OF WATERINGS FROM GOFFERED FILMS. RODOLPHE BERTHON, Neuilly, France, assignor, by mesne assignments, to Kislyn Corporation, New York, N. Y., a Corporation of Delaware. Filed June 4, 1928, Serial No. 282,754, and in France Apr. 23, 1928. 2 Claims. (Cl. 95—75.)



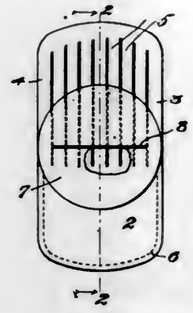
1. A method of copying by contact films having a goffering composed of parallel lines constituting microscopic refracting elements, which consists in arranging the goffered original film and a similarly-goffered blank film in contact; exposing the blank film, through the original film, to the action of a beam of light from a light source; and shifting the image of said source, during the exposure, along a certain definite diameter that is perpendicular to the lenticular elements in a manner to cause said image to occupy all the points of that diameter of the printing aperture of the picture-taking objective.

1,807,823. FLOTATION. LIONEL EARL BOOTH, Salt Lake City, Utah, assignor to The General Engineering Company, Salt Lake City, Utah, a Corporation of Utah. Filed Nov. 24, 1926. Serial No. 150,453. 10 Claims. (Cl. 209—170.)



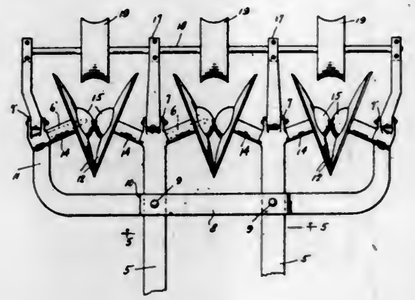
1. Flotation apparatus comprising a pulp chamber having a side wall provided with a plurality of openings therein adjacent the top thereof, a concentrate launder communicating with the interior of said chamber through the openings in the side wall, and concentrate conveying means associated with said launder.

1,807,824. MACHINE FOR SIZING AND PUNCHING VEHICLE WHEEL RIMS. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed Sept. 16, 1925. Serial No. 56,747. 7 Claims. (Cl. 153—2.)



1. In a machine for sizing and punching vehicle wheel rims, the combination with radially movable blocks engageable with a rim to size the same, of punches movable toward the rim in planes diagonal to the path of movement of said blocks for forming apertures in the rim and means for successively operating said blocks and punches.

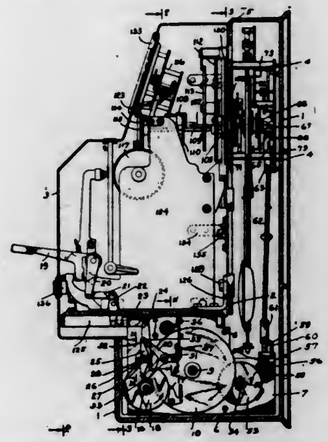
1,807,825. CONTROLLING DEVICE. FREDERICK G. L. BOYER, Dayton, Ohio. Filed May 26, 1926. Serial No. 111,868. 18 Claims. (Cl. 265—1.)



1. In combination: an element having a to and fro movement; a second element; and means for preventing operation of the second element while the first element is moving, comprising a fluid dash pot the piston of which is connected to said first element, a yielding support for said dash pot, a mechanical connection between said dash pot and said second element, so arranged that movement of the first element causes said mechanical connection to prevent operation of the second element.

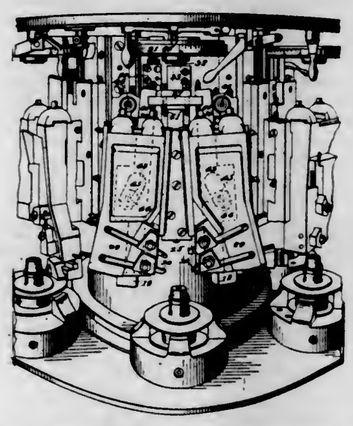
1,807,826. TRICK POCKETBOOK. FRANK BRADY, Denver, Colo. Filed Oct. 23, 1928. Serial No. 314,368. 3 Claims. (Cl. 150—36.)

1. In a device of the class described, the combination of a back, a front against said back, said front provided with edge ribs and intermediate ribs, a shield against said front and covering some parts of all of the ribs, and stitching part way across the shield, between and across said intermediate ribs and not including the edge ribs for permitting lateral movement of said edge ribs.



1,807,827. DEEP FURROW GRAIN DRILL. FRANK S. BROWN, Herndon, Kans. Filed Oct. 17, 1930. Serial No. 489,448. 2 Claims. (Cl. 97—225.)

1. In an apparatus of the class described, a pair of beams each having a pair of rearwardly diverging trunnions, a cross frame member attached to the beams and having rearward extensions at the ends thereof provided with rearwardly converging trunnions, disks of concavo-convex formation having sleeves projecting from the concave sides thereof and journalled on the trunnions and having bulged hub portions on the convex sides thereof, said hub portions abutting each other to hold the disks assembled on the trunnions.

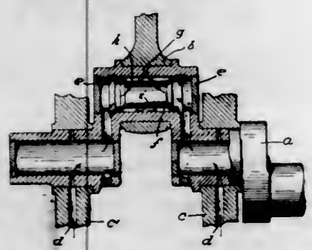


1,807,828. TIME RECORDER. JAMES W. BRYCE, Bloomfield, N. J., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed Mar. 2, 1925. Serial No. 12,488. 22 Claims. (Cl. 234—43.)

1. In a time recording apparatus having in combination, time type wheels adapted for step by step advance, which advance may be suppressed during the taking of a record from the type wheels, and means for driving the type wheels, connecting devices intermediate the said wheels and the driving means, said connecting devices having provisions for transforming continuous motion from the driving means into an intermittent motion which is applicable to drive the type wheels in variable magnitudes dependent upon the lag of the type wheels with respect to the driving means following an interruption of motion of the type wheels so that the type wheels of the

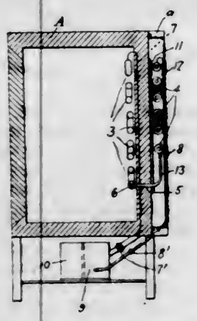
recorder reassume and preserve their proper relationship to the driving means irrespective of a suppression of an advance of the type wheels.

1,807,829. DOUBLE ANGULAR TOOL SLIDE. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor to The Bullard Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 12, 1928. Serial No. 325,425. 11 Claims. (Cl. 29—38.)



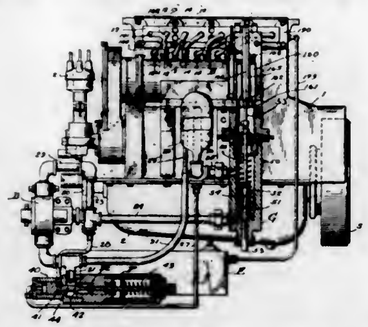
1. In an automatic machine tool, reciprocating feed means, a movable saddle, a relatively movable slide carried by said saddle, a tool head carried by said slide adapted to have movement relatively thereto, cam means carried by said slide and driven by said feed means adapted to impart movement to said tool head relatively to said slide, means whereby said slide is adapted to have movement imparted thereto by said feed means, and means for locking and releasing said saddle with respect to said feed means whereby they are adapted to move as a unit and whereby said feed means has independent movement relative to said saddle.

10. In an automatic machine tool, reciprocating feed means, a movable saddle, a reciprocating slide carried by said saddle, a pair of releasable means for fixedly securing said slide with respect to said saddle, one of said means preventing movement of the slide in one direction, and per-



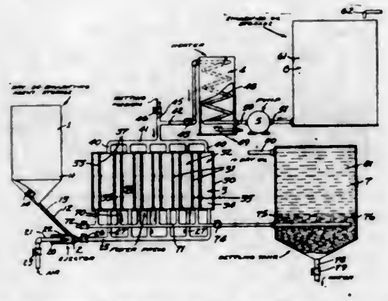
mitting movement in the other direction, the other of said means permitting movement in said one direction and preventing movement in said other direction, a tool head carried by said slide adapted to have movement relatively thereto, a cam slide carried by said slide adapted upon movement relative to said slide to impart transverse movement to said tool head, means for locking and releasing said saddle with respect to said feed means whereby they are adapted to move as a unit and whereby said feed means has independent movement relative to said saddle, means operatively connecting said feed means to said cam slide whereby said independent movement of said feed means imparts relative movement to said tool head, and means operative between the feed means and said releasable means and slide whereby said independent movement of the feed means imparts relative movement to said slide at the completion of the relative movement of said tool head in either direction.

1,807,830. LUBRICANT PURIFIER FOR CONNECTING ROD BEARINGS. GIUSTINO CATTANEO, Milan, Italy. Filed Mar. 22, 1928, Serial No. 263,835, and in Italy May 17, 1927. 1 Claim. (Cl. 184—6.)



A device for centrifugal epuration of lubricant in internal combustion engines, comprising a hollow crankshaft having a hollow crank pin provided with a hole remote from the axis of said hollow crank shaft, a cylindrical sleeve in internal annular spaced relation within said crank pin having enlarged ends communicating directly with the interior of crank shaft and abutting said crank pin, said sleeve being provided with a second hole diametrically opposite said first mentioned hole in said crank pin.

1,807,831. SELF-CONTAINED MECHANICAL REFRIGERATOR. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 3, 1926. Serial No. 126,781. 3 Claims. (Cl. 62—116.)

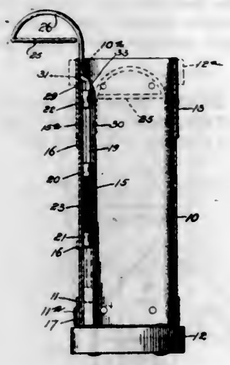


1. A refrigerator cabinet having an insulated wall, an evaporator element upon one side of said wall, a condenser element upon the other side of said wall, and means interposed between said condenser element and said wall for reflecting the heat of said last named element.

1,807,832. INTERNAL COMBUSTION ENGINE. JOSEPH REX DAVIS, Clarksburg, W. Va. Filed Feb. 28, 1927. Serial No. 171,689. 54 Claims. (Cl. 123—90.)

13. An internal combustion engine including a cylinder and admission and exhaust valves, fluid-operated means for operating said valves, means responsive to the speed of the engine for distributing fluid to said fluid-operated means, and means also responsive to the speed of the engine for regulating the pressure of said fluid.

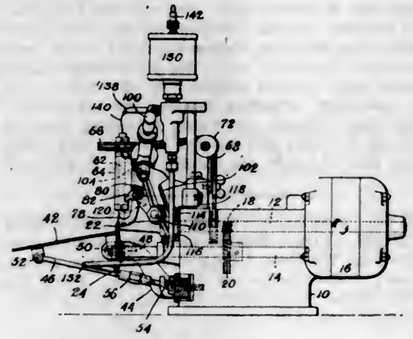
1,807,833. FILTRATION PROCESS FOR BREAKING EMULSIONS. HAROLD C. EDDY, Los Angeles, Calif., assignor to Petroleum Rectifying Company of California, Los Angeles, Calif., a Corporation of California. Filed Dec. 28, 1926. Serial No. 157,528. 6 Claims. (Cl. 196—4.)



2. A process of separating the phases of an emulsion, which includes the steps of: mixing a powdered de-emulsifying agent and a gas to form a mixture; forcing said mixture into the vicinity of a filter plate having openings too small in size to allow passage of said powdered de-emulsifying agent which agent is deposited on said filter plate while said gas passes therethrough; wetting the coating of de-emulsifying agent thus deposited and before the flow of gas through said filter plate is arrested, said filter plate and said coating thus forming a porous diaphragm; passing said emulsion through said porous diaphragm; and subsequently separating said phases.

1,807,834. PNEUMATIC TUBE CARRIER. PHILIP ERBY, Chicago, Ill., assignor to Samuel Olson & Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1930. Serial No. 440,892. 11 Claims. (Cl. 243—35.)

1. A carrier of the class described including a tubular body having an open end, a longitudinally movable rotatable stem associated therewith, means for supporting the stem adjacent the inner wall of the body, a spring acting on the stem and tending to move the latter inwardly, a closure element rigidly carried by the outer end of the stem and dimensioned to effectively occupy the internal cross-sectional area of the open end of said body,

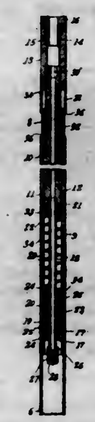


CARNEGIE LIBRARY OF ATLANTA

said closure element being movable longitudinally beyond the end of the body against the reaction of the spring, and then rotatable laterally of said body, and guide means

associated with the stem arranged to force the closure element to move in spaced relation to the end of said tubular body when it rotates into or out of alignment with the interior of said body.

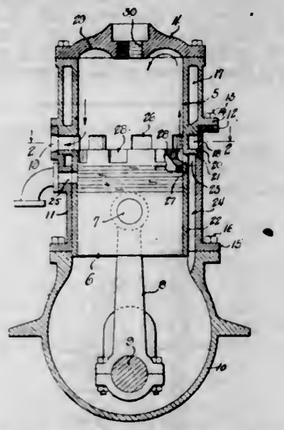
1,807,835. TRIMMING MACHINE. SIDNEY J. FINN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 4, 1927. Serial No. 196,574. 21 Claims. (Cl. 164—63.)



21. A trimming machine comprising a trimming cutter, means for operating said cutter, and means arranged to supply a lubricant to the work-engaging portion of said cutter, an element of the latter said means being tubular and having a peripheral surface arranged to engage an article of work to guide the article to said cutter.

1,807,836. WEATHERPROOFING MATERIAL. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Oct. 16, 1925. Serial No. 62,911. 9 Claims. (Cl. 94—18.)

1. A prepared expansion joint composed of 55% bituminous matter, 35% roofing scrap and 10% corn husks.

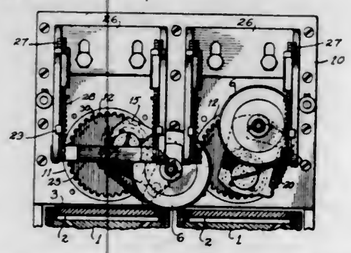


5. The method of increasing the tensile strength of prepared expansion joint by incorporating with bituminous material finely divided fibrous material and adding thereto coarse, wide pieces of vegetable, fibrous matter which will not readily break apart in mixing, combining these three in a mixer and preparing same in sheet form for use as an expansion joint.

1,807,837. WELL DRILLING. JAMES C. FORTUNE, New York, N. Y. Filed June 16, 1928. Serial No. 285,804. 14 Claims. (Cl. 255—28.)

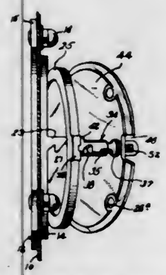
1. In apparatus of the character disclosed, a slide coupling for connection at an intermediate point in a drill string and comprising relatively telescopic tubular members longitudinally keyed together to carry the rotation of the drill string independently of the sliding movements of the members relative to each other, drill string coupling elements at the ends of said telescopically related members, whereby the device may be connected for rotary driving operations at a selected point in the length of the drill string, valve means operative in the relative movements of the two members to control communication between the section of pipe below said drive coupling and the section of pipe above the same, and a check valve operable by superior pressure in the section above the drive coupling to open communication between the two sections of pipe.

1,807,838. TWO CYCLE ENGINE. LOUIS O. FRENCH, Milwaukee, Wis. Filed Apr. 27, 1929. Serial No. 358,587. 3 Claims. (Cl. 123—73.)



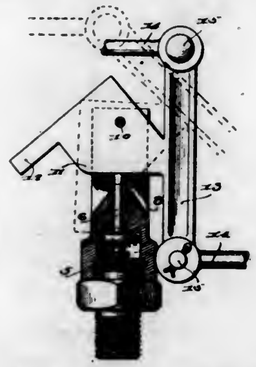
1. In a two cycle internal combustion engine, the combination of a cylinder head, a cylinder, a piston working in said cylinder, said cylinder having exhaust and scavenge ports formed therein successively uncovered by the piston at the end of its inner stroke, said exhaust ports radially arranged and alternating with said scavenge ports, said piston having shallow grooves formed therein registering with said scavenge ports to deflect the scavenging medium upwardly along the wall of the cylinder.

1,807,839. FLUID PRESSURE MOTOR. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 27, 1920. Serial No. 433,388. 5 Claims. (Cl. 121—6.)



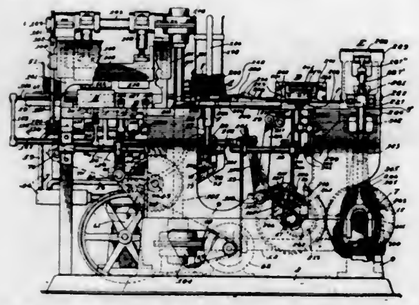
1. A rock drilling apparatus comprising a hollow drill steel, means for causing the same to hammer the rock, means for causing the drill steel to rotate during hammering action, means for supplying cleansing fluid to the drill steel, means for effecting simultaneous initiation of all of said operations, and means for interrupting the rotation and cleansing fluid pressure supply without interrupting the hammering action.

1,807,840. CUTTING MECHANISM FOR SHEETS. PAUL A. GOLLNICK and JOHN J. TOOLAN, Chicago, Ill., assignors, by mesne assignments, to Selectograph Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 1, 1927. Serial No. 209,903. 12 Claims. (Cl. 164—62.)



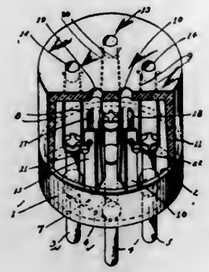
2. The combination with a support for sheets, of a mounting movable through a cyclic path transverse to said support, mechanism for intermittently actuating said mounting, an arm hinged on said mounting, and a knife rotatably supported on said arm, said mounting being arranged to hold said knife in rolling contact with the support when moving in one direction and to lift it clear of the support when moving in the opposite direction.

1,807,841. ATTACHMENT FOR DOORS. HERMAN HANSEN, New York, N. Y., assignor to Francis Keil & Son, Inc., a Corporation of New York. Filed Apr. 3, 1928. Serial No. 266,983. 18 Claims. (Cl. 20—39.)



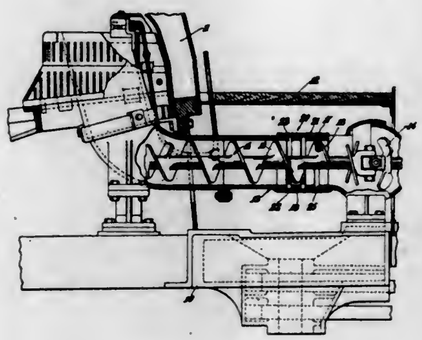
1. In a device of the character described, in combination, a frame member adapted to be secured to a door and to have a portion thereof extend through an aperture in the door, said frame member having an opening therein with means forming a grating extending thereacross and means for closing said opening, said means including a window-carrying member hinged to said frame and adapted to be locked thereto in closed position, an opaque member hinged to said frame and adapted to overlap said window-carrying member, and spring means acting upon said opaque member and through the latter upon said window-carrying member and operative to tend to swing both of said members about their hinges.

1,807,842. AIR BRAKE BLEEDER VALVE. FRANK W. HARRIS, Great Falls, Mont. Filed Feb. 23, 1929. Serial No. 342,246. 5 Claims. (Cl. 303—80.)



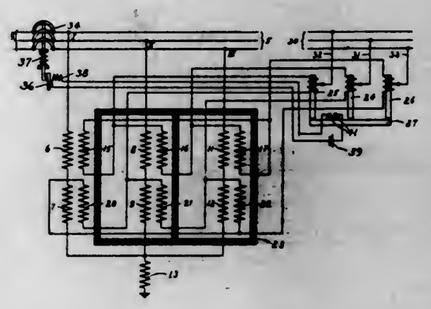
2. The combination with a bleeder valve having a normally closed depressible valve element, of a pivoted valve depressing element supported on the valve casing and normally disposed in a position to permit the valve element to remain seated and having a cam surface which is operable to depress the valve element and hold it in such position, a link attached to the valve depressing element and normally disposed parallel to the longitudinal axis of the bleeder valve, the pivoted valve depressing element being located centrally of the ends of the link and oppositely extending handles pivoted to the ends of the link whereby the valve depressing member may be moved to active and inactive position from either side of the car to which the bleeder valve is attached.

1,807,843. MACHINE FOR FORMING COMPOSITE CAN BODIES. VICTOR HENDRICKSON, Manchester, Conn., assignor to The Orford Soap Company, Inc., Manchester, Conn., a Corporation of Connecticut. Filed June 27, 1925, Serial No. 39,903. Renewed Apr. 18, 1929. 165 Claims. (Cl. 113—11.)



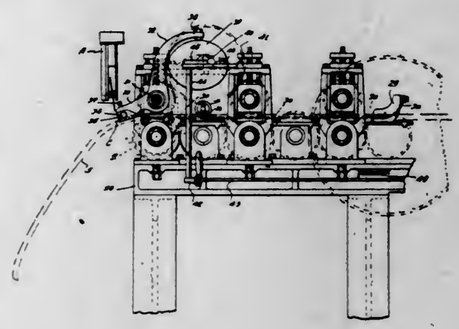
1. An organized machine for forming composite can bodies comprising means for forming a sheet metal seaming strip, means for applying the same to a can body blank, and means for forming the composite blank thus produced into the desired can body shape and for thereupon securing the seaming strip to the formed can body blank to complete the can body, said several means being correlated for harmonious operation.

1,807,844. ADAPTER. CHARLES E. HUFFMAN, Montclair, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed June 25, 1927. Serial No. 201,292. 1 Claim. (Cl. 173—344.)



An adapter for enabling a radio tube having an anode, a grid and a cathode designed to be heated by alternating current to be employed in radio receiving apparatus designed for the use of a tube having the cathode heated by direct current, comprising a body composed at least in part of insulating material, terminal prongs on said body, contact members in said body secured to two of said terminal prongs for engagement with the anode and grid prongs of the tube, two other contact members in said body having terminal connections independent of said prongs of the adapter for supplying heating current to said cathode and a fifth contact member for engagement with the cathode prong of the tube adapted to be joined to other of the terminal prongs of the adapter through an external circuit.

1,807,845. PERIPHERAL BEARING. ANDREW M. HUNT, New York, N. Y., assignor to The Standard Stoker Company, Incorporated, a Corporation of Delaware. Filed July 14, 1928. Serial No. 292,611. 8 Claims. (Cl. 198—213.)

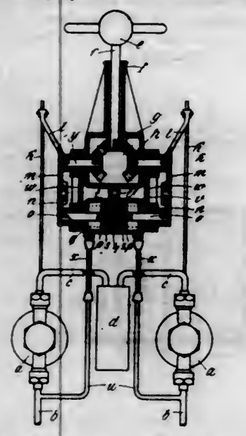


1. In a feed screw device for a stoker, the combination of a screw, a plurality of fins rigid with the screw and disposed in planes at right angles to the screw axis, and parallel stationary seats for said fins.

1,807,846. TRANSFORMER PROTECTIVE DEVICE. JULIUS JONAS, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed Feb. 2, 1929, Serial No. 337,067, and in Germany Feb. 6, 1928. 4 Claims. (Cl. 175—294.)

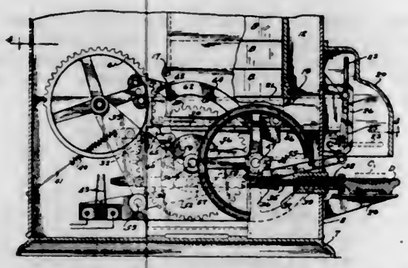
1. In a transformer, a magnetic core, a primary winding, secondary windings, said secondary windings being divided into a plurality of similar delta connected portions, all of said windings being arranged on said core, and means in connection with said secondary windings for disconnecting the transformer upon occurrence of a fault therein.

1,807,847. METAL WORKING MACHINE. HOMER G. KELLOGG, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of New York. Filed June 1, 1926. Serial No. 112,978. 20 Claims. (Cl. 153—2.)



1. In a machine of the character described, the combination with means for fashioning to a predetermined cross-sectional contour and for advancing a predetermined length of molding strip, of means for fashioning said strip to a predetermined variable longitudinal contour.

1,807,848. PRESSURE MEDIUM BRAKE AND STEERING DEVICE FOR AIRCRAFT. KURT KOLLINEK, Karlshorst, Berlin, Germany, assignor to Knorr-Bremse Aktiengesellschaft, Lichtenberg, Berlin, Germany, a Corporation of Germany. Filed Aug. 5, 1930, Serial No. 473,258, and in Germany June 23, 1930. 4 Claims. (Cl. 303—6.)

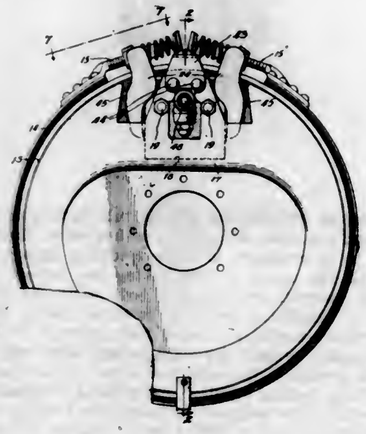


1. In pressure medium brake apparatus for aircraft, a source of pressure medium, pipes to admit said medium to the right and left hand brake cylinders respectively, valves controlling the passage of said medium to and

from the respective pipes, branch connections between said pipes to equalize the pressure therein, differential

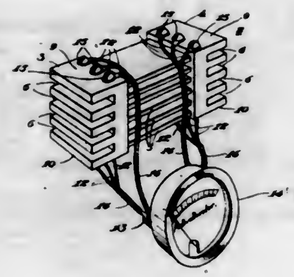
gear to operate said valves, a member interposed in said connections and also operable by said gear to obstruct said connections to prevent such equalization.

1,807,849. BUTTER CUTTER. CLIFFORD W. KUBON, Minneapolis, Minn. Filed May 18, 1929. Serial No. 364,208. 10 Claims. (Cl. 31—21.)



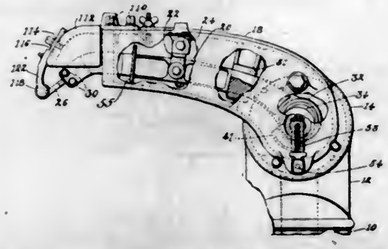
6. A device of the class described comprising a cutter, a feed device for feeding materials to the cutter, manually controlled means including a yieldingly retracted plunger for imparting step by step movement to said feed device, driven connections for operating the cutter, and a source of electrical energy for operating said connections and having a normally open switch, said plunger being arranged to close the switch during its projecting movement, said connections including a member for retaining the plunger projected to hold the switch closed for a predetermined period of time and then release the same, said member being in the form of a wheel having a peripheral notch, said plunger having a part which extends into said notch when the plunger is retracted and which is moved out of the notch when said plunger is projected, said wheel serving as a stop to hold the plunger projected with the switch closed until said notch is again brought into registration with said part.

1,807,850. DENTAL PLATE SUCTION CUP ATTACHING MEANS. IRVING KULIK, Brooklyn, N. Y. Filed Oct. 23, 1926. Serial No. 143,702. 11 Claims. (Cl. 32—4.)



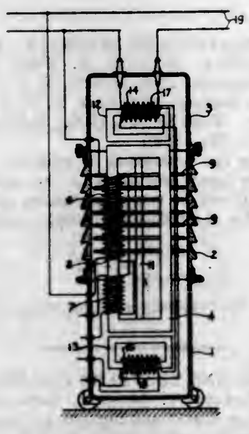
1. A dental plate suction cup attaching means and a rubber cup therefor comprising a flexible rubber cup and a holding element therefor with which said rubber cup is associated, a stem extending from said holding element to retain said holding element in position in moulds during the process of construction of a dental plate or base for a dental plate and a tube into which the said stem of the said holding element fits into.

1,807,851. HYDRAULIC BRAKE. MALCOLM LOUGHEAD, Detroit, Mich., assignor to Hydraulic Brake Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 13, 1923. Serial No. 680,292. 13 Claims. (Cl. 188—152.)



1. In a fluid operated brake system, an axle, a wheel thereon, a brake drum carried by said wheel, a brake member adjacent to the outer periphery of said drum, a cylinder mounted substantially within said brake drum, a piston in said cylinder, and a lever pivotally supported from said axle, one arm of said lever being operatively joined to said brake member, the other arm of said lever being arranged for engagement by said piston.

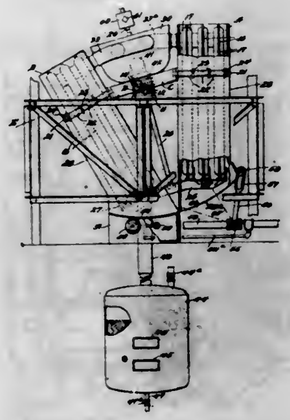
1,807,852. SHUNT. PAUL MACGAHAN, Orange, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 3, 1929. Serial No. 360,209. 10 Claims. (Cl. 171—95.)



1. A shunt for use in conjunction with instruments of the millivoltmeter type embodying a shunt portion of known resistance, terminal blocks secured to the ends thereof, and a plurality of terminals distributed over the area of each block to respectively receive a plurality of leads from the instrument.

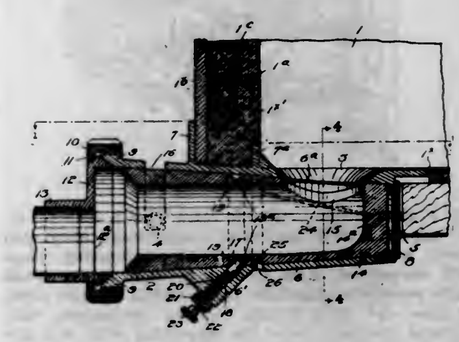
1,807,853. FASTENING-PULLING MACHINE. FRED L. MACKENZIE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 10, 1924. Serial No. 719,076. 21 Claims. (Cl. 12—16.)

1. In a machine for pulling lasting tacks, arranged in rows in the channeled soles of boots and shoes, an oscillatory fastening-pulling member arranged for movement in the line of the row of tacks, a work guarding and supporting member extending between the pulling member and the work, and a work-guide co-operating with said members having a narrow end extending in front of the pulling member and adapted to be positioned in the channel of a sole substantially in line with the pulling member, said work guide being yieldably mounted to allow tilting of the shoe to facilitate the presentation of tacks to the pulling member.



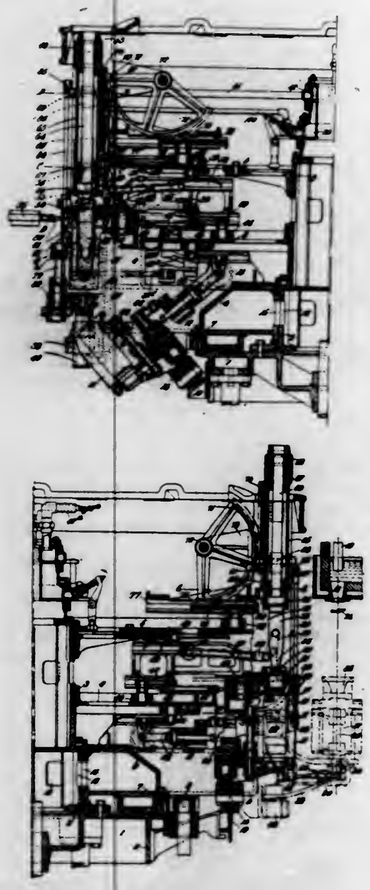
1,807,854. TRANSFORMER. AUGUST MEYERHANS, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint-Stock Company of Switzerland. Filed June 16, 1930, Serial No. 461,664, and in Germany June 17, 1929. 5 Claims. (Cl. 175—361.)

1. In a transformer structure, a voltage transformer, rings arranged about the voltage transformer to obtain a uniform potential drop thereover, a current transformer arranged adjacent said voltage transformer, and a tank partially constructed of insulating material for receiving said transformer.



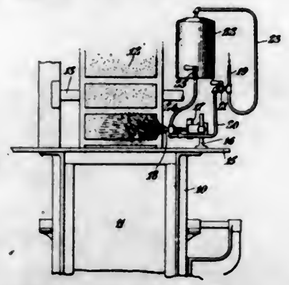
1,807,855. OSCILLATING TYPE REFRIGERATION PLANT. ERNEST B. MILLER and WALTER L. EDEL, Baltimore, Md., assignors to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed Oct. 28, 1925. Serial No. 65,465. 18 Claims. (Cl. 62—118.)

1. Refrigerating apparatus of the character described, including in combination, a support, a unit comprising a pair of adsorbers charged with vapor adsorbing material balanced on said support so that alternate adsorptions and activations causes said unit periodically to tilt, first one way and then the other, an evaporator containing an



evaporable liquid, means to place said evaporator alternately in communication with said adsorbers, and means controlled by said tilting movement to activate each adsorber when it is disconnected from said evaporator.

1,807,856. VALVE. MORRIS E. MILLER, Canton, Ohio, assignor to The H. H. Miller Industries Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 18, 1928. Serial No. 306,631. 10 Claims. (Cl. 137—21.)



1. In apparatus of the class described, the combination of a container having an outlet in its lower portion, a valve comprising a hollow casing associated with the container walls and formed with an opening in registry with said outlet, one end of said casing being open and serving as the outlet for said valve and provided with means for connecting a discharge conduit to said casing end, and a valve element consisting of a hollow member closed at its inner end and opening into said casing at its other end, said element removably and rotatably fitting within said casing and formed in its side wall with a port adapted to register in one position with said outlet, and a handle connected to the outer portion of said valve element inwardly of the outlet end of said casing.

1,807,857. GLASS SHAPING MACHINE. THOMAS COURTNEY MOORSHEAD, Strand, England, assignor to The United Glass Bottle Manufacturers Limited, London, England, a British Company. Filed Feb. 25, 1927, Serial No. 170,808, and in Great Britain Aug. 31, 1926. 17 Claims. (Cl. 49—9.)

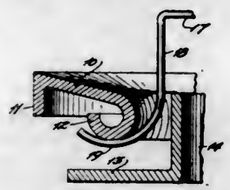
16. A glass shaping machine comprising a central vertical support, a frame carried by and rotatable about said support, means to rotate said frame continuously, blank mould supporting arms pivoted to said frame, blank moulds comprising separable parts carried by said arms, said arms and blank moulds rotating continuously with the frame, means to move the supporting arms with the blank moulds thereon so that at times the moulds are rotating in an outer circle and in an upright position to receive a charge of glass and at other times are rotating in an inner circle, neck moulds carried by the frame so as to move continuously in said inner circle, horizontal pivots carried by said frame, blow moulds mounted for movement about said pivots, means to move said blow moulds upwards about said pivots to bring them into co-operation with the neck moulds, a plurality of vertically movable register heads mounted on said frame, means for raising and lowering said register heads so that at times they serve to ensure proper alignment of the blank moulds with the neck moulds and at other times serve to ensure proper alignment of the blow moulds with the neck moulds, and pairs of locking members adapted to bind the parts of the blank moulds together at the appropriate times by a jamming action.

1,807,858. PROCESS FOR COLORING PLASTIC MATERIAL. WILLIAM H. MORRIS, Philadelphia, Pa., assignor to Ambler Asbestos Company, a Corporation of Pennsylvania. Filed Apr. 4, 1927. Serial No. 180,678. 7 Claims. (Cl. 25—155.)

1. The process of coloring articles of plastic material which consists of applying a tapering film of coloring material to one surface thereof while the article is in a plastic condition, thereafter drawing said film of coloring material into the body of said article by means of suction applied to the opposite surface of said article.

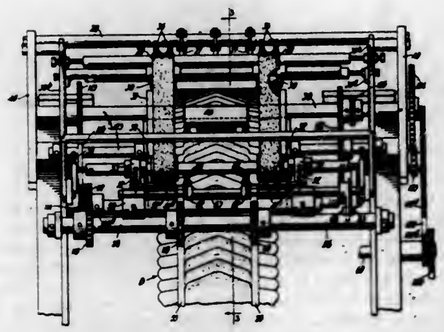
1,807,859. CONCENTRATION OF ORES. FREDERICK G. MOSES, New York, RAYMOND W. HESS, Buffalo, and ROBERT L. PERKINS, East Aurora, N. Y., assignors to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed May 20, 1927. Serial No. 193,053. 12 Claims. (Cl. 209—166.)

1. In effecting the concentration of minerals by flotation, the process which comprises incorporating with the mineral pulp a thiazyl polysulfide and a thiazyl mercaptan, and subjecting the same to a froth flotation operation.



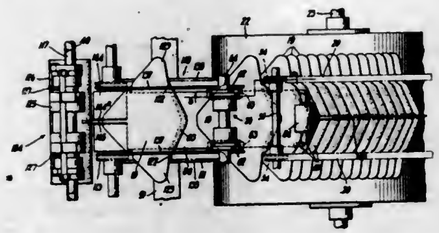
1,807,860. SEPARATION OF MINERALS. FREDERICK G. MOSES, New York, RAYMOND W. HESS, Buffalo, and ROBERT L. PERKINS, East Aurora, N. Y., assignors to The Barrett Company, New York, N. Y., a Corporation of New Jersey. Filed May 20, 1927. Serial No. 193,059. 8 Claims. (Cl. 209—166.)

1. In effecting the separation of minerals, the process which comprises incorporating with the mineral pulp a thiobiazoline sulfhydrate compound which embodies within its composition the following probable grouping:



and subjecting the resulting mixture to a froth flotation operation.

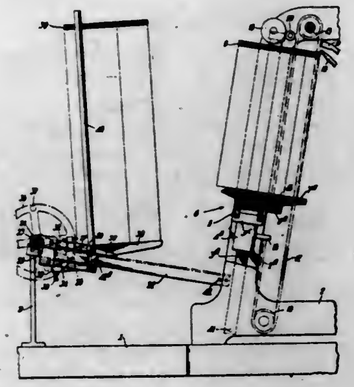
1,807,861. RING AND TRAVELER FOR SPINNING MACHINES. WILLARD T. MUNSON, Scranton, Pa., assignor to Collins Supply and Equipment Company, Scranton, Pa., a Copartnership composed of Henry E. Collins and Albert B. Collins. Filed Nov. 15, 1930. Serial No. 495,970. 3 Claims. (Cl. 118—59.)



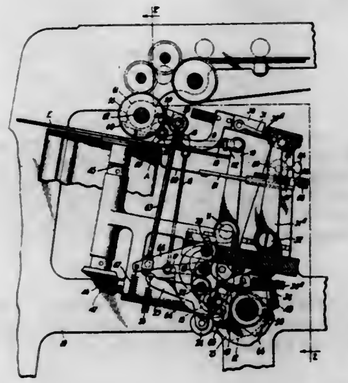
1. The combination of a spinning ring having a depending bead on its inner periphery, a traveler having foot portions adapted to engage beneath the bead and contacting tangentially with said bead, said foot portions being each curved to a radius greater than the bead with the concave side adjacent the bead, and a ring holder provided with an upstanding internal flange concentric with and spaced from the ring a distance less than the lateral extension of each foot portion of the traveler.

1,807,862. ENVELOPE MACHINE. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 21, 1926, Serial No. 156,080. Renewed Aug. 1, 1930. 19 Claims. (Cl. 93—62.)

1. In an envelope making machine, means for removing blanks from a stack and forming them into a band so as to expose the area of a sealing flap to be gummed, means for gumming the said flaps and means for individually conveying the blanks of said band comprising positive means for holding said blanks in spaced relation.



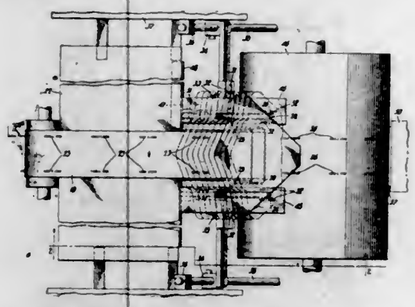
1,807,863. ENVELOPE MACHINE. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1927, Serial No. 167,077. Renewed Nov. 8, 1930. 14 Claims. (Cl. 93—62.)



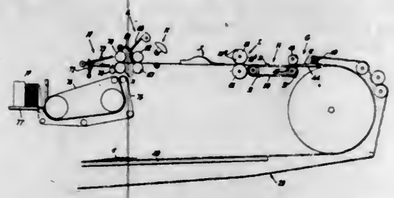
1. In an envelope making machine having means for conveying a band of envelope blanks including positive means for holding the individual blanks in spaced overlapping relation, during which an operation is performed upon them, and means for engaging each blank, releasing it from said holding means and individually conveying it for further operations thereon.

1,807,864. ENVELOPE MAKING MACHINERY. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 10, 1927, Serial No. 232,274. Renewed Sept. 24, 1930. 9 Claims. (Cl. 271—62.)

1. In an envelope-making machine, the combination of envelope-blank feeding means, envelope-blank elevating means, a tiltable platform constructed and arranged to receive a supply of blanks, a track along which said platform is adapted to be moved, and means for moving said platform along said track and into juxtaposition with said elevating means in order to deliver said supply of blanks to said elevating means.

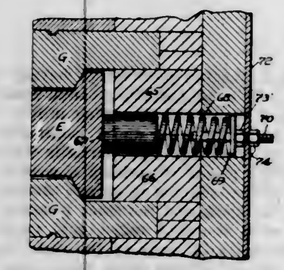


1,807,865. MECHANISM FOR FEEDING SHEETS OR BLANKS. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 6, 1928, Serial No. 244,786. Renewed Sept. 4, 1930. 10 Claims. (Cl. 271—30.)



1. In a blank feeding mechanism, having means for separating an edge of an outermost blank, means for gripping a presented blank and conveying it from the stack, comprising a main feed roller and a cooperating auxiliary roller, means for transferring the partially separated sheet to said conveying means comprising a member having a reciprocatory motion adapted to engage between the separated edge of the blank and the stack to move said blank against said main conveyor roller, said member having an edge presenting said blank to the main roller of the approximate contour of said main roller, and means for moving said auxiliary roller to grip said presented blanks against said main roller.

1,807,866. ENVELOPE MACHINERY. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 25, 1928, Serial No. 256,915. Renewed Oct. 18, 1930. 10 Claims. (Cl. 93—68.)



1. In a gumming apparatus, in combination, means for feeding blanks in a fanned out condition, a gummer adapted to operate on fanned out blanks, and collating means for individually aligning the fanned out blanks to render more uniform the exposed gum-receiving margins of the blanks before they reach the gummer.

1,807,867. MACHINE FOR MAKING ENVELOPES. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed June 12, 1928, Serial No. 284,856. Renewed Jan. 17, 1931. 4 Claims. (Cl. 93—62.)

1. In an envelope machine, in combination, means for holding a stack of blanks, means for fanning out said blanks in timed relation to the operating cycle, means for conveying the blanks so fanned out in positively timed relation to the operating cycle, and means timed to operate on each blank at the discharge end of the conveying means to individualize it.

1,807,868. EXPANSION FURNACE WALL. OSCAR NYGAARD, Saugus, Mass. Filed Oct. 30, 1926. Serial No. 145,270. 23 Claims. (Cl. 72—102.)

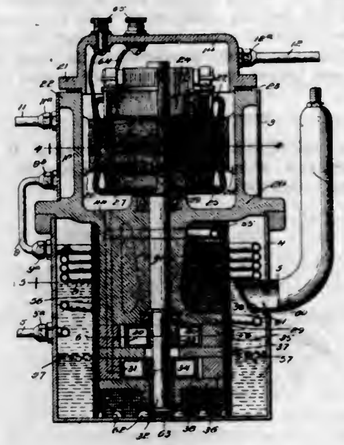
1. A furnace wall construction comprising a permanent masonry wall having a fire wall at its inner face com-

prised of refractory blocks all of which have the same dimensions at their heads except for certain of said blocks spotted over the wall whose heads are of smaller dimensions, all of the blocks surrounding each block having a smaller head being formed at their outer ends to engage a flange on the outer end of said central smaller headed block and support its head in spaced relation to the heads of said surrounding blocks.

1,807,869. SHAFT WRAPPING MACHINE. PERRY OKEY, Columbus, Ohio, assignor, by mesne assignments, to The American Fork & Hoe Company, a Corporation of Ohio. Filed Feb. 19, 1927. Serial No. 169,617. 26 Claims. (Cl. 242—7.)

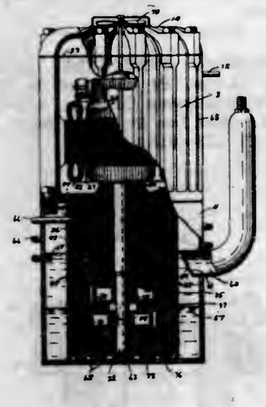
1. In a wrapping machine, a stationary frame including longitudinal guides, a carriage mounted for longitudinal travel upon said guides, said carriage embodying a pair of longitudinally spaced heads, spindles rotatably carried by said heads and adapted for the removable and rotatable reception of a shaft section, motor driven means for effecting longitudinal travel of said carriage in an advancing direction with respect to said frame, means for rotating at least one of said spindles upon advance movement of said carriage, a reel mechanism carried by said frame and operable to apply helically a wrapping to the shaft section supported between said spindles upon advance movement on the part of said carriage, means for supplying a predetermined amount of adhesive to the inner side of said wrapping at the time of its application to said shaft section, and means for severing said wrapping after the same has been applied to a predetermined length of said shaft section.

1,807,870. ARTIFICIAL FISH BAIT. UZ C. PEMBERTON, Seffner, and JOSEPH B. JOHNSON, Tampa, Fla. Filed Nov. 4, 1929. Serial No. 404,789. 3 Claims. (Cl. 43—42.)



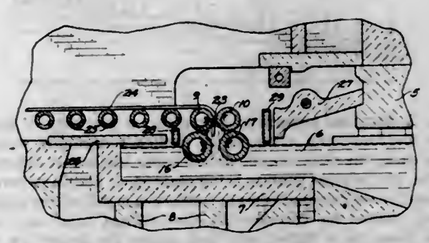
1. A device for attaching a lure to a fish hook comprising a member having an opening therein adapted to receive a shank portion of the hook, a formation on said member for attaching a lure thereto, and another formation on said member for detachably fastening the latter to the hook.

1,807,871. REFRIGERATING APPARATUS. OSBORNE I. PRICE, Frederick, Md., assignor to John S. McCarthy, Weehawken, N. J. Filed Apr. 20, 1925, Serial No. 24,599. Renewed Oct. 28, 1930. 16 Claims. (Cl. 62—115.)



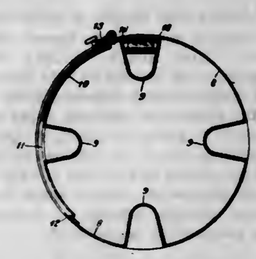
1. A refrigeration apparatus comprising in combination a compressing mechanism, a driving mechanism, a housing enclosing said driving mechanism and having a depending portion thereon supporting said compressing mechanism, said driving mechanism comprising a motor, an extended shaft on said motor journaled in said depending portion and connected with said compressing mechanism, a condensing chamber surrounding said depending

portion, means for cooling said condensing chamber, a port in said depending portion connecting said housing with said compressing mechanism, port means connecting said compressing mechanism with said condensing chamber, means permitting gaseous refrigerant to flow through said



driving mechanism in said housing, whereby said compressing mechanism operates to force said refrigerant, under pressure, into said condensing chamber for liquefying said refrigerant, and means for utilizing said refrigerant for absorbing heat.

1,807,872. REFRIGERATION APPARATUS. OSBORNE I. PRICE, Frederick, Md., assignor to John S. McCarthy, Weehawken, N. J. Original application filed Oct. 20, 1925, Serial No. 24,599. Divided and this application filed Jan. 16, 1931. Serial No. 509,232. 4 Claims. (Cl. 62—115.)



1. In a refrigerating apparatus the combination of a driving mechanism, a compressing mechanism actuated by said driving mechanism, a casing for said compressing mechanism, a cooling coil outside of said casing for receiving compressed medium from the compressing mechanism, a connection from the cooling coil to said casing for discharging cooled compressed medium from said coil into said casing, and discharge means for medium compressed by said compressing mechanism and discharged into said casing from said cooling coil.

1,807,873. METHOD AND APPARATUS FOR ROLLING SHEET GLASS. JOSEPH A. REECE and WILLIAM E. NOBBE, Toledo, Ohio, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 4, 1927. Serial No. 230,937. 10 Claims. (Cl. 49—33.)

6. In sheet glass apparatus, a receptacle containing a mass of molten glass, a pair of rotatable sheet forming rolls positioned thereabove and arranged to create a sheet forming pass, and a pair of positively rotatable feeding rolls arranged beneath the forming rolls and disposed within the mass for supplying a relatively large body of glass to said sheet forming pass partly under hydrostatic pressure and partly by a positive feeding action.

1,807,874. ATTACHMENT FOR WASHING MACHINES. HAROLD B. ROBBINS, White Plains, N. Y. Filed May 26, 1930. Serial No. 455,526. 6 Claims. (Cl. 68—18.)

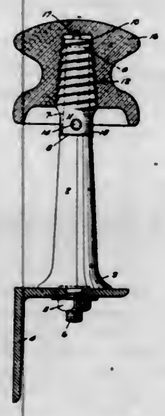
1. A washing machine comprising a rotary mounted receptacle for goods, a plurality of inwardly disposed hollow ribs extending longitudinally of the receptacle, and an auxiliary receptacle for test goods, said auxiliary receptacle having certain of its walls formed from one of said ribs.

1,807,875. METHOD OF ELECTROPLATING AND PRODUCT THEREOF. KARL DAVIS ROBINSON, New York, N. Y., assignor to The Meriden Gravure Company, Meriden, Conn., a Corporation of Connecticut. Filed Oct. 21, 1926. Serial No. 143,303. 9 Claims. (Cl. 204—6.)

3. The method of electroplating on metal articles which consists in coating the metal with gelatin prior to the electroplating step, drying the gelatin, causing the gelatin to swell to the required condition of permeability, then plating on the articles a metal through the gelatin in an electrolytic bath, and drying the gelatin coating.

5. A printing plate having a permeable colloid coating secured thereto by electroplating with a metal through the interstices of the colloid which forms part of the finished plate.

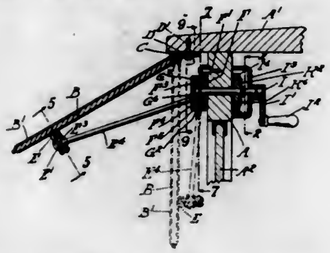
1,807,876. FLOTATION APPARATUS. JOSEPH P. RUTH, Jr., Denver, Colo. Filed Feb. 28, 1928. Serial No. 253,978. 9 Claims. (Cl. 209—169.)



1. A flotation apparatus comprising a plurality of flotation machine cells arranged in groups comprising several cells each, the cells of each group being located at different levels, the several groups being located at different levels, means for delivering the pulp to the lower cell of the higher group, means for transferring the tailings from each cell in a group to a higher cell, and means for delivering the froth from all of the cells of the upper group to the lowermost cell of the next lower group.

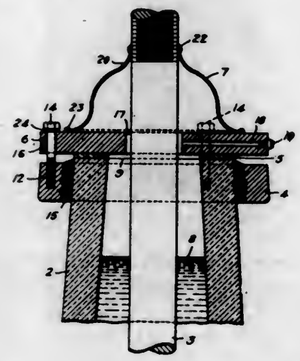
1,807,877. MOTION PICTURE. SYDNEY J. SANFORD, Philadelphia, Pa., assignor of one-half to Chester W. Larner, Philadelphia, Pa. Filed May 12, 1926. Serial No. 108,481. 4 Claims. (Cl. 88—16.)

1. A motion picture film having a series of successive picture spaces, each of said picture spaces having a plurality of spaced portions and a plurality of successive independent exposures on groups of said spaced portions each group and corresponding exposure being distributed across the picture space, the portions being so small as to appear to the eye to merge together, successive groups forming a continuous series of motion pictures across each of said picture spaces and groups of said spaced portions across each successive picture space being of one continuous motion picture whereby a relatively short length of motion picture film is provided.



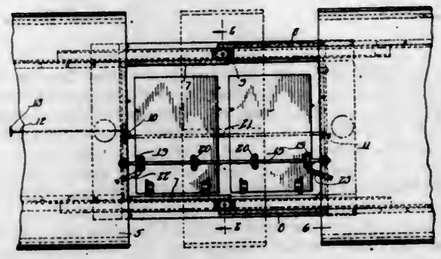
1,807,878. INSULATOR SUPPORTING POST. CARL P. SEYLER, Pittsburgh, Pa. Filed Feb. 16, 1927. Serial No. 168,617. 2 Claims. (Cl. 173—321.)

1. In combination with a supporting arm having an outer enlarged circular terminal collar, an insulator support having a threaded sheet metal arbor consisting of two spaced apart semi-circular threaded portions fixedly mounted on the supporting arm and bearing by their outer circular embracing ends against a substantial portion of said collar with an inner compressible portion.



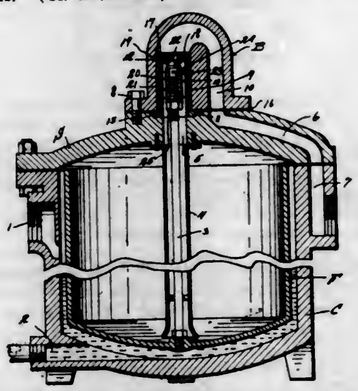
2. In an insulator support, the combination with a supporting post having a terminal collar extending laterally beyond the shank portion and a separable endmost abutment for limiting engagement with an insulator, of a two-part threaded arbor bearing against the collar at its outer end and fixedly connected at its inner end with the post and spaced apart by oppositely located clearahce slots.

1,807,879. ADJUSTABLE VISOR. ARTHUR R. SIMON, La Porte, Ind. Filed May 19, 1926. Serial No. 110,058. 8 Claims. (Cl. 296—95.)



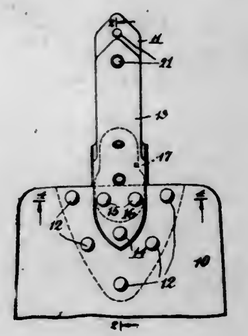
8. In an adjusting mechanism, the combination with a visor hinged along its upper horizontal edge to the upper transverse portion of a vehicle body, and swingable outwardly relative thereto, of a pair of links each operatively connected at its outer end to the inner side of said visor to swing relative thereto, a pair of devices slidably mounted on the upper transverse portion of the body above the line of vision and below the hinge for said visor to move in a plane substantially parallel to the axis on which said visor swings and each pivotally connected at its outer portion to the inner end of the adjacent link, whereby movement of said devices simultaneously outwardly or simultaneously inwardly will effect adjustment of and means mounted on the upper transverse portion of the vehicle body for simultaneously moving said devices.

1,807,880. BUSHING STRUCTURE. ALEXANDER A. SKVORTZOFF, Sharon, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1928. Serial No. 326,013. 9 Claims. (Cl. 173—318.)



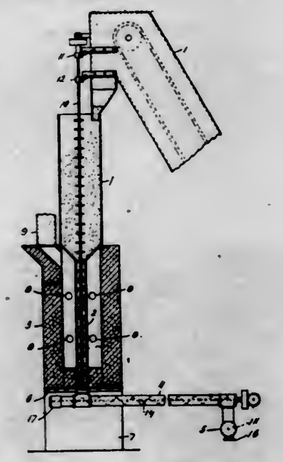
5. A bushing comprising a tubular insulating structure, a ring over an end of said structure, means hermetically sealing said ring to said end, a conductor extending through, and permitted to have movement relative to, said ring, flexible means between, and intimately united to both the conductor and the ring for hermetically sealing the same to each other, and means for securing the tubular structure and the ring to each other.

1,807,881. EXTENSION TABLE. HARRY SISKIN, Los Angeles, Calif. Filed Nov. 21, 1927. Serial No. 234,707. 9 Claims. (Cl. 45—112.)



1. An extension table comprising movable top sections and means for moving them oppositely in unison, an extension leaf mounted eccentrically below the top in concealed position and movable laterally for centering it between the top sections in extended position, and means in connection with one of the table top sections for moving the extension leaf to its eccentric position when the top sections are moved apart.

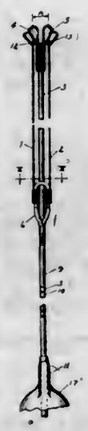
1,807,882. STEAM TRAP. DAVID A. SMELSER, Bristol, Va. Filed Feb. 27, 1930. Serial No. 431,847. 3 Claims. (Cl. 137—103.)



1. A steam trap comprising a casing having an opening in its top, a float within the casing carrying a stem extending out through the opening in the top, a bonnet detachably secured to the top wall of the casing and having a bore in communication with the opening in said top wall, said bonnet and top wall having an outlet leading from the bore of the bonnet, a sleeve snugly engaging within the bore of the bonnet, the outer end of the sleeve having an inturned flange, the inner portion of the sleeve having an outturned flange, the bore of the opening in the top wall of the casing being enlarged to provide a rabbet to receive said flanged end of the sleeve, a valve seat retainer snugly fitting within the sleeve and also engaging with the rabbet, a valve member clamped between the inturned flange of the sleeve and the adjacent end of the valve seat retaining sleeve when the bonnet is in applied position upon the top wall of the casing, and a valve carried by the stem for cosction with the valve seat.

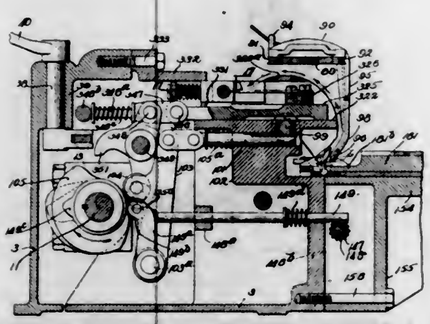
1,807,883. BACK STRAP SHOVEL. LEWIS E. WEBSTER, Wyoming, Pa., assignor to The Wyoming Shovel Works, Wyoming, Pa., a Corporation of Pennsylvania. Filed May 16, 1925. Serial No. 30,844. 5 Claims. (Cl. 306—24.)

1. A shovel comprising a blade portion, a front and back strap each separate from the blade but each secured thereto and receiving therebetween an inserted wooden shank and a curved reinforcing element fitted within said front strap portion and adjacent the wooden shank and extending downwardly and bridging the top of the blade portion to prevent contact by said wooden shank portion to bridge the shoulder formed by the blade at the point where the front strap overlaps the top of the blade.



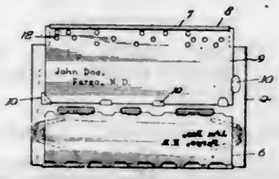
1,807,884. MANUFACTURE OF CARBON BLACK. WILLIAM BRYAN WIEGAND, South Beach, Conn. Filed Feb. 18, 1929. Serial No. 340,983. 10 Claims. (Cl. 134—60.)

1. A method of improving the properties of impingement carbon blacks in vulcanized rubber compounds which comprises calcining the impingement carbon black at a temperature not less than about 1200° F. in a non-oxidizing atmosphere.



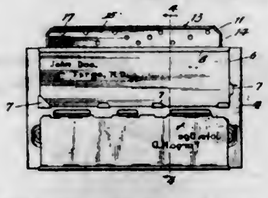
8. An impingement carbon black product produced by calcining impingement carbon black at a temperature not less than about 1200° F. in a non-oxidizing atmosphere.

1,807,885. FILAMENT MOUNTING. WILLIAM WEINGARTNER, Irvington, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Aug. 31, 1929. Serial No. 389,697. 2 Claims. (Cl. 250—27.5.)



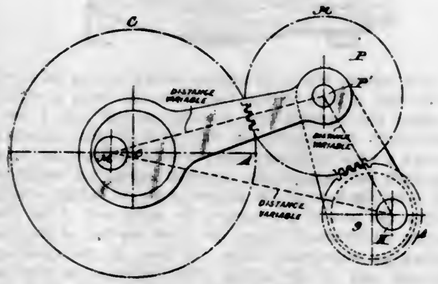
1. In a filament mount employing preformed twin inverted V-shaped filaments in spaced parallel relationship and electrically connected in parallel, means for setting up a substantial strain free parallel spaced relationship and parallel electrical connection with leading in wires of the filament mount which comprises twin inverted U-shaped filament connectors integral with the filament lead wires of said filament mount, said U connectors being spaced in parallel relationship in vertical planes apart substantially a distance equal to the distance apart of the ends of the preformed filament legs, and in a plane at right angles to the plane of said parallel filaments, the outer edges of the legs of said U connector being shaped to present parallel surfaces in the same vertical plane as the apex of said mounted preformed filament.

1,807,886. PROCESS OF AND APPARATUS FOR TIPPING LACES. GEORGE H. ARMITAGE, Providence, R. I., assignor to United Lace & Braid Manufacturing Co., Providence, R. I., a Corporation of Rhode Island. Filed Aug. 23, 1927. Serial No. 214,935. 72 Claims. (Cl. 18—1.)



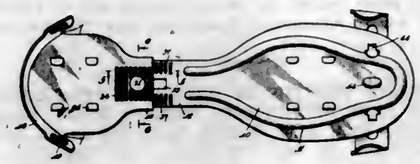
1. That process of tipping laces which comprises as steps measuring off a length of lace material from a supply, severing said length at substantially its middle point, deflecting the severed end portions out of line with the remainder of the material, and applying stiffening material to said deflected portions.

1,807,887. PRINTING DEVICE. JAMES A. BAILEY, Washington, D. C., assignor to Addressograph Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 30, 1927. Serial No. 236,656. 2 Claims. (Cl. 101—369.)



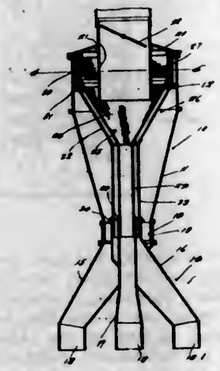
1. A printing device comprising a frame having an integral extension at the top thereof and spaced from the end edges of the frame, said extension being provided with a multiplicity of openings therein for classification or selection purposes and having its upper edge bent over to form a strengthening bead, retaining devices on the frame below said extension, and a card detachably engaged with said bead and retaining devices and covering all the openings in said extension, said card having one or more openings therein registering with corresponding openings in the extension.

1,807,888. PRINTING DEVICE. JAMES A. BAILEY, Washington, D. C., assignor to Addressograph Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 30, 1927. Serial No. 236,657. 3 Claims. (Cl. 101—369.)



1. A detachable tab for a printing device comprising a tab frame having a plurality of openings therein and means for mounting said frame on a printing device, a card, and retaining means on the tab frame to receive the card, said card having one or more openings registering with corresponding openings in the tab frame.

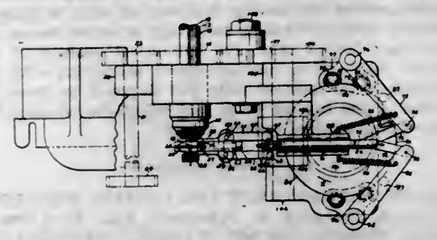
1,807,889. MECHANICAL MOVEMENT. EDOUARD BELIN, Paris, France. Filed Dec. 17, 1928, Serial No. 326,555. and in France Jan. 26, 1928. 5 Claims. (Cl. 74—41.)



1. A mechanical movement comprising, in combination, a driving shaft, an eccentric pinion on said driving shaft, a driven shaft, an eccentric pinion on said driven shaft, a centrally mounted pinion interconnecting said eccentric pinions, said interconnecting pinion being freely displaceable edgewise in its own plane during the rotation of the driving pinion.

1,807,890. SKATE. SAMUEL I. BERGER, Newark, N. J. Filed Feb. 3, 1928. Serial No. 251,535. 10 Claims. (Cl. 208—175.)

1. A skate chassis comprising a sole piece and a heel piece, said pieces having marginal guide conformations lengthwise thereof for adjustment to the length of the foot, and clamp means for securing the skate in adjusted position.

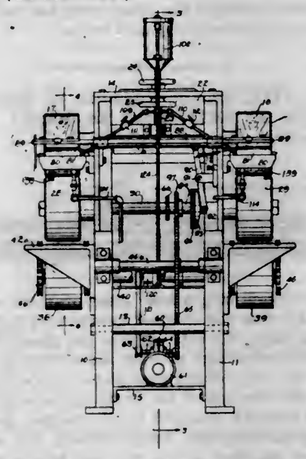


1,807,891. COMBINED COLLECTOR AND SEPARATOR FOR FEED MILLS. ALBERT H. BOTTORFF, St. Joseph, Mo. Filed May 7, 1929. Serial No. 361,159. 1 Claim. (Cl. 209—144.)

A combined collector and separator for feed mills comprising a truncated conical casing for the reception of feed having annular upper and lower portions, the annular upper portion being provided with an inlet opening, a conduit disposed tangentially to the upper portion and communicating therewith through the opening for discharging feed thereinto, a pair of spaced, truncated feed separating screens disposed concentrically in the casing and having cylindrical upper portions disposed in the annular upper portion of the casing, the upper portions of the screens having openings therein adjacent the inlet opening for the passage of the feed, a ledge mounted in the annular portion of the casing beneath the inlet opening and extending therefrom over adjacent portions of the upper ends of the truncated portions of the screens, the innermost screen having the portions of the cylindrical portion thereof which are adjacent the sides of the inlet opening extending outwardly past the adjacent edges of the outermost screen to the casing, and a deflector disposed tangentially in the casing above the ledge and in alignment with the conduit for directing the feed inwardly relative to the periphery of the casing.

1,807,892. GRID WINDING MACHINE. ROBERT BRINDLE, Jr., West Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 9, 1929. Serial No. 338,661. 10 Claims. (Cl. 140—71.)

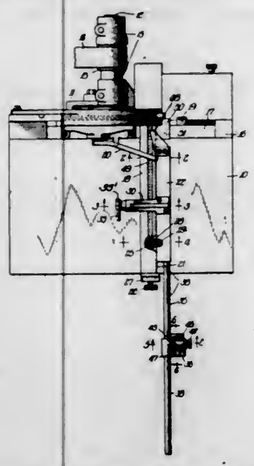
1. A machine for making grids comprising means for holding a support wire, means for winding a series of turns of a grid wire around said support wire, means for securing said turns to said support wire; means for terminating the winding operation, means for winding another series



of turns about said support means for actuating said third mentioned means to secure said last mentioned turns to said support wire.

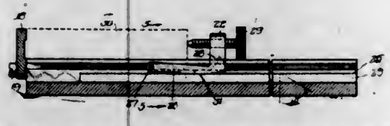
1,807,893. CURTAIN SUPPORT. RICHARD R. BRUCKNER, New York, N. Y. Filed Aug. 26, 1929. Serial No. 388,325. 12 Claims. (Cl. 156—46.)

10. An apparatus of the character described, including an elongated track member, a plurality of curtain supporting brackets, each bracket being provided with a ball adapted to roll on said track member, a motor supported near one end of said track member, pulleys at one end of said track member, operating means between said motor and said pulleys including a worm drive, operating cords connecting said curtain supporting brackets and extending over said pulleys and automatic means for maintaining said cords under tension.



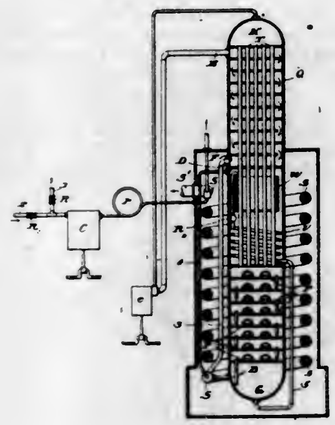
1,807,894. SURFACE DECORATING MACHINE, APPARATUS AND METHOD. LLOYD V. CASTO and GEORGE E. LANG, Detroit, Mich., assignors to Oxford Varnish Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 16, 1926. Serial No. 129,443. 28 Claims. (Cl. 101—154.)

1. In a graining machine, the combination of a machine frame, a metallic pattern roll disposed on each side



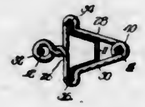
of the frame, a take-off roll disposed beneath each pattern roll and rotatably contacting therewith, a cushion roll spaced from and disposed beneath each take-off roll a common means for driving both sets of rolls, a pigment applying device including positively actuated means for removing pigment from the cylindrical surface of the pattern rolls and a cleaning device contacting with the surfaces of the take-off rolls and disposed to clean the surface of the take-off rolls, said rolls being arranged in overhanging relation to said frame.

1,807,895. ATTACHMENT FOR CUTTING MACHINES. EDWARD CHESHIRE, St. Petersburg, Fla. Filed Feb. 9, 1927. Serial No. 166,869. 5 Claims. (Cl. 29—69.)



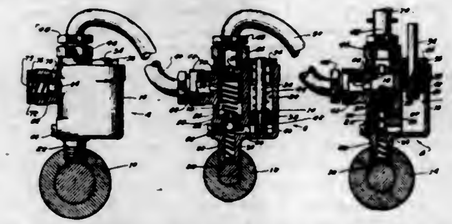
1. In a device of the character described, the combination of an abutment member adapted to be positioned to project in angular relationship to the plane of the cutter of cutting mechanism, said abutment member having a bearing surface and being provided with a screw-threaded shaft, a removable supporting member having means adapted to engage said shaft whereby rotation of said shaft will communicate longitudinal movement to said supporting member, and yieldable means for holding said supporting member in engagement with said bearing surface, said supporting member comprising an elongated member and an abutment member adjustably carried by said elongated member for supporting the extremities of work to be operated upon by said cutter.

1,807,896. VISE. EDWARD CHESHIRE, St. Petersburg, Fla. Filed July 25, 1927. Serial No. 208,077. 3 Claims. (Cl. 90—60.)



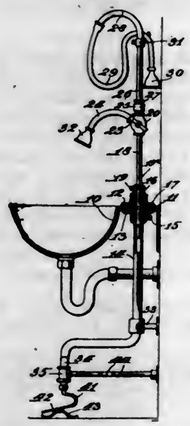
3. A vise comprising a base plate provided at it supper face with an open top channel intersecting opposite edges of the base plate, the side walls of the channel being provided with longitudinal grooves, an upstanding fixed jaw secured to one edge of the base plate and extending transversely across one end of the channel, a movable jaw having a base slidably mounted in the channel and provided with an upstanding arm rising through the open top of the channel, the base of the movable jaw being provided with trunnions slidable in the grooves and upon which the movable jaw may be swung, said movable jaw being insertable and removable through the open end of the channel opposite the fixed jaw, the bottom of the channel having teeth, the bottom of the movable jaw having teeth for selective engagement with the teeth of the channel, and a set screw carried by the upstanding arm of the movable jaw in substantial parallelism with the base plate.

1,807,897. PROCESS OF OBTAINING SUBSTANTIALLY PURE HYDROGEN. GIOVANNI CICALI, Bologna, Italy. Filed June 19, 1925, Serial No. 38,385, and in Italy Feb. 16, 1925. 7 Claims. (Cl. 183—115.)



1. The process of recovering hydrogen practically free from carbon monoxide and containing only traces of other gases from a mixture containing hydrogen and carbon monoxide such as water gas or the like, comprising removing a substantial portion of the carbon monoxide from the mixture by preliminary purification, diluting said partially purified mixture with a gas which liquefies at a higher temperature than that of hydrogen and lower temperature than that of carbon monoxide, the amount of said diluent gas being materially greater than the amount of carbon monoxide remaining after the preliminary purification, compressing and cooling said diluted mixture, and separating the hydrogen from said cooled mixture by fractionally condensing the carbon monoxide and diluent gas therefrom while in said compressed condition.

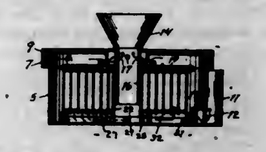
1,807,898. WIRE CLAMP. JOHN M. DAVIDSON, Duluth, Minn. Filed Sept. 19, 1928. Serial No. 307,020. 5 Claims. (Cl. 189—31.5.)



1. An integral wire anchoring clamp of the character described comprising, in combination, a connecting portion formed of resilient material, and a plurality of integral gripping members extending outwardly from opposite ends of the connecting portion, in substantially parallel relation with one another, and adapted by means of the resilient portion to be sprung apart in order to straddle a support, said gripping members being provided with cooperating wire engaging terminal portions.

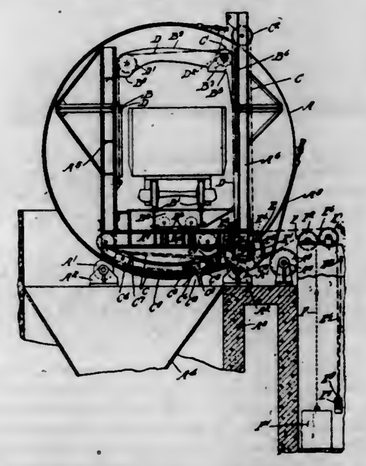
1,807,899. LUBRICATING APPARATUS. ERNEST W. DAVIS, Oak Park, Ill., assignor to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Nov. 11, 1927. Serial No. 232,550. 7 Claims. (Cl. 184—7.)

1. In combination, a plurality of bearings to be lubricated, measuring devices connected in series, one associated with each of said bearings, each of said devices being adapted to eject a measured charge of lubricant and thereafter open a port to the next device of the series, a resilient storage chamber communicating at all times with the discharge port of each of said devices and with its associated bearing, and a check valve interposed between the measuring device and the storage chamber to prevent return flow from the storage chamber to the measuring device.



1,807,900. FLUID FLOW CONTROL FIXTURE. GLENN O. DOUGHERTY, Los Angeles, Calif. Filed July 18, 1927. Serial No. 206,510. 11 Claims. (Cl. 4—148.)

7. The combination with a support of a tube having its upper portion mounted for vertical adjustment in said support, a pedally actuated valve for controlling the admission of fluid to the lower end of said tube, a second tube having its lower portion mounted for vertical and rotary adjustment in the upper portion of the first-mentioned tube, a third tube mounted for rotary movement on the upper portion of the second-mentioned tube, a branch tube leading from the upper portion of the second-mentioned tube, a branch tube leading from the upper portion of the third-mentioned tube, and a valve arranged in the upper portion of the second-mentioned tube for directing flow of fluid thru the first-mentioned branch tube or thru the upper one of the three tubes and its branch tube.



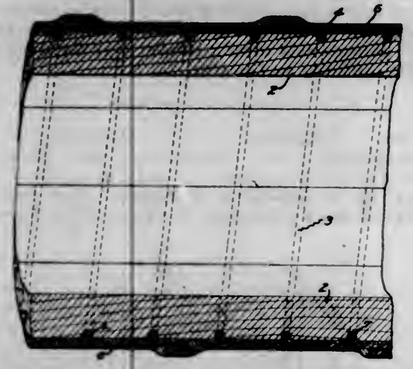
1,807,901. DEVELOPING, FIXING, AND WASHING TANK. CLAYTON L. DREW, San Francisco, Calif. Filed Dec. 7, 1927. Serial No. 238,312. 3 Claims. (Cl. 95—90.5.)

1. In a device of the character described, a tank comprising a cup-shaped portion, a cover adapted to tightly engage the said tank, a tubular member extending through said cover and terminating closely adjacent the bottom of said tank, a reel adapted to be positioned within said tank, said reel comprising a tubular hub portion adapted to surround said tubular member and having a top portion

and a bottom portion secured thereto, the adjacent faces of said top portion and said bottom portion each having a spiral groove formed therein, film holding means carried on said hub portion and means for circulating a liquid poured through said tubular member over the surface of the film carried by said grooves.

1,807,902. EXTERNAL COUNTERWEIGHT DEVICE FOR GONDOLA CAR DUMPERS. WILLARD E. ERICKSON, Chicago, Ill., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1927. Serial No. 240,994. 21 Claims. (Cl. 214—55.)

1. In a car dumper, a cradle adapted to receive a car, a support for the cradle, clamp holding counterweights mounted in the support, and means for lowering the clamps onto the car through the action of gravity at the beginning of the turning movement of the cradle and means operative only after a predetermined movement of the cradle for connecting the holding counterweights to the clamps.

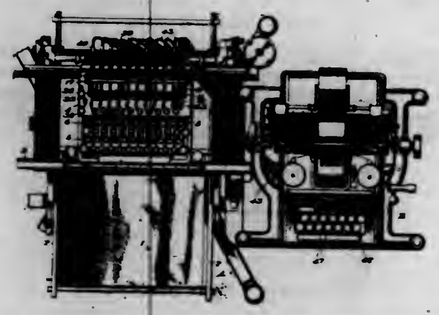


1,807,903. PRESERVING UNDERGROUND PIPING. DOZIER FINLEY, Berkeley, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed May 17, 1926. Serial No. 109,539. 11 Claims. (Cl. 171—316.)

1. A system of pipes in a medium carrying a plurality of currents, insulating covering on said pipes, non-conduc-

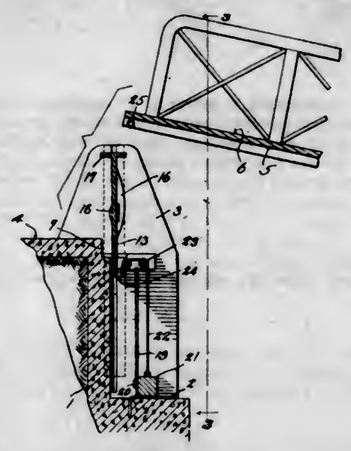
tive couplings electrically separating said system of pipes into sections, shunts of determinedly adjusted resistance around said couplings, switches in combination with said shunts for controlling flow of current around the couplings, and a plurality of bleeders electrically connecting portions of said system of pipes to portions of said medium which are at lower electrical potential than the said portions of said system of pipes, whereby the electrolytic corrosion of said system of pipes may be materially reduced.

1,807,904. COVERING FOR STAVED PIPES. DOZIER FINLEY, Berkeley, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Aug. 10, 1927. Serial No. 212,008. 5 Claims. (Cl. 137—75.)



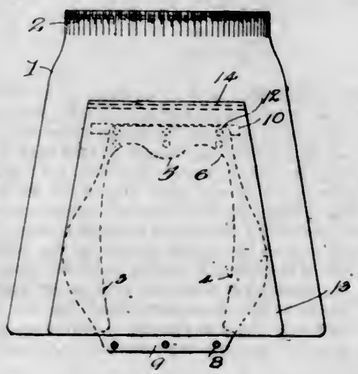
1. A pipe having a recess in the surface thereof and a second preformed recess communicating therewith, binding means seated in the first recess, and means seated in the second recess for clamping said binding means.

1,807,905. WATERPROOF EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Mar. 20, 1924. Serial No. 700,734. 7 Claims. (Cl. 106—31.)



1. The process of making elastic packing material characterized by preparing a quantity of bituminous compound in a fluid condition, treating fibrous material with a substance impervious to the bituminous compound, incorporation the treated fibrous material in the bitmuinous compound, and solidifying the bituminous compound.

1,807,906. COMBINED RECORDING AND COMPUTING MACHINE. HARRY A. FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Apr. 12, 1926. Serial No. 101,500. 12 Claims. (Cl. 235—59.)



12. The combination with a recording mechanism and a computing mechanism and including a travelling and a stationary set of keys, respectively, of mechanical operating connections between the two sets of keys operative to transmit motion from one set of keys to the other in any position of said travelling set, and means for disconnecting said operating connections from either machine to permit independent operation of either set of keys.

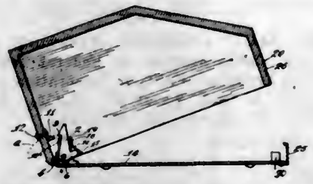
1,807,907. BRIDGE GATE. ARTHUR FOSHAY and CLEO LOVELACE, Aberdeen, Wash. Filed June 29, 1929. Serial No. 374,814. 2 Claims. (Cl. 14—58.)

1. The combination with a pier or abutment and a bridge section mounted to swing upwardly and downwardly relative thereto, of stanchions for receiving the section therebetween, guides in the pier and stanchions, a gate mounted for up and down sliding movement in the guides, yielding means for holding the gate normally elevated between the stanchions to constitute a barrier, and means providing a rolling contact between one end of the bridge section and the top of the gate for depressing the gate as the end of the bridge section moves downwardly between the stanchions.

1,807,908. UNDERWEAR. ROSE FREED, San Diego, Calif. Filed Oct. 23, 1929. Serial No. 401,861. 1 Claim. (Cl. 2—213.)

The combination with a skirt having a divided front and a suspended skirt panel attached to the skirt above said divided front, of a removable bloomer panel, detachable means for fastening the rear end of the bloomer-panel at the inside of the skirt, and means for detachably fastening the front end of the bloomer-panel to the front outside of the skirt beneath the skirt panel.

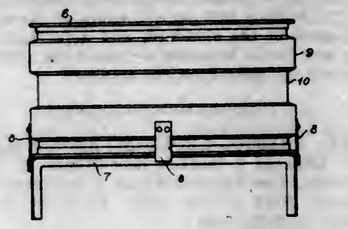
1,807,909. PNEUMATIC TIRE AND METHOD OF MANUFACTURING THE SAME. JOHN R. GAMMETER, Akron, Ohio. Filed Apr. 5, 1928. Serial No. 267,505. 9 Claims. (Cl. 154—14.)



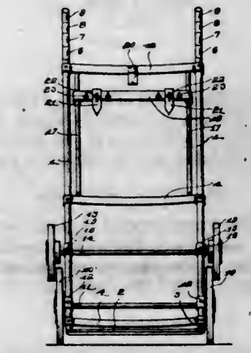
3. The process of constructing a tire by the flat band method consisting in cutting two layers of fabric of a width greater than twice the width of a ply in the finished carcass, wrapping said layers about a drum to form a two ply band, the edges of the layers being offset, applying beads at spaced points on opposite sides of the center line of the band, and folding the wings of the layers over the beads from opposite directions whereby six plies of fabric are obtained at the tread portion of the tire, each layer of fabric having its edges lying at and secured in the beads of the tire.

1,807,910. COVER CLOSURE. MAX GARBELL, Chicago, Ill., assignor to Victor Adding Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 1, 1928. Serial No. 251,027. 5 Claims. (Cl. 45—68.2.)

1. In a case for portable typewriters and the like consisting of a cover and a base, means for removably attaching said cover to said base comprising a leaf spring secured to said base and extending substantially vertically from one edge thereof and a member secured to the corresponding side wall of said cover and projecting therefrom to engage said spring.



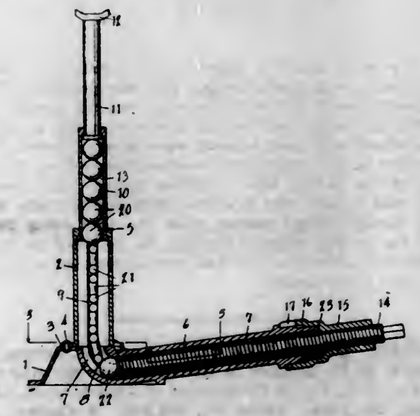
1,807,911. COVER CLOSURE. MAX GARBELL, Chicago, Ill., assignor to Victor Adding Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 1, 1928. Serial No. 251,028. 4 Claims. (Cl. 45—68.2.)



1. In a case for portable typewriters and the like consisting of a base and an inverted boxlike cover therefor, means for removably securing said cover over said base comprising separable parts respectively mounted on the rear portion of said base and on the inner face of the rear wall of said cover, one of said parts comprising a latching member, a mounting member, a pivotal support for said latching member carried by said mounting member, and a separate spring member coacting between said latching member and said mounting member, and the other of said parts comprising a rigidly mounted angle-iron adapted to be engaged by said latching member.

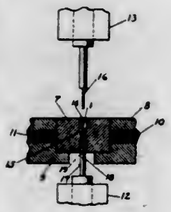
1,807,912. CONTAINER. SOREN HANSSON, Butler, Pa., assignor to Standard Steel Car Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 20, 1929. Serial No. 379,666. 2 Claims. (Cl. 220—12.)

1. A container having a side wall composed of interiorly and exteriorly-disposed channel portions that extend horizontally and have their bottoms substantially flat, the total width of the inner channel portions being substantially equal to the total width of the outer channel portions and being connected thereto by relatively narrow flange-like portions.



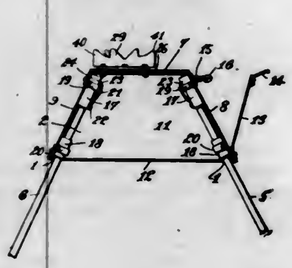
1,807,913. HAND TRUCK. MATHEW J. HOLLOWOOD, Rochester, N. Y. Filed July 9, 1925. Serial No. 42,598. 2 Claims. (Cl. 280—53.)

2. A hand truck comprising a frame, an abutment on the frame, a slide guided on the frame toward and from the abutment and receptacle engaging devices adjustable toward and from each other on the slide.



1,807,914. LIFTING JACK. ARTHUR C. HOPKINS, Niles, Mich., assignor to National-Standard Company, Niles, Mich. Filed May 18, 1927. Serial No. 192,267. 16 Claims. (Cl. 254—98.)

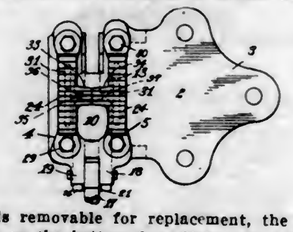
11. A standard, a lifting member in the standard and comprising two telescoping parts, a series of thrust members adapted to enter one of the said telescoping parts to



extend the other therefrom, a second series of thrust members in line with the first series and adapted to enter the standard to project the lifting member therefrom, means for holding said second series of thrust members in alignment in the standard, and actuating means for moving said thrust members to extend the lifting member and project the same from the standard.

1,807,915. PRESSURE FORMING REFRACTORY ARTICLE. CHARLES V. IRZDELL, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 29, 1928. Serial No. 329,090. 13 Claims. (Cl. 25—156.)

1. The step in the method of forming refractory articles from powdered refractory materials which comprises augmenting the cohesive properties of the individual particles thereof prior to forming with a coating of an organic wax.

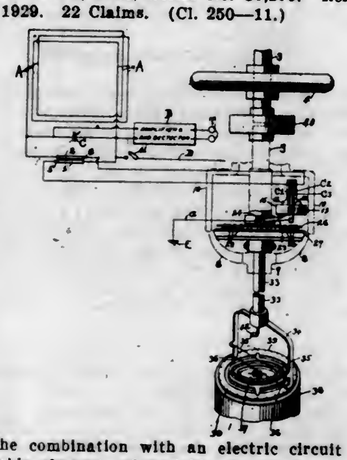


1,807,916. PIPE VISE STAND. LOUIS W. JONES, New York, N. Y., assignor to Hollands Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 23, 1929. Serial No. 401,936. 1 Claim. (Cl. 312—1.)

In a work stand, a closed casing forming the top of the stand, said casing having one side providde with a normally closed and locked access door, leg sockets fixed within the casing, said casing having openings in its bottom alined with said sockets, each of said sockets being provided with a spring latch releasable only from the interior of the casing, legs extending through said openings into said sockets and provided with notches into which said spring latches engage upon the legs being pushed into the sockets whereby the legs can be fitted to the top without opening the door and can be removed only upon the door being opened.

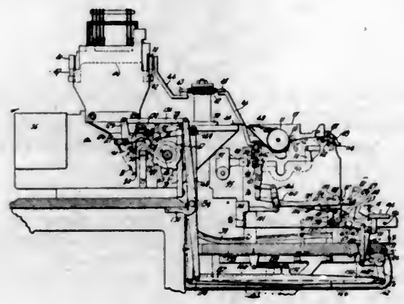
1,807,917. CHAIN PIPE VISE. LOUIS W. JONES, New York, N. Y., assignor to Hollands Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 23, 1929. Serial No. 401,937. 4 Claims. (Cl. 81—19.)

1. In a chain pipe vise, base plate and a pair of standards spaced apart on the base, each standard having the upper wall provided with a threaded hole in each end portion and a slot between the holes, and a jaw piece fitting the upper wall of each standard with a bolt hole in each end portion to receive bolts that screw down into said bolt holes in the standards to secure the jaws on



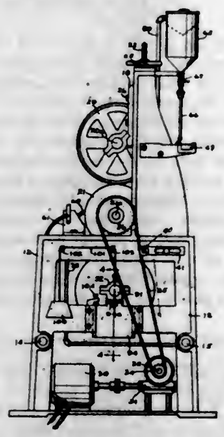
the standards removable for replacement, the jaw piece having a rib on the bottom face fitting the said slot between the holes in the standard upper face, the upper face of each jaw being of angular form with cross teeth to grip the pipe.

1,807,918. ROOFING SHINGLE AND METHOD OF MAKING SAME. LESTER KIRSCHBRAUN, Leonia, N. J., and OTTO A. HEPPES, La Grange, Ill., assignors, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Original application filed Aug. 7, 1925, Serial No. 48,840. Divided and this application filed Nov. 20, 1928. Serial No. 320,682. 7 Claims. (Cl. 91—68.)



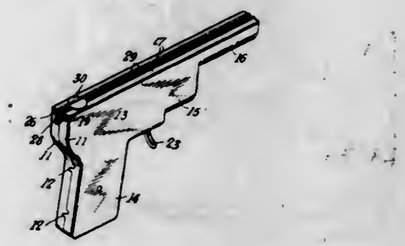
1. In the manufacture of asphalt roofing elements, a process which comprises applying a continuous layer of bituminous coating to a face of a sheet of waterproof fibrous material, said layer extending over the entire widthwise extent of said sheet, embedding grit in said coating, applying a second continuous layer of bituminous coating over said embedded grit, said second layer of coating being narrower than the width of the sheet and having the longitudinal borders thereof spaced inwardly from the marginal edges of the sheet, embedding grit in said second layer of coating, slitting the sheet longitudinally through said second coating layer and severing shingle elements from the sections formed by the slitting.

1,807,919. RADIO COMPASS. FREDERICK A. KOLSTER, Palo Alto, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed June 6, 1925, Serial No. 35,295. Renewed Oct. 14, 1929. 22 Claims. (Cl. 250—11.)



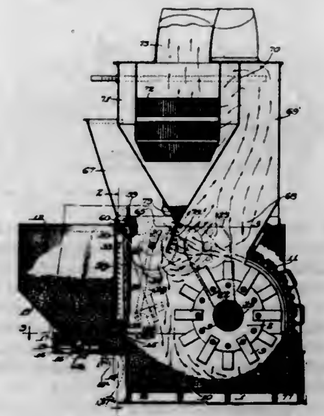
1. The combination with an electric circuit including a movable element, of variable electrical means for determining the degree of symmetry of said circuit with respect to a point therein, and means movable in response to change of position of said movable element to vary said electrical means.

1,807,920. COMBINED TYPEWRITING AND CARD-PERFORATING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 1, 1926. Serial No. 119,838. 42 Claims. (Cl. 164—113.)



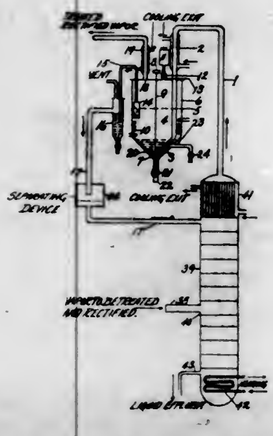
1. In a combined typewriting and card-perforating machine, the combination with perforating mechanism operative through a cycle of operations for which typing operations are preparatory and precedent, of a driver for said mechanism normally disconnected therefrom, coupling means for effecting said connection, a non-typing key remote from said means to control a certain typewriting operation, a train of linkages whereby the operation of said key will cause said coupling means to engage with the driver to actuate the perforating mechanism through said cycle of operations, and means associated with said coupling means to initiate the performance of said typing operation.

1,807,921. TRANSFER MACHINE. GEORGE E. LANG and LLOYD V. CASTO, Detroit, Mich., assignors to Oxford Varnish Corporation, Detroit, Mich., a Corporation of Michigan. Filed Sept. 11, 1926. Serial No. 134,807. 6 Claims. (Cl. 105—154.)



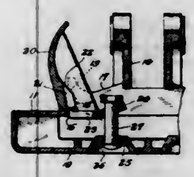
1. In a transfer machine of the character described the combination of an intaglio or engraved roll and shaft, a transfer roll contacting therewith, an ink applying means disposed above the transfer roll and driven by the intaglio roll shaft and a resilient roll operatively spaced out of contact with the transfer roll and arranged to urge the work into contact with the transfer roll, pivotally mounted means for yieldingly rotatably supporting said resilient roll and means for positively driving the transfer roll.

1,807,922. TOY PISTOL. MICHAEL R. LA SALA and FRANK SIMONE, New York, N. Y. Filed Oct. 21, 1929. Serial No. 401,078. 4 Claims. (Cl. 124—14.)



1. A toy pistol comprising a hollow body having a handle, lock and barrel, a spur extending outwardly from the rear of said body, there being openings above the spur at the end of the barrel and lower wall of the lock, a member having a hook extending through the barrel and a flattened loop extending through the opening above said spur, a trigger formed on said member extending through the opening in the lock, and an elastic band engaged by said hook at one end and by said spur at the opposite end, said band being disengageable from said spur by the flattened loop upon drawing the trigger rearwardly.

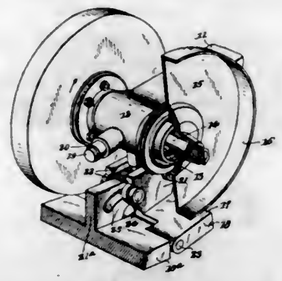
1,807,923. MATERIAL TREATING DEVICE. HENRY G. LYKKEN, Minneapolis, Minn. Filed Aug. 19, 1927. Serial No. 214,064. 16 Claims. (Cl. 83—11.)



1. In a material reducing device, a reducing chamber, a hopper having a lateral opening communicating with said chamber, a slidably mounted feeder member forming the bottom of said hopper and movable into and out of said opening so as to feed material into said reducing chamber, and feeder control means having an actuator member lying in the path of movement of the material being fed.

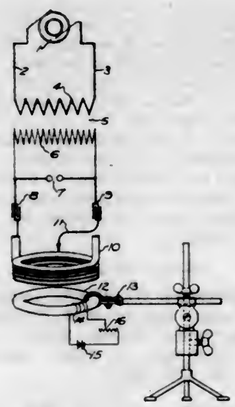
1,807,924. PROCESS FOR RECTIFYING AND TREATING HYDROCARBON VAPORS. PAUL LA FRONE MAGILL, Niagara Falls, N. Y., assignor, by mesne assignments, to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 25, 1927. Serial No. 235,491. 10 Claims. (Cl. 196—28.)

5. The process comprising passing hydrocarbon vapors from a rectifier into contact with a treating medium consisting of alkali metal in liquid hydrocarbon, removing part of the treated hydrocarbons as vapor and part as liquid freed of alkali metal and passing the latter into the upper portion of said rectifier to serve as reflux liquid and removing treatment by-products with the higher-boiling liquid hydrocarbons discharged from said distilling column.



1,807,925. LINK BELT. JOHN TURNER MOORE, Reading, Pa., assignor, by mesne assignments, to Rex-Watson Corporation, Canastota, N. Y., a Corporation of New York. Filed Feb. 26, 1929. Serial No. 342,813. 12 Claims. (Cl. 305—10.)

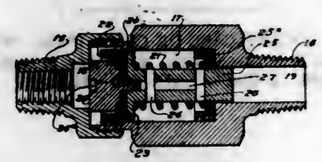
9. A link for endless track belts having a tread portion and a wheel supporting surface with a recess in the latter, a guide member fulcrumed on said surface, a lateral extension on said guide member projecting into said recess, fastening means engaging said extension to rock the guide member on its fulcrum, and abutments on said link intermediate the fulcrum of the guide and the point at which said fastening means engage said extension.



1,807,926. WHEEL GUIDE FOR TRACTION CHAINS. JOHN TURNER MOORE, Reading, Pa., assignor, by mesne assignments to Rex-Watson Corporation, Canastota, N. Y., a Corporation of New York. Filed Apr. 6, 1929. Serial No. 353,182. 2 Claims. (Cl. 305—8.)

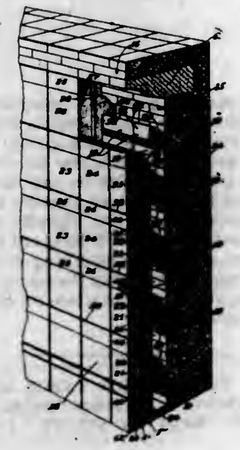
1. In an endless track mechanism, the combination of a frame, a pair of axially spaced wheels journaled in said frame, a series of articulated links adapted to travel around said wheels, an upstanding flange on each alternate link in said series, a pair of laterally spaced guide flanges on the other alternate link of said series, and a guide member on said frame located between said wheels adapted to project between the guide flanges of the last

mentioned alternate links and adapted to pass over the upper edges of the flanges on the first mentioned alternate links.



1,807,927. MERCURY VAPOR LAMP. MONTFORD MORRISON, Chicago, Ill., assignor, by mesne assignments, to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 8, 1929. Serial No. 338,477. 9 Claims. (Cl. 176—124.)

2. In an induction lamp, a source of alternating current of a frequency in excess of 5000 cycles per second, a primary inductance coil electrically associated with said source, a hollow translucent tube formed into an endless hermetically sealed envelope located adjacent said coil, said envelope containing an electrically conductive medium cooperating inductively with said coil, the path of the current in the said medium due to said inductive cooperation having a predetermined electrical self-inductance under operation, whereby the energy in the said medium under operation is partly determined by the electrical reactance of the current in the circuit of the said medium upon the current in the circuit of the aforesaid primary coil and partly by the characteristics of the primary circuit.

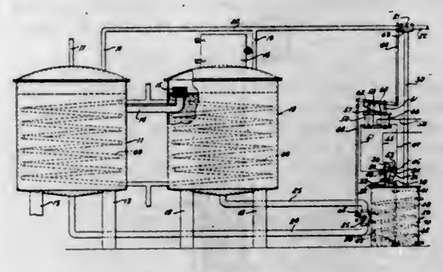


1,807,928. CHARGE DETERMINING DEVICE. HOWARD J. MURPHY, Reading, Mass., assignor, by mesne assignments, to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Original application filed Jan. 9, 1926, Serial No. 80,244. Divided and this application filed Nov. 25, 1927. Serial No. 235,492. 9 Claims. (Cl. 184—7.)

1. A charge determining lubricant device comprising a lubricant chamber, an inlet therefor, an outlet for said chamber, means movable in said chamber and normally closing said outlet and permitting lubricant to flow into said chamber from said inlet, said means movable first to

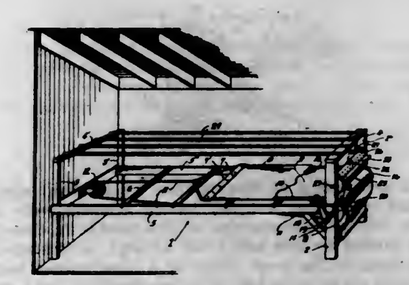
prevent inflow of lubricant and second to open said outlet, said means having an appreciable movement between closing said inlet and opening said outlet.

1,807,929. FURNACE WALL. OSCAR NYGAARD, Saugus, Mass. Filed Oct. 19, 1928. Serial No. 313,455. 22 Claims. (Cl. 72—102.)



1. In a furnace wall construction a permanent wall, a facing therefor, and means on the permanent wall engaging the top and bottom of the facing, said facing from top to bottom comprising a plurality of sections at least one of which engages the section immediately above it and immediately below it on inclined plane surfaces whereby said adjacent sections may shift relatively on said surfaces to maintain the height of the facing substantially constant during furnace temperature changes.

1,807,930. METHOD OF RECLAIMING VULCANIZED RUBBER. MORRIS OMANSKY, Roxbury, Boston, Mass., assignor to Arthur D. Little, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 12, 1928. Serial No. 261,192. 13 Claims. (Cl. 18—52.)



5. A method of reclaiming rubber stock which consists in digesting the stock with an alkali capable of destroying the fabric and plasticising the rubber, washing to remove caustic, then drying the washed stock, and mixing with the dried stock a small percentage of reagent containing the radical SO_4 and having an acid reaction.

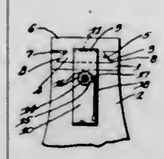
1,807,931. METHOD OF AND APPARATUS FOR PREPARING COMPOUNDS. CHESTER ARTHUR PURDY, Oak Park, Ill., assignor to Western Electric Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 29, 1928. Serial No. 258,123. 8 Claims. (Cl. 134—26.)

1. A method of preparing rosin-rosin oil insulating composition, which consists in adding to a container containing a quantity of liquefied material solid ingredients of the material, liquefying the solid ingredients, allowing said liquefied material to flow continuously into a second container from which it flows to another container, automatically interrupting the flow of liquefied material into the last mentioned container, causing the material in said last container to be returned to the original liquefied material while the flow of the material continues from the first to the second container, and withdrawing the material from the second container after liquefaction of the materials.

1,807,932. DROPPING BOARD FOR USE IN POULTRY HOUSES. ORA A. RAINWATER, Marysville, Wash., assignor of one-half to Mrs. William J. White. Filed Sept. 7, 1927. Serial No. 217,959. 2 Claims. (Cl. 119—22.)

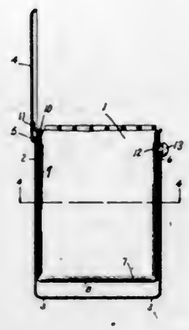
1. A device of the character described comprising a frame structure having opposite end sections, a plurality of supporting rollers in the frame, a horizontal shaft revolubly mounted in one of said end sections, a pulley on the other end section, a relatively long and short drum revoluble on the shaft, means for rotating the shaft, an arm fixed to the shaft between the drums, oppositely directed pawls fixed to the arm for engaging the drums, respectively, to rotate them with the shaft, a dropping board composed of a plurality of superimposed, flexible strips of paper, or the like, attached at one end to the larger drum, a cable attached to the other end of the board and extended over said pulley and back to the short drum and adapted to be wound onto said drum to unwind the board from its drum, and to draw it out across said supporting rollers, a scraping plate mounted to engage the top of the board as it is wound onto its drum, and a solution container mounted above the drums, having openings therein from which a solution may be discharged onto the board as it is drawn out.

1,807,933. APPARATUS FOR PHOTOGRAPHIC COPYING PURPOSES. CARL ROEHRICH, Berlin, Germany, assignor to the Firm Silfree Aktiengesellschaft (Silfree Limited) Vaduz, Liechtenstein, Germany. Filed July 6, 1929, Serial No. 376,304, and in Germany July 7, 1928. 4 Claims. (Cl. 240—1.)



1. A light source for photographic copying purposes, comprising an electric discharge tube wherein discharges are effected through a gaseous atmosphere, magnetic means for deflecting the course of discharge within said tube and means for reflecting the light rays emitted by said tube.

1,807,934. LAWN MOWER SHARPENER. CHARLES B. ROSS, Greenleaf, Kans. Filed July 9, 1928. Serial No. 291,841. 1 Claim. (Cl. 51—263.)

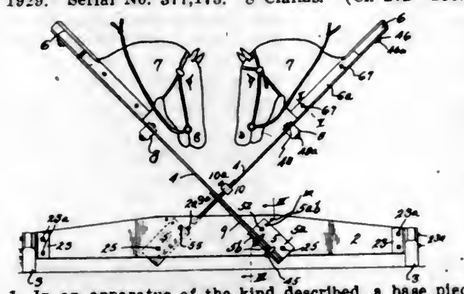


As a new article of manufacture, an abradant supplying unit comprising a brush having comparatively stiff bristles, said brush comprising an elongated body, clamping means carried by said brush and adapted to straddle the upper edges of the cross pieces of a lawn mower handle yoke, bolts for securely fastening said clamps to the yoke of a lawn mower handle and adapted to support the brush in a position to be brought at the will of the operator into and out of engagement with the cutting blades of a lawn mower.

1,807,935. SHOE-HEEL. CARL SANDLER, Milwaukee, Wis. Filed Oct. 24, 1929. Serial No. 402,181. 1 Claim. (Cl. 36—42.)

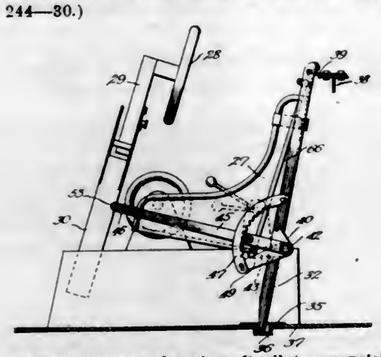
The combination with a shoe-heel having a lift attached thereto, of a tread removably attached to the lift and provided with a recess, a removable yieldable clamping plate carried by the heel and normally spaced from the heel with one end engaged in the recess, and means for holding said clamping plate in place and adjusting the pressure of said plate against the removable tread.

1,807,936. POCKET CASE OR CONTAINER. WILSON S. SAUNDERS, Kalamazoo, Mich. Filed Apr. 9, 1928. Serial No. 268,490. 2 Claims. (Cl. 206—41.)



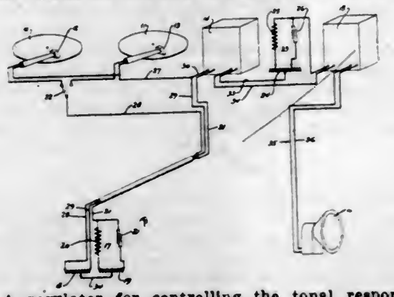
1. A pocket case or container, comprising an outer casing open at the top, a holder slidable within said casing including a bottom and flat spring front and rear vertical arms, the bottom of the holder constituting a support for articles contained within the case, and the vertical arms constituting guides, a cover hingedly secured to the rear of said outer casing, an arm hingedly secured to the top of the rear arm of the inner holder, and fixedly secured within the cover, and means for raising or lowering said holder, thereby opening or closing the cover, the resiliency of the rear spring arm serving to retain the holder in either upon or closed position.

1,807,937. COMBINATION TABLE AND IRONING BOARD. CHRISTIAN A. SELANDER, Renton, Wash. Filed Oct. 22, 1927. Serial No. 227,875. 1 Claim. (Cl. 68—10.)



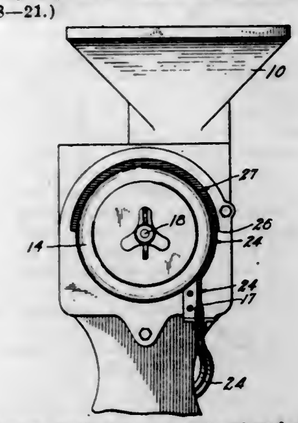
In a table of the character described, a table having a plurality of longitudinal panels forming the top thereof, one of said panels being stationary, means for hinging an intermediate panel to the said stationary panel, a panel at the side opposite the stationary panel forming a rest for material being ironed, and an ironing board on the under side of said intermediate panel, said intermediate panel adapted to raise and rest on said stationary panel.

1,807,938. EXERCISING APPARATUS. JOSEPH J. SHOEMAKER, Clawson, Mich., assignor of one-third to Kenneth H. Quail, Royal Oak, Mich. Filed July 10, 1929. Serial No. 377,173. 8 Claims. (Cl. 272—155.)



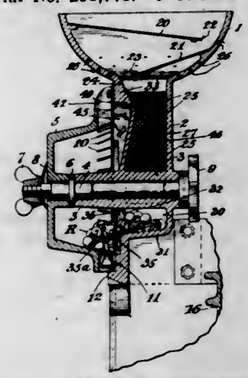
1. In an apparatus of the kind described, a base piece having two vertical sides, bar springs secured at their ends in inclined positions to opposite sides of said base piece midway between the ends of said base piece and extending in opposite directions and a hobby-horse construction on each spring.

1,807,939. AIRCRAFT INCLUDING SEAT FOR SAME. IGOR SIKORSKY, College Point, N. Y., assignor to Sikorsky Aviation Corporation, Wilmington, Del., a Corporation of Delaware. Original application filed Jan. 19, 1929, Serial No. 333,603. Divided and this application filed May 7, 1929. Serial No. 361,177. 9 Claims. (Cl. 244—30.)



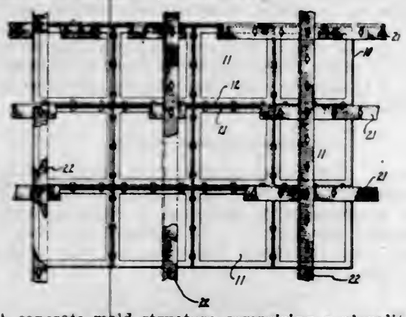
1. An adjustable seat for aircraft pilots comprising the combination of frame members, a seat slidably mounted within said frame members and a lever connected to said seat and to said frame members for sliding said seat in relation to said frame members.

1,807,940. SOUND CONTBOL APPARATUS. JOHN E. STAFFORD, Lincoln, Calif., assignor of one-third to John Calvin Moore, Lincoln, Calif., and one-third to Charles Edward Finney, San Francisco, Calif. Filed Jan. 8, 1930. Serial No. 419,329. 6 Claims. (Cl. 179—1.)



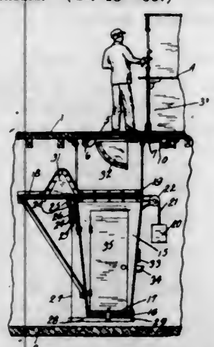
1. A regulator for controlling the tonal response of electrically operated sound reproducing apparatus comprising a source of operating current, an adjustable resistance connected in shunt relation with the source of operating current, an adjustable filter circuit having inductance and capacity connected intermediate the ends of said resistance through a second adjustable resistance, a loud speaker, and connections whereby the magnitude of the high and low frequency current impulses impressed on the loud speaker may be independently controlled by an adjustment of either of said resistances.

1,807,941. FEEDING MECHANISM FOR RIVETING MACHINES. EDWIN B. STIMPSON and JOSEPH F. SUESSLE, Brooklyn, N. Y., assignors to Edwin B. Stimpson Company, Brooklyn, N. Y., a Corporation of New York. Filed July 25, 1923. Serial No. 653,655. 6 Claims. (Cl. 218—21.)



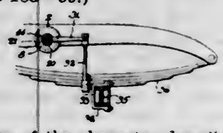
1. In a rivet feeding device, a chambered rivet positioning member rotatable about a horizontal axis, and a vertically positioned expanding channel for delivering rivets into the positioning member.

1,807,942. RIVET FEED. EDWIN B. STIMPSON, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y., a Corporation of New York. Filed July 11, 1928. Serial No. 291,775. 9 Claims. (Cl. 218—2.1.)



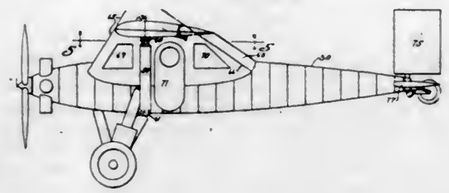
1. Rivet-feeding mechanism comprising a body structure including a hopper and spaced walls therebelow providing a downwardly convergent rivet passage, a shaft, a chambered feed wheel provided with a slotted rim face on one end of the shaft and having its slotted rim face adjacent an outer wall face of the body structure, said wall having a restricted rivet discharge opening below the shaft and leading to the wheel chamber, and a gate pivoted at the top of said rivet discharge opening and swingable toward and from the outer side thereof and regulating rivet discharge.

1,807,943. CONCRETE FORM. FRANK M. SUTTON, San Francisco, Calif. Filed July 28, 1928. Serial No. 295,897. 4 Claims. (Cl. 25—131.)



2. A concrete mold structure comprising a plurality of rectangular facing sections each formed with a peripheral flange, said sections being similar in outline and dimensions, the flanges of said sections being formed with key slots at regular intervals adapted to align when the sections are arranged edge to edge, angle iron horizontal stiffeners, one flange of which being adapted to be interposed between contiguous flanges of the sections, said flange being formed with key slots aligning with key slots in the flanges of the sections, vertical stiffeners, said vertical stiffeners and horizontal stiffeners being formed with aligning key slots, means cooperating with the key slots of the various elements to firmly but detachably connect the elements together, and transverse members having key slots at spaced intervals adapted to align with key slots in the vertical stiffeners whereby to connect two facing structures of a mold.

1,807,944. BURGLAR TRAP. ALPHONSE J. THIBAULT, Harrison, Idaho. Filed Apr. 24, 1929. Serial No. 357,678. 3 Claims. (Cl. 43—59.)

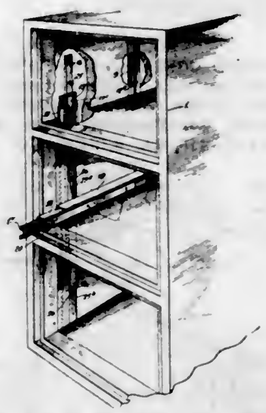


1. In an appliance as described, the combination with a trap having a depressible, false bottom, of a weight operated slide door for the upper open end of the trap, a spring pressed slide bolt for holding the door in open position, a release lever operated by the depressible false bottom, and a pull cable connecting the lever and said bolt.

1,807,945. SHOCK ABSORBER. JOHN T. TRUMBLE, Detroit, Mich. Filed June 8, 1929. Serial No. 369,318. 13 Claims. (Cl. 188—89.)

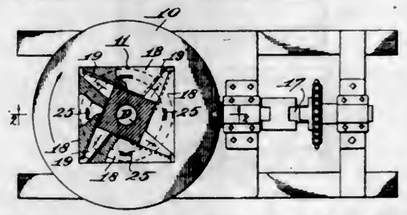
1. In a device of the character described, the combination of a casing to contain a liquid, a movable member in said casing positioned midway between the ends thereof, and a wall at each side of said movable member for confining liquid within the path of movement of said movable member, one of said walls being arranged to be moved by pressure of liquid in the spaces between said wall and casing end, into contact with said movable member.

1,807,946. AIRPLANE AND METHOD OF MAKING SAME. RALPH H. UPSON, Detroit, Mich. Filed June 16, 1928. Serial No. 285,922. 14 Claims. (Cl. 244—31.)



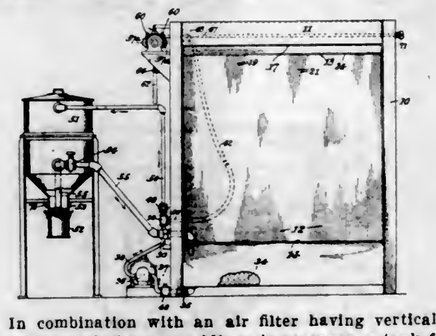
2. An airplane wing comprising, in combination, an internal framework and an upper and a lower sheet metal covering for said framework, said covering at the tip of said wing being formed as surfaces of revolution and secured together at their points of contact.

1,807,947. PAVING METHOD. JACKSON F. WITT, Dallas, Tex. Filed Jan. 30, 1930. Serial No. 424,609. 3 Claims. (Cl. 94—23.)



1. The method af paving which consists in applying a prime coat of hot liquid asphalt to the top surface of a soft supporting course, then puncturing said coat and penetrating the underlying surface of the supporting course, and then applying a layer of hot liquid asphalt to the prime coat and flowing the same through the punctures of said coat and into the penetrations in the supporting course to interlock the course.

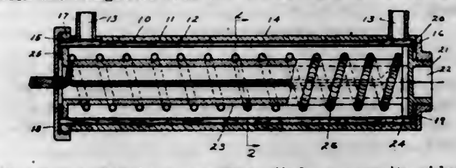
1,807,948. MONOLITHIC FILING CABINET AND ATTACHMENT THEREFOR. CARL F. WOLTERS, Marietta, Ohio, assignor, by mesne assignments, to Remington Rand Inc., New York, a Corporation of Delaware. Filed June 16, 1925. Serial No. 37,527. 9 Claims. (Cl. 25—155.)



6. The method of making a monolithic body for filing cabinets having a plurality of drawer compartments, which consists in forming a female mold to define the outer side, top and bottom walls of said body, with a front wall portion defining the open ends of the compartments in the body; placing compartment defining core molds in said female mold with an end portion of each slidably interfitting in one of the openings of the front wall portion; applying connecting elements to the opposite ends of said core molds to retain them in aligned relation and at proper spaced intervals; filling said female mold around said core mold with body forming plastic material to form unitary walls with said connecting elements embedded therein and after hardening of said material removing said body from said female mold and said core molds through the openings defined by the front wall portion after detachment of said core molds from said connecting elements.

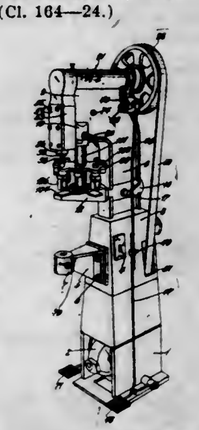
1,807,949. ROTARY DRILL STEM BUSHING. ELIJAH J. ZERR, Glendale, Calif. Filed Apr. 29, 1929. Serial No. 359,161. 10 Claims. (Cl. 255—23.)

1. A rotary drill stem bushing, comprising a plurality of pairs of members that are wedge-shape in horizontal section and horizontally disposed rib and groove connections between the members of each pair of wedge shaped members.



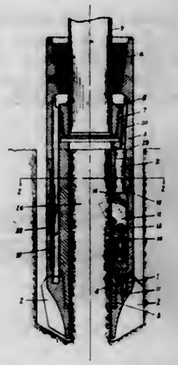
1,807,950. CLEANSING SYSTEM AND DEVICE FOR AIR FILTERS. AUSTIN ADAMS, Jr., Brightwaters, and WILLIAM L. RICHARDS, Lynbrook, N. Y., assignors to American Air Filter Company, Louisville, Ky., a Corporation of Delaware. Filed June 13, 1929. Serial No. 370,549. 7 Claims. (Cl. 183—52.)

1. In combination with an air filter having vertically arranged spaced plates providing air passages, a tank for storing purified oil, a settling reservoir, a receptacle detachably carried thereby, a spraying nozzle movable over the filter; valved pipe connections between the tank and the nozzle and between the tank and the settling reservoir adapted for alternate service, power means for causing oil to flow from said tank through said connections, and means for conveying clarified oil from said reservoir back to said tank.



1,807,951. WATER HEATER. WILLIAM ALBERT AHERN, Worcester, Mass. Filed Nov. 21, 1928. Serial No. 320,882. 2 Claims. (Cl. 219—39.)

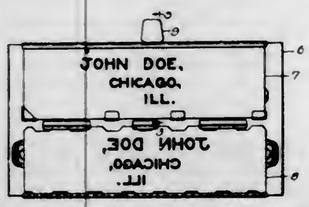
1. In a water heater, an outer shell, an inner shell spaced therefrom and defining a thin annular water chamber, the shells being provided at their ends with right angularly disposed flanges extending circumferentially inward at one end and circumferentially outward at the other end to permit assembly of the shells one within the other with their flanges in contact, means cooperating with the flanges at each end of the chamber to clamp the



flanges together by pressure applied on opposite sides of each pair of flanges and an insulated cylindrical core carrying an electrical heating element insertible within the inner shell and held in position by said flange clamping means.

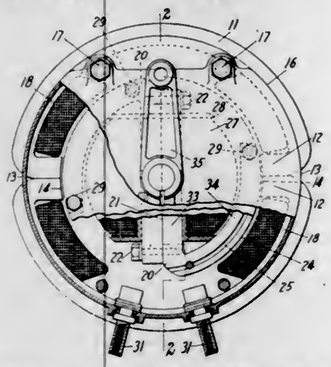
1,807,952. CUTTING, TRIMMING AND ORNAMENTING MACHINE. ARTHUR W. ALTVATER, St. Louis, County, Mo. Filed Jan. 25, 1929. Serial No. 334,934. 52 Claims. (Cl. 164—24.)

1. A machine of the character described comprising a rigid support, a series of dies, means for supporting said dies to be selectively positioned over said support and for operation toward and away from said support, a series of die striker plates corresponding respectively to said dies and being movable with said dies to position between said dies and said support, and mechanism for operating said dies toward and away from said striker plates.



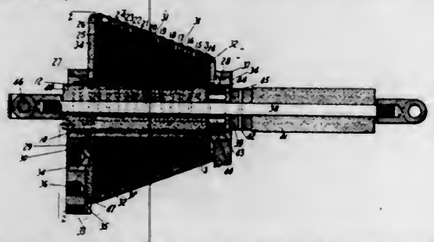
1,807,953. CORE ENGAGING DEVICE. REXFORD O. ANDERSON, Houston, Tex. Filed June 17, 1929. Serial No. 371,348. 7 Claims. (Cl. 255—72.)

5. In a core drill having a tubular head and drill collar thereon, the combination of core engaging dogs mount-



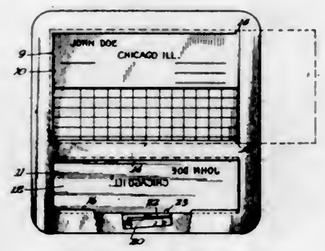
ed for vertical movement relative to said drill, resilient means tending to raise said dogs relative to said drill, means to project said dogs inwardly when they are raised, and hydraulically operated means to hold said dogs depressed.

1,807,954. PRINTING DEVICE. RUPERT ANDERSON, Chicago, Ill., assignor to Addressograph Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 8, 1929. Serial No. 353,524. 7 Claims. (Cl. 129—16.8.)



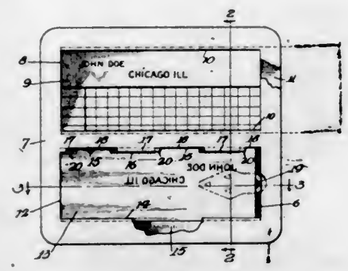
1. A printing device tab having a yielding locking device on one side edge thereof.

1,807,955. DYNAMO ELECTRIC MACHINE. VINCENT G. APPLE, Dayton, Ohio, assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed June 13, 1928, Serial No. 285,090. Renewed May 5, 1930. 26 Claims. (Cl. 175—336.)



1. A dynamo electric machine field core comprising, two substantially equal magnetizable bars bent to semicircular form with ends turned inwardly and welded together forming poles and having annular grooves formed in their edges to support bearing heads and bearing heads supported within the annular grooves of the core.

1,807,956. PROGRESSIVE SOLENOID FOR OPERATING BRAKES. VINCENT G. APPLE, Dayton, Ohio, assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed July 26, 1928, Serial No. 295,580. Renewed May 5, 1930. 31 Claims. (Cl. 175—21.)



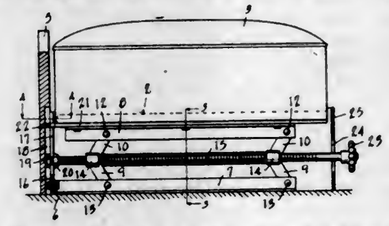
1. A solenoid having a winding divided into a plurality of coils arranged in axially spaced apart relationship, a plurality of commutator sections one arranged within each coil and connected to the coil, a core of magnetic material arranged to be drawn through the plurality of coils and adapted to be drawn into each coil when said coil is electrically energized, and a brush movable by said core through said coils to progressively energize the coil immediately ahead of the core.

1,807,957. PRINTING DEVICE. JAMES A. BAILEY, Chicago, Ill., assignor to Addressograph Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 11, 1928. Serial No. 298,972. 8 Claims. (Cl. 101—369.)

1. A printing device comprising a frame and a printing plate, said frame having flanges to engage the marginal edges of the plate at the top and bottom thereof, and yielding means carried by the frame and engaging said plate and holding the plate in yielding engagement with the flanges.

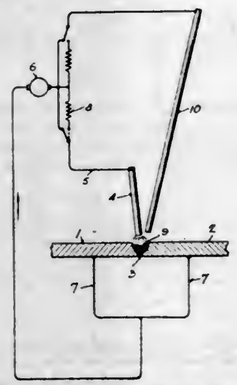
1,807,958. PRINTING DEVICE. JAMES A. BAILEY, Chicago, Ill., assignor to Addressograph Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 11, 1928. Serial No. 298,974. 4 Claims. (Cl. 101—369.)

1. A printing device comprising a frame having an opening therein and a printing plate in said opening, and interengaging projections on the frame and plate the corners of the projection on the frame overlapping corners of the projections on the plate.



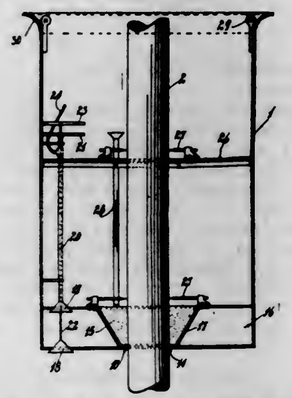
1,807,959. METAL JAMB. ISAAC A. BAUM, Chicago, Ill. Original application filed Sept. 12, 1927, Serial No. 219,096. Divided and this application filed May 17, 1930. Serial No. 453,237. 4 Claims. (Cl. 72—98.)

4. In combination a sheet metal jamb element comprising a face, an off-set portion and a marginal flange projecting angularly outward from the off-set portion and constituting a plaster terminal and ground, and wall-



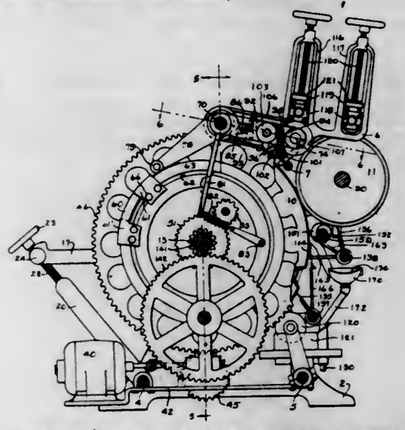
engaging members secured to and lying in a plane parallel to the off-set portion of the jamb, said members having projections struck out of the metal of the members.

1,807,960. ADJUSTABLE SEAT. JAMES L. BROWNELL, Kalamazoo, Mich., assignor to Checker Cab Manufacturing Corporation, Kalamazoo, Mich. Filed May 19, 1930. Serial No. 453,571. 6 Claims. (Cl. 155—91.)



6. The combination with a seat, of front and rear pairs of supporting toggles for said seat, slotted uprights, and adjusting screws for said toggles rotatably and slidably engaged with the slots of said uprights and having threaded engagement with said toggles.

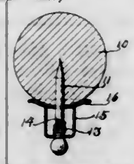
1,807,961. METHOD OF ELECTRIC ARC WELDING. HOWARD J. BURNISH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Nov. 29, 1929. Serial No. 410,478. 2 Claims. (Cl. 219—10.)



1. The method of electric arc welding which comprises establishing an electric welding arc between one end of a fusible metallic weldrod and the work to be welded, maintaining said welding arc until the metal of said weldrod is substantially fused away and deposited upon the work, inserting the end of another similar weldrod into said welding arc and adjacent the end of said first named weldrod, said weldrods being connected to the same source of electrical energy, inserting a resistance in the circuit of said first named weldrod to decrease the potential of the electric circuit thereof across the arc whereby the arc is transferred without interruption to said second named electrode, withdrawing the first named electrode, and continuing the welding operation with said second named weldrod.

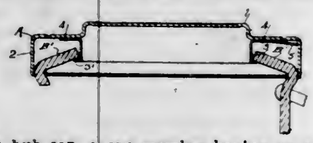
1,807,962. MARINE CAGE. ALPHONSE T. CASSIERE, Long Beach, Calif. Filed Feb. 12, 1929. Serial No. 339,347. 8 Claims. (Cl. 61—54.)

1. A marine cage adapted to be placed around a pile and comprising a housing open at the top, said housing having an opening in the bottom thereof through which the pile extends, a door in the side of said housing, a second door in the bottom of the housing, the cage being adapted to be assembled around the pile through said doors, means to seal the bottom opening of the housing around the pile, and means whereby the water may be removed from within the housing.



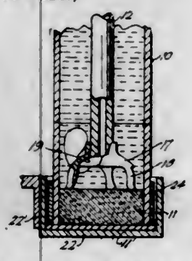
1,807,963. GRAINING MACHINE. LLOYD V. CASTO, Detroit, Mich., and GUIDO VON WEBERN, Dayton, Ohio, assignors to Oxford Varnish Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 17, 1928. Serial No. 278,482. 12 Claims. (Cl. 101—154.)

1. In a machine of the class described, a pattern roll, a transfer roll, and a backing roll, supporting means for



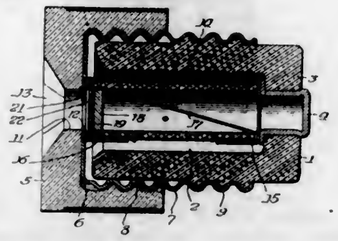
the rolls, a pair of feed rolls in parallel relation to the backing roll, a swinging frame for supporting one of said rolls, said swinging frame being pivoted to said means, a cam connected to the pattern roll for acting on the frame to swing it and separate said feed rolls in timed relation to the rotation of the pattern roll, there being a pair of arms yieldingly pivoted to the frame and forming a bearing for the movable feed roll.

1,807,964. SPINNING TOP. WALTER J. CHEFFER, Chicago, Ill. Filed May 12, 1930. Serial No. 451,600. 3 Claims. (Cl. 46—32.)



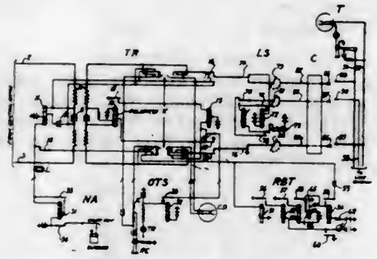
2. A spinning top comprising a ball, a spinning pin having its inner end extending into said ball and securely retained therein, a portion of said pin extending below said ball and being arranged to have a cord secured thereto, a curved band member journaled on said extending portion and being flat on its opposite sides to provide a good finger hold, a shield secured across the top part of said band member to fully overlie the same in every direction and adapted to entirely overlie the fingers and prevent them from contacting with the ball or impeding its rotation, said shield being constructed and arranged to have the ball bear only on its central part to provide ease of rotation thereon, and a head at the lower end of said pin whereby the ball may spin on a smooth surface without marring the same.

1,807,965. HUB CAP. RAE EUGENE COCHRAN, Columbus, Ohio, assignor to The D. L. Auld Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 25, 1928. Serial No. 272,600. 3 Claims. (Cl. 301—108.)



1. In a hub cap, a cap member having an annular flat-faced portion and a cylindrical wall, a locking ring secured in said cap member, said ring having a plurality of centering projections extending therefrom and engaging the cylindrical wall of the cap member to hold the cap member in position on the ring, and means to engage the hub to lock the cap to the hub.

1,807,966. VISIBLE LIQUID DISPLAY DEVICE. DANIEL A. CORCORAN, Ardmore, Okla., assignor to Visible Oil Merchandising Co., Inc., Dallas, Tex., a Corporation of Texas. Filed Dec. 16, 1929. Serial No. 414,364. 6 Claims. (Cl. 40—126.)

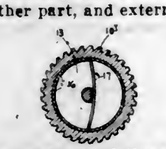


1. A display device comprising a tube of transparent material having liquid therein, an air supply pipe submerged in the liquid of the tube, a pedestal on the lower end of the pipe including a bell and supporting legs depending from the bell, the underside of the bell being truly concaved and of sufficient area to release a large sized bubble, and means for supplying compressed air to the pipe.

1,807,967. FUSE. THOMAS F. COTE, Clinton, Iowa, assignor to Cote Brothers Fuse Manufacturing Corporation, Clinton, Iowa, a Corporation of Delaware. Filed Nov. 12, 1928. Serial No. 318,652. 4 Claims. (Cl. 200—124.)

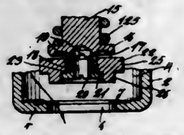
1. A fuse plug comprising a body provided with an opening and a chamber in communication therewith, spaced contacts at each end of said chamber adapted for connection with corresponding terminals in an electrical circuit, a cartridge in said chamber comprising a hollow member, terminals on opposite ends of said member in electrical contact with said contacts, and a fuse in said member connecting said terminals and having a narrow portion extending diametrically across the outer end of said member, the cartridge being constructed to render said portion visible but sealed from and adjacent to said opening.

1,807,968. TELEPHONE SYSTEM. THOMAS F. CROCKER, Chicago, Ill., assignor to Reserve Holding Company, Chicago, Ill., a Corporation of Delaware. Original application filed Mar. 14, 1929, Serial No. 346,861. Patent No. 1,776,653. Divided and this application filed Mar. 28, 1930. Serial No. 439,555. 14 Claims. (Cl. 179—84.)



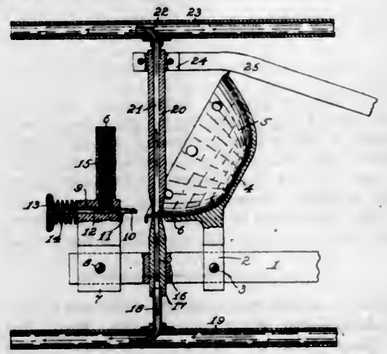
1. In combination, a vibrator, a relay, a circuit for said relay including contacts of said vibrator, and a tone circuit closed by said relay when energized, said tone circuit also including said vibrator contacts.

1,807,969. FRACTIONAL LINE SPACER FOR TYPEWRITERS. CHESTER W. CRUMBINE, Rochester, N. Y., assignor to Electromatic Typewriters, Inc., Rochester, N. Y., a Corporation of New York. Filed Dec. 13, 1928. Serial No. 325,821. 4 Claims. (Cl. 197—123.)



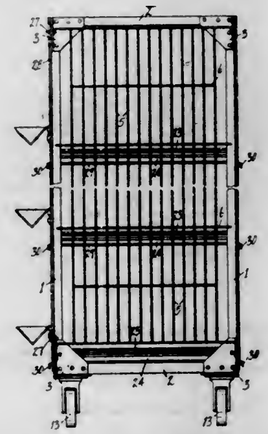
1. In a device of the class described, the combination with a cylindrical member and a ratchet wheel connected thereto for step-by-step rotation, of a clutch for releasably connecting the ratchet wheel to the cylindrical member, said clutch comprising an inner cylindrical surface on one of said parts, a bowed blade spring adapted to engage said

clutch surface frictionally and retained against rotation relatively to the other part, and externally operable means



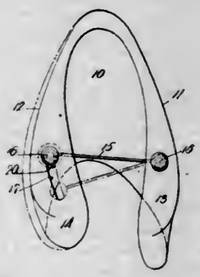
for increasing the curvature of the spring in a direction transversely to the axis of said cylindrical member to relieve its pressure against the clutch surface.

1,807,970. FAUCET. HAROLD G. DAVIS, Denver, Colo., assignor to The Davis and Gant Manufacturing Co., Denver, Colo., a Corporation of Colorado. Filed Dec. 17, 1928. Serial No. 326,445. 1 Claim. (Cl. 277—43.)



A faucet of the class described, comprising, in combination, an elongated tubular body member (1) having an opening (3) extending longitudinally therethrough, and intersecting a transverse opening at the other end, one end of the transverse opening being partially closed by an inwardly extending flange whose inner edge determines the size of the outlet opening, said flange having a circular, raised valve seat on its inner surface, a plug threadedly connected with the other end of the transverse opening, said plug having a central axial opening, a valve stem in the opening in the plug, means for sealing the opening about the valve stem, the inner end of the valve stem having a circular flange, one side of which has a circular ridge that forms a valve seat, that portion of the stem beyond the flange having a cylindrical projection provided with a threaded opening, a plurality of holes in the wall of the opening, a spring surrounding the valve stem between the flange and the plug, a circular valve member surrounding the cylindrical projection, said valve member having its outer surface formed from two cylindrical surfaces of different diameters, the portion of the smaller diameter being adapted to extend into the outlet opening, the portion of larger diameter being larger than the first mentioned valve seat and adapted to engage the latter to form a seal, the valve member being movable towards and away from the valve seat on the flange of the valve stem.

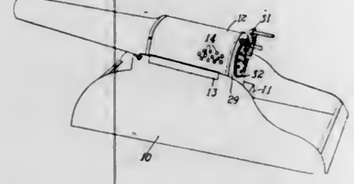
1,807,971. MEANS FOR ELECTRIC WELDING INCLUDING THE EMPLOYMENT OF AN AIR CURRENT. IRA WALTER DAY, Waterloo, Iowa, assignor to Associated Manufacturers Corporation of America, Waterloo, Iowa, a Corporation. Filed May 22, 1929. Serial No. 365,150. 2 Claims. (Cl. 219—4.)



1. A device of the character described, a pair of welding electrodes one movable to and from the other, the movable electrode being hollowed, means for drawing a current of air into and discharging from the hollow of said electrode to create a suction at the welding end of said electrode at the entrance of the hollow, and a movable device for delivering an element to be welded in the path of movement of said welding end to be held to it by said suction.

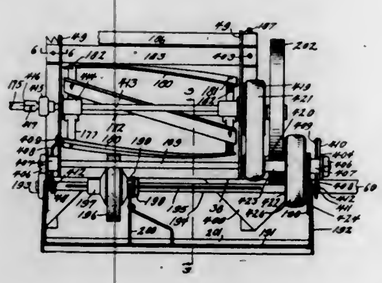
1,807,972. POULTRY COOP OR CRATE. WALTER CLARK DEAN, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Nov. 14, 1928. Serial No. 319,827. 3 Claims. (Cl. 119—17.)

1. A structure of the class described comprising assembled end units, said end units comprising corner uprights, top and bottom end members and connecting corner irons, said corner irons being adapted to receive top and bottom horizontal frame members, bottom side bars detachably secured to the bottom corner irons, a top unit comprising top bars and connecting end cross pieces and a panel secured thereto, side walls comprising panels having vertical bars provided with bendable extensions, the extension of the upper panel being engageable with the lower bars of the top unit and the bendable extension of the lower panel being engageable with the upper panel, hooked bolts detachably securing said side panels to said corner uprights, and a partition panel provided with projecting bendable members engageable by bending with said central vertical bars of said side wall panels.



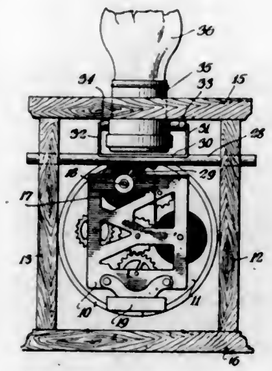
1,807,973. SHOE FORM. WILLIAM J. DE WITT, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a Corporation of New York. Filed Apr. 25, 1929. Serial No. 357,948. 13 Claims. (Cl. 12—128.5.)

1. A shoe form comprising a hollow toe member of resilient material having ball flanges on the side walls



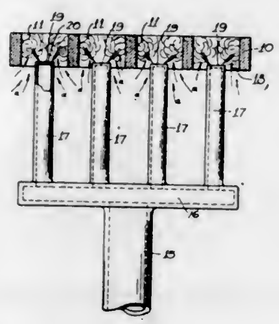
thereof, a cross bar pivoted at one end upon one of said flanges, guiding means on the other of said flanges coacting with said cross bar whereby a sliding engagement is provided between said cross bar and said second named flanges, the pivotal movement of said cross bar causing the toe member to increase or decrease in width, and means frictionally and continuously resisting such pivotal movement.

1,807,974. TOY CANNON. BIRGER ENGSTROM, Pittsburgh, Pa., assignor to Forster Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1929. Serial No. 342,040. 12 Claims. (Cl. 42—55.)



1. In a carbide cannon, a plurality of firing chambers, a gas generating chamber and means for successively connecting each of said firing chambers with said gas generating chamber.

1,807,975. BUILT-IN GRINDER AND ENSILAGE CUTTING MACHINE. CHARLES W. EYRES, Le Mars, Iowa. Filed Aug. 31, 1928. Serial No. 303,335. 4 Claims. (Cl. 146—121.)

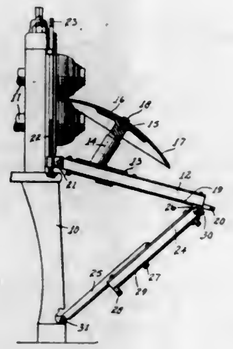


1. In combination with an ensilage cutter having a drive shaft, a cutter cylinder substantially coaxial with said drive shaft, a fly wheel on the shaft of the cutter cylinder, a frame in which the cylinder is journalled, an idler shaft in said frame parallel to the cylinder shaft, a grinder frame hinged upon said idler shaft for swinging movement radially of the cylinder, a wheel shaft journalled in said grinder frame in a position parallel to the cylinder shaft, a grinder wheel slidably and non-rotatably mounted on said wheel shaft, a power transmitting shaft positioned near the cylinder and parallel to the cylinder shaft, means including a universal joint for coupling the drive shaft to either the power transmitting shaft or the cylinder shaft and drive means connecting the power transmitting shaft with the idler shaft and the idler shaft with the wheel shaft respectively, the fly wheel being disposed at the opposite end of the cylinder from the drive shaft connection.

1,807,976. ALARM ILLUMINATOR CLOCK. EDWIN FLOHR, Brooklyn, N. Y. Filed Mar. 11, 1929. Serial No. 345,923. 3 Claims. (Cl. 200—35.)

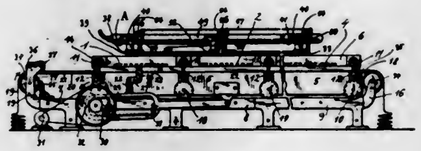
1. In a device of the class described, a cabinet, an alarm clock mechanism mounted in said cabinet, a push button operated socket in said cabinet, an alarm mechanism shaft, a spindle reciprocal in said cabinet, said spindle having both ends protruding from said cabinet, said spindle engaging said push buttons, a tongue on said spindle, a sleeve loosely mounted on said shaft, a follower arm extending radially from said sleeve and cooperating with said spindle to shift the latter, and means for locking said sleeve to said shaft when said shaft is rotated in a clockwise direction.

1,807,977. FUEL BURNER. DAVID S. FRANK, Chicago, Ill. Filed Feb. 4, 1928. Serial No. 251,773. 1 Claim. (Cl. 158—104.)



In a fuel burner, the combination with a refractory block, there being a plurality of passages extending therethrough, a fuel conducting header, a fuel conduit in axial unobstructed concentric communication with each of said passages, integral end enclosures for said conduits, there being obliquely disposed spirally arranged apertures in said end enclosures to impart twirling motion to the fuel issuing therefrom against the walls of the passages.

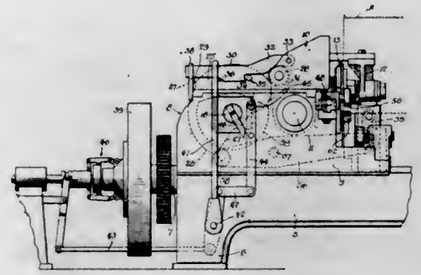
1,807,978. DISK SHARPENER. DENNIS C. GALVIN, Des Moines, Iowa. Filed June 4, 1929. Serial No. 368,272. 1 Claim. (Cl. 76—89.2.)



The combination with a disk sharpener having sharpening rolls, of a frame, a disk supporting plate slidably

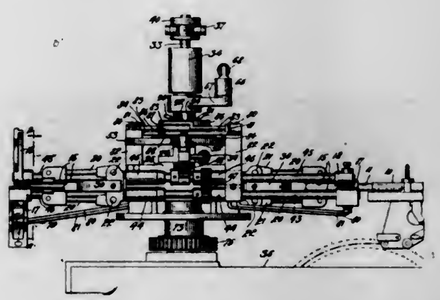
mounted in the frame, a disk support rotatively mounted in the disk supporting plate, means for forcibly moving the disk supporting plate longitudinally of the frame and fixing it in any position of its adjustment, two brackets pivotally connected to the inner corners of said frame, two adjusting screws mounted in upright positions upon the disk sharpener and on opposite sides of the sharpening rolls, and having threaded connections with said brackets and provided with means whereby they may be independently rotated, to thereby raise or lower the inner end of said frame, or to tilt said inner end of the frame laterally, and an auxiliary frame having its lower end

pivoted to a stationary support and its upper end connected to the outer end of the main frame by means of a hinged joint loosely fitted so that the outer end of the main frame may be tilted slightly in a lateral direction upon the adjustment of said screws in said clips.



1,807,979. SPRAYING OF WEBS OF FABRIC AND THE LIKE WITH DIFFERENT COLORS. JULIUS GROETSCHEL, Mannedorf, Switzerland. Filed June 27, 1929, Serial No. 374,122, and in Switzerland June 30, 1928. 13 Claims. (Cl. 101—124.)

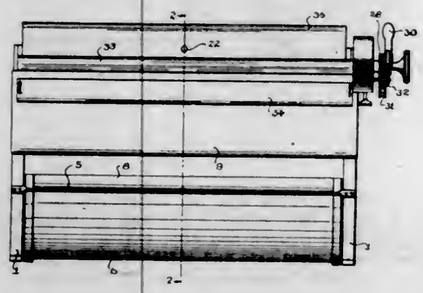
1. The herein described method of stenciling upon webs of fabric and the like with different colors, which comprises causing stencils to be pressed firmly against the webs of fabric thereafter simultaneously and uniformly moving the web of fabric and stencils in stages and in a forwardly direction during the pressing, subsequently causing the web of fabric when reaching its end point to remain stationary, then raising the stencils from the web of fabric, and returning them to their initial position, and finally lowering the stencils onto a fresh portion of fabric, and being gripped tightly thereto.



2. A machine of the character described, comprising in combination, a pressure table, stencils in a number equal to that of the colors to be sprayed and movable up and down on the pressure table, means for reciprocating the pressure table with the stencils, means for alternately clamping the web between the pressure table and the stencils during one of said reciprocating movements and then releasing the web at the other of said reciprocating movements, stationary nozzles spraying differently colored liquids, through said stencils onto the web during the movement of the pressure table and the stencil with the web clamped between them.

1,807,980. METAL WORKING MACHINE. CARL C. GROTNES, Chicago, Ill. Filed Aug. 4, 1928. Serial No. 297,469. 24 Claims. (Cl. 153—29.)

1. A metal working machine comprising, in combination, a bed, a pair of heads mounted in longitudinally spaced relation thereon and each having a forming roll rotatable on a fixed axis and a forming roll rotatable on an axis movable toward and from the fixed axis, a cam in each head operable upon the movable roll to move it toward the fixed roll, and means associated with said cam and operable at a predetermined point in the rotation thereof to retract said movable roll rapidly from said fixed roll.

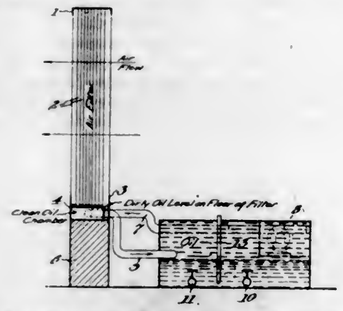


1,807,981. WRAPPING MACHINE. EDWARD HAAS, Brooklyn, N. Y., assignor to Package Machinery Company, Springfield, Mass., a Corporation of Massachusetts. Filed Aug. 22, 1928. Serial No. 301,222. 4 Claims. (Cl. 93—5.)

1. A twisting mechanism for wrapping machines comprising, a pair of clamping jaws for holding a wrapped

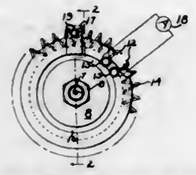
article with the ends of the wrapper extending from the article, a pair of pivotally mounted twisting fingers arranged to engage the ends of the wrapper, means for rotating the clamping jaws to cause the fingers to twist the ends of the wrapper, a rotatable member mounted to turn on a horizontal plane for supporting the clamping jaws and twisting fingers, a movable cam for controlling the closed and open positions of the twisting fingers, a roll in engagement with the working surface of the cam, connections between the roll and the twisting fingers, and means for imparting a clockwise movement to the cam to cause the fingers to close upon the ends of the wrapper and for returning the cam to its original position after the wrapped article has been discharged.

1,807,982. COPYHOLDER. CLAIR C. HARPER, Rochester, and EUGENE F. RITENDAUGH, Oneida, N. Y., assignors to Error-No Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 17, 1929. Serial No. 393,304. 17 Claims. (Cl. 120—30.)



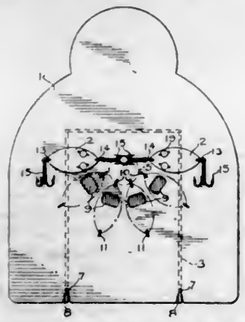
1. In a copyholder, the combination of a frame, sheet feeding means arranged thereon, and an auxiliary support for the frame comprising a sheet supporting device secured to the frame and inclined downwardly and rearwardly to a point in the plane of the base of the frame.

1,807,983. AIR OR GAS PURIFIER. CHESTER P. HEGAN and WALTER B. DIECKS, Louisville, Ky., assignors, by mesne assignments, to American Air Filter Company, Inc., Louisville, Ky., a Corporation of Delaware. Filed Mar. 12, 1924. Serial No. 698,745. 9 Claims. (Cl. 183—48.)



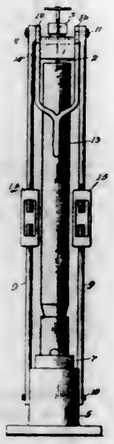
1. In a device for separating solids from a gas, a plurality of rows of deflector elements having imperforate faces directed towards the incoming gas stream, said elements being coated with a viscous adhesive substance, the elements of adjacent rows being staggered with respect to each other and each of said elements comprising a body having a length in the direction of the gas stream which is greater than its width.

1,807,984. AIR FILTER. CHESTER P. HEGAN, Louisville, Ky., assignor, by mesne assignments, to American Air Filter Company, Inc., Louisville, Ky., a Corporation of Delaware. Filed Sept. 15, 1924. Serial No. 737,942. 2 Claims. (Cl. 261—112.)



1. In a filter the combination of a hollow upright deflector, means for forcing liquid upwardly through said deflector, and a liquid overflow outlet positioned to restrict the distribution of discharged liquid over a predetermined portion of the outer surface of the deflector.

1,807,985. CURRENT TRANSFORMER. RALPH M. HEINTZ, Palo Alto, Calif., assignor to Heintz & Kaufman, Ltd., San Francisco, Calif., a Corporation of Nevada. Filed Mar. 12, 1930. Serial No. 435,099. 10 Claims. (Cl. 117—119.)

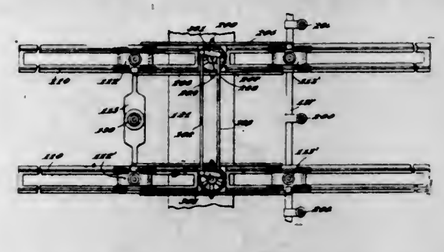


1. A current transformer comprising a conductor forming a primary, an insulating disk mounted on said conductor, and a helical spring forming a secondary stretched in torodial form about said disk.

1,807,986. DISPLAY APPARATUS. FREDERIC J. HOFSCHNEIDER, Rochester, N. Y. Filed May 28, 1930. Serial No. 456,537. 5 Claims. (Cl. 211—156.)

1. A display apparatus comprising a display card having an opening therein, means for securing an article to be displayed on said card over said opening, said article having an opening therein, and a substantially transparent bead seated in the opening and arranged over the opening in the card, and means for supporting said card in a substantially upright position before a source of light.

1,807,987. CHARGING MECHANISM FOR BLASTING CARTRIDGES. FRANK H. KNEELAND, Chicago, Ill., assignor to Safety Mining Company, Chicago, Ill., a Corporation. Filed Aug. 15, 1929. Serial No. 386,213. 2 Claims. (Cl. 226—20.)



1. In a device of the character described, a relatively fixed charging head having a nozzle extending downwardly therefrom, a relatively fixed cylindrical guide disposed beneath said head, a hollow cylindrical follower disposed within said guide, a coil spring disposed within said follower and adapted to support a cartridge to be charged, a pair of levers pivoted intermediate their ends to said charging head, a pair of links pivotally connected to said levers at points adjacent the pivotal connections of the respective levers with said head, the opposite ends of said links being pivotally connected to said follower and means for operating said levers.

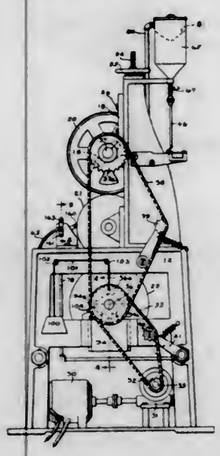
1,807,988. SMOKE BAFFLE FOR FURNACES. JOHN P. KOLLA, Holland, Mich., assignor to Holland Furnace Company, Holland, Mich. Filed Jan. 9, 1930. Serial No. 419,484. 1 Claim. (Cl. 110—173.)

In combination with a combustion chamber and feed section of a hot air furnace, an integral supporting rib disposed within the said feed section, transversely across the top thereof and strengthening the same and having its ends extended downwardly to form attaching ears, a flat perforated baffle plate suspended back of said rib and disposed to contact therewith when in depending position, and screw threaded eye-bolts forming hinge members to support said baffle plate inserted through the said rib with their free ends turned upward and engaging depressions in the said rib for retaining the same securely in place, and screw nuts on the outer ends of said bolts.

1,807,989. REPRODUCING MACHINE. CARLOS KREBS, Boston, Mass. Filed Sept. 14, 1929. Serial No. 392,723. 16 Claims. (Cl. 266—23.)

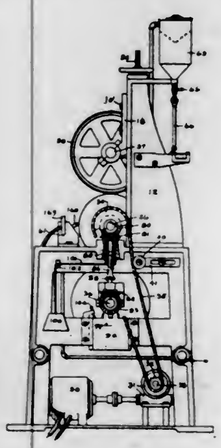
1. A reproducing machine wherein the movement of the reproducing means is controlled by that of a tracer relative to a template, comprising a tracer, a reproducing tool, a main or base carriage, parallel motion linkage carried by said carriage and adapted to transmit motion from the tracer to the reproducing tool, two rotary members carried by said carriage and each operatively connected to an element of said linkage whereby the members rotate during change of position of said linkage with respect to the carriage, and means operatively connecting said two rotary members for causing them to rotate in unison.

1,807,990. DISPLAY RACK. BERT A. LANDERS, Los Angeles, Calif. Filed Jan. 29, 1930. Serial No. 424,175. 7 Claims. (Cl. 211—166.)



1. A display device comprising: a standard; a head slidably mounted on said standard; radially extending arms mounted upon said head; article clamping means mounted on said arms; and means operable for sliding said head upwardly on the standard to lock said clamping means.

1,807,991. GRAINING MACHINE. GEORGE E. LANG and LLOYD V. CASTO, Detroit, Mich., assignors to Oxford Varnish Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Sept. 11, 1926, Serial No. 134,807. Divided and this application filed Apr. 20, 1928. Serial No. 271,582. 11 Claims. (Cl. 101—154.)

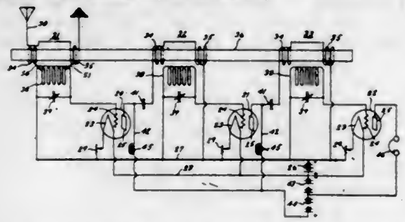


1. In a machine of the class described, a pattern roll, a transfer roll and a backing roll for holding a blank in contact with the transfer roll, individually movable bear-

ings for the backing roll, yielding means for acting on the bearings to force the backing roll to permit the backing roll axis to be angularly displaced relative to the transfer roll yieldingly toward the transfer roll, and a positive driving connection between the pattern roll and

backing roll, said connection comprising a sprocket chain and cooperating sprockets respectively connected to the pattern roll and backing roll, there being an adjustable idler device for the chain arranged to permit relative movement between the axes of said positively connected rolls.

1,807,992. GRAINING MACHINE. GEORGE E. LANG and LLOYD V. CASTO, Detroit, Mich., assignors to Oxford Varnish Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Sept. 11, 1926, Serial No. 134,807. Divided and this application filed Apr. 20, 1928. Serial No. 271,533. 8 Claims. (Cl. 101—154.)



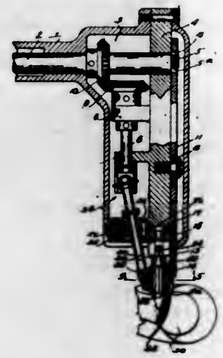
1. In a machine of the class described, a transfer roll and a backing roll, the transfer roll being disposed between the other two rolls and in driving contact with the pattern roll, bearings for the backing roll and guiding means therefor arranged to permit the axis of the backing roll to be displaced either at an angle to or in parallelism with the axis of the transfer roll, and a positive driving connection between the backing roll and one of the other rolls arranged to function irrespective of such displacement of the backing roll.

1,807,993. CABLE GRIP. PHILIP J. MARTIN, Elizabeth, N. J. Filed Oct. 4, 1929. Serial No. 397,218. 3 Claims. (Cl. 24—123.)

1. A cable grip having diagonally interwoven strands separated at one end into a plurality of freely formed loops, and a draft head for said cable grip, said draft head comprising two members one swiveled within the other and one of said members provided with a plurality of apertures through which said loops freely pass.

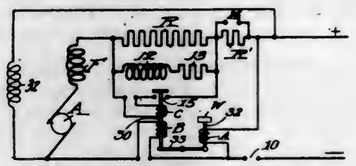
1,807,994. ELECTRICAL APPARATUS. ORIN E. MARVEL, Dayton, Ohio, assignor, by mesne assignments, to General Motors Radio Corporation, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 30, 1925. Serial No. 19,369. 3 Claims. (Cl. 250—40.)

1. In an apparatus of the character described, several pairs of coupled circuits connected for concurrent operation in cascade, and means for concurrently varying the coupling relation of said pairs of circuits, each of said pairs of coupled circuits having inductively coupled primary and secondary windings, and said means having a single movable member to which a winding of each pair is securely fixed for bodily varying in unison the relative positions of the primary and secondary windings of said pairs.



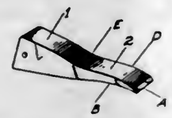
1,807,995. ELECTRICAL APPARATUS. ORIN E. MARVEL, Dayton, Ohio, assignor, by mesne assignments, to General Motors Radio Corporation, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 30, 1925. Serial No. 19,370. 17 Claims. (Cl. 250—40.)

3. An apparatus of the character described comprising a pair of control devices each having a movable element,



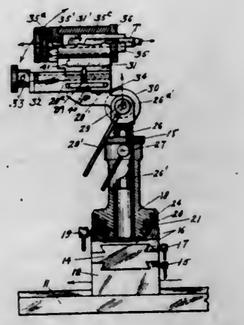
primary means for moving said elements in unison, a secondary means for moving one or said elements independently of the other, and stop means for a rotatable element adapted upon movement of the primary means to a predetermined position to coordinate said movable elements to a definite normal relationship with respect to one another.

1,807,996. TRIMMING MACHINE. NICHOLAS W. MATHEY, Boston, Mass. Filed May 27, 1929. Serial No. 366,206. 40 Claims. (Cl. 12—85.)



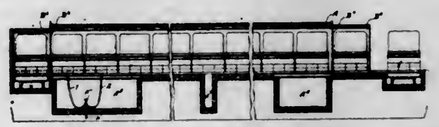
1. Apparatus of the class described comprising a conoidal gage for contact with the surface of the breast covering flap of a shoe heel, and a cutter having a cutting edge adapted to remove surplus material from the breast covering flap of the heel, the gage acting to support the flap adjacent the cutter.

1,807,997. MOTOR STARTING AND CONTROL MECHANISM. HAROLD A. MAXFIELD, Worcester, Mass. Filed Nov. 7, 1928. Serial No. 317,803. 4 Claims. (Cl. 172—288.)



1. A direct current circuit comprising a motor having an armature, a non-inductive resistance in series therewith, an inductive resistance in series with said armature but in parallel with said non-inductive resistance, and means to short circuit said parallel resistances on the occurrence of a predetermined drop in armature current.

1,807,998. REVERSIBLE SELF-SHARPENING CHISEL. JOHN I. MCCORD, Paso Robles, Calif., assignor of one-fourth to Ray B. Lyon, Paso Robles, Calif. Filed Dec. 26, 1929. Serial No. 416,431. 3 Claims. (Cl. 97—125.)

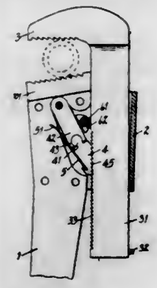


3. A chisel for ground working implements comprising a base portion adapted for attachment to a standard and a point portion having a transversely extending cutting edge; said point portion having its under surface concavely curved from the cutting edge rearwardly a certain distance, and having its upper surface formed with a convex curvature extending rearwardly from the cutting edge, said convex curvature merging into a concave curve disposed entirely below a straight line projected from the cutting edge to the rear end of the base at the top.

1,807,999. UNIVERSALLY ADJUSTABLE TOOL HOLDER. EDWARD P. MCMURTRY, Pasadena, Calif. Filed May 22, 1929. Serial No. 365,221. 10 Claims. (Cl. 51—220.)

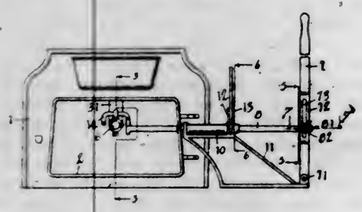
10. In a mechanism of the character referred to, a supporting base, a pedestal mechanism revolubly supported thereon, said supporting base having horizontal adjustment in four directions for said pedestal mechanism, tool holding mechanism pivotally supported at the upper end of said pedestal mechanism and adjustable about the vertical axis of said pedestal mechanism and about a horizontal axis, means for locking said pedestal mechanism in adjusted positions, said tool holding mechanism having a part for directly holding a tool and adjustable to extend a tool held thereby axially across the vertical axis of said pedestal mechanism, if extended vertically.

1,808,000. ANNEALING FURNACE. PAUL A. MEEHAN, Cleveland, Ohio, assignor, by mesne assignments, to Swindell-Dressler Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 23, 1928. Serial No. 301,503. 9 Claims. (Cl. 263—28.)



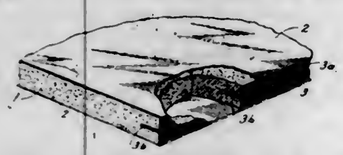
1. A continuous tunnel kiln having a goods passageway therein normally closed at its ends and through which kiln cars carrying goods to be heat treated in an inclosed car chamber are passed, means for moving a plurality of cars simultaneously through said passageway, a fixed source of fluid within the entrance end of the kiln and below said cars and means for maintaining a continuous supply of fluid from said source to said car chambers while said cars are moving through said passageway.

1,808,001. PIPE WRENCH. WILLIAM MELIN, Flint, Mich. Filed Sept. 8, 1928. Serial No. 304,755. 6 Claims. (Cl. 81—189.)



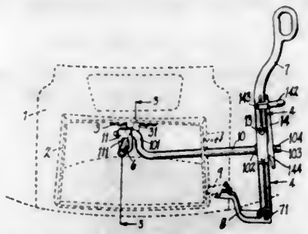
1. A pipe wrench, comprising a handle with fixed jaw at its end, a pivotal adjustable jaw with shank having serrations on its inner edge, a socket shell for said shank secured to said handle, a toggle pawl comprising two mem-

bers pivoted together by a toggle joint, one member pivoted to said handle and the other member serrated to engage the serrations of said shank, a blade spring disposed back of said pawl and secured in a kerf in said handle



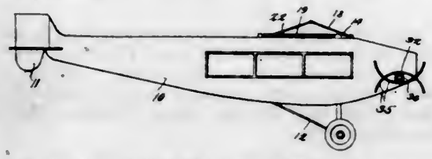
with its free end reacting to hold said serrated pawl member yieldingly in engagement with the shank, a pivoted flat cam in front of said pawl with a trip lever to rock the same to release the pawl to adjust the wrench.

1,808,002. GRATE SHAKING AND DUMPING DEVICE. JAMES MURCHIE, Traverse City, Mich., assignor to Holland Furnace Company, Holland, Mich. Filed Feb. 23, 1929. Serial No. 342,073. 7 Claims. (Cl. 126—169.)



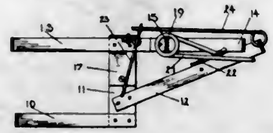
4. In a grate shaking and dumping device, the combination with the ash pit casing, a dumping grate thereon having a shaker arm, of a vertically slotted shaking lever, a reciprocating grate shaker bar to said shaking lever, a swivel block connection for said shaker bar slidably supported in the slots of the said shaking lever, means for adjusting the shaker bar axially to different angles, an offset pivotal connection at the inner end of said shaker bar, a movable connection on said shaker arm for said pivotal connection whereby the grate can be shaken by the shaker bar or can be dumped from the outside by rocking said bar and can be restored and held to operative position, as specified.

1,808,003. GYPSUM WALLBOARD. GUSTAVE A. NEW, Port Clinton, Ohio, assignor to American Gypsum Company, Port Clinton, Ohio, a Corporation of Ohio. Filed May 20, 1929. Serial No. 364,478. 10 Claims. (Cl. 154—2.)



5. A process of reinforcing the edges of wallboard in the course of manufacture, consisting of feeding a strip of reinforcing material toward the edges of the board, folding the advancing strip longitudinally into portions of double thickness arranged in T-form, and guiding the folded strip into the edge of the board.

1,808,004. GRATE SHAKING AND DUMPING DEVICE. OSCAR P. NYSTROM, Holland, Mich., assignor to Holland Furnace Company, Holland, Mich. Filed Jan. 17, 1930. Serial No. 421,384. 4 Claims. (Cl. 126—169.)

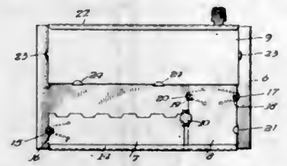


4. In a grate shaking and dumping device, the combination with the ash pit casing, of a dumping grate therein having a shaker arm, a vertically slotted shaker lever, a reciprocating grate shaker bar having a crank arm formed on its inner end disposed to reciprocate through an opening in the side of the ash pit door frame, and means to turn said shaker bar up or down.

1,808,005. AEROPLANE. WILLIAM R. REED, Baltimore, Md. Filed July 15, 1930. Serial No. 468,098. 4 Claims. (Cl. 244—12.)

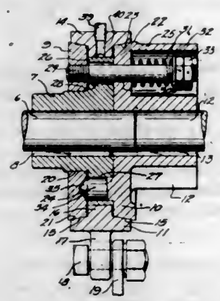
1. In an aeroplane, a fuselage, a flexible wing extending over the fuselage, a hinge connection between the forward edge of the wing and the fuselage, guides extending longitudinally of the fuselage beneath said wing, a slidable connection between the rear edge of the wing and said guides, and means to move said slidable connection along said guides.

1,808,006. GOPHER TRAP. ANTON F. RENKEN, Crete, Nebr. Filed Oct. 14, 1929. Serial No. 399,605. 3 Claims. (Cl. 43—81.)



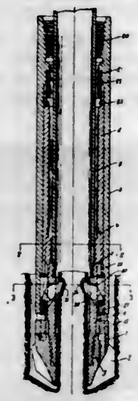
1. An animal trap including a lower jaw member, an arm projecting from said lower jaw member at the rear extremity thereof, a handle member secured to said arm at an intermediate point thereof and positioned angularly with respect to said lower jaw member, an upper jaw and handle member having an arm projecting therefrom at an intermediate point thereof, a pivotal connection between said two arms, a member for holding said jaws in open position, and resilient means for closing said jaws when said holding member is released.

1,808,007. PRINTING DEVICE. GEORGE W. SCHAEFER, South Braintree, Mass., assignor to Addressograph Company, Wilmington, Del., a Corporation of Delaware. Original application filed Oct. 1, 1925, Serial No. 59,825. Divided and this application filed May 28, 1928. Serial No. 281,302. 3 Claims. (Cl. 101—369.)



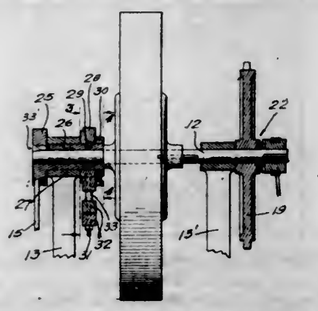
1. A printing device of the character described comprising a sheet metal frame, two printing members ar-

ranged on the frame in adjacent relation, and means integral with the frame intermediate the two printing members for detachably securing said members on the frame,



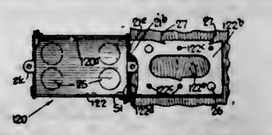
said means comprising a stud struck up from the body of the frame between said members and having portions thereof arranged to engage opposed edges of the members.

1,808,008. AUTOMATIC BRAKE. FREDERICK W. SCHMITHALS, Milwaukee, Wis. Filed June 30, 1930. Serial No. 464,901. 5 Claims. (Cl. 192—12.)



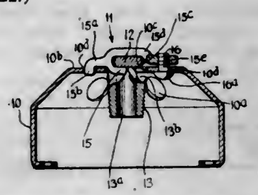
1. In a brake mechanism, the combination of a drive shaft, a driven shaft, a fixed brake element, a pair of movable brake elements engageable with said fixed brake element, means for driving said driven shaft from said drive shaft through said movable brake elements, means for automatically moving said movable brake elements out of engagement with said fixed brake element on the rotation of said drive shaft, and means for tensioning said movable brake elements.

1,808,009. CORE CATCHER FOR WELL DRILLS. FLOYD L. SCOTT, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed June 29, 1929. Serial No. 374,849. 9 Claims. (Cl. 255—72.)



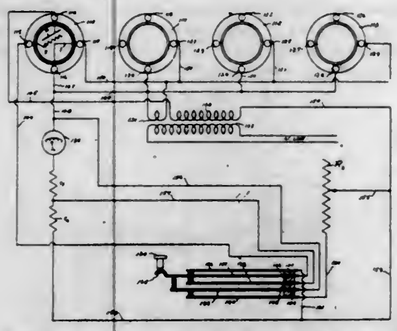
1. A score drill, a sleeve thereon, a drill collar telescoping over said sleeve, means to secure said sleeve and said drill collar together to allow a limited relative longitudinal play between them, a chamber formed between said sleeve and drill collar, a block in said chamber, a core engaging dog pivoted to said block, and means on said block frictionally engaging the walls of said chamber to support said block.

1,808,010. ADJUSTABLE OIL WELL COUNTERBALANCE. AUGUST L. SEGELHORST and OSCAR STRICKLIN, Huntington Beach, Calif. Filed Apr. 15, 1929. Serial No. 355,063. 5 Claims. (Cl. 74—71.)



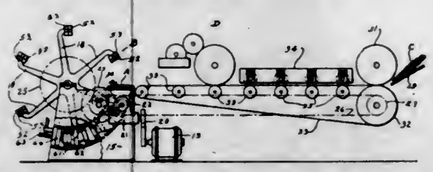
1. For use in combination with a power transmitting organization: a rotatable shaft; a sleeve on said shaft; means for rigidly connecting said sleeve with said shaft; a crank on one end of said sleeve; and a counterbalance on the opposite end of said sleeve in fixed relation with said crank.

1,808,011. ELECTRIC FITTING. LOUIS BARNETT, Brooklyn, N. Y., assignor to Standard Electric Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Jan. 11, 1929. Serial No. 331,863. 4 Claims. (Cl. 247—21.)



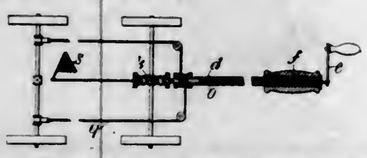
3. A plurality of sheet metal parts interconnected to form a box fitting of the character described, one of said parts forming a wall of said fitting and having an integral extension projecting from one edge thereof adjacent to and abutting an end wall, said extension formed with means in offset, non-parallel relation with respect to said wall part for attaching the fitting to the face of a stud.

1,808,012. FIXTURE COUPLING FITTING FOR OUTLET BOXES. LOUIS BARNETT, New York, N. Y., assignor to Standard Electric Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Sept. 11, 1929. Serial No. 391,755. 12 Claims. (Cl. 247—22.)



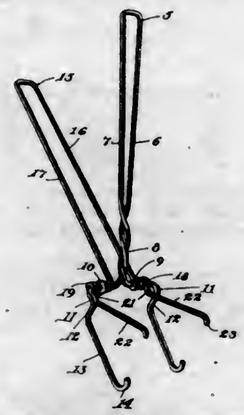
8. In combination with an outlet box, an attachment fitting comprising a coupling member having an axial bore extending into the box and having a lateral passage connecting with said bore to permit drawing conductor wires therethrough, a head piece engaging said box on the exterior side thereof above said member, and a single fastening means for securing the piece to the box adapted to clamp said piece to a mounting bar.

1,808,013. TUBE TESTER. JOB R. BARNHART, Lakewood, Ohio, assignor to Walter M. Scott, Lakewood, Ohio, and Raleigh E. Tresise, Cleveland Heights, Ohio. Filed Jan. 7, 1930. Serial No. 419,031. 19 Claims. (Cl. 250—27.)



1. A device for measuring the mutual conductance of a tube having a cathode, a grid and a plate, said device including a plate circuit including a resistor and a source of current in series, one terminal of said source being connected to said plate, and means for selectively connecting said grid to the other terminal of said source or to a point intermediate the ends of said resistor, said device including means whereby the resistance of said resistor may be varied but only by substantially proportional values on both sides of said point.

1,808,014. MACHINE FOR MAKING PAPER BOXES OR THE LIKE. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Dec. 4, 1929. Serial No. 411,611. 15 Claims. (Cl. 93—44.)

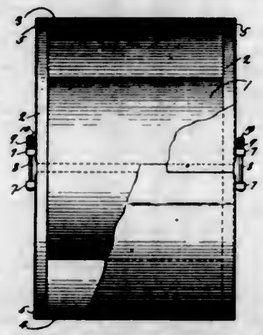


1. A machine for making paper boxes including a die member movable through an arc into operating relation with a relatively stationary die yieldable to the pressure of the movable die when the dies are in said relation to compensate for the arc of movement of the movable die, and means for applying adhesive to box blanks and for positioning the blanks relative to the stationary die, preliminary to forming the boxes by the coaction of said dies.

1,808,015. MECHANICAL TOY. HUGO JOHN BUCHANAN-WOLLASTON, Pakefield, England. Filed June 4, 1928, Serial No. 282,694, and in Great Britain June 27, 1927. 2 Claims. (Cl. 46—48.)

1. A mechanical toy comprising driving means, a flexible shaft for operating same, means held in the hand of the operator for rotating said shaft, a flexible sheath movable longitudinally on said flexible shaft and steering means on the toy operated by longitudinal movement of said sheath relatively to said shaft.

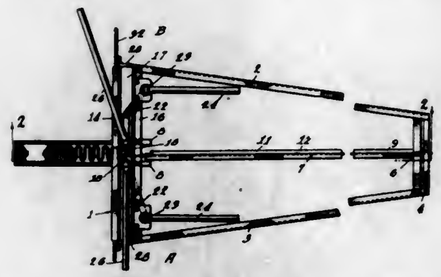
1,808,016. TONGS. MILTON M. BULL, Eugene, Oreg. Filed May 22, 1930. Serial No. 454,717. 3 Claims. (Cl. 294—28.)



1. Reversible tongs comprising cooperating members each formed from a strip of material fashioned to present handle and jaw portions and pivotally connected together by bending portions of one around parts of another, said jaw portions being formed to present a cradle like gripping surface with inwardly directed hook members in one position and oppositely disposed flat gripping surfaces in reversed position.

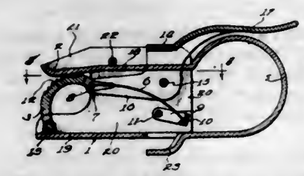
1,808,017. VALVE FOR COOKERS. FRANK D. CHAPMAN, Berlin, Wis. Filed Mar. 1, 1930. Serial No. 432,403. 14 Claims. (Cl. 126—272.)

1. A valve for a cooker, comprising a casing for attachment to a cooker drum and having an inlet opening and an outlet opening, a rotary valve member within the casing and having can receiving pockets which register with the openings when the valve member is rotated, yielding packing rings extending around the valve member between the pockets and the ends of the valve, and yieldingly elongatable packing strips positioned between the pockets and extending to the rings, said rings and strips preventing the passage of heat fluid through the valve casing.



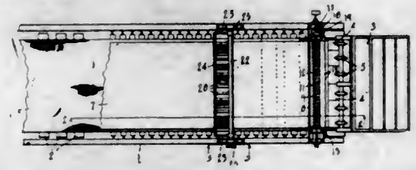
1,808,018. LAGGING FOR REELS. HENRY E. CHARLES, Paterson, N. J., assignor to The Okonite Company, Passaic, N. J., a Corporation of New Jersey. Filed Apr. 1, 1930. Serial No. 440,654. 4 Claims. (Cl. 206—59.)

1. Metal lagging for enclosing a reel for electric cables, said lagging being made in sections adapted to surround



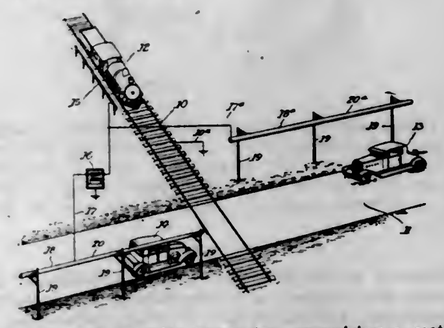
the hub and end flanges of the reel, and means carried wholly by the lagging for securing the sections to each other thereby to retain the lagging in place on the reel, said securing means being located at the outer face of each end flange and below the periphery thereof.

1,808,019. MACHINE FOR BENDING CORRUGATIONS IN METAL. LOUIS F. CLAUSING, Burlingame, Calif., assignor to Royal Metal Works, San Francisco, Calif., a Copartnership consisting of Louis F. Clausing and Max Schwartz. Filed Apr. 15, 1929. Serial No. 355,270. 9 Claims. (Cl. 153—76.)



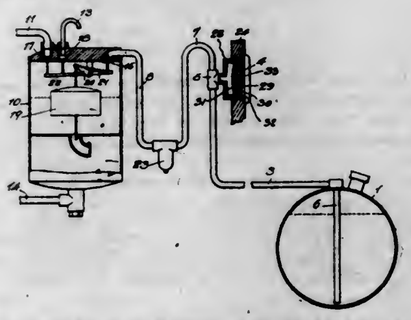
1. A device for corrugating a sheet of metal or the like, comprising means for mounting the sheet and blades pivoted adjacent the sheet on opposite sides thereof for successively bending the sheet in opposite directions when the blades are turned on their pivots.

1,808,020. TOGGLE CLAMP. JOHN J. COLLINET, Chicago, Ill., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed Jan. 4, 1930. Serial No. 418,504. 7 Claims. (Cl. 24—250.)



7. A clamp comprising a frame having a fixed jaw, a jaw movably mounted upon said frame for cooperation with said fixed jaw, a handle connected to the frame and the movable jaw for shifting the movable jaw toward and away from the fixed jaw, a toggle spring having one end attached to the movable jaw, and means shiftably mounted upon said frame engaging the opposite end of said spring.

1,808,021. APPARATUS AND METHOD OF MARBLING PAPER. FRANK G. CRANE and JOSEPH M. WARD, Detroit, Mich. Filed July 3, 1929. Serial No. 375,818. 22 Claims. (Cl. 92—40.)

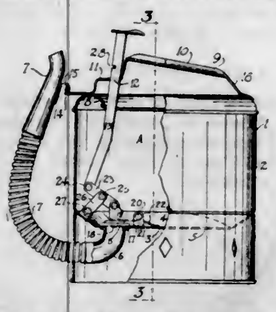


1. The combination with the forming wire and suction box of a paper making machine, of a plurality of color troughs disposed above and transversely of said forming wire in advance of said suction box, feed rolls grooved to provide spiral flat-faced raised portions mounted to rotate in said troughs, distributing blades mounted for longitudinal reciprocation with their inner edges in coacting reciprocation with their inner edges in coacting relation to said feed rolls, said blades having serrated front edges providing a plurality of A-shaped pointed teeth, and means for driving said rolls and reciprocating said blades.

1,808,022. AUTOMATIC WARNING SIGNAL. JOSEPH DEL-PRETE, Chicago, Ill., assignor to Automobile Warning Signal Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1931. Serial No. 516,528. 4 Claims. (Cl. 246—30.)

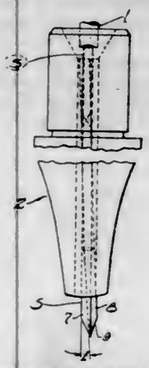
1. Automatic warning apparatus, comprising a section of railroad track on either side of a road crossing, a wave generator adapted to generate high frequency waves when a train is on said section of track, means including a semi-elliptical, hollow reflector for releasing said waves over a crossing adjacent to said track, and means on a vehicle within the effective range of said waves for receiving, rectifying and amplifying the same whereby to operate a signal on said vehicle.

1,808,023. LIQUID LEVEL INDICATOR. JOHN A. DIENNER, Chicago, Ill., assignor to Bendix Stromberg Carbureter Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1923. Serial No. 616,900. 9 Claims. (Cl. 73—54.)



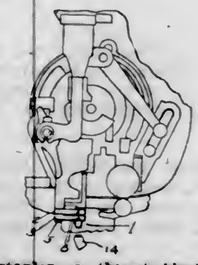
1. In combination, a main tank, a vacuum tank, a suction feed pipe between said tanks, an indicating device sensitive to difference in pressure connected to said pipe and means for holding a solid column of liquid extending from said indicating device to said main tank.

1,808,024. LIQUID MEASURE. HAROLD B. DONLEY, Columbus, Ohio, assignor to The Columbus Auto Brass Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 15, 1929. Serial No. 399,829. 8 Claims. (Cl. 221—16.)



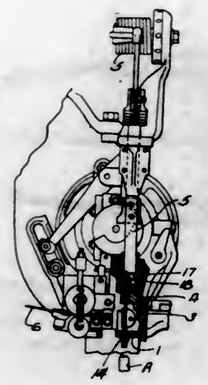
1. In a liquid measure, a substantially cylindrical side wall, a bottom wall arranged within the confines of said

side wall and disposed in a substantially horizontal plane above the lower edge of the side wall, said bottom wall being provided with an opening, a handle having its opposite ends secured to said side wall and extending across the open top of the measure, a valve mechanism



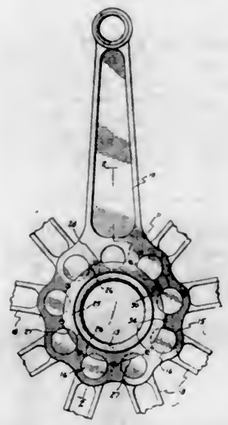
for regulating the outflow of liquid through the opening in said bottom wall, and a movable operating stem for said valve mechanism arranged to project upwardly through the open top of the measure and having its upper portion slidably received in the forward part of said handle.

1,808,025. SHOE STAPLER. ERNEST DUNFORD, St. Louis, Mo., assignor to Landis Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 4, 1929. Serial No. 411,589. 10 Claims. (Cl. 1—20.)



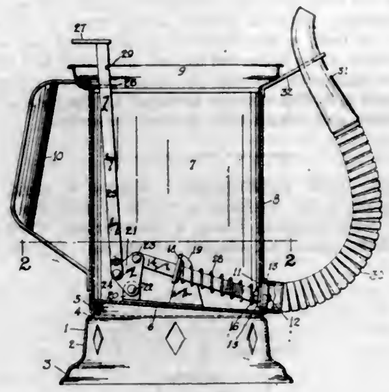
1. In a shoe stapler, a member for driving a staple, means for directing one leg of the staple vertically as it enters the work, and means for directing the other leg of the staple at an angle to the vertical as it enters the work.

1,808,026. SHOE STAPLER DEVICE. ERNEST DUNFORD, St. Louis, Mo., assignor to Landis Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 4, 1929. Serial No. 411,590. 7 Claims. (Cl. 1—20.)



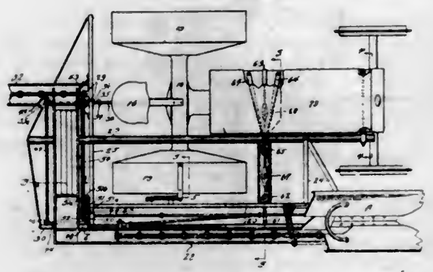
1. In a shoe stapler, a throat block distinct from staple forming mechanism and comprising an upper member for receiving a formed staple, and a separate lower member with a smooth cylindrical hole therethrough for receiving said staple from said upper member and discharging it to the work, the interior diameter of said lower member being smaller than the interior diameter of said upper member.

1,808,027. SHOE-STAPLER STRUCTURE. JACOB ADLER, St. Louis, Mo., assignor to Landis Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 4, 1929. Serial No. 411,596. 8 Claims. (Cl. 1—20.)



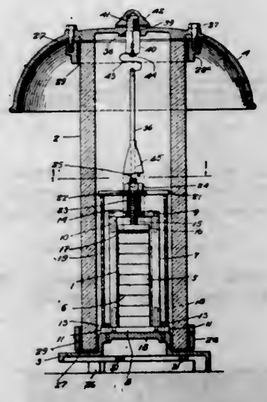
1. In a shoe stapler, staple forming members, and a staple driver, said driver including elements for turning the staple, as formed by said members, about its axis as it is driven.

1,808,028. INTERNAL COMBUSTION ENGINE. JACOB F. EDGAR, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 28, 1930. Serial No. 439,815. 5 Claims. (Cl. 74—17.)



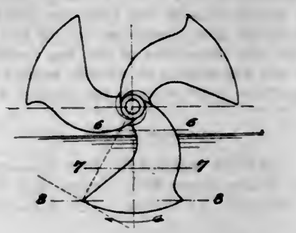
1. In a connecting rod assembly for radial engines, a master rod hub having circularly arranged pin bores therethrough, said hub having a circular recess at one end intersecting the pin bores, a ring seated in the circular recess in the hub end, said ring underlying the hub end intermediate the pin bores, connecting rod knuckle pins in the bores, said pins having a recessed end complementary to the intersecting portions of the ring, and retaining means for the end of the pins opposite the ring.

1,808,029. LIQUID MEASURE. AUGUSTUS J. FRAME, Columbus, Ohio, assignor to The Columbus Auto Brass Company, Columbus, Ohio, a Corporation of Ohio. Filed Jan. 18, 1930. Serial No. 421,827. 10 Claims. (Cl. 221—16.)



1. In a liquid measure, a base of inverted cup-like formation, a substantially cylindrical body having its lower edge secured to the upper portion of said base, and for which the top of said base constitutes a bottom, said body in conjunction with the upper wall of said base providing a liquid receiving and measuring chamber, an outlet provided in the wall of said body portion contiguous to the bottom of said chamber, a flexible spout connected with and forming a continuation of said outlet, and a manually operated valve mechanism mounted wholly upon said bottom for regulating liquid flow through said outlet.

1,808,030. CORN PICKER ATTACHMENT FOR TRACTORS. NICHOLAUS W. FRANZKOWIAK, Schaller, Iowa. Filed Mar. 3, 1930. Serial No. 432,603. 4 Claims. (Cl. 56—18.)

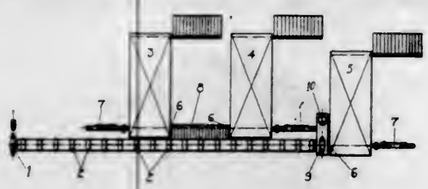


1. A picking attachment for a tractor having a belt pulley shaft housing projecting laterally ahead of a rear wheel, comprising: a sleeve to receive the housing, means attached to the sleeve and attachable to the tractor body, for securing the sleeve on the housing and for supporting the outer end of the sleeve, and a picker frame tiltably supported by the sleeve.

1,808,031. ELECTRICAL CONDENSER. JOSEPH A. FRIED, Flushing, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 22, 1924, Serial No. 745,231. Renewed Mar. 5, 1927. 18 Claims. (Cl. 175—41.)

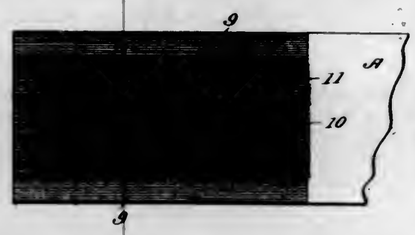
1. The combination of a housing, a base to which the housing is secured, a condenser in the housing, a clamp affixing the condenser to the base and connected directly to the base, and a cover in the housing for the condenser, the cover being made fast to said clamp.

1,808,032. OUT OF WATER PROPELLER. FRIEDRICH GEBERS, Vienna, Austria. Filed Jan. 12, 1925, Serial No. 1,974, and in Germany Jan. 22, 1924. 3 Claims. (Cl. 170—159.)



1. An out-of-water propeller designed to operate simultaneously in water and air, consisting in the combination of a hub which is normally above water, blades on said hub with an asymmetrical surface distribution with respect to the radium drawn through the attachment point on the hub, and a point sharpened in the rotation direction as to about 40–60° and essentially extending before the radial part of the propeller causing the gradual immersion from the air into the water at the entering edge of each blade, said entering edge forming with a radius through the utmost point of the blade an acute angle of at least 20°.

1,808,033. HANDLING OF HOT METAL STOCK PREPARATORY TO ITS REDUCTION BY ROLLING. JEROME R. GEORGE and JAMES A. BUELL, Worcester, Mass., assignors to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 5, 1929. Serial No. 376,205. 9 Claims. (Cl. 80—2.)

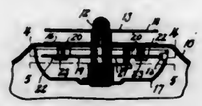


9. In the handling of hot metal stock, supplied from a plurality of heating furnaces to a common feed table for delivery, by the latter, endwise to a rolling mill, the improvement which consists in alining the side discharge

opening of one of said furnaces with said feed table, at the end of the latter remote from said mill, and procuring, selectively, the endwise discharge of stock from said fur-

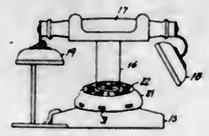
nace onto said feed table, or the endwise movement of stock from said feed table into said furnace through said opening, for reheating of said last-mentioned stock.

1,808,034. SACK. FRANK H. GREGORY, McAllen, Tex. Filed Apr. 30, 1930. Serial No. 448,663. 1 Claim. (Cl. 150—2.)



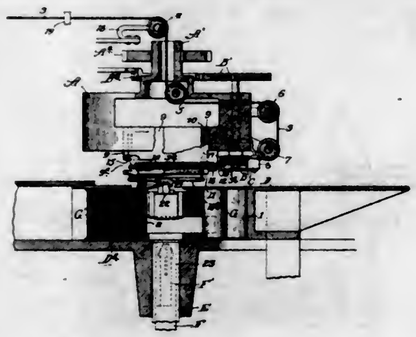
In a cotton picker's bag adapted to be dragged along the ground, that portion of the under side of the bag which in use engages the ground being provided with a gum coat throughout its width, and a rubber ground engaging tread of a width slightly less than the width of the bag vulcanized to the gum coated portion of the bag and extending from the closed end of the bag towards the open end of the bag and ending at a point beyond that portion of the bag which might engage the ground when the bag is in use.

1,808,035. TENNIS RACKET. JOSÉ LEANDRO MONTALVO GUENARD, Ponce, Porto Rico. Filed Nov. 7, 1929. Serial No. 405,441. 11 Claims. (Cl. 273—73.)



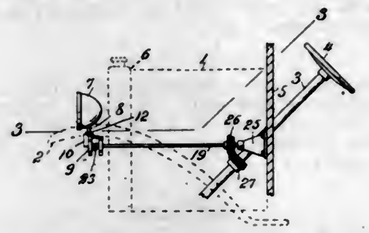
1. A tennis racket, including a handle and an associated frame section, together with a pivoted mesh-securing member adapted for co-operation with said frame to engage a mesh therebetween.

1,808,036. TOY TELEPHONE. WYMAN N. HILL, East Hampton, Conn., assignor to The N. N. Hill Brass Company, East Hampton, Conn., a Corporation. Filed Sept. 25, 1930. Serial No. 484,276. 1 Claim. (Cl. 46—46.)



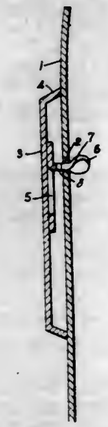
In a toy telephone, the combination with the base of a post rotatably mounted therein, a dial fixed to the outer end of the post, a bell mounted on the inner end of the post and so as to be turned by said dial, said bell formed near its edge with a series of inwardly-extending projections, and a sliding-hammer arranged in the path of said projections and adapted to contact therewith.

1,808,037. TOY TELEPHONE. WYMAN N. HILL, East Hampton, Conn., assignor to The N. N. Hill Brass Company, East Hampton, Conn., a Corporation. Filed Sept. 25, 1930. Serial No. 484,277. 8 Claims. (Cl. 46—46.)



1. A bell for toy telephones having its top provided with a plurality of means for its digital step-by-step rotation in dialing the toy and said bell being provided with a plurality of ringing-projections for engaging a striker when it is so rotated.

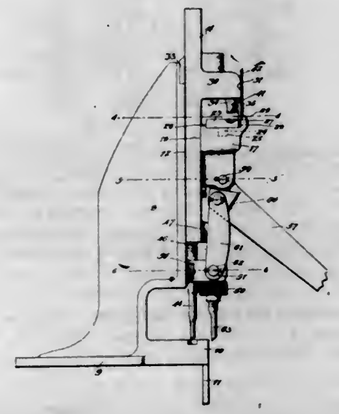
1,808,038. TAKE-UP METHOD. FRANK HONIG, Oak Park, Ill., assignor to Cyclo Corporation, Chicago, Ill., a Corporation of Illinois. Original application filed Feb. 16, 1924, Serial No. 693,264. Divided and this application filed Feb. 27, 1924. Serial No. 695,478. 6 Claims. (Cl. 242—79.)



1. In taking up a flexible strand and forming therefrom a plurality of coils, the method which comprises drawing the strand with uninterrupted tension to a convolution-forming zone and forming it into convolutions without depending for tension upon stress transmitted from the convolutions, allowing the convolutions to accumulate in a coil, and successively removing the coils from the coil-forming zone, without interrupting the convolution-forming process.

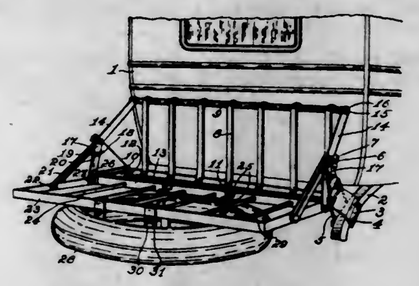
1,808,039. VEHICLE HEADLAMP ADJUSTING APPARATUS. CLAUD E. HUNTER, Peculiar, Mo. Filed July 10, 1930. Serial No. 466,978. 7 Claims. (Cl. 240—62.)

1. In an apparatus of the kind described, the combination with the fenders of a vehicle, of a horizontal tube having its ends respectively supported on said fenders, a bearing mounted on said tube, a vertical shaft oscillative on its axis in said bearing, a head lamp carried by and oscillative with said shaft, a rack reciprocative in said tube, a pinion fastened to and oscillative with said shaft and meshing with said rack, and means for reciprocating said rack.



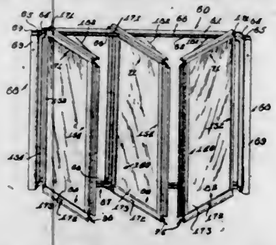
1,808,040. NAME PLATE. RAYMOND D. HYATT and RAE E. COCHRAN, Columbus, Ohio, assignors to The D. L. Auld Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 22, 1928. Serial No. 328,008. 7 Claims. (Cl. 40—20.)

1. In the method of attaching a name plate to a shell, the formation of a lug on said plate, inserting said lug through a slot in said shell of substantially the same dimensions in cross section as the lug and twisting the end of said lug to bring the cross sectional area of the lug across said slot and in engagement with the edges of said slot whereby the name plate is drawn to and held on the shell.



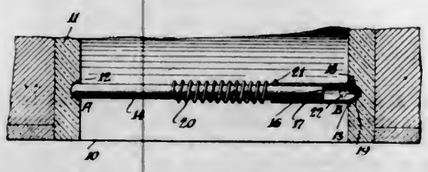
1,808,041. SHEARING, PUNCHING, AND RIVETING MACHINE. ANDREW JOHNSON, Jr., Roseau, Minn., and GEORGE F. WORTHINGTON, Sr., Chicago, Ill., assignors to Vega Separator Corporation of America, Chicago, Ill., a Corporation of Illinois. Filed June 1, 1929. Serial No. 367,815. 11 Claims. (Cl. 29—34.)

1. A machine of the class described comprising a stationary work support, a work-performing member adapted to be advanced step-by-step toward said support, said work-performing member having a thrust shoulder transverse to its line of movement, a thrust member co-operable with said shoulder, means for first moving said thrust member to thrust against said shoulder and advance said work-performing member one step and for then withdrawing said thrust member from said shoulder, and means whereby said shoulder and said thrust member may then be relatively adjusted again into contact with each other in readiness for advancing said work-performing member a second step in the same direction.



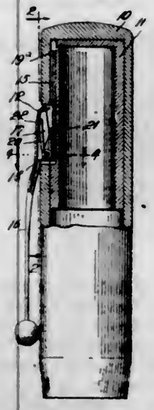
11. A machine for shearing the conventional sections from a sickle bar, comprising a jaw having a channel to receive the rear edge of the sickle bar, said jaw having a ledge at one side of said channel to abut the rear end of one of the sections, a second jaw opposite said channel, said second jaw having one face to abut the front edge of the sickle bar and another face to lie against the inner side of one of the sections, and means for relatively moving said jaws to cause further forcing of the sickle bar into said channel while the section is held by said ledge, thereby shearing the rivets connecting the section and sickle bar.

1,808,042. ADJUSTABLE LUGGAGE CARRIER. GEORGE COLVIN KENNEDY, Waterloo, Iowa. Filed June 17, 1929. Serial No. 371,593. 6 Claims. (Cl. 224—29.)



1. A luggage carrier including a fixed section having a horizontal portion, a movable section, means connecting said sections and arranged to permit the movable section to move bodily in a substantially horizontal path toward and from the fixed section while maintaining substantial coplanar relation therewith, said movable section being pivoted to said means to permit swinging of the movable sections into selected angular position relative to the fixed section, and means to secure the movable section in the selected angular position.

1,808,043. SLIDING AND SWINGING WINDOW. JACOB L. KLEINMAN, New York, N. Y. Filed Oct. 2, 1928. Serial No. 309,762. 59 Claims. (Cl. 189—66.)

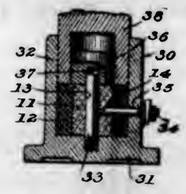


1. A window comprising a casement, frames slidably mounted in said casement, end and intermediate sashes pivotally mounted on said frames, said intermediate sashes formed with cutout portions to permit the swinging of said sashes.

1,808,044. TOILET-PAPER HOLDER. FRED W. KOMPA, Astoria, N. Y. Filed June 14, 1930. Serial No. 461,133. 2 Claims. (Cl. 242—55.2.)

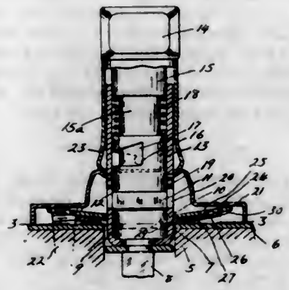
1. A holder for toilet paper rollers comprising in combination with a chamber formed in a bath-room wall and having recesses at directly opposite points of its side walls, a rod engaging with one end one of said recesses, a sleeve formed from a blank, adapted to receive the other end of said rod, a conical end formed with said sleeve adapted to engage the other of said recesses, a spring wound about said rod adapted to firmly press the ends of said rod and sleeve in their respective recess allowing a rotating of the paper roll about the same.

1,808,045. CLIP STRUCTURE FOR FOUNTAIN-PEN CAPS, PENCILS, AND THE LIKE. HENRY KRAUSE, New York, N. Y. Filed Dec. 5, 1929. Serial No. 411,747. 17 Claims. (Cl. 24—11.)



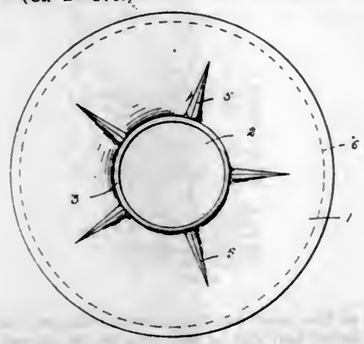
1. The combination with a tubular member containing a longitudinal slot, of a clip structure comprising a clip and an anchor bar extending in the same general direction and pivoted together and of greater width and area than the width and area of the slot, one of them being adapted to be passed through the slot in the tubular member so as to place the clip outside the tubular member and the anchor bar inside the tubular member.

1,808,046. FILM OF MAGNETIZABLE MATERIAL FOR EPISCOPIC PROJECTION. HEINRICH KÜCHENMEISTER, Berlin, Germany. Filed Jan. 30, 1928, Serial No. 250,734, and in Germany Feb. 7, 1927. 11 Claims. (Cl. 88—16.2.)



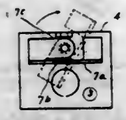
1. A moving picture and sound record band consisting of a metal band having a magnetic sound record, and of a coating extending over the surface of said band, said coating being provided with photographic sound and picture records for episcopic projection, at least one of said last two records overlying said magnetic record.

1,808,047. METHOD OF MAKING BEARINGS. JESSE T. LITTLETON, Jr., Corning, and RAYMOND W. LILLIE, New Rochelle, N. Y. Filed Oct. 15, 1928. Serial No. 312,637. 6 Claims. (Cl. 18—59.)



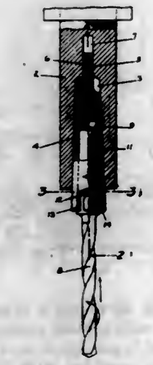
1. The method of making bearings which consists in forming a glass core with a shaft-receiving bore, placing said core in a mold, surrounding the core with finely comminuted material and heating and exerting pressure on the finely comminuted material to form a solid casing around the core, and cooling to cause a contraction of said casing on said core.

1,808,048. AUTOMOBILE DOOR HANDLE. CHARLES B. LOWE, Detroit, Mich., assignor to The Ferro Stamping Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 17, 1928. Serial No. 313,113. 8 Claims. (Cl. 292—356.)



1. The combination with a rotatable door handle and an escutcheon therefor, of means for resisting rotary movement of the door handle comprising a tension plate fixedly engaging the escutcheon and a rotatable tension plate secured upon the door handle to rotate therewith and slidably contacting the fixed tension plate.

1,808,049. ARM SHIELD. ERNEST S. LYDEN, Duluth, Minn. Filed Aug. 14, 1930. Serial No. 475,191. 1 Claim. (Cl. 2—170.)

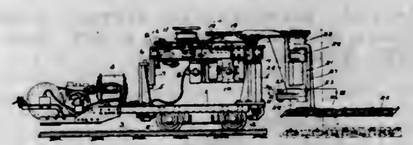


Dished disc-like shield of the character described made of a single piece of flexible material having an axial hole therethrough, an annular enlargement about the hole, a groove within the inner face of the enlargement, reinforcing ribs extending radially from the flange upon the inner face of the shield, and an annular drip flange adjacent its marginal edge, and projecting from the convex surface thereof.

1,808,050. SWITCH BOX. JOHN E. MAIR, Mars, Pa., assignor to National Electric Products Corporation, a Corporation of Delaware. Filed Feb. 7, 1930. Serial No. 426,562. 4 Claims. (Cl. 247—21.)

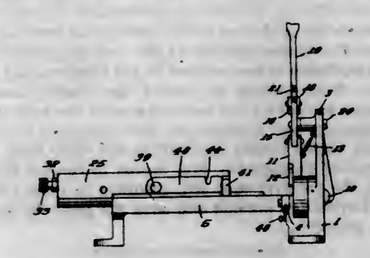
1. The combination with a switch-box having a cover-attaching lug projecting outwardly from its side wall, of a two-position box-supporting member comprising a tail-piece bearing against and rotatably pivoted to said box wall and an outwardly projecting shelf, an opening in said shelf containing said lug when said member is in one position, and a slot extending from said shelf-opening through said tail-piece adapted to permit said tailpiece to pass said lug upon rotation of said member to its other position.

1,808,051. DRILL SUPPORT. JOSEPH P. MASLEWSKI, Minneapolis, Minn. Filed Jan. 16, 1930. Serial No. 421,193. 2 Claims. (Cl. 279—103.)



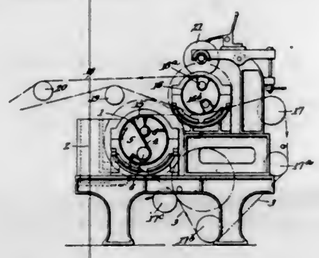
1. A drill supporting sleeve having a tapered socket therein provided with an angular slot in its wall, a tapered shank adapted to be received in said socket, and a pin received in said shank and adapted to be received in said slot to detachably secure the shank in the socket, said slot having an inclined wall adapted to be engaged by said pin, whereby rotation of said sleeve and drill in one direction will cause said shank to be tightly secured to said sleeve.

1,808,052. GUN. GEORGE M. MCCANN, New Castle, Del. Filed Jan. 31, 1931. Serial No. 512,615. 1 Claim. (Cl. 89—16.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



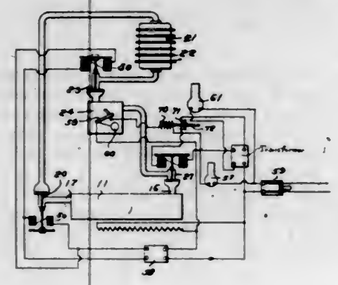
In a gun, an outer tube provided with a slot, a liner within the tube and capable of longitudinal movement with respect thereto, a conduit insertable through the slot in the tube and attached to the liner, the diameter of the conduit being less than the length of the slot in the tube.

1,808,053. COAL MINING MACHINE. JOHN W. MCPHERSON, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 4, 1922. Serial No. 599,090. 6 Claims. (Cl. 262—28.)



1. In a mining machine, a truck, an overhanging bracket having a bearing mounted for transverse movement across the front of said truck, a vertical shaft mounted in said bracket bearing in front of said truck, a horizontal kerf cutter having a bracket provided with a forked bearing rotatably mounted upon said shaft and resting upon said bearing of said overhanging forked bracket for supporting said kerf cutter, and means for securely fixing said kerf cutter in any one of a plurality of different angular positions about said shaft.

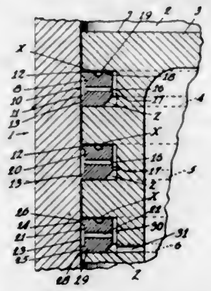
1,808,054. LEAD AND RULE CUTTER. FRANK MEESE, Chicago, Ill. Filed Nov. 23, 1929. Serial No. 409,257. 7 Claims. (Cl. 164—105.)



1. In a lead and rule cutter, a frame, a bed detachably secured thereto, a stationary knife carried by said bed, an oscillating knife carried by said frame for cooperation with said stationary knife, a gauge adjustably carried by said bed, and an extension for said gauge pivotally connected thereto and adjustable therewith upon said bed.

1,808,055. PAPER MAKING MACHINE. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Co., Sandusky, Ohio, a Corporation of Ohio. Filed July 20, 1926. Serial No. 123,757. 10 Claims. (Cl. 92—39.)

2. In a paper-making machine, a rotating suction roll; a wire traveling thereon; means for feeding pulp solution on the vacuum area of the surface provided by the wire on said suction roll, said vacuum area extending beyond the level of the liquid, so that a sheet is continually formed by vacuum-induced deposit of fibres in close formation as the wire traverses the arc of contact with the liquid and the vacuum action continues on the sheet as it passes from the liquid; and means rapidly moving solution to and fro across the forming surface to promote crisscross deposition of fibres.

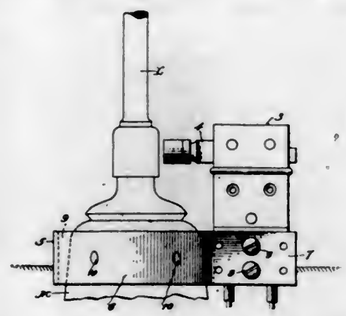


1,808,056. REFRIGERATING SYSTEM. ROBERT J. MITCHELL, Kent, Ohio. Filed May 9, 1929. Serial No. 361,781. 3 Claims. (Cl. 62—5.)

1. A refrigeration system comprising a still-absorber, a condenser and a receiver-evaporator orbitally connected; valves respectively between the still-absorber and condenser; between the condenser and receiver, and between the receiver and still-absorber; a heater for the still-absorber, means responsive to low content in the receiver, and to temperature thereadjacent to control the heater, corresponsive means to control the valves between the still-absorber and condenser, and between the condenser and receiver, to open said valves during distillation and close them during the period of evaporation, and means to control the valve between the receiver and still-absorber to close the same during distillation periods and open the same during evaporation periods.

1,808,057. PISTON RING. ROBERT C. MONTEAGLE, San Francisco, Calif. Filed Mar. 25, 1929. Serial No. 349,837. 4 Claims. (Cl. 74—109.)

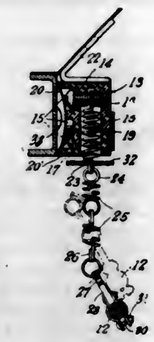
1. The combination with a cylinder having a piston slidable therein, said piston having an annular groove, of a ring disposed in said groove, one face of said ring having an annular oil groove for forming a seal between the ring and the adjacent wall of said groove, the inner edge of the opposite face of said ring being beveled for forming a



cavity so that gases entering therein from the cylinder will force the oil-seal side of said ring firmly against the wall of the piston groove.

1,808,058. WINDSHIELD. JAMES MORRISON, Cincinnati, Ohio, assignor to The Highland Body Manufacturing Company, Elmwood, Ohio, a Corporation of Ohio. Filed Dec. 14, 1929. Serial No. 414,068. 5 Claims. (Cl. 296—93.)

1. A windshield comprising a rigid frame having flanges extending inwardly and outwardly of the frame, rubber strips providing channels for receiving and gripping said flanges, said strips likewise providing channels opening inwardly of the frame, and a glass sheet receivable along its edges in said inwardly-opening channels and filling the space within the frame.

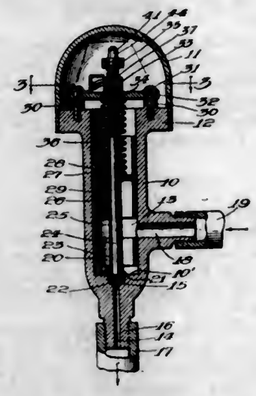


1,808,059. CLAMP. GUSTAV M. MORTENSON, Kane, Pa. Original application filed Apr. 8, 1929, Serial No. 353,537. Divided and this application filed Mar. 13, 1930. Serial No. 435,515. 1 Claim. (Cl. 24—19.)

A clamp adapted to surround a tapered member, said clamp being provided with a thick resilient lining to adapt itself to any degree of taper which said member may possess, said clamp being provided with inwardly projecting studs of a length less than the thickness of the lining, the latter having sockets in which said studs are received.

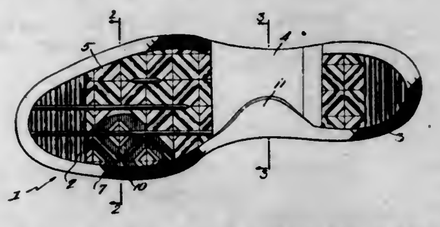
CARNEGIE LIBRARY OF ATLANTA

1,808,060. ELECTRIC SWITCH. WILLIAM F. NEUBECK, Brooklyn, N. Y. Filed May 13, 1929. Serial No. 362,603. 14 Claims. (Cl. 200—59.)



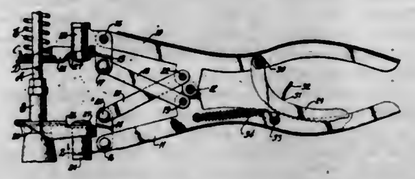
1. In an electric switch for mounting on a stationary part, the combination of a casing having an open face, a pair of contacts within said casing, an extensible switch arm pivoted within the casing to swing between the contacts and extending through the open face thereof, a flexible link operatively connecting said switch arm to a movable part under tension, and a friction element mounted on said switch arm and normally held out of engagement with said casing when said switch arm is under tension, said friction element being adapted to frictionally engage with said casing in the event of a slackening of tension on said switch arm to hold the switch arm in an inoperative position.

1,808,061. TREATMENT OF THREADS, FABRICS, OR OTHER MATERIALS COMPOSED OF OR CONTAINING ARTIFICIAL FILAMENTS. CHARLES WILFRED PALMER and STEPHEN MILLER FULTON, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Nov. 16, 1925, Serial No. 69,526, and in Great Britain May 26, 1925. 10 Claims. (Cl. 8—20.)



1. In a process of treating a material containing lustrous cellulose acetate filaments with an agent which tends to delustre the material, conducting the treatment in the presence of normal salt of neutral to acid reaction.

1,808,062. MEASURING VALVE. THOMAS J. PARKER, Chicago, Ill., assignor of one-half to William McGuineas, Chicago, Ill. Filed Aug. 18, 1930. Serial No. 476,042. 7 Claims. (Cl. 221—95.)

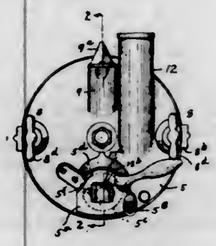


1. A measuring valve comprising a housing forming a fluid receiving chamber, an outlet and an inlet communicating with the chamber, a shaft movably mounted in the housing, inlet and outlet closing means fixed to the shaft, the inlet being normally open and the outlet normally closed, a piston slidably mounted on the shaft, operative connections between the piston and the shaft for moving the shaft longitudinally relative to the piston when the piston has been actuated under influence of fluid pressure in the chamber, means for moving the piston in the opposite direction and means for reversing the direction of the shaft to restore the inlet and outlet closing means to normal position, said operative connections between piston and shaft comprising a head on the shaft, a coiled spring on the shaft between the piston and the head, a pivoted trip lever fixed on the housing, in engagement with the shaft head and having a contact arm adapted for engagement with the piston for releasing the trip lever from the head when the lever is pivotally actuated by said piston.

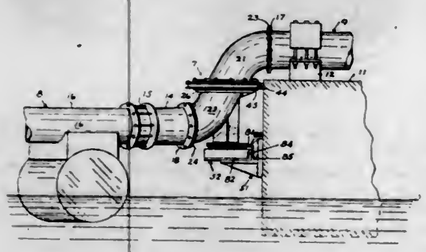
1,808,063. FOOTWEAR. MORTON L. PATERSON, Boston, Mass., assignor to Converse Rubber Company, Malden, Mass., a Corporation of Massachusetts. Filed July 16, 1929. Serial No. 378,598. 13 Claims. (Cl. 36—32.)

2. A shoe sole comprising a forward part having an irregularly surfaced intermediate portion, a marginal reinforcement extending about the forward part and having a greater depth than that of the intermediate portion, a reinforcing pad integral with the marginal reinforcement and disposed upon the ball portion of the shoe, said marginal reinforcement extending backwardly along the inner side of the shank to the heel, and an extension of said reinforcement providing a pad upon the shank to support the arch portion of the foot.

1,808,064. VALVE LIFTER. WILLIAM J. PEARMAIN and JAMES S. ALLAN, Racine, Wis., assignors to Rex Accessories Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 15, 1929. Serial No. 340,101. 3 Claims. (Cl. 29—86.3.)



1. A valve-spring-lifting tool comprising two lever members pivotally connected, bell cranks pivotally connected to the ends of said members, means for maintaining said bell cranks substantially in parallelism, and finger members pivotally mounted on said bell cranks.



1,808,065. FREEZING CYLINDER. LEROY S. PROUTS, Canton, Ohio, assignor to The H. H. Miller Industries Company, Canton, Ohio, a Corporation of Ohio. Filed July 25, 1927. Serial No. 208,235. 4 Claims. (Cl. 220—24.)

3. A valve mechanism comprising a valve seat, a valve element movable relative to said seat and formed with an

opening adapted to register with said valve seat when said valve element is seated and forming a separate valve seat, a valve element movably mounted on said first mentioned valve element to engage and disengage the last mentioned valve seat, and separate means for operating said valve elements independently.

1,808,066. SWIVEL JOINT FOR PIPES. SIDNEY G. PLUMMER, Oakland, Calif. Filed Sept. 10, 1929. Serial No. 391,559. 5 Claims. (Cl. 37—72.)

1. In a swivel fitting for connecting pipes, a pair of tubular elements having opposed ends thereof providing annular radial flanges engaged in coaxial and abutting relation for relative rotation about a fixed axis, and antifriction means cooperative with one only of said flanges to maintain the same in coaxial alignment with the other flange.

1,808,067. PAPER AND METHOD OF MAKING THE SAME. HAROLD ROBERT RAFTON, Lawrence, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Nov. 15, 1928. Serial No. 319,719. 41 Claims. (Cl. 92—21.)

1. The method of incorporating into paper filled with alkaline filler an inorganic alkali metal salt with a pH value greater than 7.0, which is precipitable by material which depresses its hydroxyl ion concentration, comprising mixing fibrous material, said alkali metal salt and a precipitant therefor, and alkaline filler, and adding to the resulting mix a restoring material under conditions favoring the minimizing of the time of contact of the constituents of the mix, and thereafter making paper therefrom.

1,808,068. MANUFACTURE OF PAPER. HAROLD ROBERT RAFTON, Lawrence, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Nov. 15, 1928, Serial No. 319,720. Renewed Jan. 21, 1931. 30 Claims. (Cl. 92—21.)

1. The method of incorporating into paper filled with alkaline filler an inorganic alkali metal salt with a pH value greater than 7.0, which is precipitable by material which depresses its hydroxyl ion concentration, comprising mixing fibrous material, alkaline filler, and said alkali metal salt, adding a precipitant therefor under conditions favoring the minimizing of the time of contact of the constituents of the mix, and thereafter making paper therefrom.

1,808,069. MANUFACTURE OF PAPER. HAROLD R. RAFTON, Lawrence, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Nov. 15, 1928, Serial No. 319,721. Renewed Jan. 21, 1931. 25 Claims. (Cl. 92—21.)

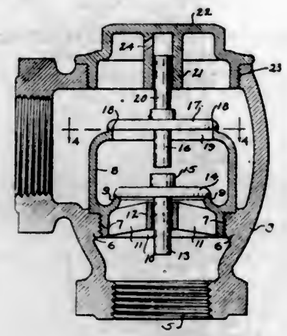
1. The method of incorporating into paper filled with alkaline filler the precipitate of an inorganic alkali metal salt with a pH value greater than 7.0, which is precipitable by material which depresses its hydroxyl ion concentration, and a precipitant therefor, comprising separately mixing said alkali metal salt and said precipitant, adding the resulting product to fibrous material and alkaline filler under conditions favoring the minimizing of time of contact of the constituents of the mix, and thereafter making paper therefrom.

1,808,070. METHOD OF PRODUCING PAPER FILLED WITH ALKALINE FILLER. HAROLD R. RAFTON, Lawrence, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Nov. 24, 1928. Serial No. 321,753. 31 Claims. (Cl. 92—21.)

1. That step in the method of manufacturing a substantially unsized paper filled with alkaline filler comprising adding alkaline filler, in an amount sufficient to impart a substantial degree of filling to the resulting paper, to fibrous material under conditions favoring the minimizing of the time of contact of the alkaline filler and the fibrous material.

1,808,071. METHOD OF PRODUCING PAPER FILLED WITH ALKALINE FILLER. HAROLD R. RAFTON, Lawrence, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Nov. 24, 1928, Serial No. 321,754. Renewed Aug. 15, 1930. 33 Claims. (Cl. 92—21.)

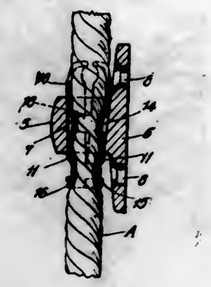
1. The method of manufacturing paper filled with alkaline filler comprising adding alkaline filler in an amount sufficient to impart a substantial degree of filling to the resulting paper, and an aluminum salt to fibrous material under conditions favoring the minimizing of time of contact, and thereafter making paper therefrom.



1,808,072. METHOD OF IMPROVING PAPER MACHINE OPERATION. HAROLD ROBERT RAFTON, Lawrence, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Dec. 11, 1928, Serial No. 325,407. Renewed Mar. 5, 1931. 24 Claims. (Cl. 92—40.)

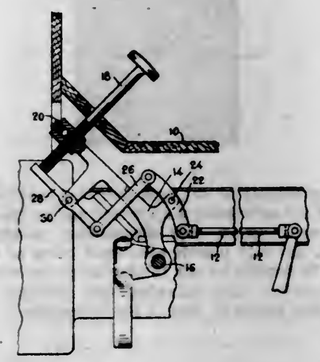
1. The method of manufacturing paper filled with alkaline filler and containing casein in its furnish, comprising adding to a fibrous mix comprising fibrous material, casein bearing constituents, and alkaline filler, alum under conditions favoring the minimizing of time of contact of the constituents of the mix, and thereafter making paper therefrom.

1,808,073. METHOD OF IMPROVING PAPER MACHINE OPERATION. HAROLD ROBERT RAFTON, Lawrence, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Dec. 11, 1928, Serial No. 325,408. Renewed Mar. 5, 1931. 26 Claims. (Cl. 92—40.)



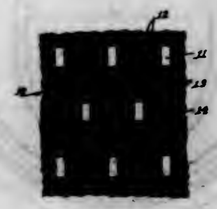
1. The method of manufacturing paper filled with alkaline filler and containing casein in its furnish, comprising adding to a fibrous mix originally comprising fibrous material, casein bearing constituent, and alum, alkaline filler under conditions favoring the minimizing of time of contact of the constituents of the mix, and thereafter making paper therefrom.

1,808,074. VALVE. FREDERICK F. RIKE and WILLIAM P. HUFFMAN, Dayton, Ohio, assignors to Buckeye Iron and Brass Works, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 24, 1927. Serial No. 228,265. 6 Claims. (Cl. 277—42.)



1. In combination, a valve casing having inlet and exit pipes arranged and connected thereto at right angles to one another, a detachable cover in line with one of said pipes, a valve cage detachably mounted in line therewith and poppet valves carried by said cage, and means to guide said valves, said valves being so arranged that the movement of one will move the other while they may move a predetermined distance independently one of the other.

1,808,075. CORD OR ROPE HOLDING DEVICE. SIDNEY ROTHSCHILD, New York, N. Y. Filed May 7, 1930. Serial No. 450,559. 4 Claims. (Cl. 24—136.)



4. A gripping element for cord or rope holders comprising a two part rope embracing means, each of the parts comprising a relatively long member of substantially cross sectional circular form, rope engaging means formed on one end of each of said members, guide means carried by each of said members and overlying the other member, and inwardly projecting rope engaging means intermediate the ends of said members, said last mentioned means being formed from the body of the members.

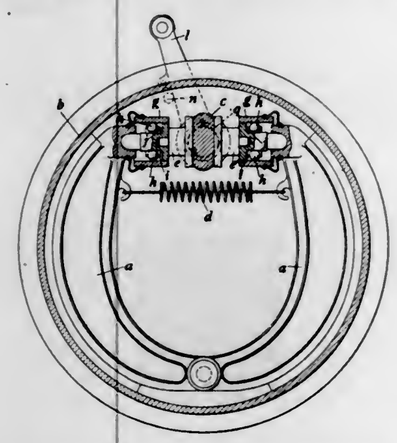
1,808,076. BRAKE OPERATING MECHANISM. ROY S. SANFORD, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Original application filed Feb. 28, 1927, Serial No. 171,505. Divided and this application filed Feb. 11, 1928. Serial No. 253,585. 11 Claims. (Cl. 188—196.)

2. Brake operating mechanism comprising a movable brake operating member, a brake connection adjustably coupled therewith to be actuated thereby, a tread portion carried by the member and adjustable thereon to vary the adjustment of the brake operating connection with the member.

1,808,077. SOUND PICTURE SCREEN. WILLIAM J. SCHOONMAKER, New York, N. Y. Filed Nov. 5, 1929. Serial No. 404,882. 8 Claims. (Cl. 88—24.)

1. A sound picture screen, comprising a woven cloth formed with interstices and somewhat larger apertures in the weaving among the threads and having a plastic fluid compound applied thereto, the said plastic compound being of a density suitable for covering the threads of the said cloth in order to make the latter waterproof and washable and of a density sufficient to clog up and entirely close the said interstices, but not of sufficient density to clog up or close the apertures.

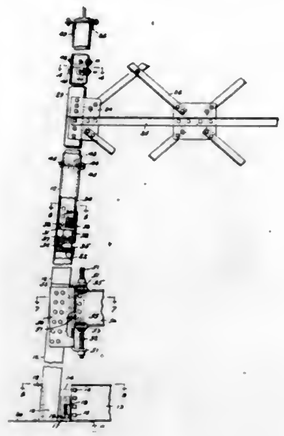
1,808,078. NONINFLAMMABLE SOUND PICTURE SCREEN. WILLIAM J. SCHOONMAKER, New York, N. Y. Filed Nov. 12, 1929. Serial No. 406,559. 6 Claims. (Cl. 88—24.)



1. A non-inflammable sound picture screen comprising a woven fabric formed with interstices in the weaving

among the threads, the said fabric being submitted to a fireproof solution treatment and having afterwards applied to both sides a plastic non-inflammable and waterproof chemical compound, said plastic compound being of a density suitable for covering the threads of the said fabric, thus acting as a seal in preventing deterioration

of the ingredients of the said fireproof solution from exposure to air or contact with water and at the same time making said screen non-inflammable, waterproof and washable, the said plastic compound being of a sufficient thinness in density as not to clog up or entirely close the said interstices thus allowing the passage of sound through said screen by way of the interstices.

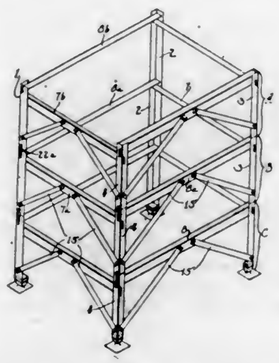


1,808,079. AUTOMATICALLY ADJUSTABLE MECHANICAL STOP OR ABUTMENT. WILLIAM SEDDON and ROGER FREDERICK CORDEY, Cowley, Oxford, England, assignors to Morris Motors (1926) Limited, Cowley, Oxford, England. Filed May 13, 1929, Serial No. 362,786, and in Great Britain Nov. 13, 1928. 2 Claims. (Cl. 188—79.5.)

1. In motor vehicle brakes, the combination comprising a movable brake member, a thrust piece acting on said member, the said piece being formed with a tapered portion, a hollow cylindrical guide surrounding the thrust piece, a plurality of balls, located between the tapered portion of the thrust piece and the guide, a resilient cage for holding the balls, in contact with the guide and a shoulder on the thrust piece for acting in one direction on the cage, substantially as described.

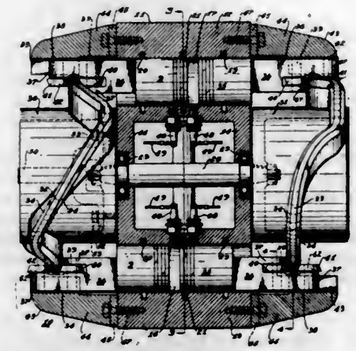
1,808,080. STEEL DERRICK. JAMES E. SMITH, Los Angeles, Calif., assignor to Western Pipe & Steel Company of California, a Corporation of California. Filed Feb. 23, 1928. Serial No. 256,180. 12 Claims. (Cl. 189—18.)

2. A reinforced steel derrick comprising a base plate, a main tower resting on said base plate having a plurality of legs, a reinforced base section on each leg extending a substantial distance above said base plate, a seat on each base section above said base plate, an auxil-



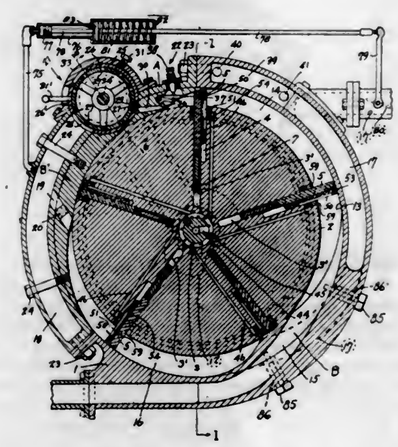
iary tower having a plurality of legs, a foot piece on each leg of the auxiliary tower, and adjustable means on each foot piece engaging the seat on the respective legs of the main tower.

1,808,081. ACID-PROOF COATING COMPOSITION. FRANCIS D. SULLIVAN, Memphis, Tenn. Filed May 23, 1929. Serial No. 365,570. 2 Claims. (Cl. 106—8.)



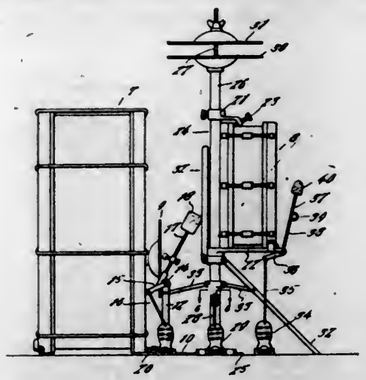
1. A coating composition comprising a mixture of Portland cement, mica, sulphur, and a metallic coloring matter mixed together in the presence of heat.

1,808,082. SCAFFOLD. CARL A. THOMPSON, Harvard, Ill. Filed Dec. 26, 1928. Serial No. 328,378. 3 Claims. (Cl. 304—23.)



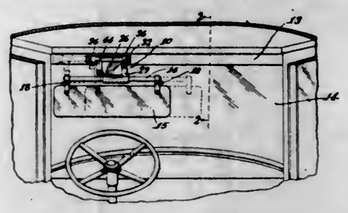
1. A scaffold construction comprising a plurality of sections arranged in superimposed relation, said sections comprising corner posts and detachable members for connecting the same, the upper ends of said posts being provided with a plurality of openings for receiving the end portions of said detachable members, the lower ends of said posts being provided with securing members having openings arranged to be aligned with certain of the openings in the upper ends of the posts when the lower ends are disposed contiguous to the upper ends, certain of said detachable members having recesses for receiving certain portions of said corner posts when the ends of the detachable members are disposed within certain of the openings in said corner posts, the other of said detachable members being provided with recesses arranged for receiving portions of the corner posts and said securing members when the ends of the detachable members are disposed within the other of the openings in said corner posts, and a base section adapted for supporting said sections and connected therewith.

1,808,083. INTERNAL COMBUSTION ENGINE. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 31, 1929. Serial No. 367,184. 25 Claims. (Cl. 123—64.)



7. In an internal combustion engine, in combination, a cylinder, a pair of pistons movable in the cylinder, the cylinder having a combustion chamber between the pistons, and cam means causing the pistons to move substantially equally in the same direction on two of the strokes in a cycle of the engine.

1,808,084. ROTARY ENGINE. FRANK E. TIDD, Yerington, Nev. Filed Apr. 30, 1928. Serial No. 274,034. 7 Claims. (Cl. 123—16.)

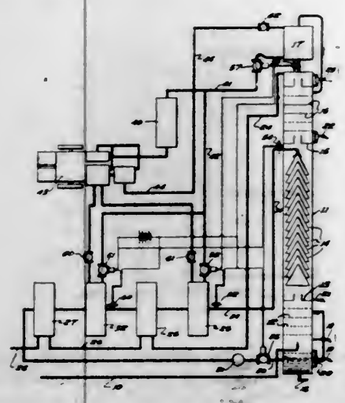


1. In a rotary engine, a combustion chamber, a gas inlet for said chamber, a timed valve for causing said inlet to intermittently deliver a gas to said chamber and spark-controlling means consisting of a stationary terminal and a movable terminal, said movable terminal being controlled by gravity when the compressed gas ceases to flow into said chamber.

1,808,085. MUSICAL TRAPS. FREDERICK J. TROPPE, Joliet, Ill. Filed Aug. 1, 1929. Serial No. 382,641. 9 Claims. (Cl. 84—422.)

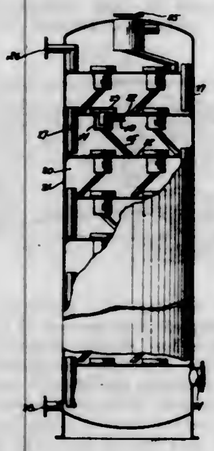
6. A structure of the character described comprising a tubular standard, an arm projecting laterally from an intermediate portion of the standard, a clamp mounted on the standard in spaced relation above the arm, said arm and the clamp constituting means for securing a snare drum on the standard, a beater mounted for swinging movement on the free end portion of the arm, a foot pedal operatively connected with the beater, a stationary cymbal on the upper end portion of the standard, a rod disposed for vertical reciprocation in the standard and projecting thereabove, a cymbal mounted on the upper end portion of the rod for movement therewith and engageable with the stationary cymbal, and a foot pedal operatively connected to the lower end portion of the rod for actuating said rod.

1,808,086. MOUNTING FOR AUTOMOBILE GLARE SHIELDS. ALFRED R. ULP, Altadena, Calif.. Filed Aug. 5, 1929. Serial No. 383,698. 3 Claims. (Cl. 296—97.)



2. A device of the character described comprising a stationary tube adapted to be secured to a fixed support, a bracket having a bore formed therein rotatable and slidable on said tube, a second tube parallel to said stationary tube and rotatable and slidable in a second bore formed in said bracket, adjustable mechanisms carried by said bracket adapted to frictionally engage said stationary tube and said second tube, and a glare shield carried by said second tube.

1,808,087. APPARATUS FOR TREATING GAS. KENNETH M. URQUHART, Marshall, Okla. Filed Jan. 29, 1929. Serial No. 335,801. 8 Claims. (Cl. 62—122.)



1. An apparatus for the removal of condensable substance from a gas which comprises a tower having a gas inlet near the base thereof, liquid outlets below said gas inlet, one of said liquid outlets leading to an impeller which drives the liquid removed through chilling devices, a liquid inlet at a point above the gaseous inlet where the

chilled liquid is allowed to flow counter to the upward flowing gas within the tower, baffles between the gas inlet and the liquid inlet, a plate above said liquid inlet preventing substantial down flow of liquid but permitting up flow of gas, bubble plates above said plate, a reflux

condenser above said bubble plates and a gaseous outlet in the upper portion of said tower from which a pipe leads the gas through two heat exchangers in series, where the liquid before mentioned is consequently chilled by the out flowing gas, and a cooler operated by a refrigerant interposed between said two heat exchangers.

1,808,088. APPARATUS FOR CONTACTING TWO OR MORE FLUIDS. KENNETH M. URQUHART, Marshall, Okla. Filed Jan. 29, 1929. Serial No. 335,802. 3 Claims. (Cl. 261—114.)

1. A contacting tower having a plurality of plates preventing the free fall of the heavy fluid used in said contracting tower, means above said plates to mix the lighter fluid coming up through said plates with the heavy fluid upon said plates and means below each plate and depending therefrom to separate the heavy and light fluid from the next lower plate, said last named means comprising a centrifugal separator having a tangential inlet below said plate, an outlet through said plate for the lighter fluid and an outlet downwardly going to a point below the surface of the heavier fluid on a plate below.

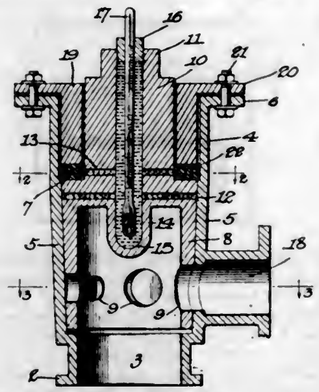
1,808,089. DATING STAMP. RAOUL VILLON and ROBERT LEMAIGNEN, Paris, France. Filed Oct. 22, 1928, Serial No. 314,276, and in France Oct. 28, 1927. 3 Claims. (Cl. 101—110.)

1. In a dating stamp, the combination of a handle, a case secured to the said handle, a shaft crossing the said case, an operating knob secured to the said shaft at the outside of the said case, a first toothed number wheel mounted on the said shaft, several other number wheels mounted loosely on the said shaft, means for transmitting in an intermittent manner the rotation of the first number wheel to the other number wheels for causing these wheels to turn one tooth at each revolution of the first number wheel, pawls, the noses of which engage respectively the teeth of each number wheel and guide the said pawls between the adjacent number wheels, a sliding bolt crossing the said case above the noses of the said pawls and provided with grooves which allow the said pawls to disengage the said number wheels, and a spring adapted to bring back automatically the said bolt in the catching position.

1,808,090. ADHESIVE. ARCHIBALD H. VINING, San Jose, Calif. Filed Jan. 30, 1930. Serial No. 424,725. 4 Claims. (Cl. 87—17.)

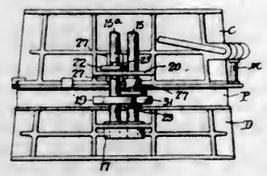
1. An adhesive composition for masks consisting of beeswax, lanolin, and a turpentine having the consistency of Venice turpentine.

1,808,091. PNEUMATIC TIRE TUBE. JAMES W. WABER, Chicago, Ill. Filed Aug. 9, 1930. Serial No. 474,147. 7 Claims. (Cl. 154—15.)



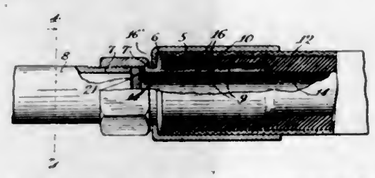
1. The method of constructing an inner tube for pneumatic tires which consists in forming an endless tube of vulcanizable rubber, expanding said tube by internal pressure, attaching to the outer circumference of said tube while inflated, a layer of plastic sealing compound, covering the compound with a vulcanizable rubber sheet which extends beyond the edges of the compound and contacts with the endless tube for adhesion thereto and curing the entire tube structure to produce a full molded tube.

1,808,092. TOP RELIEF VALVE FOR SULPHITE DIGESTERS. LEOPOLD WIMMER, Muskegon, Mich. Filed July 21, 1930. Serial No. 469,537. 3 Claims. (Cl. 92—7.)



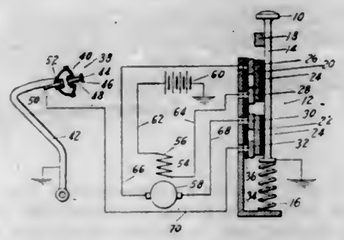
1. In a device of the class described, the combination of a valve casing having a frusto-conical lower portion and

having an end opening and a lateral opening, a revoluble valve seated in the casing, said valve having a series of alined openings of different sizes adapted to be brought into communication with the lateral opening of the valve



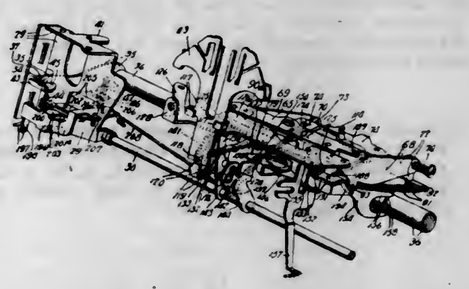
casing, a valve plug integral with the valve and having a shouldered portion, radiating oil passages in said valve plug, a packing positioned above the shoulder of the plug, and a packing gland adapted to be fastened to the casing and seating on the packing.

1,808,093. MOLDER'S FLASK. CHARLES O. WOOD, Chambersburg, Pa. Filed July 18, 1930. Serial No. 468,943. 6 Claims. (Cl. 22—96.)



1. A molder's flask comprising a drag and a plurality of superposed flask members successively removable from the drag, in combination with a plurality of guide pins at each end of the flask, each removable flask member being guided by different pins of said plurality of pins.

1,808,094. HOSE CONNECTION. GEORGE F. YACKEY, Whittier, Calif., assignor to Earl B. Wiggins, Los Angeles, Calif. Filed Mar. 30, 1929. Serial No. 351,134. 2 Claims. (Cl. 285—84.)

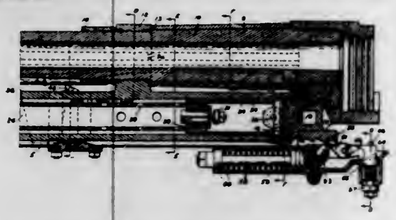


1. In combination, a hose coupling comprising a tubular member having an internal and an external shoulder intermediate the ends thereof, a series of external wedge shaped projections on one end of said coupling against which a hose section is adapted to be held with one end thereof abutting against the external shoulder, the opposite end of said coupling being internally threaded for cooperating with an externally threaded pipe section, a protecting lining for said coupling, one end of said lining being adapted to be clamped between the internal shoulder of the coupling and end of the pipe section.

1,808,095. CONTROL MECHANISM FOR MOTOR VEHICLE ELECTRIC STARTING AND BRAKING MOTORS. VINCENT G. APPLE, Dayton, Ohio, assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Jan. 30, 1929. Serial No. 336,299. 13 Claims. (Cl. 172—179.)

1. Mechanism of the character described comprising, in combination, a reversible electric motor, a switch for said motor operable to one position to complete at any time all connections for running the motor in one direction, and operable to another position to only partially complete the connections for operating the motor in the reverse direction, and a second switch separately operable to complete the said connections to operate the motor in said reverse direction.

1,808,096. TYPEWRITING MACHINE. HENRY ALLEN AVERY, Groton, N. Y., assignor to L C Smith & Corona Typewriters Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 20, 1928. Serial No. 271,499. 30 Claims. (Cl. 197—151.)



17. In a typewriting machine, the combination of a vibratory ribbon guide, a bell-crank having a forwardly extending arm connected with the ribbon guide and a pendent arm and mounted to rock about an axis extending transversely of the machine, a key actuated tappet lever mounted to rock about and up and down extending axis, an upstanding motion transmitting lever interposed directly between the tappet lever and bell-crank, a pivot support parallel with the bell-crank axis upon which the upstanding lever is mounted to rock fore and aft and slide transversely of the machine, and means for sliding the upstanding lever along said support while in operative relation with said tappet lever into either of three positions, in one of which it is operatively disconnected from the pendent bellcrank arm and in the other two of which it is operatively connectd with the pendent bellcrank arm different distances from the axis of the bellcrank.

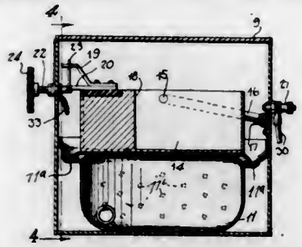
1,808,097. GUN. GLADEON M. BARNES, Hastings, Mich. Filed Dec. 10, 1929. Serial No. 413,117. 17 Claims. (Cl. 89—43.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

7. In a reciprocating gun, a recoil mechanism utilizing the compressive action and reaction of the gases of

discharge to check recoil and restore the gun to battery and a counter recoil buffer mechanism employing the elements of the recoil mechanism and gases from the recoil mechanism.

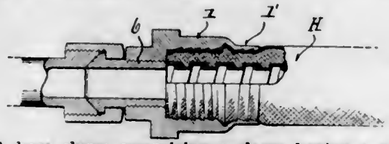
17. In a gun structure a channel-shaped cradle having guideways on its side plates, a gun slidably supported in the guideways and a cylinder underneath the gun having hangers embracing the gun and slidably supported in the guideways.

1,808,098. TREATMENT OF THREADS, FABRICS, OR OTHER MATERIALS COMPOSED OF OR CONTAINING ARTIFICIAL FILAMENTS. JOHN FREDERICK BRIGGS and CHARLES WILFRED PALMER, Spondon, near Derby, and JOHN THOMAS KIDD, Eaton, near Norwich, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Nov. 16, 1925, Serial No. 69,524, and in Great Britain May 26, 1925. 11 Claims. (Cl. 8—20.)



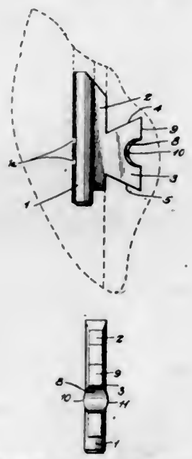
1. A process for imparting lustre to delustred cellulose acetate filaments in materials containing the same which comprises treating said material with a liquid comprising water and a swelling substance for cellulose acetate, and afterwards, without material reduction of the ratio of swelling substance to water in the liquid retained by the filaments, treating the material for the removal of water by evaporation.

1,808,099. DISPLAY DEVICE. JOSEPH EDWIN BURGESS, New York, N. Y., assignor to The United States Printing and Lithographing Company, Brooklyn, N. Y., a Corporation of Ohio. Filed July 2, 1928. Serial No. 289,703. 12 Claims. (Cl. 40—7.)



1. A device of sheet material of the class described for association with a container or the like including a display panel, a section extending therefrom and adapted when folded out of the plane of the panel to embrace a container, and an element foldable out of the plane of the panel for engagement with the first mentioned section to retain said panel and section in predetermined relative positions.

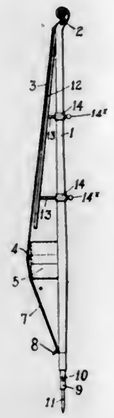
1,808,100. GAS FLOW ALARM SWITCH. LUIGI DE SIMONE and GIACOMO CIRIACONO, New York, N. Y. Filed Sept. 5, 1928. Serial No. 304,008. 5 Claims. (Cl. 200—83.)



1. In a pressure operated circuit controller for gas flow alarms, a casing, an expansible chamber through which gas flows mounted in the bottom of the casing and having inlet and outlet ports for connection in a gas supply line, a weighted support mounted on the top of the expansible chamber and carrying a pair of vertically spaced contacts electrically connected together, and a manually vertically adjustable contact finger mounted in the casing in the path of and between said pair of contacts.

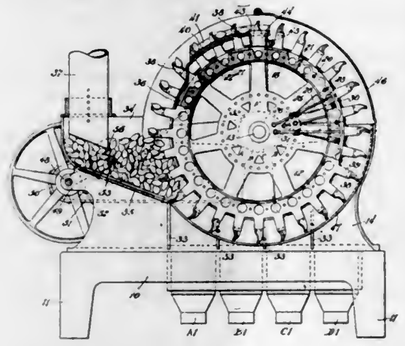
1,808,101. HOSE CLAMP. JOSEPH PETER EASTMAN, Manitowoc, Wis. Filed Dec. 12, 1927. Serial No. 239,459. 7 Claims. (Cl. 285—72.)

1. A hose clamp comprising a sleeve having a portion internally threaded with a right hand thread, and another portion internally threaded with a left hand thread, both of such portions being adapted to engage around the hose, and one of said portions being thinner than the remaining portion of the sleeve to provide for ready contraction on to the hose.



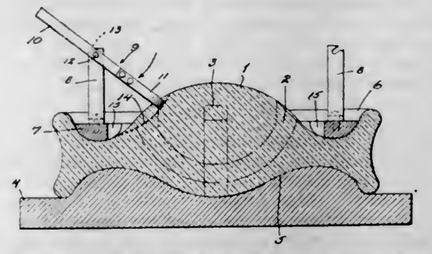
1,808,102. DENTAL CASTING POST. DAVID E. EVANS, Columbus, Ohio, assignor to The Columbus Dental Manufacturing Company, Columbus, Ohio, a Corporation. Filed May 7, 1929. Serial No. 361,022. 2 Claims. (Cl. 32—9.)

1. As a new article of manufacture, a casting post for the backing for an artificial tooth, comprising a post,



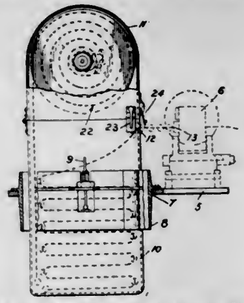
a web, and a retention member having a recess in its rear edge and protuberances from two side walls thereof, all formed integrally.

1,808,103. STRING MUSICAL INSTRUMENT. HERMANN FISCHER, New York, N. Y. Filed Dec. 14, 1928. Serial No. 326,016. 5 Claims. (Cl. 84—173.)



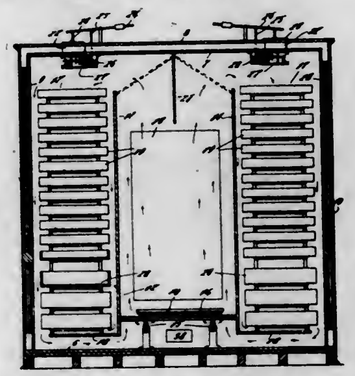
1. A string musical instrument comprising a shaft, a finger board removably attached to the shaft, and a sound box carried by the shaft below the finger board, the top surface of the finger board being formed at an acute angle toward the bow side of the string, as and for the purpose set forth.

1,808,104. NUT GRADING MACHINE. WILLIAM GEBHARDT, San Antonio, Tex., assignor to G. A. Duerler Manufacturing Company, San Antonio, Tex., a Corporation of Texas. Filed Dec. 17, 1928. Serial No. 326,630. 12 Claims. (Cl. 209—89.)



1. A machine for grading pecans and the like according to their lengths comprising, in combination, a rotary carrier movable over a series of chutes in succession; spring-urged nut gripping devices arranged in staggered relation on opposite sides of the carrier and having pockets to receive the nuts lengthwise therein; means to supply nuts, one at a time to the pockets; means to hold the grippers open while the nuts are being supplied; and cam means cooperating with the grippers to release the nuts successively according to their grade sizes so that they will fall into the respective chutes.

1,808,105. INSULATOR CUTTER AND METHOD OF TREATING INSULATORS. MINOR F. H. GOUVERNEUR, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Jan. 7, 1927. Serial No. 159,630. 8 Claims. (Cl. 25—105.)



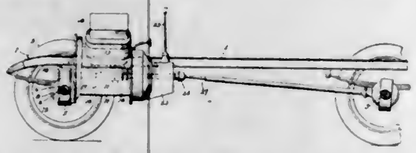
1. A device of the character described comprising a supporting member adapted to be mounted upon the top of an insulator, bracket members on said support, and a cutter pivotally mounted on said bracket members and having a substantially U-shaped blade adapted to cut through the material of the insulator along an arcuate path for scooping out the material at one side at a relatively small area.

1,808,106. MAGAZINE. SAMUEL G. GREEN, Gray, Ga. Filed Apr. 17, 1929. Serial No. 355,907. 3 Claims. (Cl. 89—33.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

3. In a magazine for a belt of ammunition, a portion for receiving folded layers of the loaded belt and a portion for revolvably supporting a part of the loaded belt.

1,808,107. INCUBATOR. WILLIAM HANSON, Trenton Junction, N. J. Filed Dec. 21, 1928. Serial No. 327,656. 2 Claims. (Cl. 119—37.)

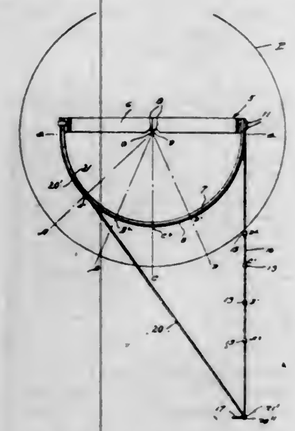
1. An incubator cabinet comprising an enclosure provided with longitudinally extending spaced parallel par-



titions defining a central air circulating shaft through which air passes upwardly, and a pair of side compartments, said partitions having their upper and lower edges spaced respectively from the floor and ceiling of the enclosure, a horizontal register supported between the lower portions of said partitions, and the heating means located beneath said register, together with a swingably mounted valve plate suspended from the ceiling and located centrally over said air shaft and adapted to be swung against either partition to shunt the circulating air in a desired direction.

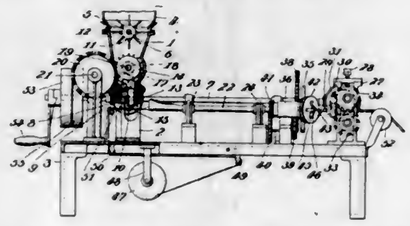
1,808,108. COMPOSITION OF MATERIAL FOR USE IN PANARY FERMENTATION. JOSEPH W. HAWKS, Piqua, Ohio. Filed Dec. 17, 1927. Serial No. 240,934. 20 Claims. (Cl. 99—10.)

8. A composition for use in panary fermentation, comprising two parts of edible gelatin, one-half to one part of monobasic acid phosphate, and a filler.



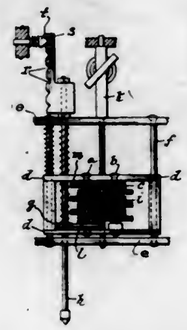
20. The process of making a composition for panary fermentation which comprises adding edible gelatine acidulated with monobasic acid phosphate, to the dough and other usual ingredients in proportion to the degree of hydration desired in the mass.

1,808,109. MOTOR VEHICLE. JOHN O. HEINZE, Detroit, Mich. Filed Oct. 24, 1928. Serial No. 314,561. 7 Claims. (Cl. 180—44.)



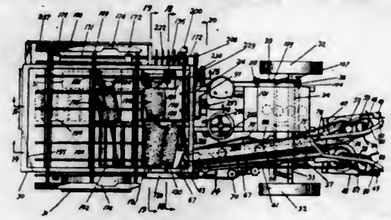
1. In a motor vehicle, the combination of a reciprocating piston engine having a tubular crank shaft provided with a crank member and a connecting member operated by piston reciprocation to rotate said shaft, a change speed power transmitting mechanism at one end of said engine, and a power-shaft extending through and projecting beyond the ends of said tubular crank shaft for transmitting motion from said change speed mechanism to the end of the engine opposite that at which said mechanism is located.

1,808,110. CIRCLE DIVIDER. FREDERICK F. HEITZIG, Fieldon, Ill. Filed June 3, 1929. Serial No. 368,046. 7 Claims. (Cl. 33—1.)



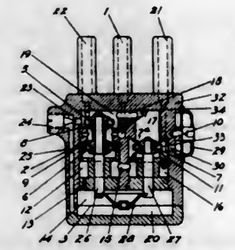
1. In a circle divider, an elongated flat bar, said bar being formed intermediate its ends to provide a center point, and a flexible strap formed of spring material having one end anchored to one end of said bar, and said strap adapted to be disposed in a semi-circular position, means for securing the free end of said strap to the opposite end of said bar, said strap being provided with a graduated scale, and detachable marker members for the strap adapted to be disposed in alignment with the graduations thereon.

1,808,111. MACHINE FOR MAKING PAPER-COVERED INCENSE CORDS. CHÛJI HORIGUCHI, Higashinari-Ku, Osaka-Shi, Japan, assignor to Kabushiki Kaisha Azumi Daiyakuho, Nishi-Yodogawa-Ku, Osaka-Shi, Japan. Filed Jan. 6, 1930, Serial No. 418,905, and in Japan Jan. 21, 1929. 6 Claims. (Cl. 117—41.)



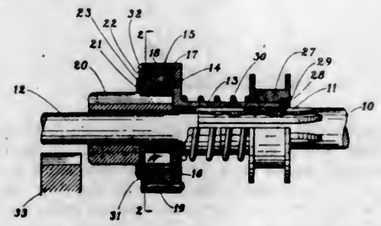
1. In a machine for making incense cords, having the incense material tubed in rice-paper-tape, and externally wrapped in inflammable paper tape, a feeder-box having a discharge spout therein, for feeding powdered incense, an agitator in the feed-box, a feed-control wheel in the lower end of the feeder-box, a trimming wheel in proximate position to, and in cooperating relation with the feed-control-wheel for smoothly disposing the incense in its passage through the feeder-box delivery spout, a forming conduit for tubing the incense material in the rice-paper-tape, and means for wrapping the rice paper covered material in inflammable paper tape to produce the finished product.

1,808,112. SPEED INDICATOR WITH SEVERAL MEASURING RANGES. ERHARD HORN, Leipzig, Germany. Filed Feb. 26, 1929, Serial No. 342,817, and in Germany Nov. 1, 1928. 1 Claim. (Cl. 74—58.)



A multiple wheel gearing for hand speed indicators, including a frame, a rotatable driven shaft, a pinion on said shaft, a movable carrier in said frame, intermediate shafts supported in said carrier, pairs of intermeshing gear wheels journalled on said shafts, certain of said gear wheels being movable with the carrier into mesh with the driven shaft pinion, an axially movable shaft mounted in said frame, and a pinion on said axially movable shaft selectively engageable with certain of the gear wheels.

1,808,113. CANE HARVESTING APPARATUS. ARTHUR CLIFFORD HOWARD, Northmead, New South Wales, Australia. Filed Apr. 17, 1929, Serial No. 355,854, and in Australia Apr. 23, 1928. 9 Claims. (Cl. 56—17.)

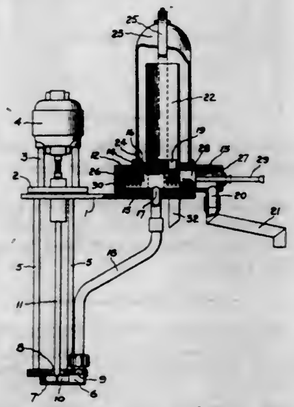


1. Cane harvesting apparatus comprising a wheeled structure provided with power drive and with steering means and also with means whereby cane stalks can be gathered and cut and firmly gripped at their butt ends by conveyor means and conveyed thereby in upstanding position rearwardly of the apparatus, fender means associated with the structure and below which such conveyor means passes, and an abutment on the structure in the path of such conveyor means adapted to allow bending of the upstanding cane stalks carried by such conveyor means to enable such stalks to be fed by such conveyor means in butt first position thereof to mechanism on the apparatus for further treatment.

1,808,114. APPARATUS FOR AUTOMATICALLY ESTABLISHING A PULSATING MOTION OF AIR IN TWO CONDUITS. GEORG KARL WILHELM JOHANSSON, Lidingo, Sweden, assignor to Svenska Aktiebolaget Gasaccumulator, Lidingo, Sweden. Filed Nov. 21, 1929, Serial No. 408,858, and in Sweden Dec. 8, 1928. 6 Claims. (Cl. 31—62.)

2. In an apparatus for automatically establishing a pulsating motion of air in two conduits, a vacuum chamber and an atmospheric chamber, each provided with two valves mounted on a common spindle, a diaphragm and a flexible member for connecting the one side of the diaphragm with the spindles of said valves.

1,808,115. STARTER DRIVE. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Sept. 10, 1929. Serial No. 391,641. 13 Claims. (Cl. 74—7.)

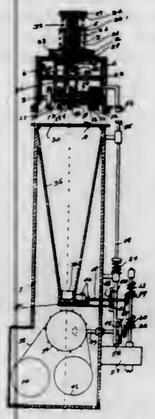


1. A starter drive for internal combustion engines including a member adapted to engage and rotate an element of the engine to be started, a power member and unidirectional driving means connecting the power member to the engine engaging member including an annular element connected to one of said members, an eccentric fixed to the other member and an intermediate transmission member mounted on said eccentric and having means adapted to interlock with the annular element in one direction of rotation.

1,808,116. TILE LINOLEUM. ALEXANDER CATHIE MCKISSOCK, London, England, assignor to Linoleum Manufacturing Company, Limited, London, England. Filed June 3, 1929, Serial No. 367,927, and in Great Britain Apr. 19, 1929. 1 Claim. (Cl. 154—26.)

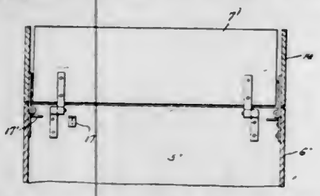
The method of producing an enriched tile pattern linoleum which consists in stripping a patterned linoleum from its backing, cutting the stripped linoleum into tesseræ each containing a pattern, cutting tesseræ to be enriched by the first mentioned tesseræ from other linoleum, and in combining the first and second tesseræ in substantially checkered relation on a backing and into the final product.

1,808,117. MEASURING AND CIRCULATING DEVICE. JAMES HOWARD MCLELLAN, Vancouver, British Columbia, Canada. Filed June 8, 1929. Serial No. 369,465. 2 Claims. (Cl. 221—100.)



1. A measuring and circulating device comprising a pump, a measuring cup, a valve communicating therebetween, and means of return communication between the cup and the pump, said valve having alternate setting in which one setting enables liquid to flow from the pump to the cup and the other enables the liquid pumped into the cup to flow to discharge through the valve, said means of return communication comprising a transparent vessel enclosing the measuring cup whereby the liquid overflowed from the measuring cup is displayed prior to its return to the pump.

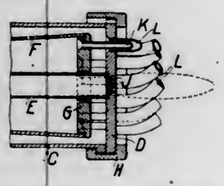
1,808,118. PHOTOGRAPHIC RECORDING APPARATUS. ADOLPHE C. PETERSON, Minneapolis, Minn. Filed Nov. 11, 1927. Serial No. 232,614. 13 Claims. (Cl. 88—24.)



1. In a record means, means whereby documents are serially exposed to a photographing means and a nu-

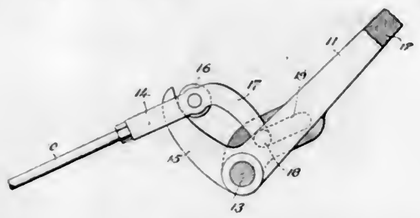
meral imprinting means, and means whereby the numeral imprinting means and the photographic means are coordinated so that the numeral imprinting means prints

numbers serially on the documents as exposed and the photographic means successively photographs the documents with numbers like the imprinted numbers on the documents on a photographically sensitive film.



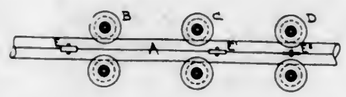
1,808,119. MINE CAR. JOHN RUFFING, Sr., Nokomis, Ill. Filed Dec. 9, 1930. Serial No. 501,137. 5 Claims. (Cl. 105—379.)

1. In a mine car including side walls and end walls, panels mounted above the walls by means of flat like straps.



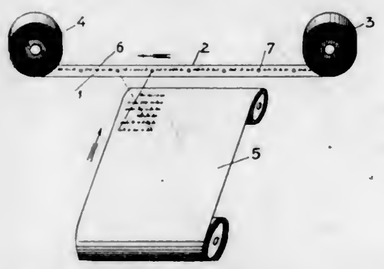
2. In a mine car including side walls and end walls, panels mounted above the walls by means of flat like straps, said flat like straps being formed in sections hingedly connected together.

1,808,120. PULVERIZED FUEL FURNACE. ARTHUR RUNKWITZ, Kiel-Elmschenhagen, Germany, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Germany. Filed July 28, 1930, Serial No. 471,288, and in Germany Aug. 9, 1929. 3 Claims. (Cl. 110—28.)



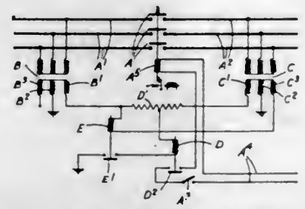
1. A pulverized fuel burner comprising a burner plate, a plurality of individual laterally bent burner pipes circularly arranged on this plate, larger pipes each surrounding one of said burner pipes and bent correspondingly, a tube adapted to supply pulverized fuel-air mixture and communicating with all of said burner pipes, and another tube adapted to supply additional air of combustion and communicating with all of said larger pipes.

1,808,121. BRAKE APPLYING MECHANISM. GEORGE L. SMITH, Washington, D. C., assignor to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed Sept. 28, 1928. Serial No. 309,057. 8 Claims. (Cl. 74—81.)



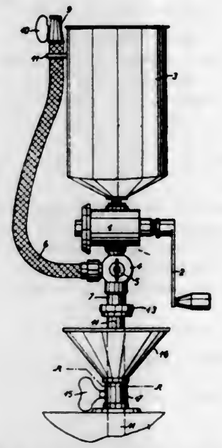
1. In a brake applying mechanism, a brake, a lever, connections between the brake and lever including a pull rod having a shiftable connection with the lever for movement along the latter toward and away from its pivot, a second lever, and means operable by the second lever to shift said connection along the first named lever..

1,808,122. MANUFACTURE OF TUBES AND PIPES. FRANCIS SÖNNICHSEN, FRANCIS ADOLF FRISCH, and HERMAN ARTHUR NICOLAYSEN, Oslo, Norway. Filed Sept. 18, 1928, Serial No. 306,741, and in Norway Aug. 11, 1928. 6 Claims. (Cl. 219—6.)



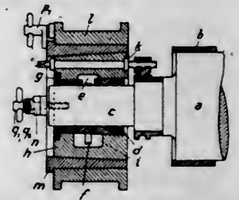
1. Apparatus for welding by a continuous operation tube blanks formed out of a folded up strip of metal, comprising means to pass the tube blank, electrically insulated from the feeding mechanism, into successive contact with a series of electrodes forming the terminals of a polyphase current system, said electrodes having a contact surface with the tube blank covering both sides of the slit to be welded, the contact surface of successive electrodes being narrower than that of preceding electrodes.

1,808,123. METHOD OF PRODUCING PHOTOGRAPHED PRINTING FORMS. EDMUND UHER, Jr., Budapest, Hungary. Filed Mar. 29, 1929, Serial No. 351,010, and in Germany July 29, 1927. 4 Claims. (Cl. 95—4.5.)



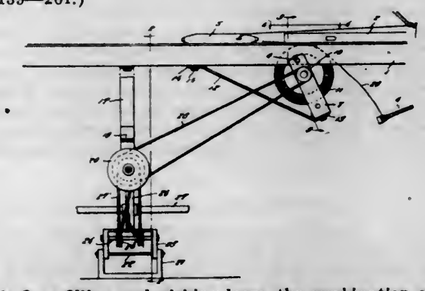
1. The method of producing photographed printing forms from lines, which consists in first composing the lines by photographic means on a non-elastic film band in succession and in continuous alignment with the first line thereon, so as to form an intermediate model print and thereafter photographing the lines individually in the desired order, from the intermediate model print on to a sensitized form.

1,808,124. ELECTRIC SYNCHRONIZING APPARATUS. THOMAS REGINALD WARREN, Jesmond, Newcastle-upon-Tyne, and NORMAN COOKE, Sunderland, England, assignors to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a Company of Great Britain. Filed Apr. 21, 1928, Serial No. 271,825, and in Great Britain May 3, 1927. 17 Claims. (Cl. 171—118.)



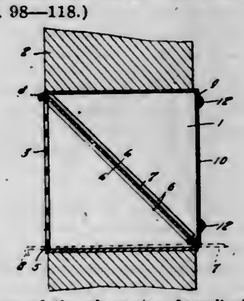
1. In electric synchronizing apparatus for polyphase synchronous machines, the combination with an incoming machine and a running machine, of a circuit-breaker controlling the connection of the incoming machine into circuit with the running machine, and means for controlling the closing of the circuit-breaker comprising two potential transformers whose primaries are respectively connected to the two machines, an earth connection to corresponding points of the secondaries of the two potential transformers, a resistance connected between other corresponding points of the secondaries of the two potential transformers, a synchronizing relay connected between earth and the mid-point of such resistance and acting when operated to allow the circuit-breaker to close, and means whereby the operation of the circuit-breaker is rendered dependent upon the direction of relative rotation of the two machines.

1,808,125. DEVICE FOR FILLING THE CRANK CASES OF MOTOR VEHICLES WITH LUBRICATING OIL. KONRAD KARL WEISSFLOCH, Nuremberg, Germany. Filed Dec. 16, 1929, Serial No. 414,524, and in Germany Dec. 7, 1928. 2 Claims. (Cl. 221—99.)



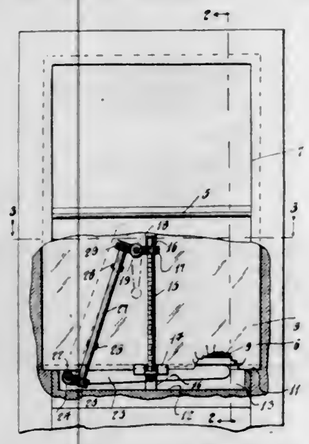
1. A portable liquid withdrawing and dispensing device including a liquid container, a reversible liquid pump having ports therein, one of the ports communicating with the bottom of the container, branched conduits connected with the other port of the pump, one of said branches being adapated for immersion in a body of liquid during the filling of the container during rotation of the pump in one direction and the other branch being adapted to conduct liquid to a desired point of delivery during operation of the pump in the opposite direction, and means for connecting the second mentioned port of the pump alternately with the first and second mentioned branches.

1,808,126. BEARING FOR THE CYLINDERS OF PRINTING MACHINES. KARL ALBRECHT, Geisenheim-on-the-Rhine, Germany, assignor to Maschinenfabrik Johannisberg, G. m. b. H., Geisenheim-on-the-Rhine, Germany. Filed Aug. 7, 1928, Serial No. 298,015, and in Germany Aug. 10, 1927. 7 Claims. (Cl. 308—70.)



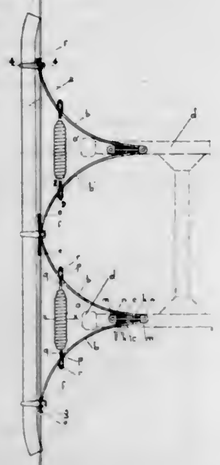
1. A bearing for the cylinder of printing machines, comprising in combination, a journal, a bushing on the journal provided with a conical outer surface, a sleeve having its outer as well as its inner surface conical, a fixed casing having a cylindrical bore, and a slotted conical pressure-ring interposed intermediate said sleeve and said fixed casing for releasably holding the conical parts in position and capable of independent withdrawal.

1,808,127. WEFT END REMOVER FOR AUTOMATIC LOOMS. WILLIAM H. BANAGAN, Quechee, Vt. Filed Nov. 7, 1930. Serial No. 494,136. 8 Claims. (Cl. 139—261.)



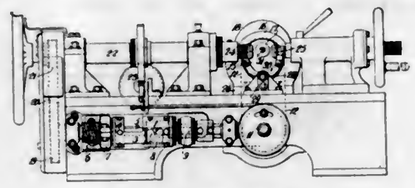
1. In a filling replenishing loom, the combination of the lay having a shuttle box and provided with an opening for the passage of a bobbin when it is ejected from the shuttle, a rotary brush mounted on the lay having its axis at right angles to the longitudinal axis of the lay, said brush being operable in the opening in the lay to catch and hold the filling between an ejected bobbin and the shuttle box and prevent the filling end from being carried into the shed by the shuttle.

1,808,128. VENTILATOR. VINCENT BROCATO, Memphis, Tenn. Filed June 20, 1930. Serial No. 462,604. 5 Claims. (Cl. 98—118.)



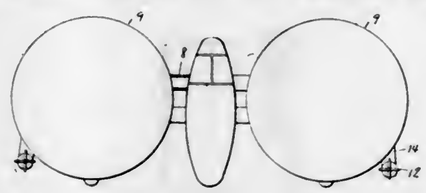
1. A ventilator of the character described comprising a casing open at its front and rear, a grid in the front portion of the casing, and a closure plate removably mounted for diagonal sliding movement in the casing intermediate the grid and the screen.

1,808,129. AUTOMOBILE DOOR. EMORY G. BULLIS, Fulton, N. Y. Filed Dec. 22, 1927. Serial No. 241,996. 3 Claims. (Cl. 268—133.)



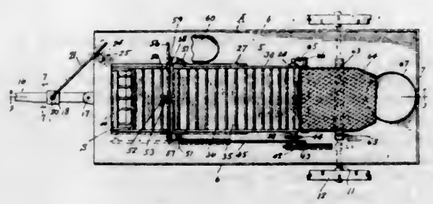
3. An automobile door having a window opening formed in the upper half thereof and a casing in the lower half thereof, a glass panel and a screen panel adapted to be housed in said casing or to be projected therefrom to an elevated position within said window opening, a driven means connected to each of said panels, a single driving means, and means for causing the motion of the driving means to be transmitted to either of said driven means independently of the other, all these elements being concealed within the door casing.

1,808,130. SHOCK-ABSORBER. JULES CHALUMEAU, Paris, France. Filed Aug. 18, 1930, Serial No. 476,100, and in France Aug. 23, 1929. 2 Claims. (Cl. 293—55.)



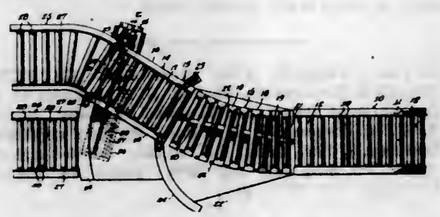
1. In a shock-absorber, a plurality of springs fixed at one end to one of the parts between which shock is to be absorbed and adapted to slide freely along the other part, and a plurality of tensile spring attached at their ends to two of the former springs.

1,808,131. VARIABLE VELOCITY RATIO MECHANISM. JOHN GEORGE DOUGLAS, Leagrave, Luton, England, assignor to George Kent, Limited, Luton, England. Filed July 26, 1930, Serial No. 470,093, and in Great Britain June 26, 1929. 8 Claims. (Cl. 90—15.)



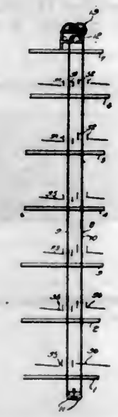
2. In a machine for cutting a worm or cam, the combination of a rotatable blank carrier, a rotatable tool carrier adapted to receive a tool at a point displaced with respect to the axis of rotation of the tool carrier, and means for rotating the tool carrier at a rate variable with respect to the rotation of the blank carrier comprising a driving member rotatable in timed relationship with the blank carrier, a driven member in driving connection with the tool carrier, and means mounting one of said members operating during rotation in a single direction to rotate the member about its axis relatively to the other member in opposite directions, one of the members having a portion parallel to its axis engaged in a cutaway portion of the other members, said portions having coacting surfaces for automatically transmitting through the said mounting means the drive from the driving to the driven member and for converting the axial movement into relative rotational movement between the members to an extent determined by the shape of the said surface.

1,808,132. AIRSHIP. GEORGE GERARD DUERING, Fort Bliss, Tex. Filed Sept. 12, 1930. Serial No. 481,484. 3 Claims. (Cl. 244—6.)



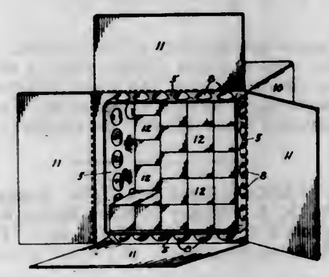
1. In an airship of the class described, a cabinet, a pair of lihgter than air gas containing bodies one to each side of the cabinet and means connecting the bodies to the cabinet, said means being in the form of hollow tubes to provide means for entering the bodies from the cabinet and vice versa.

1,808,133. POTATO HARVESTER. WILLIAM W. FIRMAN, Detroit, Mich. Filed Dec. 6, 1929. Serial No. 412,099. 4 Claims (Cl. 55—109.)



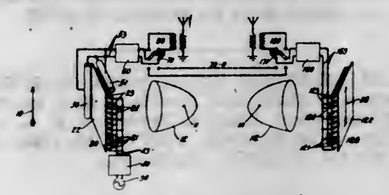
1. In a potato harvester of the class described, a wheeled frame, an elevator mechanism mounted in the frame, means for raising and lowering the elevator mechanism, a scoop on the lower end of the elevator mechanism, a beater in the scoop, a shaker screen at the rear end of the elevator, means for rockably mounting the shaker screen, means operatively connecting the elevator with the wheels of the wheel frame, means operatively connecting the elevator with the beater and means operatively connecting the elevator with the shaker screen, said beater being rotated in a direction opposite to that of the ground wheels for separating the potatoes from the dirt and throwing them onto the elevator.

1,808,134. SELECTIVE DEFLECTING SWITCH. HENRY R. GOTTHARDT, Louisville, Ky., and WILLIAM E. CAIN, Jeffersonville, Ind., assignors to Logan Co., Inc., Louisville, Ky., a Corporation of Kentucky. Filed Sept. 25, 1929. Serial No. 395,167. 19 Claims. (Cl. 186—20.)



1. Apparatus of the character described comprising a main conveyor, a pair of branch conveyors, a switch section connected at one end to said main conveyor and at its opposite end to one of said branch conveyors, a source of electrical power adapted to move the last named end of said switch section to a position in alinement with the other of said branch conveyors, circuit means for said source including a pair of contacts, and an article carrier movable over said contacts, and key means detachably supported by the carrier for completing a circuit across said contacts.

1,808,135. AUTOMATIC VERTICAL ELEVATOR. HENRY R. GOTTHARDT, Louisville, Ky., and WILLIAM E. CAIN, Jeffersonville, Ind., assignors to Logan Co., Inc., Louisville, Ky., a Corporation of Kentucky. Filed Nov. 20, 1929. Serial No. 408,516. 35 Claims. (Cl. 198—38.)

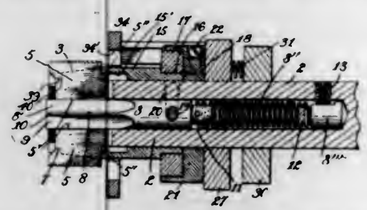


1. An elevating conveyor comprising endless chain conveying means including a carrier movable therewith, a plurality of loading and unloading stations each including a station member movable from an inoperative position out of the vertical plane of the conveying means to an operative position in the vertical plane of the conveying means, means controlled by the carrier when moving upwardly for automatically moving the next station member to operative position provided there is an article at such station to be picked up by the carrier, and means operative by an article on the carrier for rendering said last named means inoperative.

1,808,136. PACKING FOR FRAGILE ARTICLES. FRED D. GRAY, Herkimer, N. Y., assignor to Holed-Tite Packing Corporation, a Corporation of New York. Filed May 9, 1929. Serial No. 361,626. 3 Claims. (Cl. 229—14.)

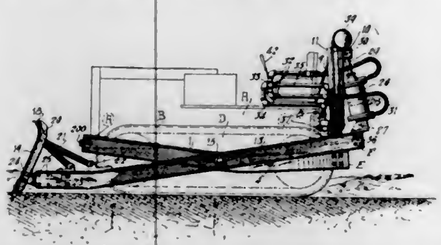
1. A resilient lining member for packing containers comprising a sheet of yieldable material, the major portion of said sheet having flat uninterrupted faces, one of said faces having its flat area centrally of the sheet and constituting the major portion of the face, said face having a bordering row of protuberances bulged from the sheet, the flat area of such face being greater than the bulged area thereof whereby the sheet may flex at the region within said bordering row.

1,808,137. ELECTROOPTICAL SYSTEM. RALPH V. L. HARTLEY, South Orange, N. J., assignor to Bell Telephone Laboratories Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 28, 1928. Serial No. 302,448. 14 Claims. (Cl. 178—6.)



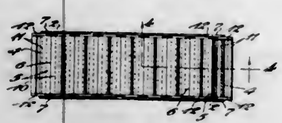
1. The method of producing an image electro-optically which comprises simultaneously producing a plurality of trains of light waves equal in number to the elemental areas of a field of view, an image of which is to be produced, each of said trains being modulated in accordance with the light tone values of the corresponding elemental area of the field of view and having a distinctive super-audio frequency characteristic.

1,808,138. COLLAPSIBLE TAP. WILLIAM J. HOGG and FREDERICK NEUMANN, Cleveland, Ohio, assignors to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 19, 1928. Serial No. 247,770. 24 Claims. (Cl. 10—144.)



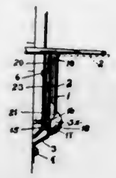
1. A collapsible tap comprising a bored and radially slotted body having a bored shank, a plurality of radially shiftable cutters located in the slots of said body, rotatable means for supporting the under faces of the cutters and positively expanding them, positively acting

means connected with said expanding means for supporting outer faces of the cutters to prevent the tipping thereof and effective to positively retract the cutters, means within the shank bore for automatically rotating said ex-



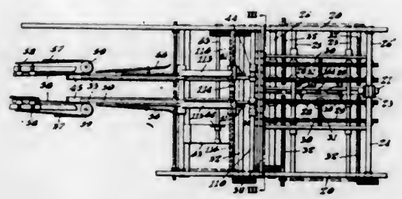
panding means thereby to shift the retracting means to retract the cutters, means forming part of the tap for locking the retracting means, and means for releasing said locking means on the forward movement of the tap whereby the expanding means will shift the retracting means.

1,808,139. BACK-FILLING MACHINE. JAMES HOZACK, Belleville, N. J., assignor to Essex Engine & Machine Corporation, a Corporation of New Jersey. Filed June 25, 1928. Serial No. 288,001. 50 Claims. (Cl. 37—144.)



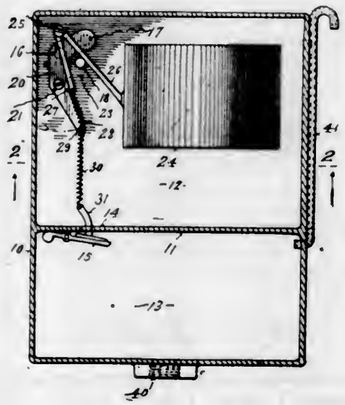
48. A machine of the character described comprising a tractor, a sub-frame fixedly mounted thereon and extending across the rear of the tractor, a pusher frame pivoted to swing upon a horizontal axis and having a pusher at the front of the tractor, and means connected to said subframe and pusher frame for swinging the latter.

1,808,140. FLEXIBLE STRAP, BAND, OR LINKAGE. CHARLES H. KESTENMAN, Providence, R. I., assignor to Kestenman Bros. Mfg. Co., Providence, R. I., a Corporation of Rhode Island. Filed Oct. 23, 1928. Serial No. 314,486. 3 Claims. (Cl. 59—80.)



1. A flexible strap, band or linkage comprising a plurality of outer box-like link-elements having top, side, bottom and end walls, the end walls being spaced away from the ends of the side and bottom walls to provide openings therebetween at both ends of the link; and inner connecting-links having transverse bars connected by end strips occupying planes at right-angles to the plane of said transverse bars; the inner links being straddled across the adjacent side walls of adjoining outer box-links between the top and bottom walls thereof with their end strips disposed within the openings between the ends of the side and bottom walls and the end walls of the outer box-link and covered by the top wall thereof, whereby the connecting-links are completely concealed from view on the top and sides of the linkage.

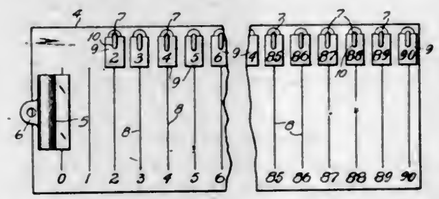
1,808,141. KEY GUARD. THEODORE W. KUPFER, Rochester, N. Y. Filed Feb. 6, 1931. Serial No. 513,914. 5 Claims. (Cl. 70—7.)



2. A keyguard comprising a vertical bracket, a spring operated locking plate mounted on said bracket, combined anchoring and locating means for anchoring and locating said bracket to the escutcheon with relation to the key hole therein, and fastening means for fastening said bracket in place below the escutcheon.

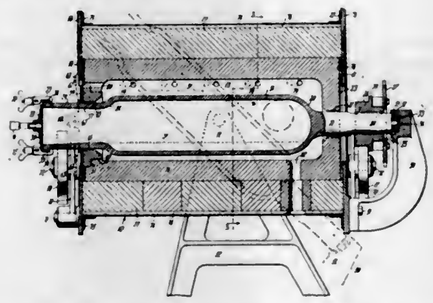
1,808,142. FEEDER FOR ENVELOPE MACHINES. HAROLD S. LABOMBARDE, Nashua, N. H., assignor to The International Paper Box Machine Company, Nashua, N. H., a Corporation of Maine. Original application filed Nov. 3, 1927, Serial No. 230,746. Divided and this application filed July 30, 1928. Serial No. 296,186. 6 Claims. (Cl. 271—49.)

1. A feeder for delivering blanks to blank-treating mechanism in accurate alinement, said feeder including four pin carriers and means for laterally adjusting said carriers relatively to each other.



1,808,143. VACUUM TANK. DUDLEY D. LEVY, New York, N. Y., assignor to Dudley Research Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1927. Serial No. 243,363. 8 Claims. (Cl. 103—236.)

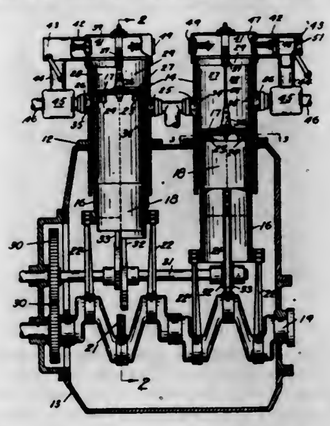
1. In a liquid supplying tank, a partition to divide said tank into a liquid receiving chamber and a liquid



storing chamber, a valve in said partition for maintaining a constant liquid supply in said storing chamber, said receiving chamber having an air port, a suction port and a liquid supply port extending through the walls of said chamber and a valve in said receiving chamber to cover and uncover said ports for intermittently replenishing the liquid in said tank.

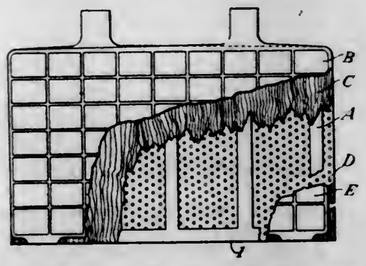
1,808,144. MEASURING AND TAGGING DEVICE. PAUL LUNGSTRAS, St. Louis, Mo. Filed Mar. 16, 1929. Serial No. 347,487. 1 Claim. (Cl. 33—127.)

A device of the character described comprising a board having a spring clamp secured thereto at one end and parallel lines formed thereon equi-distant from each other and from the zero designation under said spring clamp, said lines being designated by numerals indicating the distance of the line that they represent from the zero designation under the spring clamp, hooks secured to said board on said lines, co-operative tags having perforations therein secured to said hooks, the tags on a hook having the same numerical designation imprinted thereon as the line on which the hook is secured.



1,808,145. BRASS-MELTING APPARATUS. ADOLPH W. MACHLET, Elizabeth, N. J. Filed July 10, 1929. Serial No. 377,105. 16 Claims. (Cl. 263—34.)

9. A brass-melting one-piece crucible in the form of a cast bottle formed of an alloy of iron, chromium and nickel, not amalgamating with melted brass, nor scaling off when exposed to heat sufficient to melt brass, the melting point of the crucible being about 2400°, the proportions being substantially 65% iron, 27% chromium and 8% nickel, said bottle having means for supporting it by its ends for revolution in cumbent position, and for decanting, one end of the bottle having a discharge neck and a shoulder to confine the melted work in the revolving cumbent bottle.

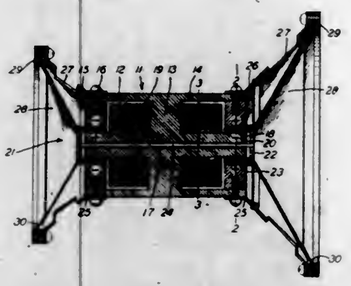


1,808,146. INTERNAL COMBUSTION ENGINE. WARREN H. PARKER, Oakland, Calif., assignor of one-half to Anthony Jorski, Oakland, Calif. Filed July 2, 1928. Serial No. 289,870. 3 Claims. (Cl. 123—50.)

1. In an internal combustion engine, a block having a bore open at one end, a cylinder having a head and arranged to reciprocate in said bore, a conduit communicating with the open end of said bore and having two air intake openings and a discharge opening, a two way

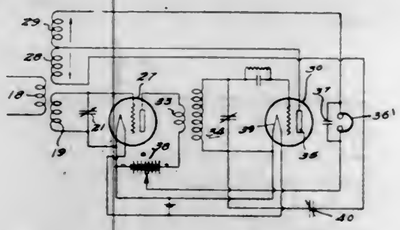
valve for closing either intake opening and a check valve for the discharge opening arranged to open on the up stroke of said cylinder.

1,808,147. STORAGE BATTERY SPACER. JOHN L. RUPP, Wilkinsburg, Pa., assignor, by mesne assignments, to Wubco Battery Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Feb. 23, 1928. Serial No. 256,074. 1 Claim. (Cl. 136—145.)



In combination, positive and negative storage battery plates, a spacer comprising a flat apertured non-conducting member interposed between said plates, a flat perforated non-conducting sheet between said spacer and the positive plate, and a porous separator between said spacer and the negative plate.

1,808,148. NURSING NIPPLE. JULIUS SCHMID, New York, N. Y. Filed Oct. 20, 1930. Serial No. 489,703. 2 Claims. (Cl. 40—2.2.)

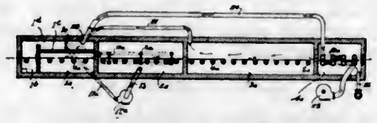


1. A rubber nipple comprised of a body, and a neck portion, said neck portion being transparent, a reinforcing neck band vulcanized with the neck portion of the nipple and carrying thereon indicia printed in ingredients which are insulated both exteriorly and interiorly of the nipple, said indicia being exposed to view through said transparent portion.

1,808,149. ELECTRODYNAMIC SPEAKER. MORRIS SMITH, Los Angeles, Calif. Filed Apr. 3, 1929. Serial No. 352,215. 15 Claims. (Cl. 179—115.5.)

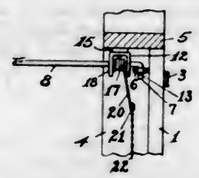
2. A device as described comprising in combination a magnet having a core with a plurality of poles, a vibrating coil mounted adjacent each of the poles, said magnet forming a plurality of magnetic circuits through each of the poles intersecting the said coils, rigid means connecting the coils and a sound reproducing device connected to said rigid means.

1,808,150. HIGH FREQUENCY AMPLIFIER. PERCIVAL J. TOWNSEND, Los Angeles, Calif. Filed Nov. 1, 1927. Serial No. 230,311. 5 Claims. (Cl. 179—171.)



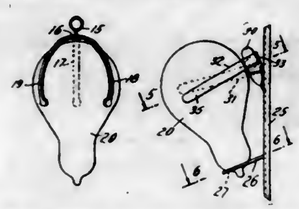
1. In combination, one or more electronic emission devices having a plurality of electrodes, an input circuit connected to some of the electrodes, an output circuit connected to some of the electrodes, and means for feeding back energy from the output circuit to the input circuit, comprising a pair of inductances and a capacity connected in series and between the input and output circuits, the inductances being inductively coupled to the input circuit, said output circuit including a translating device in series with one only of said inductances.

1,808,151. METHOD OF FABRICATING CONTRA-PROPELLERS. JOHN T. WISHMAN, Brooklyn, N. Y., assignor to United Dry Docks, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 15, 1930. Serial No. 488,760. 9 Claims. (Cl. 29—84.)



1. The method of fabricating contra-propellers for vessels comprising erecting a dummy rudder post, cutting the propeller parts to fit said post, securing certain parts to one another on but one side of the propeller while fitted about the post, transferring the resultant structure to the vessel's rudder post and securing the remaining parts to said structure and to the rudder post.

1,808,152. CONTINUOUS ANNEALING APPARATUS. THADDEUS F. BAILY, Alliance, Ohio. Filed Aug. 6, 1925. Serial No. 48,541. 5 Claims. (Cl. 263—6.)

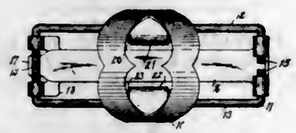


1. A furnace for annealing sheets and the like including a heating chamber in which fuel is burned for heating, a cooling chamber, hollow rolls in the cooling chamber connected in series through which air for combustion in the heating chamber is heated, a pipe leading from said rolls to the heating chamber and means for passing material through the heating chamber and between said rolls.

1,808,153. DOOR HOLDING DEVICE. WILLIAM G. BLACK, Cleveland, Ohio. Filed Jan. 25, 1928. Serial No. 249,297. 5 Claims. (Cl. 292—275.)

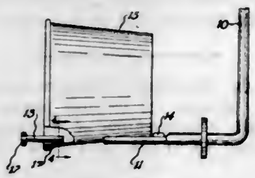
1. In a door holder, the combination of a rod, a coil spring adapted to normally grip the rod, one end of the coil spring being fixed, and the other end of the coil spring extending at an obtuse angle therefrom for providing a lever arm for manually operating said coil spring and causing it to release said rod.

1,808,154. FIRE EXTINGUISHER. WILHELM B. BRONANDER, Montclair, N. J. Filed Mar. 7, 1928. Serial No. 259,762. 10 Claims. (Cl. 169—26.)



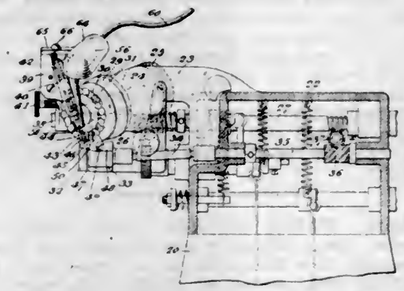
1. A grenade support comprising a supporting element, and grenade engaging and holding means carried by said element and including a strip formed of thermostatic metal adapted to swing away from and release the grenade under the action of heat thereon.

1,808,155. PROCESS OF MAKING ISOPROPYL ACETATE. HYYM E. BUC, Roselle, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Nov. 24, 1926. Serial No. 150,625. 2 Claims. (Cl. 260—106.)



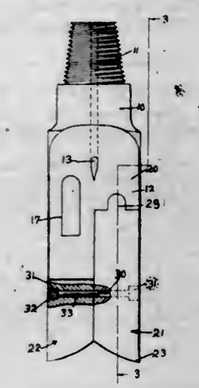
1. Process of making isopropyl acetate, comprising distilling a mixture containing isopropyl alcohol, acetic acid and water, rectifying the distilled vapors, holding the finally rectified vapors at a temperature not exceeding 76° C., taking off and condensing the isopropyl acetate formed from the reaction of isopropyl alcohol and acetic acid, together with substances associated with the isopropyl acetate, and separating the isopropyl acetate.

1,808,156. HEADDRESS-RETAINING DEVICE. JAMES E. BURNS, Milford, Conn., assignor to The A. J. Donahue Corporation, Milford, Conn., a Corporation. Filed Nov. 8, 1930. Serial No. 494,223. 1 Claim. (Cl. 132—47.)



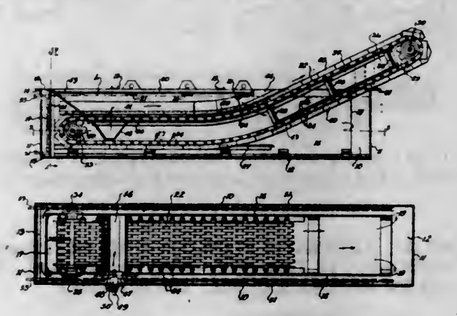
A headdress-retaining device comprising a clasp, said clasp comprising top- and bottom-bars having inset portions, a tongue pivotally connected with one end of said clasp and extending into engagement with the other end of the clasp and lying in a plane of said offsets, when so engaged, a locking-lever pivotally connected with one end of the clasp and adapted to be folded over the free end of said tongue, and a yoke hingedly connected with one inset portion and formed at its opposite end with a hook adapted to engage with the other inset portion whereby the yoke is locked in its closed position by the said tongue.

1,808,157. FRAME FOR COATING PAILS AND THE LIKE. JOHN CARROLL, Dover, Ohio, assignor to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Original application filed Nov. 2, 1928, Serial No. 316,754. Divided and this application filed Sept. 21, 1929. Serial No. 394,322. 7 Claims. (Cl. 91—60.)



1. In an apparatus for coating pails and the like, a frame adapted to carry a pail and the like, and including a pair of substantially horizontally disposed, diverging arms for supporting the pail in horizontal position and a finger carried by the outer end portions of the arms and adapted to project inside of the pail.

1,808,158. FOLDING MACHINE. CHRISTIAN CHRISTIANSEN, Lynn, Mass., assignor to Rotary Machine Company, Lynn, Mass., a Corporation of Massachusetts. Filed Oct. 30, 1929. Serial No. 403,497. 6 Claims. (Cl. 12—55.)

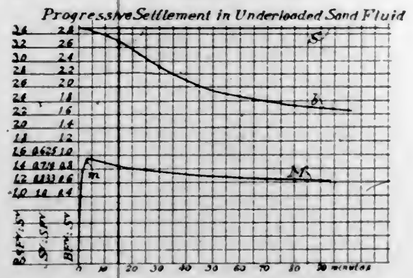


1. In a folding machine for folding a binding strip cemented at one side and stitched to the edge of a material, the combination of means for folding the strip, and heat conducting means in advance of said folding means in contact with said strip at the cemented side thereof.

1,808,159. FISH TAIL BIT. OSCAR E. CONE, Taft, Calif. Filed Aug. 8, 1928. Serial No. 298,209. 6 Claims. (Cl. 55—61.)

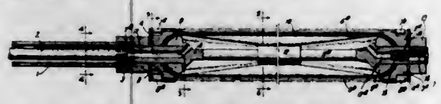
6. A fish tail bit comprising a body having upwardly and rearwardly extending apertures formed therein, blades adapted to be mounted upon the body having portions receivable in the apertures, and means connecting the blades to each other to lock them against removal from the body.

1,808,160. QUENCHING TANK. FRANK T. COPE, Salem, Ohio, assignor to The Electric Furnace Company, Salem, Ohio, a Corporation of Ohio. Filed Feb. 6, 1930. Serial No. 426,310. 7 Claims. (Cl. 266—6.)



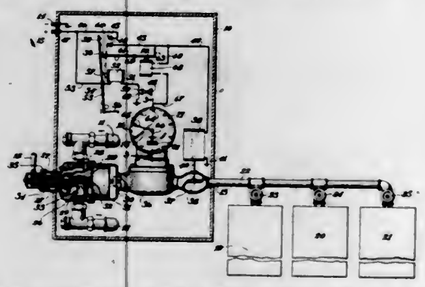
3. Quenching apparatus including a tank, a substantially U-shaped baffle wall within the tank spaced from the walls thereof, the open end of the U terminating at a point spaced from the discharge end of the tank, means for passing articles to be quenched through the tank between the baffle walls, a transverse trough extending between the baffle walls at the entrance end of the tank below the path of the articles, there being an opening in one baffle wall communicating with the adjacent end of the trough, means for changing the temperature of the quenching liquid and means for then circulating the liquid through said opening and into the trough.

7. Quenching apparatus including walls forming an outer tank having an inlet end and a discharge end, walls forming an inner tank open at the discharge end and within the outer tank, the walls of the inner tank being spaced from the walls of the outer tank to form a circulating passage for a quenching liquid between the tanks, the side walls of the inner tank terminating at a point spaced from the discharge end of the outer tank, and means for passing articles to be quenched through the inner tank, walls forming a transverse trough within the inner tank at its entrance end below the path of the articles, there being an opening formed in one inner tank side wall com-



municating with the adjacent end of the trough, means adjacent the opening for circulating quenching liquid from the circulating passage through the trough into the inner tank, and means in the circulating passage for controlling the temperature of the quenching liquid.

1,808,161. PROCESS FOR MAKING MOLDING SAND. WAGER FISHER, Bryn Mawr, Pa. Filed Aug. 24, 1927. Serial No. 215,049. 14 Claims. (Cl. 22—217.)

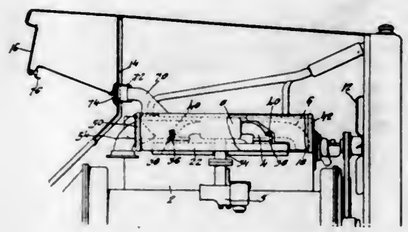


1. In the manufacture of molding sand the method which consists in forming a mixture of sand in binder fluid having a sand content suited to form a cloud settlement range of sand, in making the percentage of binder in the fluid high enough so as to form a synthesis range for settlement underlying the sand in the cloud settlement range and in settling the sand through both ranges.

1,808,162. MINING CARTRIDGE. SAMUEL G. FRANTZ, Princeton, N. J. Filed Aug. 31, 1927. Serial No. 216,698. 15 Claims. (Cl. 262—12.)

1. In a mining cartridge, the combination of a resilient container and an articulated armored covering therefor.

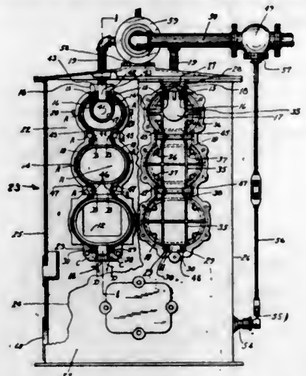
1,808,163. AUTOMATIC FLOW-CONTROLLER. CHARLES GOTTFRIED, New York, N. Y. Filed Nov. 22, 1928. Serial No. 321,260. 2 Claims. (Cl. 221—101.)



2. In combination with a fluid meter having a pointer and having in its outlet a normally closed electrically-operable valve, a main electric circuit including said valve and a normally open master switch, an electric circuit shunt connected to the main circuit and including a push button and electromagnetically actuated devices operable therefrom for closing said master switch, retaining means for the switch, and switch-releasing means including an electric circuit connected to said main circuit and having said pointer as a movable contact member and also including a co-acting contact element located in the path of said pointer, whereby, when contact is established between said pointer and element, said master switch is freed from retention and permitted to resume its normally open condition at the completion of a desired flow of liquid through the meter.

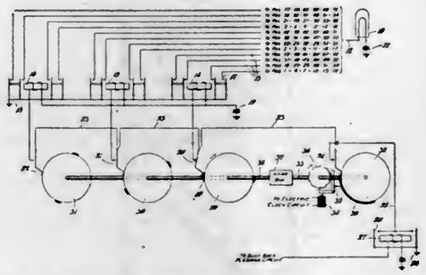
1,808,164. PORTABLE ELECTRIC ARC LAMP. WILLIAM R. GRUBER, New York, N. Y. Filed Mar. 18, 1930. Serial No. 436,691. 9 Claims. (Cl. 176—103.)

1. An arc lamp comprising a dielectric casing, a carbon mounted axially therein, a second carbon, means for holding said second carbon in register with the first carbon said means being foldable alongside said casing, and means for controlling current to said carbons.



1,808,165. CAR HEATER. MARK B. HARRIS, Birmingham, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 7, 1925. Serial No. 61,153. 10 Claims. (Cl. 123—171.)

1. The combination of an engine having an intake manifold, an exhaust manifold and the usual cooling fan, of a casing for said manifolds, means for discharging air from said casing into the atmosphere or to a desired point as desired, said casing being arranged to receive air from the fan and being provided with means to direct air alternatively over the exhaust manifold or over the intake manifold so that air heated by contact with the exhaust manifold may be supplied to a desired point or a cooling stream of air may be passed over the intake manifold.

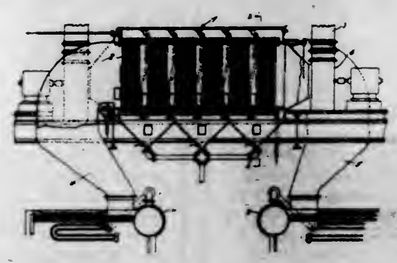


1,808,166. WATER HEATER. JOHN HICKEY, New Haven, Conn., assignor to The National Pipe Bending Company, New Haven, Conn., a Corporation. Filed Apr. 30, 1930. Serial No. 448,536. 12 Claims. (Cl. 257—53.)

1. In a water-heater, the combination with a substantially-vertical water-apron; of means for supplying water to the upper edge of the said apron for downward flow by gravity over one side thereof; means for supplying steam to the opposite side of the said water-apron for heating the said apron and hence the water; and one or more steam-ports extending laterally through the said

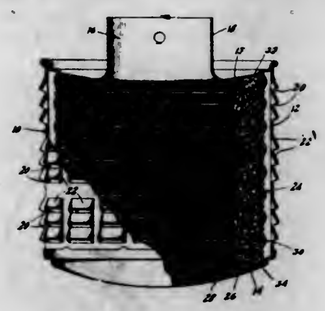
water-apron from the steam-side thereof to the water-side thereof for insuring the direct contact of the steam with the water.

1,808,167. TIMING APPARATUS. RAYMOND M. HICKS, East Orange, N. J. Filed Oct. 29, 1928. Serial No. 315,720. 4 Claims. (Cl. 161—2.)



4. In apparatus of the class described for use in connection with a series of switchboard operators' positions, an indicator lamp at each of said positions, means to flash said lamps in predetermined sequences, pluralities of the lamps respectively at separated positions being flashed concurrently, said means comprising a clock controlled circuit, a rotatable element controlled thereby, a plurality of rotatable switch devices, means operatively connecting said rotating element to rotate said switch devices as a group at a rate slower than the rotation of said element, a flashing circuit, and multi-contact relay means operating under the control of said flashing circuit and through said switch devices whereby each of said pluralities of lamps is flashed in succession once during each cycle of movement of said switch devices.

1,808,168. DEHYDROGENATING HYDROCARBONS. MARION B. HOPKINS, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed July 31, 1923. Serial No. 654,947. 7 Claims. (Cl. 260—170.)



1. A process for partially dehydrogenating hydrocarbons, comprising causing the hydrocarbons as vapors to traverse an elongated path in admixture with free oxygen, heating the admixture of hydrocarbon vapors and oxygen to a temperature between 250° C. and 470° C., the quantity of oxygen being so limited as to partially dehydrogenate the hydrocarbons, thereby forming unsaturated compounds without substantial quantities of compounds containing the three elements, carbon, hydrogen and oxygen, and withdrawing the unsaturated product.

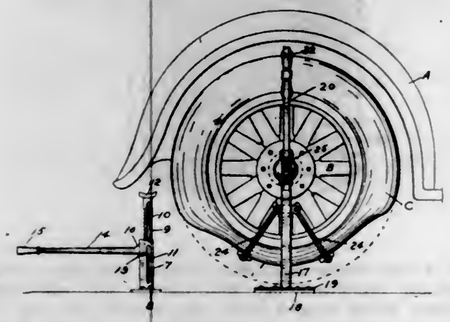
1,808,169. HEAT TRANSFER DEVICE. DAVID S. JACOBUS, Montclair, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed Sept. 4, 1918, Serial No. 252,550. Divided and this application filed June 20, 1929. Serial No. 372,269. 8 Claims. (Cl. 257—251.)

1. In a heat transfer device, a gas pass, a plurality of headers on each side of the pass and connected by tubes extending thereacross, the headers on one side of the pass being disposed in groups spaced apart, with the headers in each group closely adjacent each other, and with some of the tubes bent at their ends to bring them opposite the space between said groups.

1,808,170. AIR CLEANER. HERBERT G. KAMRATH, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Mar. 22, 1928. Serial No. 263,931. 3 Claims. (Cl. 183—73.)

1. An air cleaner comprising a casing including a substantially cylindrical side wall member and end wall members rigidly secured to the side wall member, one of said end members being provided with an axial clean air outlet, a hollow cylinder of oil-wetted filtering material lining the interior of the cylindrical member, a rigid foraminous member within the cylinder of filtering material, said filtering material and foraminous member extending from end to end of the casing and being tightly confined between the end members, said cylindrical side wall member being provided with a plurality of parallel horizontally extending radially and axially spaced slots, the material of the casing at the upper sides of the slots being pressed outwardly to form louvers integrally united at their top and side edges to the casing wall.

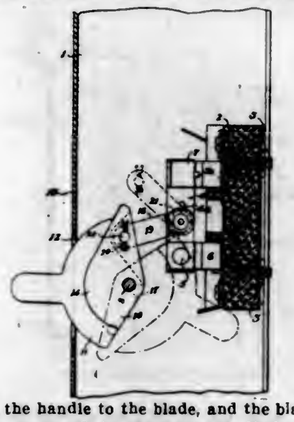
1,808,171. MULTILEAD MECHANICAL PENCIL. HALSEY MONROE LARTER, Newark, N. J., assignor to Larter & Sons, Newark, N. J. Filed Nov. 7, 1929. Serial No. 405,318. 10 Claims. (Cl. 120—14.)



1. A multi-lead mechanical pencil comprising a casing including two relatively slidable and rotatable sections

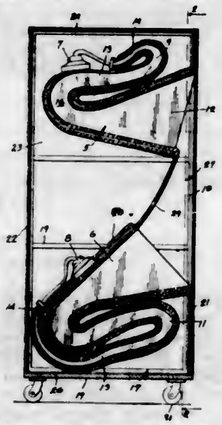
one having an opening at one end, a plurality of lead-carriers mounted in said section of the casing to move one at a time through said opening, and means in the other casing section to selectively engage said lead-carriers upon relative rotation of said casing sections and to

project them outwardly through said opening and retract them into said casing upon relative sliding movement of the casing sections in opposite directions respectively, and means for locking all said lead-carriers except the one to be projected against longitudinal movement.



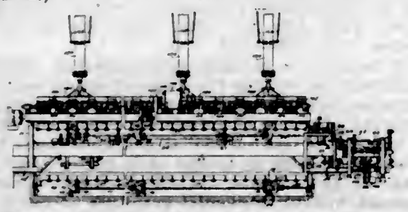
1,808,172. VEHICLE JACK AND SUPPORT MECHANISM. CLINTON W. LEACH, Minneapolis, and GEORGE M. BOGIE, Glenwood, Minn., assignors of one-third to George C. Leach, River Falls, Wis. Filed Aug. 5, 1929. Serial No. 383,606. 10 Claims. (Cl. 254—134.)

1. A jack comprising a standard, a member vertically movable in the standard, a pair of lifting hooks pivotally secured to the member for engagement under a wheel, and means at the upper end of the member for abutting engagement with the upper outer part of the wheel.



1,808,173. ENTRANCE SWITCH AND SERVICE BOX. JOSEPH C. LEWIS, Minerva, Ohio, assignor to Charles W. Keplinger, receiver of The American Electric Switch Corporation, Minerva, Ohio, a Corporation of Delaware. Filed April 28, 1927. Serial No. 187,209. 7 Claims. (Cl. 200—168.)

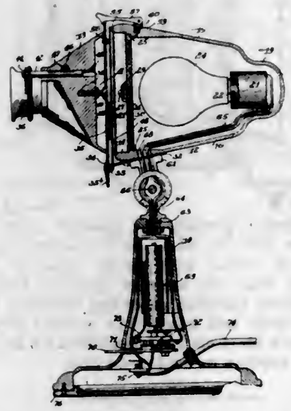
6. A sheet metal switch box, a door for the box provided with a slot, a switch block within the box, a switch blade pivotally mounted on the switch block, spring jaws on the switch block for receiving said blade, a rod located through the box and supported in the side walls thereof, an operating handle for the blade pivotally mounted upon the rod and located through the slot, a rigid link pivotally



connecting the handle to the blade, and the blade, link and jaws being arranged to cooperate to limit the opening and closing movements of the blade.

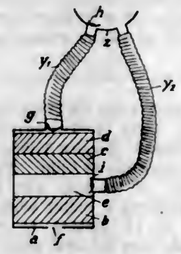
1,808,174. PADDED SOUND REPRODUCING HORN. LEONARD L. MAXAM, San Pedro, Calif., assignor of one-third to Clarence S. Crews, San Pedro, Calif. Filed June 19, 1929. Serial No. 371,995. 7 Claims. (Cl. 181—27.)

1. A loud speaker comprising a frame, a sound reproducer mounted thereon and including a sound amplifier, and a covering of vibration dampening material carried by said frame and completely enclosing said reproducer with the exception of an opening therein in register with said amplifier.



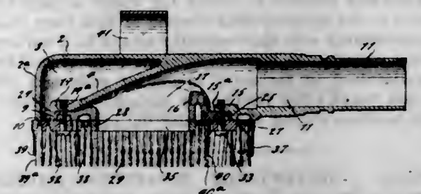
1,808,175. LIFTING DEVICE. RAYMOND C. PENFIELD, New York, N. Y. Original application filed May 5, 1926, Serial No. 106,875. Divided and this application filed Nov. 1, 1928. Serial No. 316,546. 7 Claims. (Cl. 214—1.)

1. In an automatic brick backing machine the combination of a vertically movable lift, a plurality of parallelly



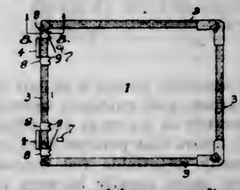
arranged rollers thereon forming a track, means for rotating said rollers in one direction when the lift is in its uppermost position and for rotating said rollers in the opposite direction when the lift is in its lowermost position.

1,808,176. STEREOSCOPIC VIEW BOX. ALPHONSE F. PIEPER and GEORGE I. KESTER, Rochester, N. Y.; said Kester assignor to said Pieper. Filed Oct. 24, 1927. Serial No. 228,260. 27 Claims. (Cl. 88—29.)



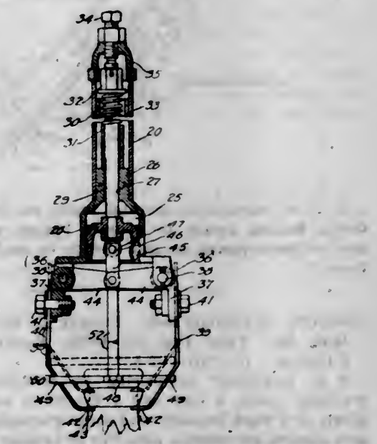
1. In a device of the class described, a lamp housing, stereoscopic lens means adjacent thereto, means intermediate said housing and lens means for holding films or the like, and means providing for relative aligning movement between said lens means and said film holding means one in a plane substantially parallel to the other and about an axis while each remains in its normal plane of operation whereby to simultaneously align the optical axes with corresponding points on the films.

1,808,177. AIR PURIFYING APPLIANCE. KARL EDUARD PÜTTER, Berlin, Germany, assignor to Deutsche Gasglühlicht-Auer-Gesellschaft mit beschränkter Haftung, Berlin, Germany, a Corporation of Germany. Filed May 20, 1927, Serial No. 193,034, and in Germany May 20, 1926. 4 Claims. (Cl. 128—140.)



1. A respirator having an opening adapted to serve alternately as an inlet and as an outlet, a chamber arranged to receive both the air to be inhaled and the exhaled air, a purifying chamber interposed between said receiving chamber and said opening, a mask, a conduit to lead the exhaled air from said mask to said receiving chamber, a connection, separate from said conduit, for leading air for inhalation from said receiving chamber to said mask, and an air-purifying element in said connection.

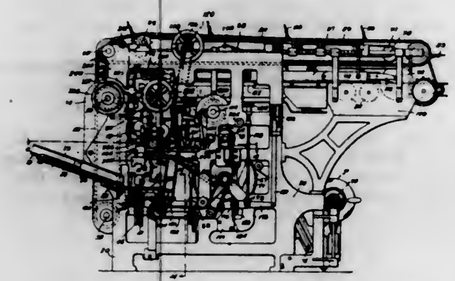
1,808,178. VACUUM BRUSH. RANDOLPH SANTINI, New York, N. Y., assignor to Arco Vacuum Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 18, 1926. Serial No. 142,249. 10 Claims. (Cl. 15—158.)



4. In a brush of the class described, a back member having a chamber therein, said chamber having an open side, said back member having an exhaust port for said chamber, an insert member mounted in said chamber with a side wall thereof spaced from a wall of said chamber to form a suction slot, support means on said back member providing a slot alined with said suction slot, and tuft means carried by said support means adjacent said suction slot.

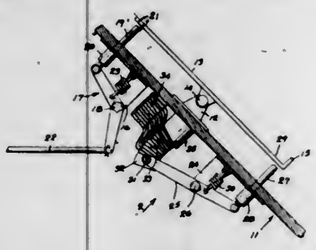
1,808,179. BOOK COVER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Corporation of Massachusetts. Filed April 3, 1930. Serial No. 441,218. 2 Claims. (Cl. 281—37.)

2. A book cover comprising a cardboard body, plates having rearwardly extending prongs and hinge eye, and a single forwardly extending prong, the plates being applied over the cardboard adjacent one edge thereof, the rear prongs being clinched around the edge, and the forward prong being clinched through the board.



1,808,180. APPARATUS FOR HANDLING GLASSWARE. JOHN E. SCHRODER, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Sept. 3, 1927. Serial No. 217,489. 6 Claims. (Cl. 214—1.)

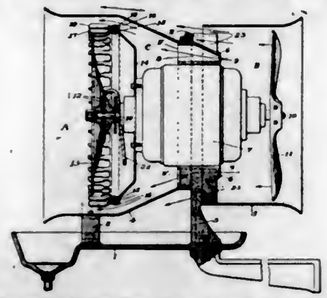
1. Apparatus for handling glassware comprising an arm mounted for movement between a ware-receiving station



and a ware-delivery station, a holder and tongs actuating means carried by said arm, tongs members mounted for vertical sliding movement with respect to said actuating means, means carried by the tongs for engagement with the ware and adapted to adjust the height of said tongs relative to the tong-engaging portion of said ware, means for maintaining said ware-engaging means in a horizontal position whereby the ware-engaging portions of said tongs are maintained in horizontal alignment with each other, and said tongs being frictionally maintained in their adjusted position during the transferring operation.

1,808,181. CONVERTIBLE WRAPPING MACHINE. HENRI A. SÉVIGNÉ, Winthrop, Mass., assignor to National Bread Wrapping Machine Company, Springfield, Mass., a Corporation of Massachusetts. Filed Sept. 27, 1929. Serial No. 395,608. 17 Claims. (Cl. 93—2.)

1. A wrapping machine having a supply guideway for articles to be wrapped, said guideway having a fixed rail at one side, a plurality of levers at the other side, a rail connected to said levers and parallel with the fixed rail, and a longitudinally adjustable rod connected to said levers to vary the space equally between the two rails throughout their lengths.



1,808,182. ELECTRICALLY OPERATED BRAKE FOR MOTOR VEHICLES. CARSON H. SHANNON, Los Angeles, Calif., assignor to American Electric Brake Corporation, Los Angeles, Calif., a Corporation of Delaware. Filed Oct. 24, 1928. Serial No. 314,597. 36 Claims. (Cl. 188—158.)

1. In an electrically operated brake, an electro-magnetic device having means to operate brakes, and a control mechanism actuated by said device to control the power thereof.

1,808,183. HUMIDIFIER. EUGENE A. SPAULDING, Portland, Me. Filed Dec. 10, 1928. Serial No. 325,096. 5 Claims. (Cl. 261—90.)

1. A humidifier comprising in combination with a revoluble shaft, a disc and a fan-wheel secured to said shaft, of a fixed impeditive element surrounding said disc, said element including a plurality of annular grids disposed in transverse alignment, relatively, each grid having a plurality of blades respectively disposed obliquely to a radial line, a cylindrical casing concentrically disposed around said impeditive element and spaced therefrom to provide an annular space, a frusto-conical portion on the rearward end of said casing, a frame adapted to support said casing and said frusto-conical portion thereof, an annular aperture through said frame, another cylindrical casing, said second casing adapted to surround said fan-wheel and extend forwardly to provide, between it and

said frusto-conical portion, an annular outlet for air projected from said fan-wheel on to the exterior of said first mentioned casing, said outlet being of relatively greater width than the annular aperture through said frame, an interior partition extending inwardly from said impeditive element and adapted to prevent impingement of the projected air from said fan-wheel on to said disc, and means to conduct water to said disc.

1,808,184. CLEANING AND PRESERVING OF METALLIC SURFACES. DEAL H. TOMPKINS, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed June 30, 1930. Serial No. 465,070. 20 Claims. (Cl. 148—8.)

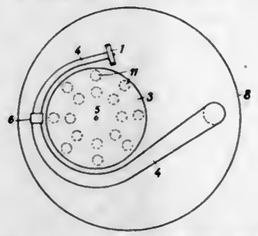
1. A process of pickling iron and steel products which comprises subjecting the metal to be pickled to the action of a sulfuric acid solution containing a small proportion of a sulfuric acid derivative of a reaction product of sulfur dioxide and an aldehyde-amine product.

1,808,185. CLEANING AND PRESERVING OF METALLIC SURFACES. DEAL H. TOMPKINS, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 9, 1930. Serial No. 487,506. 20 Claims. (Cl. 148—8.)

1. A process of pickling a metal which comprises subjecting the metal to be pickled to the action of a substantially non-oxidizing mineral acid solution containing a small proportion of a hydrochloric acid derivative of a reaction product of sulfur dioxide and an aldehyde-amine product.

1,808,186. CLEANING AND PRESERVING OF METALLIC SURFACES. DEAL H. TOMPKINS, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 11, 1930. Serial No. 488,196. 20 Claims. (Cl. 148—8.)

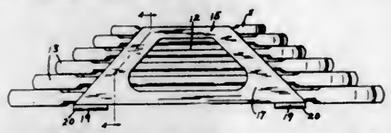
1. A process of pickling a metal which comprises subjecting the metal to be pickled to the action of a substantially non-oxidizing mineral acid solution containing a small proportion of a phosphoric acid derivative of a reaction product of sulfur dioxide and an aldehyde-amine product.



1,808,187. CLEANING AND PRESERVING OF METALLIC SURFACES. DEAL H. TOMPKINS, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 16, 1930. Serial No. 489,240. 20 Claims. (Cl. 148—8.)

1. A process of pickling iron and steel products which comprises subjecting the metal to be pickled to the action of a sulfuric acid solution containing a small proportion of a chromic acid derivative of a reaction product of sulfur dioxide and an aldehyde-amine product.

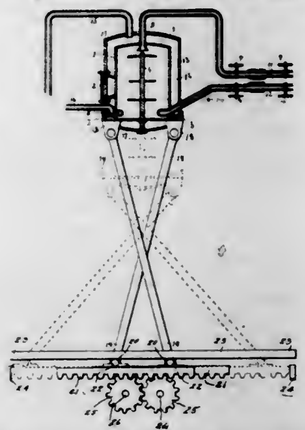
1,808,188. PROCESS OF PICKLING METALS. DEAL H. TOMPKINS, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 13, 1930. Serial No. 495,519. 24 Claims. (Cl. 148—8.)



1. A process of pickling a metal which comprises subjecting the metal to be pickled to the action of a substantially non-oxidizing mineral acid solution containing a small proportion of an organic acid derivative of a reaction product of sulfur dioxide and an aldehyde-amine product.

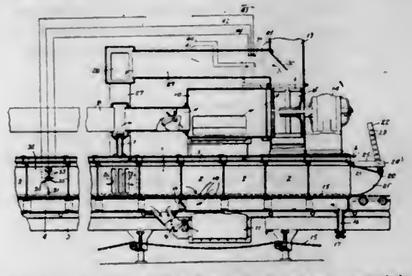
1,808,189. PHONOGRAPH. ETIENNE VADASZ, Ste.-Croix, Switzerland. Filed Mar. 29, 1929, Serial No. 350,904, and in Germany Aug. 3, 1928. 3 Claims. (Cl. 274—23.)

1. A phonograph comprising a casing including a sound chamber, a rotatable turntable mounted in said casing for receiving the record disks, a sound arm connected at one end with said sound chamber, said sound arm being of gradually increasing cross-sectional diameter toward its connection with said sound chamber and being of circular form disposed concentrically to a portion of the periphery of said turntable, and a sound box carried by said sound arm at its outer end, one-half of the developed length of said sound arm being greater than the distance between its point of connection with the sound box and its connection with the sound chamber.



1,808,190. WRENCH SET UNIT. FRANK J. VLCHEK, Cleveland, Ohio, assignor to The Vlchek Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1927. Serial No. 239,233. 17 Claims. (Cl. 206—16.)

1. A wrench set unit, comprising: a plurality of wrenches assembled side by side; and binder means extending about said wrenches; said binder means and said wrenches having interabutting means for preventing any substantial relative longitudinal movement in either direction between said binder means and said wrenches; whereby said wrenches are held both against separation and against shifting.

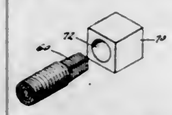


1,808,191. ART OF TREATING GUM HYDROCARBONS AND APPARATUS USED IN THE SAID ART. FELIX F. VON WILMOWSKY, New York, N. Y. Continuation of application Serial No. 701,217, filed Mar. 22, 1924. This application filed Feb. 8, 1930. Serial No. 427,069. 15 Claims. (Cl. 18—49.)

4. A process of dividing gum hydrocarbons into distinct grades or lots of hydrocarbons having different physical properties such as different degrees of tenacity, which consists in differentiating the aggregate state or physical condition of some portion of such hydrocarbons from the aggregate state or physical condition of another portion of the hydrocarbons by means of employing suitable physical factors which govern the changes of the aggregate states

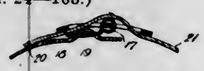
or physical conditions of the gum hydrocarbons and differently affect the aggregate states or physical conditions of distinct portions of the same such as running time, gradually changing temperature, gradually changing pressure; and then separating the differentiated portion and the other portion of the gum hydrocarbons from each other.

1,808,192. DRIFT CONTROL FOR LEERS. HAROLD A. WADMAN, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Aug. 29, 1929. Serial No. 389,118. 23 Claims. (Cl. 49—47.)



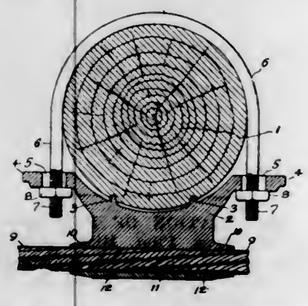
21. Apparatus for annealing glassware comprising a tunnel through which gaseous fluid may flow, means in said passage adapted to be acted upon by a flow of gaseous fluid through said passage in one direction or the other, detecting means responsive to the first named means, and means responsive to said detecting means for effecting a mechanical movement.

1,808,193. PREPARATION OF FLEXIBLE CABLES. HARTWELL W. WEBB, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Nov. 21, 1927. Serial No. 234,759. 14 Claims. (Cl. 219—10.)



1. A new article of manufacture, a length of multi-strand flexible cable or shafting having welded squared ends.

1,808,194. PREPARATION OF FLEXIBLE CABLES. HARTWELL W. WEBB, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Jan. 5, 1928. Serial No. 244,606. 29 Claims. (Cl. 219—10.)

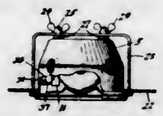


1. The method of preparing multistrand cable or shafting consisting of electrically heating a section of said cable or shafting until it oxidizes, annealing the section, and then cutting at the heated section while it is in the heated state.

1,808,195. FASTENING MEANS. NATHANIEL M. WHITMORE, Cambridge, Mass., assignor to Haverhill Shoe Novelty Company, Haverhill, Mass., a Corporation of Massachusetts. Filed July 2, 1929. Serial No. 375,538. 2 Claims. (Cl. 24—163.)

1. In a buckle for use on straps fixedly secured at their ends to opposite sides of the closure slit of an article for centering the buckle, a main buckle frame comprising side and end members, the main buckle frame having strap-receiving openings adjacent the end members so that a strap may be passed through these openings and under each of the end members, means for releasably securing a strap in the main buckle frame, a concavo-convex auxiliary buckle of approximately half the length of the main buckle frame, the auxiliary buckle being mounted to pivot on the main buckle frame about an axis disposed transversely of this frame and approximately midway between the ends thereof so that the auxiliary buckle may swing with its concave side adjacent the main buckle frame to a position wherein the free end of the auxiliary buckle is disposed adjacent an end of the main buckle frame, the auxiliary buckle having transverse slots for receiving and frictionally holding a strap.

1,808,196. STATE HIGHWAY GUARD FENCE. ROLLAND G. WILLIAMS, Branford, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn., a Corporation of Connecticut. Filed Mar. 27, 1929. Serial No. 350,390. 1 Claim. (Cl. 248—31.)



A device for attaching cables to supports composed of a fixture of substantially I-beam form having its front and rear connected by horizontal webs and having its front face concaved throughout its width to receive a cable and having the concavity of straight formation throughout, an elongated clamping member having its rear face formed with a concavity extending throughout its length to receive the cable, and also having its said concavity of straight formation throughout so as to permit the cable to slide between said face of the fixture and the clamping member upon the cable being subjected to lateral strains thereby to relieve the fixture and support of shock a pair of straps engaged about and substantially embedded in the clamping member and having threaded bolts connected to their ends, said front face of the fixture having openings above and below the cavity thereof and through which said threaded bolts extend, and nuts on the bolts engaged with the rear of the said front face of the fixture and disposed between said front face and the rear of the fixture so as to be protected thereby.

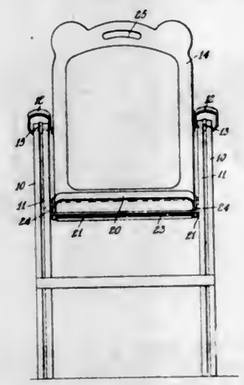
1,808,197. NAIL. WILLIAM G. WOODRUFF, Wareham, Mass., assignor to Tremont Nail Company, Wareham, Mass., a Corporation of Massachusetts. Filed July 19, 1928. Serial No. 293,890. 2 Claims. (Cl. 85—21.)

1. A cut nail having a body formed with flat sides meeting in relatively sharp longitudinal edges, with one side provided with indentations forming triangularly-shaped spurs having lateral shoulders extending across the side of the body at substantially right-angles to the edges thereof and with said shoulders terminating at one edge of the body in sharp points projecting laterally outward beyond the normal plane of its indented side and beyond its longitudinal edge.

1,808,198. INSTRUMENT MECHANISM HOLDER. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Nov. 28, 1927. Serial No. 236,314. 1 Claim. (Cl. 235—96.)

In an instrument mounting, an instrument carrying frame, a casing, means including plates secured to and within said casing and having inwardly directed resilient arms, said frame having cooperating projections, and means securing said projection to said resilient arms.

1,808,199. ATTACHMENT FOR SCREENS AND THE LIKE. ISIDORE I. ABRAMS, Brooklyn, N. Y. Filed Aug. 19, 1929. Serial No. 387,039. 4 Claims. (Cl. 156—38.)

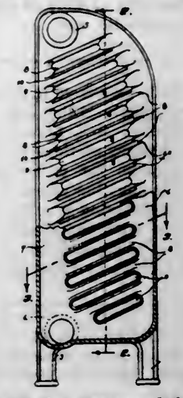


2. The combination with a screen frame composed of two sections each having upper, lower and outer end members, the sections being arranged to slide past one another, of a loop secured on the adjacent ends of each upper and lower member, said loops being adapted to slidably

receive the upper and lower members of the other section, cam means on one pair of said loops to engage the members of the section slidable therein, said cam means being on the outer side of the frame, and means to exert resilient pressure on said sections to move them outwardly.

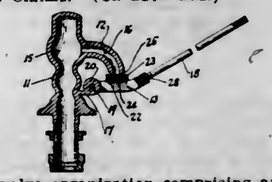
1,808,200. CLEANING AND PRESERVING OF METALLIC SURFACES. THOMAS W. BARTRAM and DEAL H. TOMPKINS, Nitro, W. Va., assignors to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 20, 1930, Serial No. 437,597. Renewed Dec. 4, 1930. 16 Claims. (Cl. 148—8.)

1. A process of pickling iron and steel products which comprises subjecting the metal to be pickled to the action of a sulfuric acid solution containing a small proportion of a sulfonated aldehyde-amine reaction product.



1,808,201. COLLAPSIBLE ARM CHAIR. WILLIAM J. BAUER, New York, N. Y., assignor to Project Holding Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 5, 1928. Serial No. 310,520. 7 Claims. (Cl. 155—139.)

1. A collapsible chair, comprising a pair of front legs, a pair of rear legs secured at their respective upper ends to corresponding upper ends of the pair of front legs, a pair of arm members pivotally connected to the respective upper ends of said cooperating legs, a seat member pivotally and slidably connected to the rear pair of legs, means to pivotally support the seat member to the front pair of legs, and a back member pivotally secured to the inner ends of the respective arm members and pivotally and slidably connected to the respective rear legs.



1,808,202. RADIATOR. EVERETT D. BETTS, Milan, Mich. Filed Nov. 13, 1929. Serial No. 406,779. 5 Claims. (Cl. 257—151.)

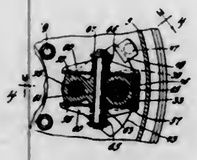
2. A radiator unit formed with openings surrounded by bosses extending in opposite directions laterally from said unit to space units apart when a number thereof are assembled into a radiator structure and form inlet and outlet passages at the upper and lower ends of said structure, said unit being also formed with vertical hollow edge members forming passages at the front and rear edges of the unit and also formed with passages at the upper and lower ends of said unit connecting said passages of said edge members, said passages of said edge members being of lesser cross-sectional area at one end than at the other, said passage at the upper and lower ends of said unit being in open communication with said inlet and outlet passages, and with transverse tubular passages connecting said vertical edge passages and

spaced apart, said tubular passages being inclined in the direction of their length forwardly and upwardly of said unit.

1,808,203. VALVE CONSTRUCTION. LOUIS BORTEN, Philadelphia, Pa. Filed Mar. 30, 1929. Serial No. 351,252. 6 Claims. (Cl. 137—104.)

1. A float valve organization comprising an upstanding inlet pipe, a pipe extending laterally from the standing pipe and curved downwardly, a hinge below the lateral, an arm pivoted to the hinge and extending beneath the end of the lateral, a closing member carried by the arm in position for contact with the end of the lateral and a buoy carried at the end of the arm.

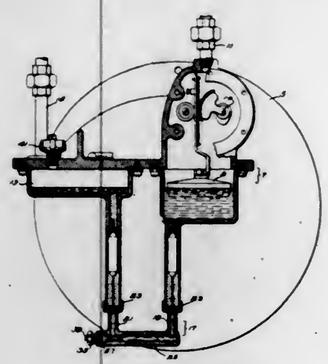
1,808,204. FLEXIBLE CONDUIT. JOHN H. BROWN, Minneapolis, Minn., assignor to Keasbey & Mattison Company, Ambler, Pa., a Corporation of Pennsylvania. Filed Mar. 7, 1929. Serial No. 345,042. 3 Claims. (Cl. 247—39.)



1. A flexible conduit comprising a tubular core of spirally curled strip metal; and a covering including a

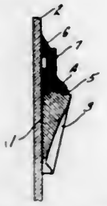
wound on thickness of comparatively heavy thermo-insulate cordage, with an outer retaining jacket, also of thermo-insulate material, both capable of adapting themselves to the flexing of the metallic core.

1,808,205. WELDING. MANTON B. BRYANT and WALTER J. BEATTY, Detroit, Mich. Filed Jan. 10, 1928. Serial No. 245,807. 3 Claims. (Cl. 113—112.)



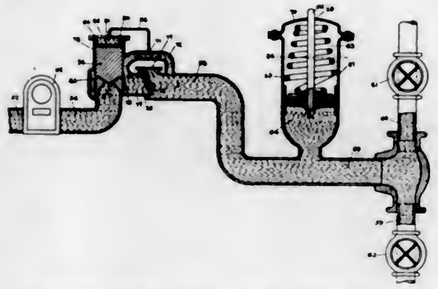
1. The method of welding sections of sheet steel containing nickel and chromium for carbonizing boxes, which comprises welding the abutting edges by fusing therewith a welding material containing a relatively large amount of nickel as compared with the amount of nickel in the sections whereby the welded sections are adapted to withstand temperatures as high as 1700° F.

1,808,206. BRAKE CENTRALIZER. THERON P. CHASE, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 17, 1929. Serial No. 378,958. 10 Claims. (Cl. 188—78.)



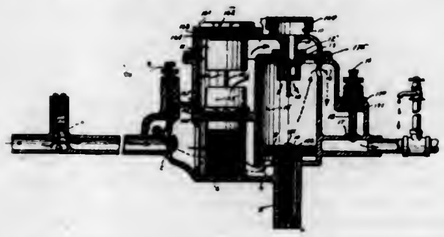
1. In a centralizer for brakes, a brake actuating shaft, a swinging journal carrying said shaft, said journal having opposite faces, said shaft being rotatably supported in said journal, a fixed plate having oppositely disposed edges normally in alinement with said faces, oppositely located spring seats, resilient means holding said spring seats against said edges and faces and said faces and edges in alinement.

1,808,207. GAUGE. LYMAN COOK, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed Aug. 27, 1927. Serial No. 215,921. 8 Claims. (Cl. 73—31.)



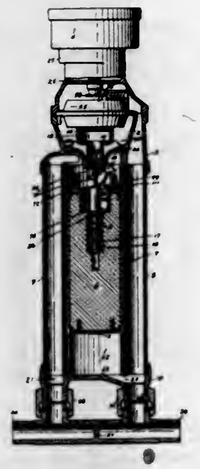
1. A gauge of the U tube type having a pair of legs and a tubular connection between them extending past one of the same and terminating in an open end, a threaded plug in said open end, a member rotatively supported therein having a segmental portion opposing the junction of the adjacent leg and being exposed exteriorly to provide for rotative adjustment of the same.

1,808,208. SIGNAL VIEWING ATTACHMENT FOR AUTOMOBILES. BRUCE W. DAVID, Cleveland Heights, Ohio, assignor to The Moonbeam Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 12, 1928. Serial No. 318,764. 11 Claims. (Cl. 88—1.)



7. In a device of the class described, the combination of a lens having an integral projection, and a one-piece rubber member having a portion in direct engagement with said projection and having an integral suction cup adapted for direct attachment to a glass window.

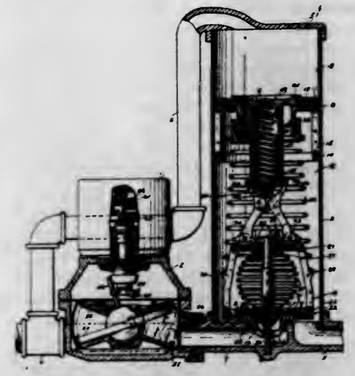
1,808,209. FLUID METERING SYSTEM AND APPARATUS. GEORGE GOODELL EARL, New Orleans, La. Filed Dec. 21, 1923. Serial No. 682,040. 30 Claims. (Cl. 73—167.)



1. In a fluid conduit system a fluid system valve having a movable member, the valve being normally biased toward closure by a given force, means for opening and holding open said valve at all rates of flow above a given rate of flow therethrough, and for closing said valve at any lower rate of flow, comprising means for conducting the fluid discharging through said valve through a restriction and means for communicating the pressure at the approach of said restriction to the movable member to cause it to tend to open the valve and means for communicating the reduced pressure effected by the restriction from the restriction to said movable member in opposition to the first named pressure.

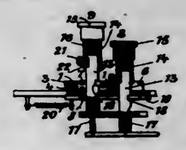
1,808,210. FLUID METERING MECHANISM. GEORGE GOODELL EARL, New Orleans, La. Filed May 31, 1927. Serial No. 195,275. 35 Claims. (Cl. 73—167.)

1. In a hydraulic system, in combination a container for liquid, a wall for said container movable inwardly and outwardly upon movement of liquid into and from the container, means to continuously communicate pressure of liquid from a source to the exterior side of said wall, means to continuously effect a predetermined pressure of constant value upon the wall to oppose the pressure of liquid effective on its exterior side, a valve operable to admit liquid from the source to the interior of said container, said valve and said wall being normally, entirely, operatively disassociated, means responsive to a definite predetermined outward movement of the wall to operate the valve, and a duct for discharge of liquid from the container.



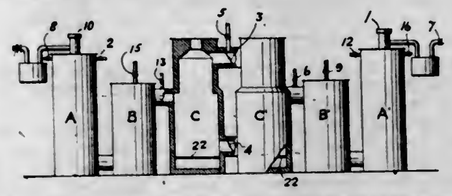
1,808,211. FLUID METER. GEORGE GOODELL EARL, New Orleans, La. Filed Mar. 1, 1928, Serial No. 258,339. Renewed Apr. 13, 1931. 14 Claims. (Cl. 73—167.)

1. In combination, a casing having a passage therethrough adapted to conduct a flow of fluid, a register, a register actuator and a valve, said valve controlling the flow through the passage, said actuator adapted to effect operation of the register at a rate corresponding to the rate of flow through the passage, means operable to effect opening of said valve responsive to an excess of pressure at the inlet end of the passage over that at the outlet end thereof, and other means dominated by the rate of flow through the passage responsive to an initial opening of the valve, adapted to effect continuous opening of the valve, substantially only for such a period as a predetermined rate of flow through the passage is exceeded, and separate means operated coincidental with any substantial movement of the actuator, adapted to instantly indicate the fact of and continuance of flow through the passage.



1,808,212. METER. GEORGE GOODELL EARL, New Orleans, La. Filed May 25, 1928, Serial No. 280,483. Renewed Oct. 16, 1930. 19 Claims. (Cl. 73—167.)

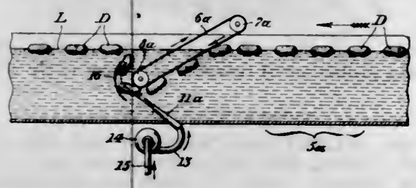
7. In combination with a fluid conduit, a valve mechanism therefor comprising a valve adapted when in closed position to substantially prevent flow through the conduit, the valve being movable to open in the direction of flow through the valve opening, a fluid storage chamber communicating with the conduit on the discharge side of the valve, the chamber having a movable wall, means to communicate the pressure of fluid on the approach side of the valve to an exterior side of the said wall, means effective to accumulatively store energy upon a movement of said wall in a direction effective to reduce the volumetric content of the chamber, means operable to effect a relatively sudden communication of the force of the stored energy to the valve to effect a positive opening of



the valve upon such movement of said wall as accomplishes a predetermined reduction of content of the chamber.

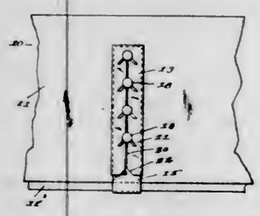
1,808,213. CALCULATING MACHINE FOR ALL SPECIES. KONRAD EICHENAUER, Neu-Rossen, near Merseburg, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany, a Corporation of Germany. Original application filed July 21, 1927, Serial No. 207,426, and in Germany Nov. 18, 1926. Divided and this application filed Apr. 19, 1928. Serial No. 271,315. 2 Claims. (Cl. 235—145.)

1. In a calculating machine for all species of calculations wherein the keys remain depressed upon operation thereof, the combination of normally open contacts in an electric circuit, setting keys arranged to close said contacts simultaneously with the setting up of numeral values thereby in said machine, each of said keys consisting of two parts movable with respect to each other, one of said parts controlling the opening and closing of said contacts, means for limiting the amount of relative movement of the two parts, and a spring interposed between the two parts of the key adapted to be compressed by setting up a numeral value in the machine for the purpose of allowing the contact to be closed and to be expanded after release of pressure upon said key, and means for retaining one part of said key in the depressed position.



1,808,214. METHOD OF MAKING WATER GAS. OWEN B. EVANS, Philadelphia, Pa., assignor to The U. G. I. Contracting Company, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 3, 1924. Serial No. 703,893. 2 Claims. (Cl. 48—208.)

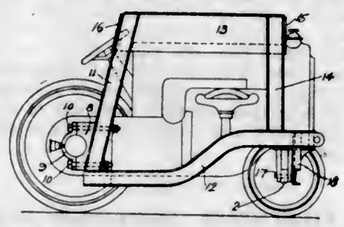
1. In the process of manufacture of water gas by alternate air and steam blasting periods; the improvement



which consists in providing two separate fuel beds of bituminous fuel in two intercommunicating water gas generators, hot air blasting from the top part of the fuel bed in one generator to the top portion of the other fuel bed in the second generator and from the bottom part of the fuel bed in the first generator to the bottom part of the fuel bed in the second generator thereby evolving volatile matter in the fuel bed in the first generator, and introducing secondary air between the fuel beds to burn the volatile matter and thereby facilitate the carbonization of raw fuel and to store heat in the fuel bed in the second generator, and then generating water gas by steam blasting the heated fuel beds.

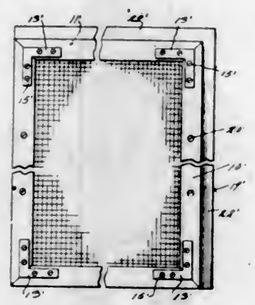
1,808,215. TURNOVER FOR AUTOMATIC COOKING APPARATUS. JACOB H. FRIEDEL, New York, N. Y., assignor to Doughnut Machine Corporation, New York, N. Y., a Corporation of New York. Filed June 21, 1930. Serial No. 462,723. 7 Claims. (Cl. 53—7.)

1. Turnover means useful with automatic apparatus for cooking articles such as doughnuts afloat in hot liquor, comprising means for temporarily depressing the articles against their buoyancy in the liquor incident to progression in the apparatus; and means for setting up an upward current in the liquor locally at the point of release of the articles by the depressing means to turn the articles over.



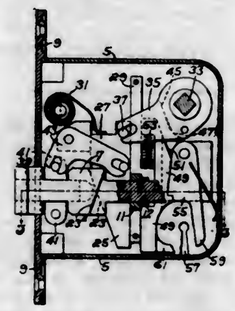
1,808,216. SAFETY BOX FASTENER. JOSEPH G. FRIEDMAN, New York, N. Y. Filed May 4, 1929. Serial No. 360,561. 3 Claims. (Cl. 292—307.)

1. A fastener for a box including outer and inner telescopic members, said fastener comprising two slidable parts adapted to be secured to said outer and inner members respectively, one of said parts being sheath-like and having a longitudinal slit and an angular slot in communication therewith, said slot being wider than said slit, the other part having headed projections presenting neck portions larger than the width of said slit and adapted for forceful entry into said slit and into the slot to secure the parts in non-releasable engagement.



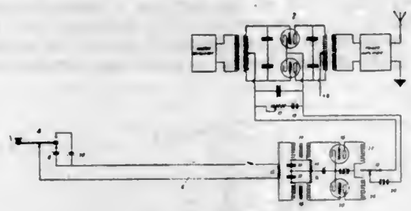
1,808,217. TRACTOR FRAME. THORVALD N. GARSON, New Brighton, N. Y. Filed June 21, 1928. Serial No. 287,066. 1 Claim. (Cl. 180—1.)

In a tractor comprising a frame and front and rear axles secured thereto, of front and rear wheels connected to said axles, and means including the rear axle for driving the rear wheels, of lateral projecting annular hub extensions for the rear wheels, a supplemental tractor frame comprising front and rear upwardly projecting frame members and interconnecting members therefor, means connecting the rear frame members to the hub extensions of the rear wheels whereby said wheels serve as the entire



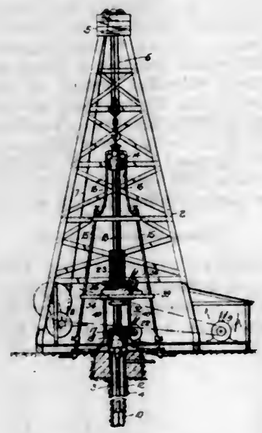
support for the rear of the supplemental frame, and means connecting the supplemental frame at its front to the front axle.

1,808,218. METAL DOOR AND WINDOW SUPPORT. CLIFORD W. GRIFFIN, Lebanon, Tenn. Filed Apr. 10, 1930. Serial No. 443,229. 1 Claim. (Cl. 156—14.)



In combination with a screen frame, an L-shaped bracing member, means for securing said bracing member on one face of the frame and across the corner thereof a protecting supporting shield positioned on the opposite face of the frame and overlying the screen, said supporting shield comprising an elongated metallic strip covering the face of the frame and reinforcing the frame whereby to prevent bending or warping thereof, the outer edge of said supporting strip extending outwardly of the frame whereby to provide an outwardly extending flange for engagement with the outer face of a sash structure.

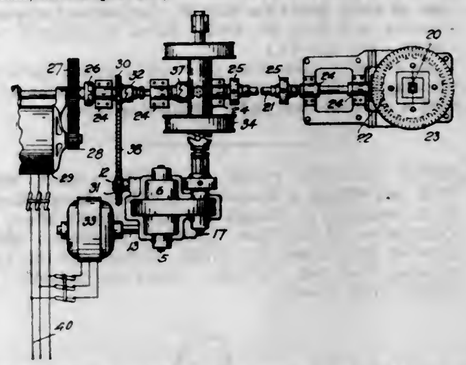
1,808,219. LATCH. BICKNELL HALL, Quincy, Mass. Filed Dec. 31, 1927, Serial No. 243,838. Renewed Apr. 9, 1930. 12 Claims. (Cl. 70—29.)



4. In a latch a double beveled bolt, an abutment thereon and a member movable across said abutment as the bolt is projected and serving to maintain the bolt in any projected position within its range.

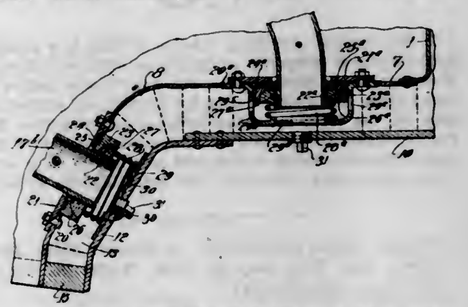
1,808,220. KEYING. CLARENCE W. HANSELL, Rocky Point, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Nov. 2, 1927. Serial No. 230,439. 8 Claims. (Cl. 178—2.)

1. The method of keying a remote transmitter having amplifier tubes which includes putting plus and minus direct control current on a line, and at the terminal of the line utilizing induced potentials resulting from the rate of change of the control current for applying blocking potential to the grid of an amplifier tube in the transmitter.



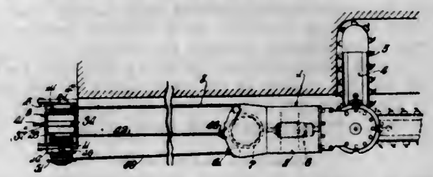
1,808,221. DRILLING MACHINE. FREDERIC W. HILD and GURDON T. POLLARD, Denver, Colo.; said Pollard assignor to said Hild. Filed Dec. 15, 1920. Serial No. 430,940. 7 Claims. (Cl. 255—22.)

1. In a drilling machine, the combination of a drill tool, an element for its rotation including a motor, a rotary nut having a screw connection with the drill tool, a second motor for rotation of the nut, and means for varying the relative velocities of said motors by and proportionate to variations in a resistance to the movement of the tool.



1,808,222. POWER TRANSMISSION SYSTEM. FREDERICK W. HILD, Denver, Colo. Filed Mar. 22, 1921, Serial No. 454,451. Renewed May 7, 1924. 8 Claims. (Cl. 255—19.)

1. Earth-boring apparatus comprising a drill stem, means for freely suspending a portion of the weight of said drill stem, driven means for effecting rotation of said drill stem, and a plurality of motor devices and a differential

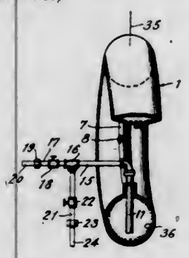


mechanism for operating said means, one of said motor devices having a positive driving connection with said driven means.

1,808,223. LOCOMOTIVE BOILER. WALTER H. HINSCH, Chicago, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 17, 1929. Serial No. 386,665. 4 Claims. (Cl. 122—68.)

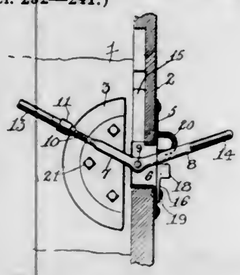
1. A locomotive boiler having a firebox, a water steaming and circulating member disposed in the firebox and having a tubular inlet end opening through one of the sheets thereof so as to communicate with the water space of the boiler and means associated with said sheet and including a packing surrounding said inlet end and providing a connection for said inlet end which permits of both a longitudinal and a lateral movement of said neck without leakage about the same.

1,808,224. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 22, 1929. Serial No. 365,168. 32 Claims. (Cl. 262—8.)



1. The combination with a mining machine adapted to operate on a steeply inclined coal face and having feeding means for feeding the machine upwardly along the coal face, of a safety device operated by the machine feeding means and complementing the latter in the feeding of the machine up the inclined and operative upon failure of the machine feeding means to prevent automatically uncontrolled movement of the machine down the incline.

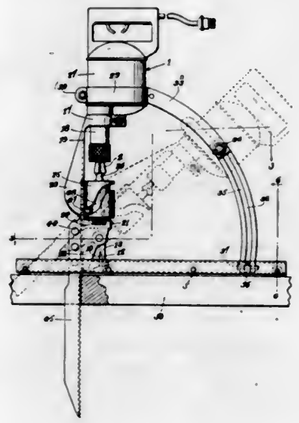
1,808,225. ADHESIVE COMPOSITION. ERNEST HOPKINSON, New York, N. Y. Original application filed Aug. 18, 1923, Serial No. 658,184. Divided and this application filed Sept. 28, 1927. Serial No. 222,689. 4 Claims. (Cl. 87—17.)



1. An adhesive composition for bonding porous material comprising an aqueous dispersion of rubber, an organic colloid, a colloidal clay, and a vulcanizing agent.

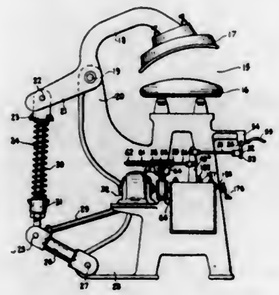
1,808,226. RUBBER TUBE. ERNEST HOPKINSON, New York, and WILLIS A. GIBBONS, Little Neck, Long Island, N. Y., assignors to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Original application filed June 23, 1925, Serial No. 38,966. Divided and this application filed Oct. 10, 1928. Serial No. 311,462. 3 Claims. (Cl. 18—58.)

1. The method of making tubular articles in a complete annulus which comprises supplying an aqueous dispersion of rubber to the interior of a water permeable hollow annular form, depositing suspended solids from said dispersion on the form by withdrawing aqueous matter from the dispersion though said form, dying the deposit, a pressure differential being maintained on opposite sides of the form during said operations, and removing the article.



1,808,227. DOOR FASTENER. ALEXANDER HOSIG, Blackhawk, Wis. Filed May 13, 1929. Serial No. 362,764. 3 Claims. (Cl. 292—241.)

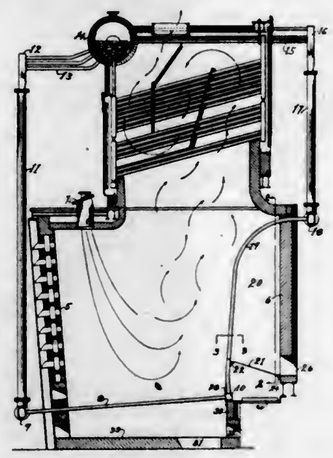
1. A device of the class described including a stationary arcuate cam plate, having an angularly disposed engaging face, angularly positioned arms having their inner ends pivotally mounted on a movable member and adapted to be disposed adjacent the straight edge of the plate, a hook member carried by one of said arms for engaging the cam surface of the plate, and a handle member at the outer ends of both arms for engaging and disengaging the hook member with the cam plate.



1,808,228. ATTACHMENT FOR ELECTRIC DRILLS. EUGENE HULACK and JOHN W. NISSROD, Jacksonville, Fla., assignors of one-sixth to H. E. Cochran and one-sixth to George L. Rutherford, Jacksonville, Fla. Filed Apr. 25, 1930. Serial No. 447,298. 7 Claims. (Cl. 143—68.)

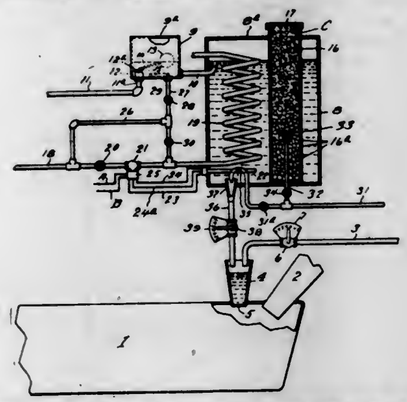
1. In an attachment for connection with the rotatable chuck of an electric hand drill, a cam roller having a shank for engagement by the chuck, said cam roller having its peripheral face formed with a diagonally disposed groove, a guide element adjacent the cam roller, a tool connecting element slidably mounted in the guide element, a roller carried by the tool connecting element and extending into said groove, a travelling carriage for engagement with an object to be operated upon, a vertically disposed plate extending transversely of the carriage, a supporting member having its lower end pivotally connected with said plate to swing on an axis longitudinally of the carriage, said guide element having a projecting portion pivot-

ally connected with the upper end of said supporting member to swing on an axis disposed transversely of the carriage, and adjustable means for preventing movement of the guide element relative to said supporting member, said adjustable means including a clamp secured to the drill, an arcuate extension formed on the clamp, an arcuate bracket having its lower end pivotally connected to the carriage to swing on an axis longitudinally of the carriage, said bracket being formed with an elongated slot and having an upper end portion thereof disposed in overlapping relation to said extension, and a bolt carried by said extension and extending through said elongated slot.



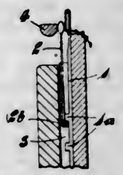
1,808,229. CIRCUIT CONTROLLING DEVICE. RICHARD B. HUNTER, Milwaukee, Wis., and ROBERT C. PAULY, Cincinnati, Ohio, assignors, by mesne assignments, to Cutler-Hammer, Inc., a Corporation of Delaware. Filed June 23, 1928. Serial No. 287,844. 12 Claims. (Cl. 68—9.)

1. In an electric switch, in combination, a stationary contact, a pivoted contactor movable into and out of engagement with said stationary contact, a lever pivoted eccentrically with respect to said contactor, spring means interposed between the free end of said lever and said contactor and adapted upon movement of said lever in opposite directions respectively to effect corresponding movement of said contactor with a snap action, means for effecting such movement of said lever comprising another pivoted lever having a toggle connection with said first lever, said toggle connection being adapted upon movement of said second lever to a given intermediate position to effect movement of said first lever in one direction, and said toggle connection being also adapted upon movement of said second lever in either direction from said intermediate position to effect movement of said first lever in its opposite direction.



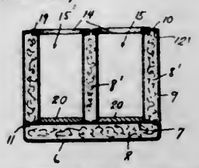
12. In a controller for the driving motion of a garment press or the like wherein one member of the press is movable alternately toward and away from the other member thereof under conditions of unidirectional operation of the driving motor, the combination with a switch movable with a snap action to closed or open position to complete or interrupt the energizing circuit of said motor, manual and automatic operating means for said switch comprising a pivoted lever movable to a given intermediate position to open said switch, said lever being also movable in either direction from said intermediate position to close said switch, manually operable means comprising a crank and a normally disengaged clutch for effecting movement of said movable member of the press independently of the driving motor, and a cam and lever associated with said last mentioned means for insuring intermediate positioning of said first mentioned lever to open said switch prior to engagement of said clutch.

1,808,230. SLAG SCREEN. DAVID S. JACOBUS, Montclair, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Nov. 3, 1925. Serial No. 66,628. 7 Claims. (Cl. 122—235.)



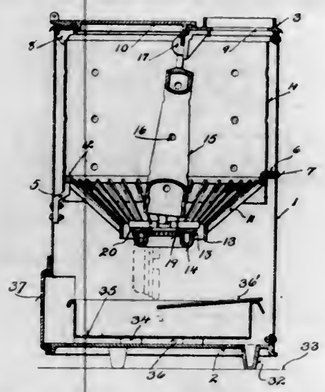
1. In combination, a boiler, a combustion chamber disposed beneath the boiler and having means for burning a slag-producing fuel therein, a vertically extending wall disposed in a position to be subjected to the action of slag in the burning fuel, means spaced inwardly from the wall forming a cooling zone in front thereof to protect it from the action of said slag, and means for the collection and removal of ashes from the space between said means and the wall.

1,808,231. PROCESS OF TREATING CLAY. WILLIAM R. JEAVONS, Cleveland Heights, and MAHLON J. RENTSCHLER, Willoughby, Ohio. Filed May 11, 1928. Serial No. 277,029. 17 Claims. (Cl. 106—11.)



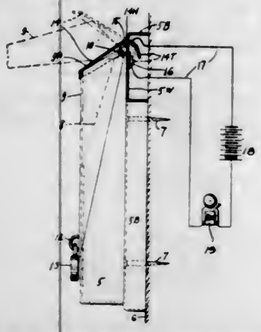
1. The herein described process of treating clay which consists in dissolving barium hydrate in water free from carbon dioxide and pugging a definite proportion of such solution into the clay.

1,808,232. KNITTING MACHINE. THOMAS HENRY JONES, Woodthorpe, England. Filed May 9, 1929, Serial No. 361,776, and in Great Britain May 21, 1928. 7 Claims. (Cl. 66—102.)



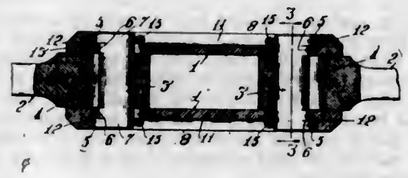
6. In a knitting machine, bearded needles, presser members for the beards of the needles, and means for moving the presser means and the needles longitudinally in unison during the pressing period, and other means operating while the said parts are moving in unison to move the presser means laterally to cross the beards of the needles.

1,808,233. FOOT WARMER. ALBERT KAMRATH, St. Louis, Mo. Filed Mar. 13, 1930. Serial No. 435,504. 1 Claim. (Cl. 2—69.)



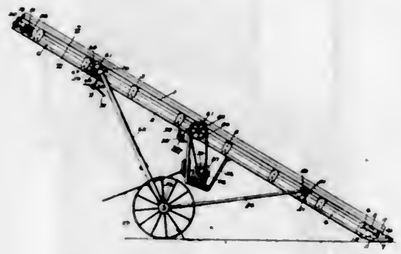
A foot warmer comprising a casing including a bottom wall, a top wall, and a peripheral wall connecting said top and bottom walls, said bottom wall comprising spaced inner and outer layers of fabric, a filling material arranged in the space between said inner and outer layers of fabric, said top wall being provided with a pair of leg accommodating openings, a pair of separable boots arranged in said casing and supported on said inner layer of fabric, said boots at their upper ends registering with said leg accommodating openings, means for securing the upper edges of said boots to said top wall at the edge of the respective leg accommodating openings, and filling material arranged between said boots, and between the boots and peripheral wall of the casing for substantially enveloping the boots.

1,808,234. GARBAGE INCINERATOR. MATHIAS ANTON KOHN, Milwaukee, Wis. Filed Feb. 23, 1928. Serial No. 256,319. 2 Claims. (Cl. 110—18.)



1. A garbage incinerator comprising an outer shell, a perforated colander positioned within and spaced from said outer shell, spaced lugs carried by the shell and having their inner ends extending through notches in the lower end of the colander for supporting said colander within the shell, means for normally spacing the colander from the shell, a conical grate formed with a plurality of inwardly converging slanting bars and having an open central portion, a ring connecting the bars at their upper ends and resting on the lugs which support the colander, a second ring connecting the lower ends of said bars around the open central portion, a tilting burner within said second ring for closing the lower portion of the grate, a plate upon the upper side of the burner with its edges overhanging the same, a plurality of radial ribs upon the upper face of the plate with their upper edges extending above the upper edge of said second ring and a hollow, perforated flame distributor located above said grate.

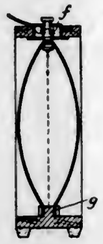
1,808,235. MAIL BOX SWITCH. SIGISMUND LANG, St. Paul, Minn. Filed Mar. 6, 1929. Serial No. 344,697. 1 Claim. (Cl. 200—57.)



In a mail box comprising an elongated upright receptacle provided with a mail receiving aperture at its upper end, a hinged lid normally closing said aperture, the receptacle comprising further a large closure hinged below the hinge means of the said lid, the upper end of said large closure formed to provide the mail inserting opening and said lid normally resting thereon, an electric switch within the receptacle comprising a stationary contact fixed in proximity to said hinge means, a hinge circuit closing member comprising a tongue integral of the hinged part of said lid and normally with its free end in spaced relation to the fixed contact and arranged to close circuit by upward movement of the said lid, and said lid arranged to also be raised by opening of the large closure.

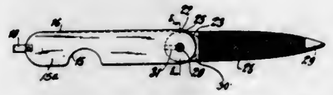
1,808,236. SPROCKET CHAIN. EARL A. LERNER, Chicago, Ill., assignor to himself and Ernest E. Crane, Chicago, Ill. Filed June 16, 1928. Serial No. 286,000. 4 Claims. (Cl. 74—32.)

1. An articulate structure of the type specified comprising a series of links disposed in overlapping relation to each other and presenting overlapped and overlapping end portions, each overlapped end portion being provided with a substantially elliptical opening semi-cylindrical at one end, each overlapping end portion having an opening of the same length and width as said elliptical opening and having a straight wall at one end, and pins for coupling said links, each of said pins comprising a cylindrical middle portion engaging in one of said elliptical openings, a head at at least one end corresponding substantially in shape and size with and adapted to pass through said elliptical openings and through the opening in the overlapping portion of a link, and a flat shoulder between said head and said middle portion overhung by said head and engaging the straight wall portion of the opening in the overlapping link portion, said respective openings being offset from each other and said overhanging portion of said head engaging the outer face of the overlapping link end, and a transverse retaining pin mounted in the latter and bridging the other end of the opening therein for retaining said head in the last-mentioned position.



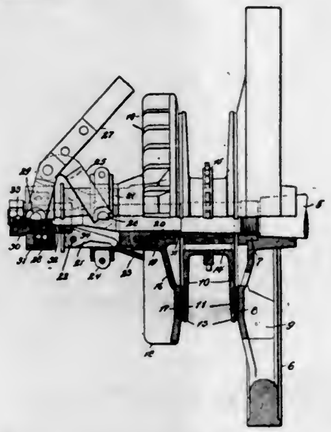
1,808,237. PORTABLE CONVEYER. WILLIAM K. LIGGETT, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 15, 1922. Serial No. 543,984. 17 Claims. (Cl. 198—233.)

1. In a machine of the class described, the combination with an elongated frame and an endless belt mounted therein, of transverse cleats attached at spaced intervals to the belt, each cleat being made of yielding material having one longitudinal edge secured to the belt and the other longitudinal edge extending outwardly from the belt.



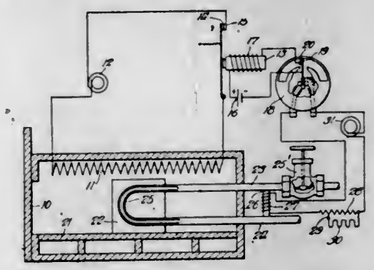
17. In a machine of the class described, the combination with an elongated conveyer frame, of an axle positioned beneath the frame substantially midway its length, struts extending in opposite directions from said axle, one of said struts being pivotally connected to said frame, the other strut having a pivotal and sliding connection with said frame and said pivotal connections of said struts with the frame being arranged at substantially equal distances from opposite ends thereof at all times regardless of the inclination of the frame and struts.

1,808,238. DIAPHRAGM FOR SOUND REPRODUCTION. KARL LOCKE and HUGO SACHS, Leipzig-Wahren, Germany. Filed Aug. 28, 1928, Serial No. 302,466, and in Austria Feb. 2, 1928. 5 Claims. (Cl. 181—31.)



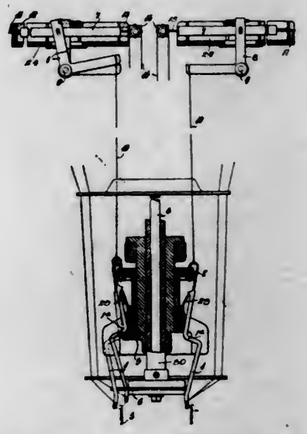
1. In a sound reproducing device, an open sided rectangular box frame, a straight-bordered curved diaphragm within said box frame and secured by one straight border to one side thereof, and means mounted on said box frame for vibrating the opposite straight border of said diaphragm in the direction of the chord of the curvature of said diaphragm.

1,808,239. COMBINATION TOOL. GEORGE A. LOGAN, New York, N. Y. Filed Dec. 31, 1927. Serial No. 243,819. 3 Claims. (Cl. 30—10.)



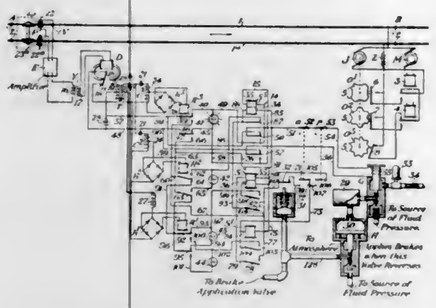
1. In a combination tool, a handle, a hub in the handle for engaging a tool means, said hub consisting of a single sheet of material comprising a plurality of cheek plates interconnected by a web, another oppositely positioned split web, and pivot means passing through the cheek plates and mounting the hub on the handle, one of said webs coacting with the handle as a stop.

1,808,240. POWER TRANSMISSION MEANS. CHARLES G. MAHANA, Three Rivers, Mich., assignor to Fairbanks, Morse & Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 14, 1925. Serial No. 56,265. 3 Claims. (Cl. 192—68.)



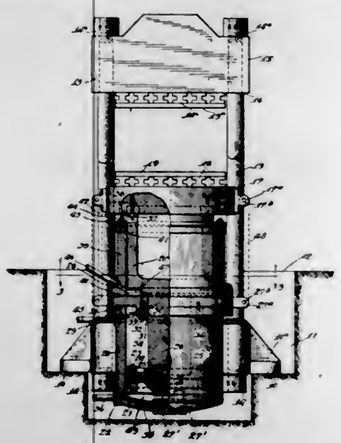
1. In a power transmitting mechanism in combination, an engine shaft, a fly wheel mounted thereon, having a plane frictional driving surface on one side thereof and radiating cooling fins on its opposite side, a driven member rotatably mounted on said shaft and having power transmitting means rigidly connected therewith and having plane frictional driving surfaces at each end thereof, a driving member slidably mounted on said shaft and having a plane frictional surface on one side thereof to engage said driven member and having radiating cooling fins on its opposite side, said slidable driving member having a hub provided with a socket on its side adjacent said driven member, a spring in said socket and a collar on said shaft said spring engaging said collar and tending to separate said slidable member from said driven member, mechanism mounted entirely on said shaft for moving said slidable driving member to clamp said driven member between it and said fly wheel.

1,808,241. SYSTEM OF HEAT TREATING. CHARLES A. MARTIN, Chicago, Ill. Filed Oct. 3, 1925. Serial No. 60,316. 5 Claims. (Cl. 263—2.)



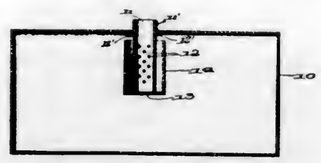
1. A system of heat treating a magnetic substance comprising means responsive to a change in the magnet permeability of the substance, means for cooling said permeability responsive means, and means controlled by said permeability responsive means for indicating the changes in said means due to a change in the permeability.

1,808,242. CIRCULAR KNITTING MACHINE. EDWIN TEMPLAR MAY, Chilwell, and ARTHUR SHERRIFF, Long Eaton, England, assignors to Fred Attenborough, Long Eaton, England. Filed Apr. 10, 1928, Serial No. 268,973, and in Great Britain Apr. 23, 1927. 7 Claims. (Cl. 66—135.)



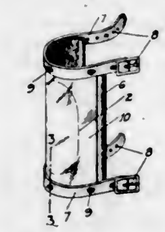
1. In a circular knitting machine a plurality of displaceable thread guides, a rotary cam device operating to displace said guides and jacquard mechanism functioning selectively to move said thread guides into a position in which they are unaffected by said cam device.

1,808,243. RAILWAY TRAFFIC CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 28, 1928, Serial No. 322,421. Renewed Nov. 6, 1930. 4 Claims. (Cl. 246—63.)



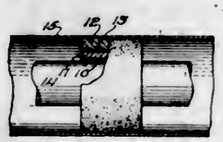
1. Railway traffic controlling apparatus comprising a train carried differential relay having two opposed windings, means located partly in the trackway for energizing one winding of said relay under certain traffic conditions, means operating upon a change to certain other traffic conditions to energize the second winding to open said relay, means under the control of the engineman and effective under said other traffic conditions to energize said second winding to close the relay, a signal arranged to be operated when said relay is open, and governing means on the train set into operation at the expiration of a fixed interval of time after said relay is opened.

1,808,244. HYDRAULIC PRESS. WILLIAM E. MCCULLOUGH, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Apr. 1, 1929. Serial No. 351,590. 4 Claims. (Cl. 138—17.)



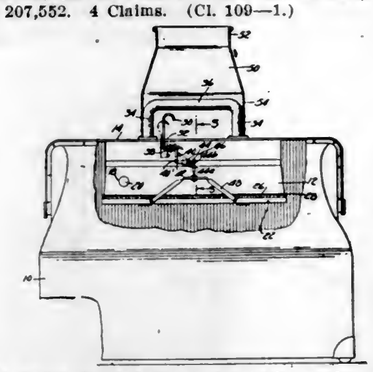
1. In an hydraulic press, two casings, a partition between said casings, a ram extending through one of said casings and into the other passing through a suitable opening in said partition, a pressure-receiving piston at the end of said ram within the second casing, said piston being in sliding contact with the walls of said casing and making a water-tight seal therewith, a main pressure-chamber at the end of said second chamber being confined by the end thereof and by the said piston, an annular water-space between said second casing and said ram being confined by the opposite side of said piston and the walls of the casing and the partition, said ram being enlarged to substantially the size of the first casing for a distance substantially equal to the length of said first casing but forming therewith an annular pressure-chamber bounded by said enlarged portions the partition and the walls of the first casing, and means for admitting water to said main pressure-chamber and said annular pressure-chamber and said water-space.

1,808,245. ANTITHEFT DEVICE. JOHN R. MIDDLETON, Boise, Idaho. Filed Nov. 12, 1928. Serial No. 318,945. 9 Claims. (Cl. 220—86.)



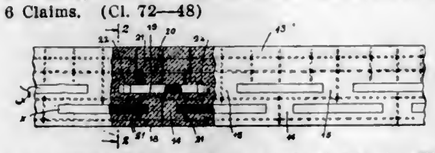
1. The combination with a liquid fuel tank having a top filling opening, of a downwardly projecting tubular member set in said opening, the lower portion of said member being provided with perforations, and an imperforate cup-like member surrounding said lower portion, the side walls of said cup-like member extending above the perforate portion of said tubular member in spaced relation thereto.

1,808,246. CERTIFICATE HOLDER. EDWARD A. MORRIS, Sacramento, Calif. Filed Nov. 5, 1928. Serial No. 317,218. 9 Claims. (Cl. 40—10.)



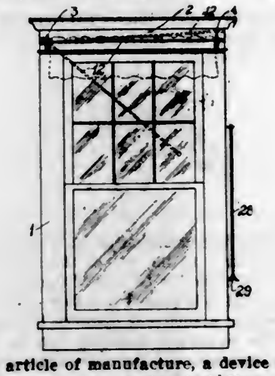
1 A certificate holder including a body element having an opening therein through which to view the certificate, flaps flexibly mounted on the back of the body to form, with said body, retaining means for a certificate, and straps for engagement with a steering post rigidly secured to the front face of the body across the top and bottom thereof.

1,808,247. COMPOSITION BUSHING AND PROCESS OF MAKING THE SAME. FRED C. MORRIS, San Francisco, Calif. Filed Apr. 22, 1929. Serial No. 357,157. 17 Claims. (Cl. 308—240.)



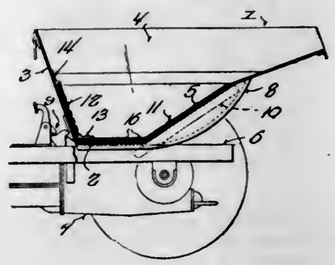
1 A bushing comprising a tubular member of fibrous material impregnated with a dry lubricant, a cooperating rigid tubular member of non-metallic vulcanizable material integrally joined thereto, and a cushioning member for supporting both of said tubular members.

1,808,248. ANTITHEFT DEVICE. CHARLES M. MORSSEN, Montreal, Quebec, Canada. Filed July 21, 1927. Serial No. 207,552. 4 Claims. (Cl. 109—1.)



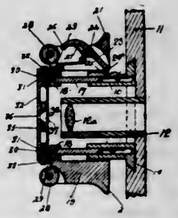
1. A device for defacing and marking stolen valuable papers and the like to render same unsalable and non-transferable, comprising a chamber for receiving said valuables, a fluid container suspended within said chamber over said valuables, a closure at the lower side of said container adapted to open for emptying same, and means extending through the wall of said chamber for controlling said closure and operable from without said chamber for instantaneously discharging the contents of said fluid container upon the valuables within said chamber.

1,808,249. WALL CONSTRUCTION. RICHARD MURRAY, New York, N. Y. Filed Oct. 20, 1928. Serial No. 313,801. 6 Claims. (Cl. 72—48)



1 A concrete wall construction involving a plurality of intercommunicating chambers extending vertically through the wall structure, means involving core members for forming the chambers in the wall structure, said chambers being arranged in two different planes with respect to the thickness of the wall structure, the members forming one plane being in staggered relation to those in the other plane, and said core members being composed of inexpensive material and being placed one directly upon the other in forming the wall structure to form vertically continuous chambers in said wall structure.

1,808,250. SUPPORT FOR FABRIC HANGINGS. CHARLES NEHER, Chicago, Ill. Filed Aug. 17, 1929. Serial No. 386,510. 6 Claims. (Cl. 156—22.)

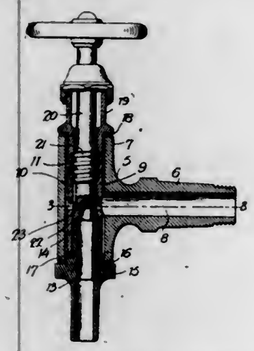


1. As an article of manufacture, a device for supporting window hangings, said device including a curtain rod loosely pivoted adjacent one end thereof to permit both horizontal and vertical movement of the rod, a drapery rod adjacent said curtain rod and mounted in similar manner, and means for freely supporting the free ends of said rods.

1,808,251. DUMP BODY. RALPH T. OSMAN. Mansfield, Ohio. Filed Nov. 8, 1928. Serial No. 317,962. 1 Claim. (Cl. 298—1.)

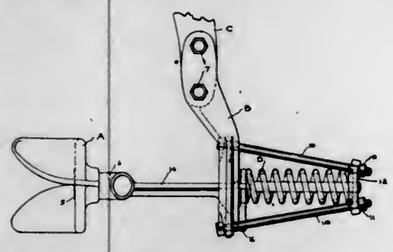
In combination with a dump body having side walls and a bottom provided with an upwardly inclined portion, said side walls being restricted at their lower ends, a metallic apron normally resting upon said bottom and conforming to the same, means for spacing said apron from the bottom of said body, and a chain connecting the rear end of said apron to the rear wall of said body at a point intermediate its top and bottom.

1,808,252. FILM GATE. FREEMAN H. OWENS, New York, N. Y. Filed July 13, 1927. Serial No. 205,447. 8 Claims. (Cl. 179—100.3.)



5. In combination, a slit member, a film movable past the same, a support, a film gate having a base slidable laterally in said support and readily removable therefrom, a shell slidable on said base and having a spring pressed pad thereon, and means for moving said pad into or out of engagement with said film opposite said slit member.

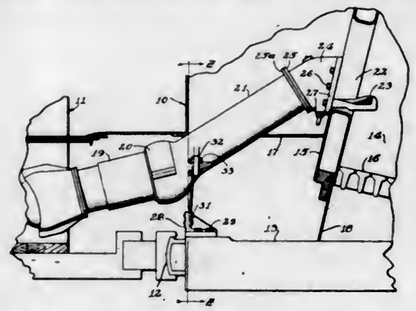
1,808,253. MANUFACTUURE OF MERCURY SALTS. HUGH S. REID, Shawinigan Falls, Quebec, Canada, and AYLMER H. MAUDE, Nitro, W. Va., assignors to Canadian Electro Products Company, Limited, Montreal, Canada. Original application filed Apr. 18, 1921, Serial No. 462,347, now Patent No. 1,721,188, and in Canada Apr. 16, 1921. Divided and this application filed July 12, 1929. Serial No. 377,910. 6 Claims. (Cl. 23—117.)



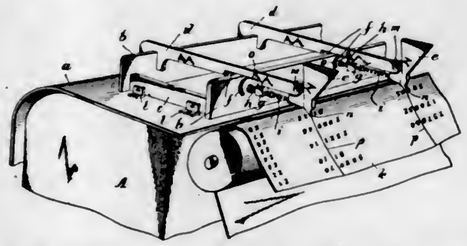
1. A process of making salts of mercury, which comprises bringing together metallic mercury and a strong non-oxidizing mineral acid of less than 60% concentration in presence of nitric acid.

1,808,254. BALANCED VALVE. MERRIT H. RICE, Pasadena, Calif. Filed Aug. 2, 1930. Serial No. 472,657. 10 Claims. (Cl. 251—156.)

2. A balanced valve comprising a casing, an apertured sleeve within the casing, providing inner and outer communicating chambers, said chambers having portions disposed equal distances on opposite sides of the valve inlet passageway; and a valve and valve seat located within said inner chamber, substantially as set forth.



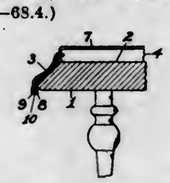
1,808,255. AUTOMATIC TRAIN PIPE COUPLING. JOSEPH ROBINSON, New York, N. Y. Filed Feb. 2, 1923, Serial No. 616,593. Renewed Apr. 13, 1929. 5 Claims. (Cl. 285—58.)



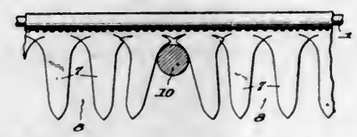
1. In an automatic train pipe connector the combination of a coupling head, a bracket having an opening in its lower end, an abutment arranged rearwardly of and spaced from said bracket, a member secured to said head and extending rearwardly through said opening and engaging said abutment and universally movable relatively thereto, a coiled spring surrounding said member and bearing at one end agains said abutment and at the other end against said member and serving to normally force said member forwardly, said opening in the bracket being substantially larger than the body of said member, a web on each side of said member extending laterally thereof and a web extending downwardly therefrom, the front edge of each of said webs being inclined to contact with said bracket, whereby said member will be centered in said opening when the same is moved forwardly under the action of said spring, the portion of said opening above said member being substantially unoccupied whereby free upward movement of said member is permitted at all times.

1,808,256. LOCOMOTIVE. FRANK P. ROESCH, Chicago, Ill., assignor to The Standard Stoker Company, Incorporated, a Corporation of Delaware. Filed Nov. 16, 1929. Serial No. 407,650. 4 Claims. (Cl. 110—101.)

1. In a locomotive having a frame, a fire-box and backhead construction flexibly mounted thereon, and a fuel feed conduit section for delivering fuel to said firebox being at its forward end fixedly attached to said backhead and having its rearward end remote therefrom, the improvement which comprises an upstanding plate rigidly secured at one end to the rearward portion of said frame and rigidly secured at the other end of the rearward portion of said conduit section, said plate supporting the conduit section, said plate supporting the conduit section in a vertical direction and being flexible to permit movement of the feed conduit with the firebox in a horizontal direction.



1,808,257. RULING DEVICE. HERMANN A. P. RÖTTKE, Berlin, Germany, assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Oct. 9, 1926, Serial No. 140,669, and in Germany Dec. 12, 1925. 2 Claims. (Cl. 33—34.)

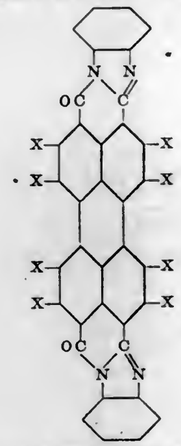


1. In combination with a writing machine, a platen upon which a strip of paper is adapted to be mounted, a plurality of markers, means for supporting said markers in cooperative relation with said platen for tracing a plurality of parallel lines upon a strip of paper mounted on said platen, a reservoir for supplying ink to said markers, said markers being movably mounted upon the machine to adjust the distance between them, and means for individually maintaining and adjusting the pressure of each marker upon the paper.

1,808,258. TABLE MAT. JACOB SACHERMAN, Cleveland, Ohio. Filed Mar. 21, 1927. Serial No. 176,917. 1 Claim. (Cl. 45—68.4.)

In a table mat, the combination of a filler, a sheet of flexible material fixed to the top of the filler, a sheet of flexible material fixed to the bottom of the filler, the sheets of flexible material being fixed together centrally of the filler and extending a sufficient distance beyond the outer edges of the filler to provide a flexible flap for falling over the edges of a table top, and the outer edges of the flexible material being fixed together.

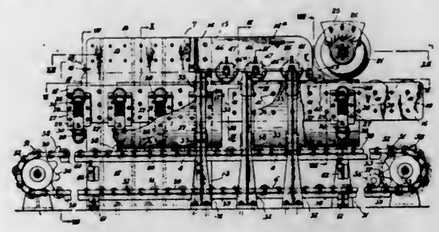
1,808,259. FENDER WELT AND METHOD OF MAKING THE SAME. ROBERT C. SCHEMMEL, Union City, Ind. Filed Sept. 18, 1930. Serial No. 482,816. 6 Claims. (Cl. 154—45.5.)



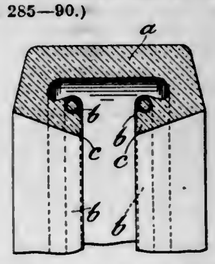
1. The method of making a fender welt which comprises enclosing a pair of fillers in spaced relation in a strip of covering material, sewing the material along lines closely adjacent each of the fillers, severing the blank thus formed along an irregular line of cut to form two welts each having a bead and a tongued flange, and slitting each of said tongues inwardly close to said line of stitching to provide a weakened flexing connection.

4. The method of making fender welts which comprises associating with a covering strip a pair of spaced fillers, folding each margin of the covering strip over one of the fillers, disposing the edges of the strip in meeting relation along a line adjacent one of the fillers, securing said edges together in a joint along said line, and then severing the blank thus formed along an irregular line of cut to form two complementary welts each having a bead and a flange provided with a plurality of multi-ply tongues, each ply of each tongue comprising a single continuous piece of the covering material.

1,808,260. NEW VIOLET VAT DYESTUFFS. MAXIMILIAN PAUL SCHMIDT and WILHELM NEUGEBAUER, Biebrich-on-the-Rhine, Germany, assignors, by mesne assignments, to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 23, 1926, Serial No. 90,206. Renewed Oct. 10, 1927. 3 Claims. (Cl. 260—29.)



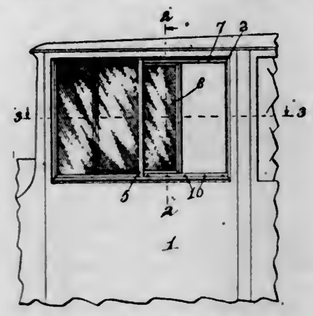
1. As new products the vat dyestuffs being obtainable by condensing a perylene-tetra-carboxylic acid, containing at the most three halogen atoms, with a phenylene-diamine and corresponding most probably to the general formula:



wherein at the most 3 X's represent halogen atoms, the other X's hydrogen, and wherein the penylene nuclei may be substituted.

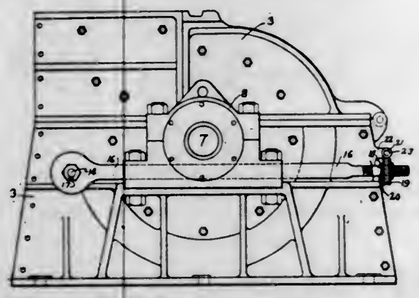
1,808,261. WELDING MACHINE. FRANK L. SESSIONS, Lakewood, Ohio. Filed Jan. 5, 1927. Serial No. 159,218. 14 Claims. (Cl. 219—6.)

2. In apparatus of the class described, a support, a work positioning and guiding plate secured to said support and extending therefrom into the path of movement of the work, a work supporting bar secured to said plate and extending therefrom longitudinally in the path of movement of the work, seam guiding means secured to said bar in alignment with said plate adapted to engage and guide the edges of the open longitudinal seam of a metal shell that has been positioned by said plate, and means for traversing a metal shell longitudinally past said plate and along said supporting bar past said seam guiding means.



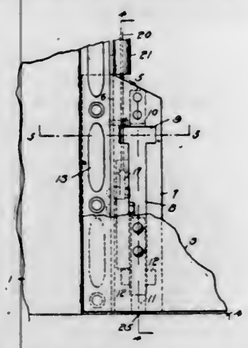
1,808,262. PIPE JOINT. HENRY SELBY HELE-SHAW, London, England, assignor to Victaulic Company Limited, London, England. Filed June 5, 1930, Serial No. 459,374, and in Great Britain Nov. 30, 1929. 5 Claims. (Cl. 285—90.)

1. A pipe joint comprising a ring of flexible material having inturned flanges adapted to embrace the pipe ends and be subjected to the pressure within the pipes and springs capable of elongation but incapable of shortening applied to the flanges of the joint.



1,808,263. SERVICE WINDOW FOR MOTOR VEHICLES. FRANK B. SHEERAR, Omro, Wis. Filed Feb. 11, 1929. Serial No. 339,167. 1 Claim. (Cl. 296—44.)

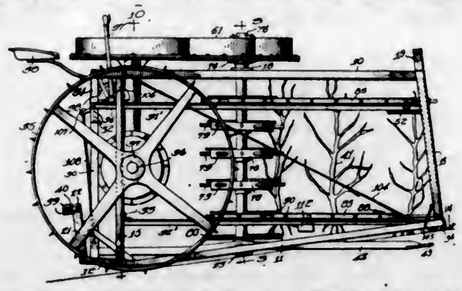
In a motor vehicle body having a window opening, a movable member normally closing the opening, one side of the opening having a longitudinal groove in the wall, a frame member having a longitudinal groove in one side thereof, a tongue projecting from the other side of the frame to be received in the groove of the window opening, said movable member engaging the groove in the opposite side of the frame to retain the frame against lateral movement relative to the opening, a stationary and a movable



sash within said frame, stops carried by the frame for retaining the sash against lateral movement and one of said stops being formed with a plurality of openings to provide means for drainage.

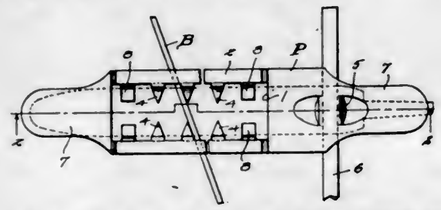
1,808,264. CRUSHER AND PULVERIZER. HARRY J. SHELTON, St. Louis, Mo. Filed Mar. 26, 1927. Serial No. 178,660. 2 Claims. (Cl. 83—11.)

1. A crusher and pulverizer comprising a housing having a pulverizing chamber with a crushing element mounted therein, a breaker plate pivotally mounted at one side thereof to form part of the wall of said pulverizing chamber, a rod extending outwardly from each end of said breaker plate and fixed thereto, the side members of said housing having arcuate shaped slots therein through which said rod extends at each end of said plate, the axis of said arcuate slots being at the axis of the pivotal movement of said plate whereby said rod may be moved to adjust the position of said plate in relation to said crushing element, and bars engaging said rod outside of said housing for controlling the movement of said plate.



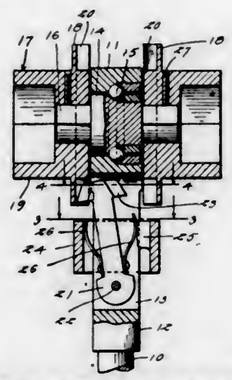
1,808,265. MOTOR VEHICLE HOOD LOCKING MECHANISM. LOUIS R. SMITH, Hawthorne, Nev. Filed Sept. 9, 1929. Serial No. 391,415. 4 Claims. (Cl. 292—304.)

1. In combination with a motor vehicle hood and body, a guide member provided with a vertical slot fixed to the body and having a stop member positioned at the upper edge of the slot, a lug carried by the hood and adapted to be passed through the slot adjacent the stop member to prevent outward displacement of the hood, and means for normally preventing upward displacement of the hood.



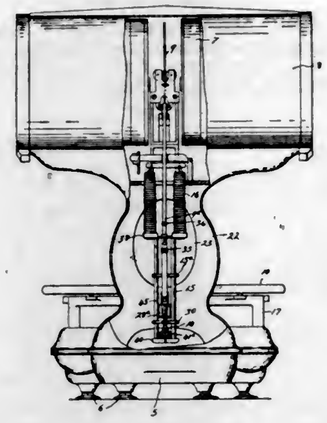
1,808,266. STALK CUTTER. PERRY W. SPELL, Roseboro, N. C. Filed June 22, 1929. Serial No. 372,893. 7 Claims. (Cl. 55—62.)

1. A stalk cutter comprising a frame, supporting wheels carried by said frame, pivoted stalk lifting means carried by said frame, stalk cutting means also carried by said frame, means for conveying stalks from said lifting means



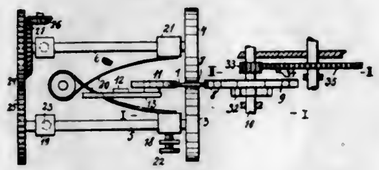
to said cutting means, and means operable from a common control for simultaneously raising the forward end of said frame and said lifting means.

1,808,267. SHARPENING TOOL. JOHN E. STEINOUR, Los Angeles, Calif. Filed Nov. 21, 1929. Serial No. 408,877. 5 Claims. (Cl. 76—82.1.)



1. A device of the class described and in combination comprising a plate having an intermediate opening and offset side members refining said opening, guiding means carried by the plate, blade engaging fingers carried by the plate at opposite sides of the opening therein and extending inwardly of said opening, and a sharpening element supported by the plate between the side members.

1,808,268. WRENCH. CHARLES M. STEWART, Allston, Mass. Filed Oct. 4, 1930. Serial No. 486,423. 3 Claims. (Cl. 81—61.)

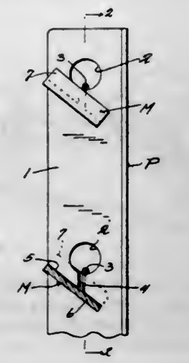


1. A wrench of the character described comprising a handle, an annulus mounted on the outer end of the handle, a spindle rotatably mounted in the annulus, a ratchet mounted on each end of the spindle, a reversible pawl member pivotally carried by the handle, a socket element mounted on the spindle and extending outwardly of the ratchet member, and an eccentric ring carried by the handle and engaging said pawl whereby to swing said pawl into engagement with a selected ratchet member.

1,808,269. COMPUTING SCALE. WALTER F. STIMPSON and WILLIS E. FINCH, Louisville, Ky.; said Finch assignor to said Stimpson. Filed Dec. 15, 1927. Serial No. 240,102. 19 Claims. (Cl. 265—37.)

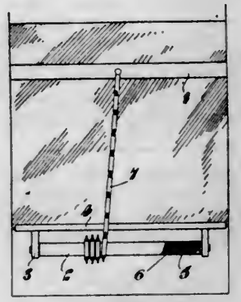
1. In a weighing scale having a lever and counterbalance springs connected thereto, of adjustable means movable into contact with the lever for swinging the lever independently of a weighing operation to extend the springs and maintain both of said members in their adjusted positions as long as desired.

1,808,270. COUNTING MACHINE. CURT VOGT, Berlin, Germany. Filed Jan. 27, 1927, Serial No. 163,975, and in Germany Oct. 29, 1926. 4 Claims. (Cl. 133—8.)



1. In coin feeding means for coin counting machines of that type employing a peripherally spaced counting disc and guide rolls forming between them a passage for the coins, a pair of feed rollers arranged to form a vertical passage and to engage opposite sides of the coins and to feed the same through said passage, intergeared shafts carrying said feed rollers, one of said shafts being pivotally mounted for adjustment toward and from the other shaft, adjusting means for action on said pivotally mounted shaft to move the roller carried thereby toward the other roller, and resilient pressure means acting constantly on said shaft to move the roller carried thereby away from the other roller in opposition ot said adjusting means.

1,808,271. PROCESS FOR DEHYDRATING ALCOHOL. OTTO VON KEUSSLER and DANIEL PETERS, Darmstadt, Germany. Filed Apr. 10, 1928, Serial No. 269,020, and in Germany May 6, 1927. 6 Claims. (Cl. 202—57.)

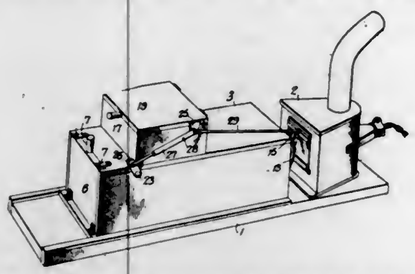


1. Process for dehydrating aqueous alcohol which consists in heating the aqueous alcohol with quicklime, distilling off the formed anhydrous alcohol and recuperating the last part of the waterfree alcohol retained by the hardened quicklime by subjecting the quicklime to a vacuum distillation.

1,808,272. FENCE CONNECTION. WILLIAM E. WARD, Delmar, Iowa. Filed Jan. 10, 1931. Serial No. 507,975. 3 Claims. (Cl. 256—56.)

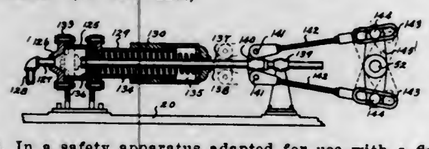
1. A fence post having a flange provided with an opening adapted to receive a wire strand or the like, said flange having a depending slot in communication with said opening, the lower end portion of said slot being continued by an upwardly and inwardly inclined slot open at its outer end, and a retaining member sliding downwardly by gravity within the second slot to maintain closed the depending slot.

1,808,273. DEVICE FOR BALANCING BODIES ADAPTED FOR RISING AND FALLING MOVEMENTS. HARRY RILEY WEBB and HARRY NEWTON WEBB, Grantham, England. Filed June 8, 1929, Serial No. 369,477, and in Great Britain Feb. 5, 1929. 7 Claims. (Cl. 16—198.)



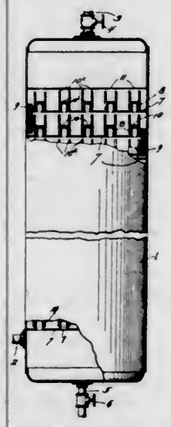
1. A device for balancing bodies adapted for a rising and falling movement, by means of an inconstant balancing moment, comprising means exerting a balancing force, a chain extending over a smooth circular element, means for applying the opposing forces to the extremities of said chain and the angular disposition taken up by the links of such chain around said circular element during traverse of the body to be balanced causing cyclic variations in the moments of the forces applied by such body to the balancing force.

1,808,274. PROJECTION PRINTER. ROBERT A. WEBSTER, Santa Monica, Calif. Filed Sept. 8, 1927. Serial No. 218,295. 13 Claims. (Cl. 88—24.)



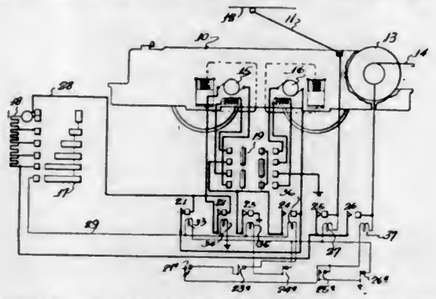
1. A projection printer comprising a casing having a light aperture, means for holding an image in line with said aperture for the projection of light therethrough and into the casing, means for holding a light sensitive material in the path of the light passing through the image, a lens in the casing in the path of the light and between the

image and sensitive material, a focusing screen, a shutter for covering and uncovering the screen, a reflector movable into and out of the light path at a point between the



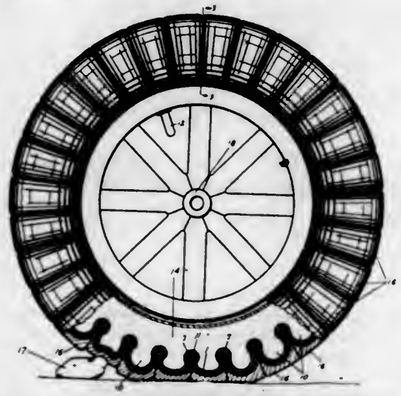
lens and sensitive material and upon which the image may be viewed through the screen when the reflector is in the first-named position, and means for simultaneously operating the shutter and reflector.

1,808,275. SAFETY APPARATUS. FREDERICK N. WHITESELL, Chicago, Ill., assignor to Fairbanks, Morse & Co., Chicago, Ill., a Corporation of Illinois. Original applications filed Nov. 6, 1926, Serial No. 146,720, and in Feb. 10, 1928, Serial No. 253,412. Divided and this application filed Aug. 30, 1928. Serial No. 302,979. 16 Claims. (Cl. 192—129.)



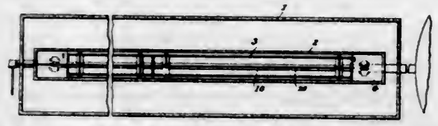
5. In a safety apparatus adapted for use with a fluid-pressure controlled mechanism, a control shaft, associated with the mechanism, a lever connected to said shaft, a slotted member operatively engaging said lever, actuating means for said member, coacting therewith for moving said shaft to a neutral position and preventing further movement thereof, responsively to a predetermined low fluid pressure, and fluid pressure means adapted normally to keep the slotted portion of said member in a position to permit a movement of said lever relative thereto.

1,808,276. BUBBLE TOWER CAP. HENRY E. WIDDELL, Kansas City, Mo., assignor to Gasoline Products Company Inc., Wilmington, Del., a Corporation of Delaware. Filed Dec. 21, 1923. Serial No. 681,970. 7 Claims. (Cl. 261—109.)



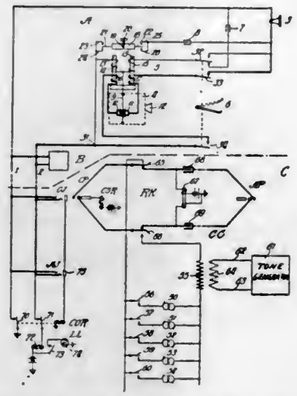
1. Caps for vapor risers for use in towers of the bubble type having trays spaced apart sufficiently to permit vertical movement of the caps on the risers, comprising cap units having serrated lower edges, vapor risers upon which the caps are mounted, means on the caps for automatically limiting the upward movement of the caps and enlargement of the vapor passage.

1,808,277. MINE LOCOMOTIVE. CLAUDE O. WOOD, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1929. Serial No. 344,631. 9 Claims. (Cl. 191—3.)



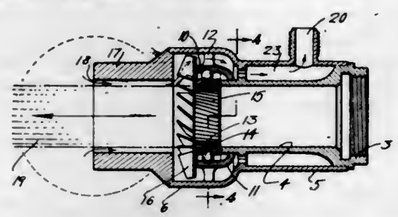
1. In a locomotive having a plurality of driving motors and trolley and reel inlets for power supply to said motors, automatic devices for connecting the locomotive motors in series or parallel circuits, depending upon whether the trolley or reel inlet is utilized for connection to a power source.

1,808,278. AUTOMOBILE TIRE. CHARLES B. WOODWORTH, Port Dickinson, N. Y. Filed Mar. 8, 1927. Serial No. 173,727. 4 Claims. (Cl. 152—13.)



3. A pneumatic tire comprising a circular casing provided with a series of compressible air pockets in circumferential succession, a relatively large air chamber in such casing permanently communicating with such pockets, and an inflatable inner tube lining the inner walls of said casing and pockets.

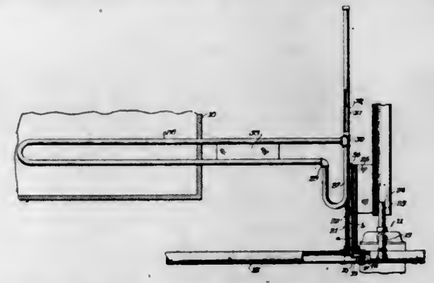
1,808,279. SCUM REMOVING DEVICE. CARL W. ANDERSON, New Market, N. J., assignor of one-half to William Umont, Dunellen, N. J. Filed Oct. 17, 1929. Serial No. 400,355. 13 Claims. (Cl. 210—51.)



1. In combination with a liquid receiving tank, a skimmer trough arranged within the tank, a scum and foam discharge pipe having communication with the bottom of the trough, and means operable adjacent the exterior of the trough for delivering scum and foam into the same, and transversely disposed breaker rods extending from the lower portion of the trough for disposition within the tank.

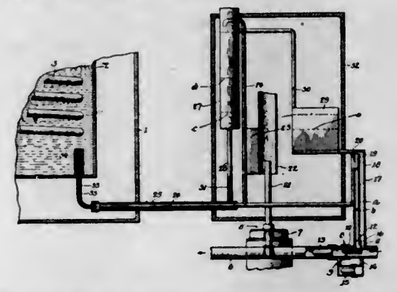
1,808,280. TELEPHONE SYSTEM. GARRISON BABCOCK, Seattle, Wash., assignor to American Telechronometer Company, Seattle, Wash., a Corporation of Washington. Filed July 29, 1929. Serial No. 381,731. 11 Claims. (Cl. 179—34.)

1. The method of signaling the subscribers on a party line in a telephone system which comprises impressing a low frequency alternating current on the line to select the party to be signaled, and simultaneously applying a higher frequency tone superimposed on the low frequency current to signal the selected station.



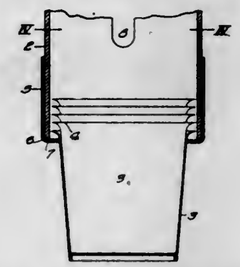
1,808,281. AIR SUPPLY DEVICE. BENJAMIN T. BALTHAZOR, Racine, Wis. Filed Feb. 10, 1930. Serial No. 427,282. 5 Claims. (Cl. 299—109.)

2. In an air supply device of the character described, a nozzle, a sleeve encircling the nozzle in spaced relation thereto in a manner to provide an air chamber therebetween, said air chamber open at its forward end, a ring mounted on the nozzle and extending forwardly therefrom and disposed within the sleeve, an annulus mounted for rotation within the ring, said annulus being substantially longitudinally aligned with the nozzle adjacent the discharge end thereof and having means thereon engageable with the water discharged from the nozzle for rotating said annulus, a fan fixed on the annulus for rotation therewith and adapted to normally blow air away from the chamber, and suction tubes connecting with the chamber rearwardly of the rotary fan to draw air from said chamber.



1,808,282. THERMOSTAT. MATTHEW E. BENESH, Cicero, Ill. Filed Dec. 11, 1926. Serial No. 154,052. 8 Claims. (Cl. 236—68.)

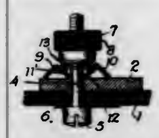
1. A thermostat having, in combination, a thermostatic element adapted to control the temperature of a body, means for transmitting heat to said element, and means subject to said temperature for dissipating heat in said element, the effectiveness of said last mentioned means



in dissipating said heat varying over a wide range to actuate said element when said temperature passes through a relatively small predetermined range.

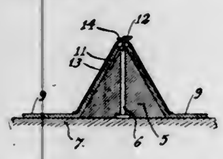
1,808,283. THERMOSTAT. MATTHEW E. BENESH, Cicero, Ill. Filed Dec. 22, 1927. Serial No. 241,755. 6 Claims. (Cl. 236—68.)

1. A thermostat having, in combination, a fluid line for supplying fluid to control the temperature of a body, a valve in said line, a thermostatic element connected to said valve, a source of heat, said source being constantly available regardless of variations in the flow of fluid through said line, and means for carrying heat by convection from said source to said element, said means being subject to said temperature and being effective when said temperature passes through a relatively small predetermined range to vary the flow of heat to said element over a relatively wide range so as to actuate said element.



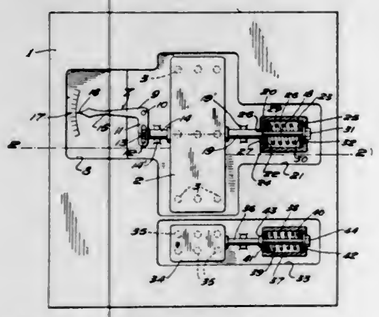
1,808,284. ELASTIC BAND CUP DISPENSER. CHRISTIAN N. BERGMANN, Pittsburgh, Pa., assignor to Bergmann Packaging Machine Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Oct. 9, 1928. Serial No. 311,362. 4 Claims. (Cl. 312—43.)

1. In combination with a receptacle holding and delivery tube, an elastic band having an upper stretched



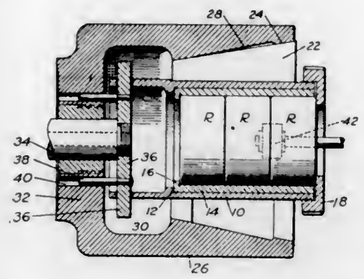
portion gripping the tube and capable of being shifted thereon whereby to expand or contract the terminal opening of the lower portion of the band across the end of the delivery tube to adapt it to resilient engagement with varying size receptacles.

1,808,285. WIRE CONNECTER. GEORGE H. BRADY, Baltimore, Md., assignor to Improved Fire Detector Corporation, Baltimore, Md. Filed Mar. 26, 1929. Serial No. 350,025. 6 Claims. (Cl. 173—259.)



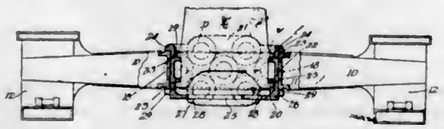
1. A wire connecter comprising a binding screw, a resilient washer having an outer expansible and contractible wall and an inner expansible and contractible wall, through which latter said screw extends, and a nut for engagement with the screw and for clamping a conductor within and against the said inner wall.

1,808,286. ROOFING JOINT. GEORGE G. BRITTON, Anniston, Ala. Filed Jan. 8, 1930. Serial No. 419,347. 3 Claims. (Cl. 108—20.)



1. A roofing joint comprising a roof deck, a triangular strip secured to the roof deck, a lock plate mounted upon the triangular strip, roofing strips laid upon the roof deck parallel to and on opposite sides of the triangular strip and having their adjacent edges interposed between the triangular strip and the lock plate, a split nail having its split end projecting upwardly from the apex of the triangular strip and adapted to pierce and engage the lock plate to clamp the adjacent edges of the roofing material in place, and means to prevent the nail from changing its position in the triangular strip during the piercing operation.

1,808,287. VEHICLE WHEEL GAUGE. HERMAN CASLER, Canastota, and CHARLES P. GRIMES, Syracuse, N. Y. Filed Oct. 11, 1928. Serial No. 311,887. 3 Claims. (Cl. 33—203.)

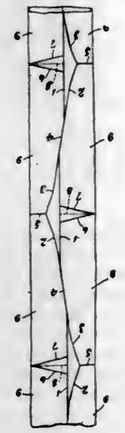


3. A vehicle wheel testing device comprising a movable element adapted to be placed in the path of travel of the vehicle wheel, and laterally shiftable to right or left of its normal mid-position with reference to said path by the action of a misalined vehicle wheel passing thereover, and an auxiliary movable member positioned directly adjacent and in advance of said movable element for preventing movement of said movable element due to tire distortion built up prior to engagement of the wheel with the movable member.

1,808,288. WORK HOLDER. WILLIAM H. CHAPMAN, Montclair, and PHILIP H. HUTCHINSON, East Orange, N. J., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 24, 1925. Serial No. 25,617. 13 Claims. (Cl. 279—1.)

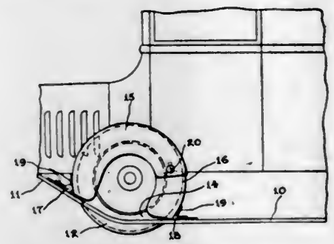
1. In a device of the character described, a rotary head having a centering face, a holder detachable from the head for loading and having means for engaging said centering face, means carried by the holder for clamping a work piece thereon when the holder is detached from the head, means for moving said holder endwise, said means being permanently supported by the head, and a quick detachable connection between said holder and said moving means for allowing removal of the holder from the head while the moving means remains supported by the head; substantially as described.

1,808,289. RAILWAY TRUCK. CLAUS J. W. CLASEN, Davenport, Iowa, assignor to The Bettendorf Company, Bettendorf, Iowa, a Corporation of Iowa. Filed Apr. 13, 1925. Serial No. 22,597. 28 Claims. (Cl. 105—197.)



10. The combination with a bolster, having an end portion; and means detachably interlocked with the end of said bolster, said means having elements adapted for co-operation with column guides of a side frame, certain of said elements being detachable.

1,808,290. PROCESS OF AND PATTERN FOR MAKING UNDERWEAR. EILERT A. CLEMENTS, Grand Rapids, Mich. Filed Dec. 26, 1929. Serial No. 416,474. 3 Claims. (Cl. 2—224.)



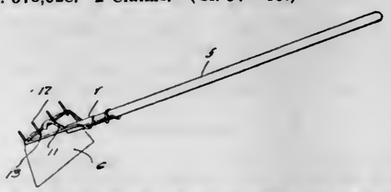
1. The process of manufacturing an underwear garment which consists in providing an elongated length of tubular fabric laid flat and cutting therefrom at spaced apart points substantially triangular spaced inserts in the body of and between the side edges of the tubular fabric, also cutting from the end of one insert to the adjacent end

of the next insert and further cutting from one edge of the flat tubular fabric transversely inward to the nearest angle of the inserts, and further cutting from the upper layer of tubular fabric directly opposite said transverse cut a triangular shaped gusset in the shape of an isosceles triangle the apex of which is at the opposite side edge of the flat tubular fabric and the base of which is coincident with one side of the upper of the inserts, next cutting the under layer of fabric from the side edge of the

tube transversely across to said inserts and repeating the operation for as many times as the length of tubular fabric will permit, thus forming a series of units, i. e., two leg portions, two inserts, and one gusset, then seaming together the back edges of the two leg portions a distance from their upper end portions, next connecting the gusset between the diverging leg portions and finally connecting an insert between the gusset and the front edges of the leg portions.

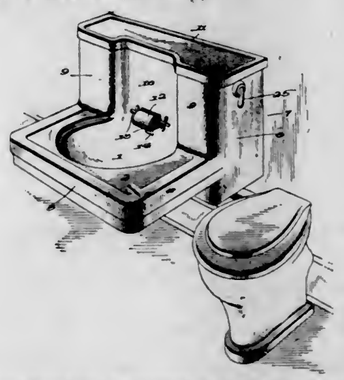
1,808,291. TIRE COVER. JOHN JAMES CLOUGHLEY, Oklahoma City, Okla. Filed Apr. 29, 1930. Serial No. 448,259. 2 Claims. (Cl. 280—152.)

1. In combination with a motor vehicle having its fender and adjacent portion of the running-board dished to provide a seat for a spare tire, cross-sectionally arcuate cover sections hinged to the running board and fender respectively on opposite sides of said seat, and springs impelling said sections toward a tire mounted in said seat.



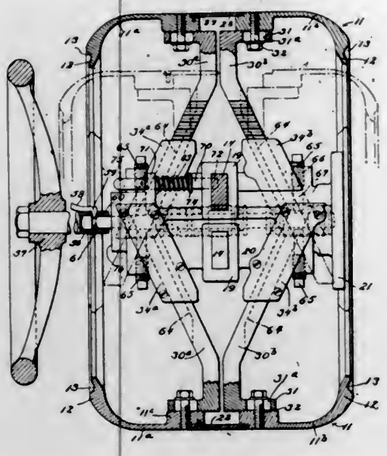
1,808,292. MARKER FOR PLANTS OR FLOWERS. DANIEL S. COPPERSMITH, Brooklyn, N. Y. Filed Nov. 26, 1929. Serial No. 409,972. 6 Claims. (Cl. 40—10.)

1. A marker for use with plants or flowers comprising an elongated tubular member adapted to be inserted into the article to be marked, an indicia displaying means, and a member connected to said means and adjustable within said tubular member for supporting said means at a convenient point above the article, said second named mem-



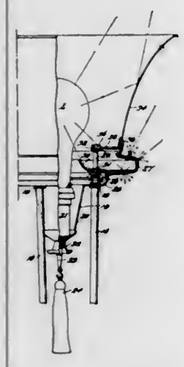
ber being enlarged at a point adjacent said means to bind within said tubular member whereby said members may be frictionally retained in collapsed relation.

1,808,293. RAKE ATTACHMENT FOR HOES. CHARLES COPPOCK, Gold Hill, Oreg. Filed June 25, 1929. Serial No. 373,528. 2 Claims. (Cl. 97—65.)



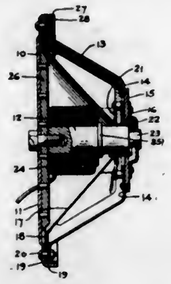
1. An attachment for garden tools of the type having a handle and a blade, said attachment comprising a rake frame formed of a continuous strip of material, teeth carried at one end thereof and having their butt ends engaging the blade of the tool to secure the teeth against displacement during the raking action, a handle saddle arranged at the opposite end of the frame and a fastening device coacting with the frame whereby to embrace said handle.

1,808,294. SANITARY FIXTURE. RAYMOND E. CRANE, Kittanning, Pa. Filed Jan. 26, 1931. Serial No. 511,386. 7 Claims. (Cl. 4—3.)



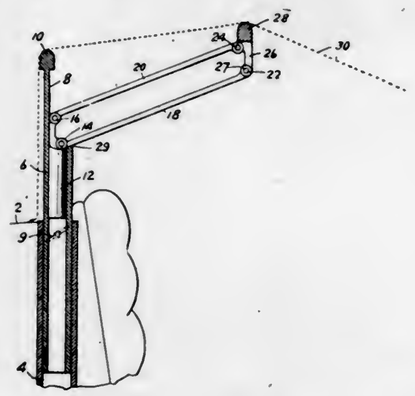
1. A sanitary fixture comprising a flush tank for closets and the like, having combined therewith and supported thereby a lavatory basin, a discharge outlet for said tank and a separate and independent discharge outlet for said basin.

1,808,295. COLLAPSIBLE TIRE BUILDING FORM. PETER DE MATTIA, Passaic, N. J., assignor to National Rubber Machinery Company, a Corporation of Ohio. Filed Mar. 13, 1930. Serial No. 435,387. 16 Claims. (Cl. 154—9.)



4. In a collapsible core, a segmental section comprising two circumferentially parted members, and means for moving said members obliquely in opposite directions with reference to the plane of operative continuity of the core.

1,808,296. FLOOR LAMP. LEROY C. DOANE and GUY P. NORTON, Meriden, Conn., assignors to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed June 19, 1928. Serial No. 286,585. 7 Claims. (Cl. 240—81.)

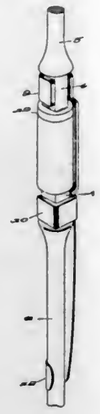


5. A floor lamp comprising, a base, a standard having a plurality of upwardly extending members, an upwardly opening socket cover supported by the members and disposed between the members, an upwardly opening lamp socket in the socket cover, a lamp in the socket, threaded means for securing the socket cover in place on the members, an annular ring of diffusing glass of U-shaped cross section supported on the upper edge of the socket cover, rods extending upwardly from the securing means, the upper ends of the rods being threaded, and an outwardly and upwardly flaring deflector supported above the diffusing ring in a position to be illuminated by light therefrom, the deflector being adjustably supported in the rods.

1,808,297. LOUD SPEAKER. BURGESS DEMPSTER, Berkeley, Calif., and JOHN C. KOONZ, Evanston, Ill., assignors to The Magnavox Company, Oakland, Calif., a Corporation of Arizona. Filed May 6, 1930. Serial No. 450,128. 7 Claims. (Cl. 179—115.5.)

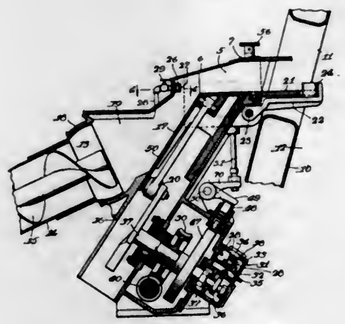
1. In a loud speaker of the moving coil type the combination of, a pair of cooperating frame members of magnetic material, a conical diaphragm supported by said frame members, a central pole upon one of said frame members projecting into said diaphragm and through an opening at its apex, a second pole upon the other of said frame members disposed about the end of said central pole piece, a current carrying coil secured to said diaphragm at its apex, and an energizing coil upon said central pole disposed within said conical diaphragm, whereby a magnetic field completely surrounding said conical diaphragm will be established.

1,808,298. AUTOMOBILE TOP. ELEUTHERE PAUL DU PONT, Montchanin, Del. Filed Dec. 4, 1928. Serial No. 323,654. 4 Claims. (Cl. 296—107.)



4. In an automobile, a plurality of tubular guideways, tubular upright frame members slidably mounted in said guideways, a cross member connecting the tops of said upright frame members, a plunger mounted in each of said upright frame members, and a collapsible frame pivoted to the plunger and adapted to extend horizontally, said frame being at least partially receivable within the tubular upright frame members.

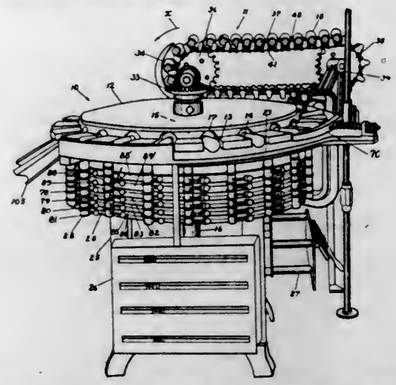
1,808,299. LOCK FOR ROD COUPLINGS. WILLIAM K. EDWARDS, Big Spring, Tex. Filed Dec. 30, 1929, Serial No. 417,460. Renewed Apr. 20, 1931. 4 Claims. (Cl. 287—125.)



1. A lock for rod couplings comprising a longitudinal portion having at spaced points thereon oppositely facing,

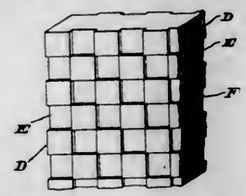
non-circular socket members to embrace similarly shaped cross sectional portions of a rod coupling, and a resilient

arm extending from one of said members and provided with a hook to engage the rod at a point removed from the coupling.



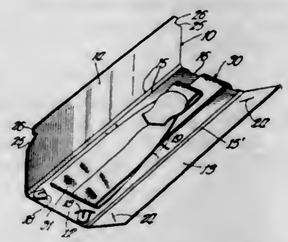
1,808,300. STOKER MECHANISM. ADAM B. FAHNESTOCK, Manhasset, N. Y., assignor, by mesne assignments, to The Standard Stoker Company Inc., New York, N. Y., a Corporation of Delaware. Filed July 26, 1926. Serial No. 124,873. 16 Claims. (Cl. 110—101.)

16. The combination, with a furnace, of apparatus for delivering fuel to the fuel-bed of the furnace including a plurality of blast means each arranged to throw the fuel in a given direction and each having means to vary the force of the blast therefrom, and independently controlled means to deflect the fuel thrown by the respective blast means.



1,808,301. AUTOMATIC RADIOTRON TUBE TESTING MACHINE. JOHN E. FERGUSON and CHARLES A. NICOLAI, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 18, 1928. Serial No. 313,221. 10 Claims. (Cl. 209—81.)

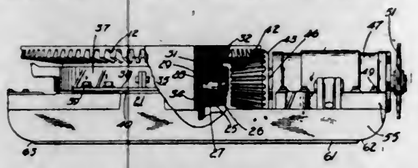
1. A machine for testing radio tubes comprising a testing circuit, a plurality of contacts electrically connected with said circuit, a carrier, a plurality of contact members on the carrier, tube receiving means adjacent to said contact members, means for positioning a radio tube



in said tube receiving means and means for adjusting said tube to engage predetermined contact elements thereof with predetermined contact members on said carrier.

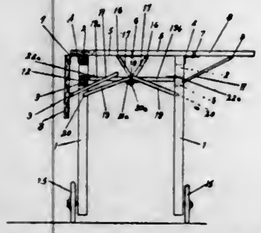
1,808,302. CONSTRUCTIONAL MATERIAL COMPRISING RAIL FILLER FUNCTIONING AS AN EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Dec. 5, 1927. Serial No. 237,833. 14 Claims. (Cl. 238—9.)

14. In a preformed construction material comprising a flexible, boardlike strip embodying in its structure separate mats of fibers and a bituminous material bonding said mats together.



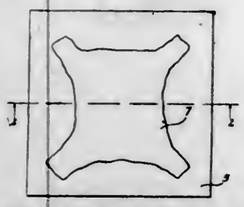
1,808,303. DISPLAY DEVICE. ABRAHAM J. FREILER, Glencoe, Ill., assignor to A. Stein & Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 28, 1930. Serial No. 439,557. 3 Claims. (Cl. 206—79.)

1. A display package made from a blank and provided with parallel weakened fold lines dividing the blank into a main central panel and opposite side panels foldable on the fold lines to overlap across the back of the main panel, the corner portions of one of the side panels functioning as a holding means, the other side panel having slits disposed in such position as to receive the said corner portions of the first mentioned side panel to hold the side panels in folded condition, and a pair of suspenders housed and retained in place between said central panel



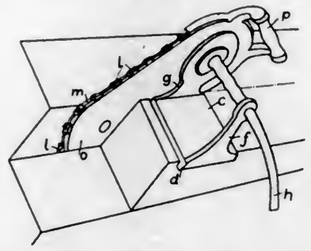
and the overlapped side panels with the suspender ends folded over one end of said main panel, extending longitudinally along the exterior of the main panel and held in position thereon.

1,808,304. ONE-PIECE ROTARY. EDWIN W. GOESER, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 9, 1926, Serial No. 147,235. Renewed Dec. 14, 1929. 3 Claims. (Cl. 255—33.)



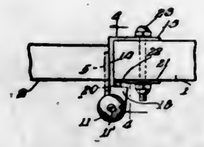
1. In a rotary machine, the combination of: an integral base structure having a horizontal plate, and pairs of depending longitudinal ribs extended along opposite sides of said plate, said longitudinal ribs reinforcing said plate and serving as skids; sole plates attached to the lower ends of said longitudinal ribs, said sole plates reinforcing said longitudinal ribs and providing bearing faces therefor; a rotary table journaled on said base; and mechanism supported by said base for driving said rotary table.

1,808,305. FOLDING DEVICE FOR TABLES AND THE LIKE. HAROLD HOWE, New York, N. Y., assignor to Howe Folding Furniture, Inc., New York, N. Y. Filed Dec. 11, 1929. Serial No. 413,231. 10 Claims. (Cl. 45—116.)



3. A folding table comprising parallel side frames constituting supporting legs, a top section hinged to the upper edge of each frame and hinged together between and parallel with said frames, a link pivoted at one end to each frame and each top section, and a common pivot for the opposite end of all of said links, said common pivot being disposed centrally between said frames and free to swing upwardly and downwardly during folding and unfolding of the table, said links being disposed at each end of said table.

1,808,306. SETTING OUT BOARD. WILLIAM C. JOHNSON, Milwaukee, Wis., assignor to Machinery Development Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 15, 1928. Serial No. 306,247. 2 Claims. (Cl. 149—20.)

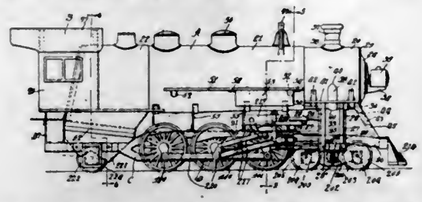


1. A setting-out board for leather comprising a sheet metal body portion, a facing of fibrous material attached to said body portion over the working surface thereof, the said fibrous material having a smooth surface and being coated with an impervious coating of varnish or lacquer.

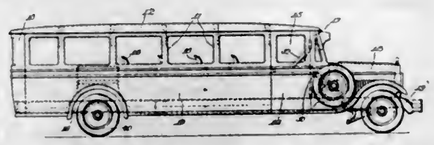
1,808,307. DEVICE FOR MINING COAL AND THE LIKE. FRANZ KALLA, Lagiewniki, Gorny Slask, Szyb Carnall, Poland. Filed June 22, 1929, Serial No. 373,030, and in Germany Apr. 16, 1928. 1 Claim. (Cl. 262—28.)

A device for cutting coal and the like comprising a base plate having a down-turned guide edge, a pair of brackets on said plate, a sleeve bridging said brackets and forming a handle, a driving shaft arranged rotatably in said sleeve, a pair of plates arranged to swing about said shaft, a pair of sprocket wheels mounted between said plates, one of said sprocket wheels mounted on the shaft, an endless toothed chain mounted on said sprocket wheels and guided on said plates, and a handle connected to said plates at right angles to said sleeve.

1,808,308. ADJUSTABLE CLAMP FLANGE FOR SPRING HINGES AND THE LIKE. WILLIAM J. KEENE, Chicago, Ill., assignor to Chicago Spring Hinge Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1928. Serial No. 326,436. 4 Claims. (Cl. 16—187.)



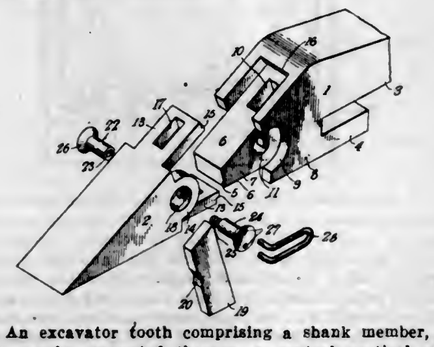
1. In a door fixture of the class described, the combination of a part adapted to engage the door, and an adjustable means for mounting the fixture on a partition or the like, said means including a web adapted to be positioned against the edge of the partition, a pair of normally parallel, oppositely disposed flanges, extending laterally from said web adjacent opposite edges thereof, said flanges being adapted to embrace a portion of said partition, one of said flanges being rigid with said web and the other flange being independent thereof so as to be adjustable towards or from said rigid flange, a bracket part carried by said web, extending laterally therefrom and overlapping a part of said adjustable flange, and means for adjustably connecting said adjustable flange and bracket part comprising a tongue projecting from one of said parts towards the other, the other part being provided with an opening for adjustably receiving said tongue.



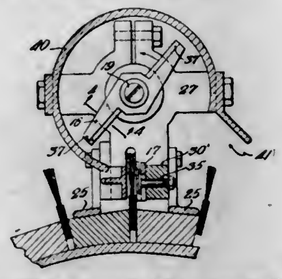
1,808,309. VEHICLE TOY. FREDERICK A. LUNDAHL, Rock Island, Ill.; Marie Lundahl, Executrix of said Frederick A. Lundahl, Deceased, assignor to Buddy "L" Mfg. Co., East Moline, Ill., a Corporation of Illinois. Filed May 1, 1926. Serial No. 105,906. 20 Claims. (Cl. 46—48.)

1. The herein described process of making a locomotive toy super-structure, comprising a plurality of hollow

boiler sections of sheet metal, each section being of a size as to exclude the entrance of a workman thereinto having attached thereto its appurtenances corresponding to those of a commercial locomotive, which consists in first making up each section as an independent welding unit and applying thereto its respective appurtenances, then manually manipulating said sections to telescopically assemble the front and next sections and permanently welding said two sections together at the edges thereof by insection of welding tools through the open end of one of said sections, then manually telescopically assembling the next rearward section with the rear end of said second section, and welding the two latter sections together in a like manner at the adjacent edges thereof.

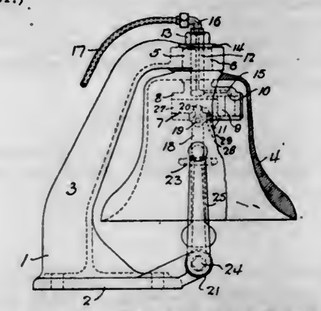


1,808,310. VEHICLE TOY. FREDERICK A. LUNDAHL, East Moline, Ill.; Marie Lundahl, executrix of said Frederick A. Lundahl, deceased, assignor to Buddy "L" Mfg. Co., East Moline, Ill., a Corporation of Illinois. Filed Apr. 22, 1927. Serial No. 185,865. 8 Claims. (Cl. 280—87.5.)



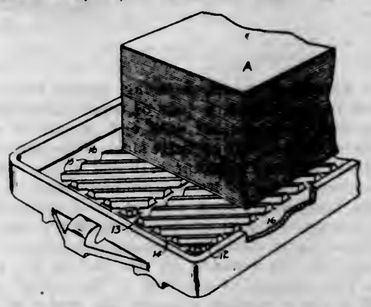
1. In a toy of the character described, the combination with a wheeled vehicle made up of sheet metal fabricated to provide great strength and predetermined size, and having a closed body provided with a top adapted to support an individual in recumbent position thereon; a steering wheel arranged inside of said closed body portion; spare equipment carried on said vehicle exteriorly of the closed body portion thereof within reach of an individual while resting upon the top of said vehicle; and means connecting said equipment with the front wheels of the vehicle whereby manipulation of said spare equipment effects steering of the vehicle.

1,808,311. EXCAVATOR. HARRY MADONNA, deceased, Conowingo, Md., by Sabby Madonna, administratrix, New York, N. Y. Filed Sept. 11, 1929. Serial No. 391,746. 4 Claims. (Cl. 37—142.)



4. An excavator tooth comprising a shank member, a point member mounted thereon, a central vertical pin passing through the members, and a transverse spool passing through the members and engaged with the pin, said spool comprising a male and female portion coupled together at their inner ends.

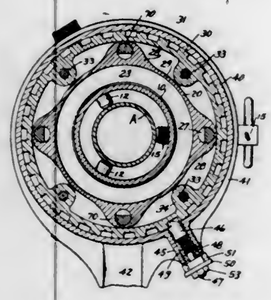
1,808,312. TRIMMER FOR BRUSH BRISTLES. ROBERT W. MCLEAN, Bridgewater, Mass., assignor to Carver Cotton Gin Company, East Bridgewater, Mass., a Corporation of Massachusetts. Filed Feb. 4, 1930. Serial No. 425,850. 18 Claims. (Cl. 300—17.)



1. A brush trimmer comprising cooperating cutting blades, base members spaced to receive a row of bristles therebetween, and a guide adapted to engage the side of a row of bristles for positioning the blades in cutting relation thereto.

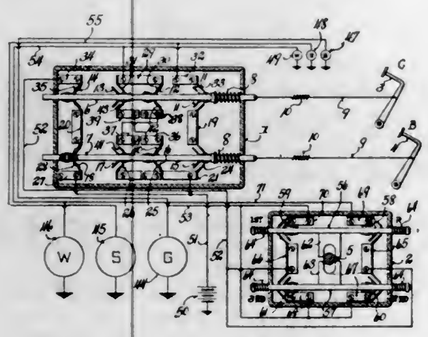
1,808,313. BELL. SHERMAN MILLER, Schenectady, N. Y. Filed Oct. 15, 1930. Serial No. 488,718. 9 Claims. (Cl. 116—151.)

1. The combination of a stationary bell having a clapper, motor means for actuating said clapper, and manually operated means disposed below and extending upwardly into said bell for actuating the said clapper independently of said motor means.



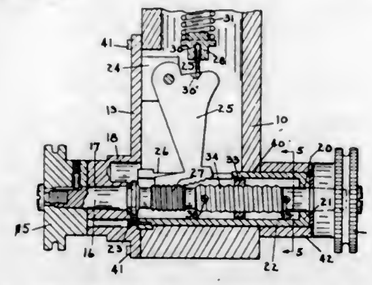
1,808,314. ANNEALING BOX. GEORGE B. NISBET, Cleveland, Ohio, assignor to The Otis Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 24, 1929. Serial No. 365,614. 1 Claim. (Cl. 263—49.)

A bottom for an annealing box comprising a horizontal member having integral parallel ribs extending upward-



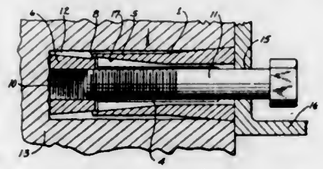
ly from the bottom of the box, said ribs extending diagonally in a plurality of sets separated by an aisle space providing a longitudinal flue for gases.

1,808,315. DIESTOCK. IRA W. NONNEMAN, Warren, Ohio, assignor to The Borden Company, Warren, Ohio, a Corporation of Ohio. Filed Jan. 13, 1930. Serial No. 420,362. 3 Claims. (Cl. 10—120.5.)



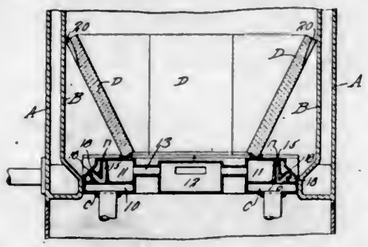
1. In a die stock, the combination of a chaser-carrying-frame, chasers carried thereby, a set of pins occupying openings in the chaser frame and forming abutments for the chasers, the chaser frame having outward bosses occupied by said pins, a ring having outwardly facing teeth surrounding the set of outward bosses, said ring having inward bosses respectively positioned between proximate outward bosses, means for clamping the inward bosses of the ring to the chaser carrying frame, and a handle frame having a pawl coacting with the teeth of the toothed ring.

1,808,316. SIGNAL SWITCH. JAMES M. OSGIAN, Racine, Wis. Filed Dec. 16, 1926. Serial No. 155,244. 1 Claim. (Cl. 200—16.)



In a signalling system, a casing, spaced rods movably mounted in the casing, a pair of separate contacts carried by each rod adjacent each end, a pair of separate contacts on each rod at opposite sides of its center, a pair of separate contacts adjacent each end of the casing and upon opposite sides of its longitudinal center, a pair of separate contacts at each side of the longitudinal and of the transverse center of the casing at the central portion thereof, and means for imparting movement to the rods whereby the contacts on one end of the rod will engage the contacts at one end of the casing, and one pair of separate contacts adjacent the center of the rod will engage one pair of the contacts adjacent the central portion of the casing.

1,808,317. MICROSCOPE. WILLIAM L. PATTERSON, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 5, 1930. Serial No. 441,990. 4 Claims. (Cl. 88—39.)

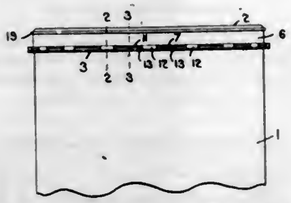


1. A miscroscope having in combination a stand, an adjustable body tube mounted on said stand, a bushing detachably secured to said stand, a member carried by said bushing, means for adjusting said body tube in opposite directions embodying a rotatable shaft, said shaft having its bearings in said bushing and said member.

1,808,318. BOLT ANCHOR AND METHOD. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall Corporation, Garwood, N. J., a Corporation of New Jersey. Filed Oct. 31, 1929. Serial No. 403,874. 12 Claims. (Cl. 85—2.4.)

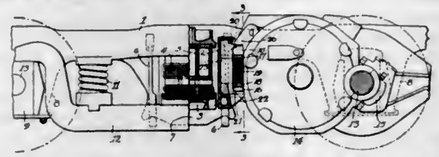
3. A new article of manufacture comprising an integral rigid cast bolt anchor formed of a plurality of expanding and expansible movable parts rigidly held together by breakable means.

1,808,319. BURNER AND METHOD OF TRANSFERRING HEAT. MILLARD J. ROBERTS, Tonawanda, N. Y., assignor to Roberts-Gordon Appliance Corporation, Buffalo, N. Y. Filed Oct. 26, 1929. Serial No. 402,681. 5 Claims. (Cl. 122—156.)



4. A method of heating a heat exchange member, including deflecting a flame at an angle against said member to scrub the dead air film therefrom, providing another flame adjacent to said first flame and deflecting said second flame toward said member by means of an inclined baffle to cause heat from the second flame to be deflected to said heat exchange member, and to ignite unburnt gases from said first flame, and heating said inclined baffle by said second flame to radiate heat therefrom to said heat exchange member.

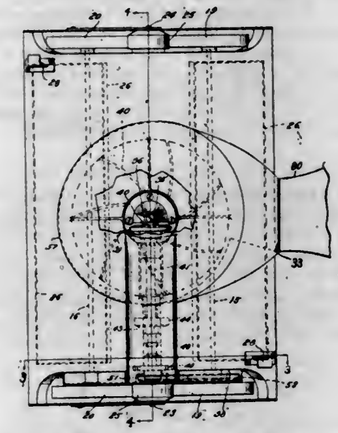
1,808,320. PRINTING PROCESS. WERNER SCHÄFFER, Laupen-Bern, Switzerland, assignor, by mesne assignments, to Chocolat Tobler Holding Co., Aktiengesellschaft, Schaffhausen, Switzerland. Filed Dec. 4, 1922, Serial No. 604,772, and in Germany Dec. 12, 1921. 13 Claims. (Cl. 95—5.)



1. In a process for producing a reproducing medium to be used in a photomechanical reproducing process for printing purposes, forming a line of characters on a strip by means of a typewriting machine, cutting the strip between words, arranging the words in the line on laterally-displaceable members, and justifying the line by changing the space relations of the words in the line by inserting interchangeable spacers between each two laterally-displaceable members.

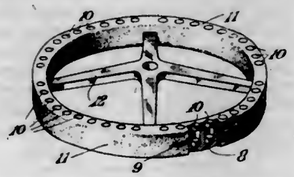
1,808,321. SEALED CAN. HARRY SEBELL, Boston, Mass., assignor to Arthur H. Parker, Lexington, Mass. Filed June 4, 1929. Serial No. 368,247. 2 Claims. (Cl. 220—59.)

1. A can comprising a can body having an outwardly-directed flange, a can cover having a mating flange, one of said flanges being a multi-ply flange and having at certain portions thereof fewer portions than at other portions, the reduction in the number of plies being on the face of said flange adjacent the other flange whereby pockets are formed between the flanges for the reception of an implement to be used to pry the flanges apart.



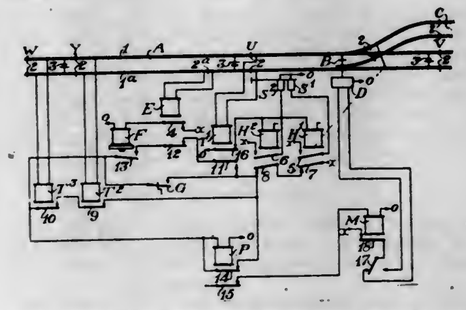
1,808,322. MOTOR CAR TRUCK. IRWIN A. SEIDERS, Reading, Pa., assignor to Flexible Truck Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 12, 1928. Serial No. 325,444. 17 Claims. (Cl. 105—139.)

1. In a car truck, the combination with a wheel axle and a transverse truck member, of a driving motor having a frame or casing swiveled on the wheel axle, and interengaging supporting parts carried by and projecting from the adjacent portions of the transverse truck member and the motor frame for holding the latter in position, said supporting parts including a spring unit, safety lugs and certain other parts that are laterally adjustable to permit the unobstructed vertical swinging movement of the motor frame in opposite directions from a normal position, substantially as described.



1,808,323. CARPET SWEEPER. WILLIAM E. SHERBONDY, Shaker Heights, Ohio. Filed Dec. 14, 1923, Serial No. 680,753. Renewed Mar. 29, 1930. 9 Claims. (Cl. 15—8.)

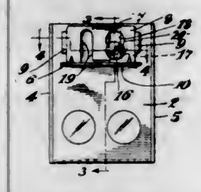
1. In combination, a carpet sweeper casing, a brush carried thereby, said casing having an opening above the brush, a housing carried by the casing and projecting through the opening into the casing, said housing having a bottom inlet opening in close proximity to the top of the brush, a vertically extending shaft enclosed within the



housing, a fan mounted on said shaft, traction wheels carried by the casing, and means drivingly connecting at least one of the traction wheels with said shaft above the fan.

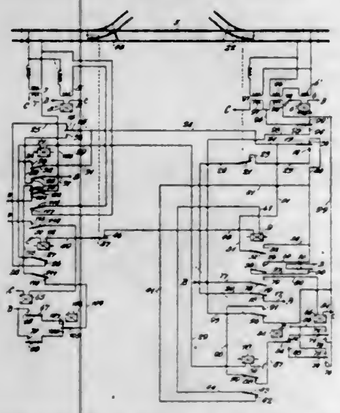
1,808,324. STEERING WHEEL AND METHOD OF MAKING THE SAME. GRANT E. SMITH, Poughkeepsie, N. Y., assignor to Pouvailsmith Corporation, Poughkeepsie, N. Y., a Corporation of New York. Filed Dec. 2, 1926. Serial No. 152,108. 9 Claims. (Cl. 74—33.)

1. A steering wheel comprising a wooden rim having recesses and weight increasing material inclosed within said recesses together with a wooden plug sealing said recesses and enclosing the weight increasing material.



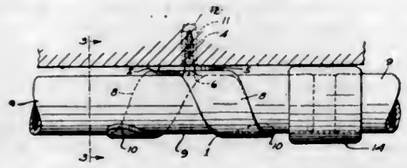
1,808,325. RAILWAY TRAFFIC CONTROLLING APPARATUS. LESTER E. SPRAY, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 17, 1930. Serial No. 453,364. 3 Claims. (Cl. 246—160.)

1. In combination, a main section of railway track containing a switch, a track circuit including a track relay



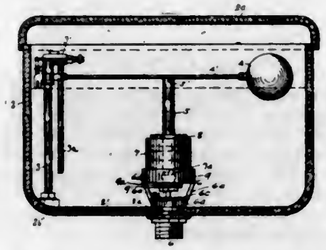
for said section, an approach section provided with an insulated joint in one track rail, a track circuit for said approach section including a source of current connected across the rails at the exit end and an auxiliary relay connected around said joint, a slow-releasing relay controlled by a back contact of said auxiliary relay, an approach locking relay, means for preventing operation of said switch unless said approach locking relay is energized, and a pick-up circuit for said approach locking relay including in series a back contact of said main section track relay and a front contact of said auxiliary relay as well as a front contact of said slow-releasing relay.

1,808,326. OUTLET BOX ATTACHMENT MEANS. GEORGE C. THOMAS, Jr., Elizabeth, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Original application filed Apr. 4, 1924, Serial No. 704,101, Patent No. 1,683,742, dated Sept. 11, 1928. Divided and this application filed Feb. 7, 1925, Serial No. 7,450. Renewed Apr. 10, 1931. 5 Claims. (Cl. 247—21.)



1. In outlet box construction, in combination, a box including a wall having an aperture and a slot narrower than said aperture and extending therefrom to an edge of said wall, a switch supporting element having a boss wider than said slot and engageable in said aperture, and a screw passing through said wall and engaging said boss, the head of said screw being wider than said aperture and the shank of said screw being narrower than said slot, whereby when said screw is tightened said boss is drawn into said aperture to prevent removal of said element from said box wall, and when said screw is loosened said element may be removed from and may be mounted on said box wall without removing said screw from said boss.

1,808,327. RAILWAY TRAFFIC CONTROLLING APPARATUS. HOWARD A. THOMPSON, Edgewood Borough, and CHARLES A. BROOKS, Swissvale, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 23, 1929. Serial No. 394,402. 8 Claims. (Cl. 246—34.)

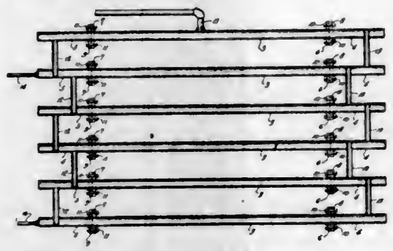


1. In combination, a section of railway track, devices corresponding respectively to directions of movement of traffic in said section and means comprising relays having different releasing characteristics for bringing one of said devices into action upon traffic movement in one direction in said section and for bringing another of said devices into action upon traffic movement in said section in the opposite direction.

1,808,328. CONDUIT AND PIPE CLAMP. FREDERICK B. THOMSON, Teaneck, N. J. Filed June 14, 1929. Serial No. 370,944. 1 Claim. (Cl. 248—31.)

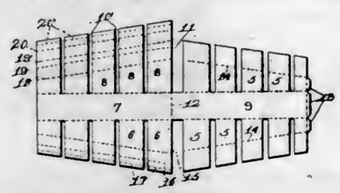
A new article of manufacture, comprising a conduit or pipe clamp having a base, spring tension members, adapted to be sprung over the crown of the conduit or pipe, the ends of said spring tension members being dished to form side gripping edges to positively grip a conduit or pipe.

1,808,329. FLUSH VALVE. BERT O. TILDEN, Trenton, N. J., assignor to B. O. T. Mfg. Co., Trenton, N. J., a Corporation of New Jersey. Filed Aug. 27, 1930. Serial No. 478,108. 6 Claims. (Cl. 4—58.)



1. A flushing apparatus in combination with a tank having inlet and outlet openings, a valve body in register with the outlet, having a seat disposed substantially in the plane of the tank bottom, a cylinder mounted concentrically in said body, a float loosely disposed in said cylinder, an annular valve, an over-flow pipe passing axially through said cylinder, said valve and said float, and being rigidly secured to both of said latter parts, adapted when raised, to enable the contents of the tank to discharge through said outlet, and means for raising said pipe, said cylinder having a closed bottom formed with an opening of greater diameter than that of the pipe whereby water may drain therethrough, and said float being of less diameter than that of the cylinder, whereby water may enter the cylinder.

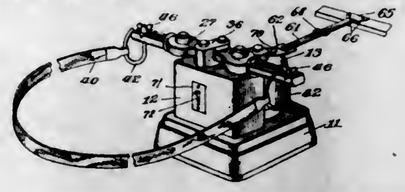
1,808,330. TERMINAL CONNECTER. ANTON F. WALTZ, Brooklyn, N. Y., assignor to Koscherak Siphon Bottle Works, Hoboken, N. J., a Corporation of New Jersey. Filed June 29, 1925. Serial No. 40,438. 6 Claims. (Cl. 173—259.)



1. A heavy duty terminal connecter as described comprising a pair of clamping jaws made from moulded non-corrosive metal and having perforations to receive a clamping bolt and a spring band formed to the contour of said jaws embedded in said jaws having perforations aligning with but of larger diameter than the perforations in said jaws and having their edges covered by said moulded metal.

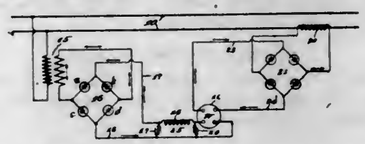
1,808,331. EVAPORATOR COIL. ROBERT S. WHEATON, Milwaukee, Wis., assignor to The Vilter Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 26, 1930. Serial No. 455,730. 4 Claims. (Cl. 62—126.)

1. A refrigerating coil, comprising a plurality of spaced, superimposed tubes having closed ends, short tubular connections between one set of end portions of said superimposed tubes, each of said tubular connections extending from the bottom portion of a tube above through and terminating slightly above the lower inner portion of a tube below and adjacent tubular connections being offset one from another, short tubular connections between the other set of end portions of said superimposed tubes, each of said last mentioned tubular connections extending from an upper portion of a tube below through and terminating slightly below the upper inner portion of a tube above and each of said last mentioned tubular connections being offset from an adjacent tubular connection, a fluid inlet pipe entering one of said tubes, and a fluid outlet pipe extending from one of said tubes.



1,808,332. SPRING COVER. MILTON H. WHITEHOUSE, Milwaukee, Wis. Filed Feb. 25, 1930. Serial No. 431,126. 10 Claims. (Cl. 267—37.)

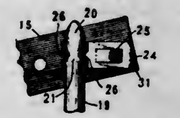
7. A spring cover adapted to snugly embrace a spring and formed from a single blank of sheet metal folded upon itself to provide a double thickness of metal, each thickness having transverse slots extending from opposite sides of the longitudinal center through the outer edges to compensate for flexure of the spring, and means whereby to secure the outer edges of the outermost layer of metal together along one side of the spring.



1,808,333. PORTABLE MASSAGE AND EXERCISE MACHINE. FRITZ A. ANDERSON, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a Corporation of Delaware. Filed Nov. 20, 1928. Serial No. 320,664. 6 Claims. (Cl. 128—63.)

3. In an exercising and massaging machine, an applicator, a rocker arm for actuating the applicator, a link pivotally attached to the rocker arm intermediate its length, a pin for pivotally securing the opposite end of the link a bearing carried by the rocker arm, and an

eccentric element journalled in the bearing and a rotatable shaft mounted to rotate on a fixed axis and secured to said eccentric element for producing a combined translating and oscillating movement of the rocker arm.

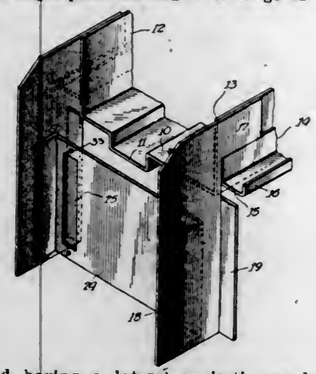


1,808,334. VOLT-AMPERE METER. DONALD J. ANGUS, Indianapolis, Ind. Filed Nov. 4, 1927. Serial No. 230,949. 19 Claims. (Cl. 171—34.)

14. The method of measuring the volt-amperes in an alternating-current circuit which comprises rectifying a quantity proportional to volts, rectifying a quantity proportional to amperes, and energizing the current and voltage windings, respectively, of a direct-current watthour meter by said rectified quantities.

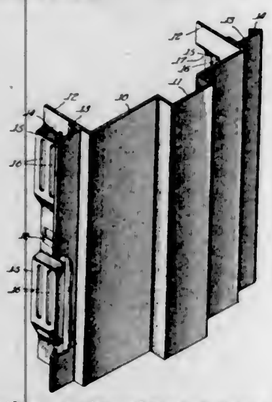
18. A system for measuring the volt-amperes of an alternating-current circuit comprising means, including a copper-oxide rectifier, in circuit relation with a circuit traversed by a current proportional to the voltage of said circuit, means, including a copper-oxide rectifier, in circuit relation with a circuit traversed by a current proportional to the current traversing said circuit, and a direct-current watthour meter having current and voltage coils energized, respectively, by the currents traversing said copper-oxide rectifiers.

1,808,335. ELECTRICAL CONNECTING MEMBER. JOHN M. AUFIERO, Brooklyn, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 18, 1927. Serial No. 234,062. 1 Claim. (Cl. 173—328.)



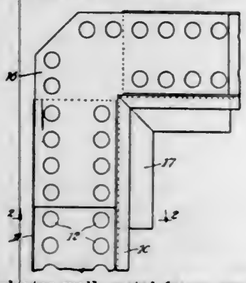
A connecting member including a strip of conducting material having portions of its surface bulged inwardly and said strip being bent adjacent such portions to provide complementary and substantially semi-circular plug-enclosing parts, the said inwardly bulged portions providing flanges for yieldingly engaging a reduced portion of a plug and said strip extending to have its free end present a surface for securing to a mounting member.

1,808,336. CORNER CONNECTION FOR METAL FRAMES. ISAAC A. BAUM, Chicago, Ill. Filed Feb. 21, 1929, Serial No. 341,740. Renewed June 12, 1930. 4 Claims. (Cl. 189—46A.)



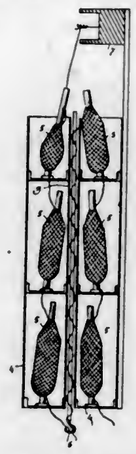
1. In a door frame, the combination of head and side frame members of channel shape in cross section with the flanges projecting away from the door opening, a

continuous angular member constituting a plaster terminal and ground secured to the face of the flange of the channel, an angle plate secured to a flange of one frame



member and having a lateral projection and a socket member secured to the inside of the plaster terminal for engagement by said projection.

1,808,337. PLASTER ANCHOR. ISAAC A. BAUM, Chicago, Ill. Filed July 22, 1929. Serial No. 380,207. 1 Claim. (Cl. 72—98.)

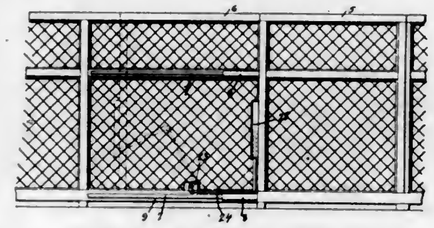


In combination, a channel-shaped frame member, a flange of which has spaced, laterally deflected portions adapted to act as plaster anchors, and an angle strip secured to said flange at a point closely adjacent to said deflected portions, a perpendicular portion of said strip having a rebent margin that partially overlies said deflected portions and acts as a plaster anchor, terminal and ground.

1,808,338. FRAME FOR ALL PLASTER WALLS. ISAAC A. BAUM, Chicago, Ill. Filed July 22, 1929. Serial No. 380,211. 4 Claims. (Cl. 72—98.)

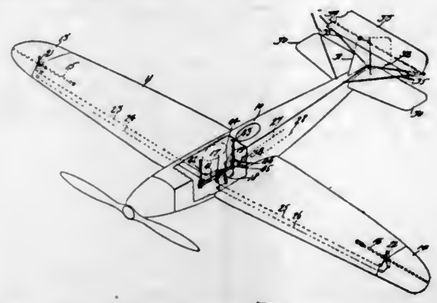
1. In an all plaster wall, metal frame construction comprising a channel shaped buck member and a continuous flanged wall stiffener, a flange of which is rigidly secured to the back of said channel shaped buck and positioned to extend a substantial distance rearwardly into the plaster of the wall.

1,808,339. CREEL FOR WINDING WARP BEAMS. MARIO BELLINGERI, Monza, Italy. Filed Jan. 24, 1927, Serial No. 163,174, and in Italy Jan. 28, 1926. 2 Claims. (Cl. 242—131.)



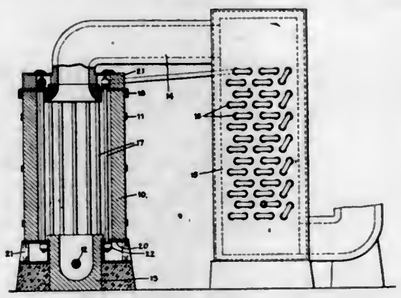
1. A creel comprising a plurality of compartmental columns, removable trays in the columns, a plurality of thread bobbins in each tray, a distributor for each column adapted to space the threads from the bobbins and consisting of vertical bars, horizontal bars pivoted to the vertical bars so that they may be moved in parallel relationship, and thread guiding pins on the horizontal bars.

1,808,340. FUEL BRIQUETTE. ROCH P. BOTSCH, Milwaukee, Wis., assignor to United Coal and Dock Company, Milwaukee, Wis. Filed Oct. 26, 1929. Serial No. 402,800. 2 Claims. (Cl. 44—20.)



1. A fuel briquette consisting of pulverized coal molded to size and held by a waterproof binder having an asphalt base, lightly coated with a mineral oil having an affinity for the binder.

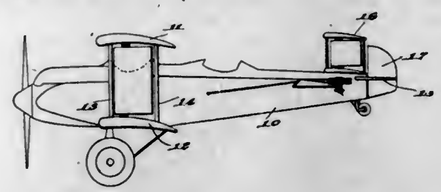
1,808,341. TANDEM CHECK FOR GATES. MAX BURSTEIN and ARCHIBALD G. BUCKENHAM, New York, N. Y. Filed Nov. 19, 1929. Serial No. 408,192. 1 Claim. (Cl. 16—70.)



In combination with a partition having a hollow base rail, a gate for the partition mounted to slide on said rail, a check for the gate housed in said rail, a rack in the rail movable with the check, a gear in the rail for actuating the rack and a right angle lever having one end thereof keyed to the gear and the other end in slidable engagement with the gate so that one arm of the lever is parallel to the rail in the closed position of the gate.

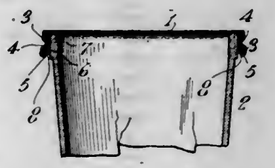
1,808,342. AIRPLANE CONTROL. ROLAND CHILTON, Keyport, N. J., assignor, by mesne assignments, to Aeromarine Plane & Motor Company, Inc., Keyport, N. J., a Corporation of New York. Filed May 13, 1929. Serial No. 362,652. 8 Claims. (Cl. 244—20.)

1. The combination with normally horizontal control surfaces spaced laterally and longitudinally of an airplane on hinges, lateral thereto, of a control member movable laterally and longitudinally, and means connecting said pivotally floating surfaces to said control member for simultaneous antomatic movement of all in the same direction and for opposite movement of the laterally separated surfaces in response to lateral movement of the control member and for opposite movement of the longitudinally separated surfaces in response to longitudinal movement of the control.



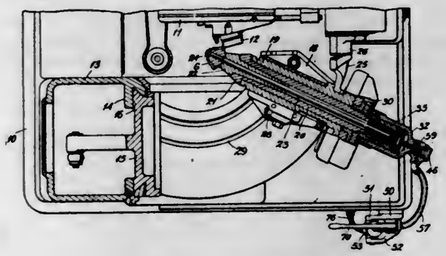
1,808,343. METHOD OF HEATING OILS. LUIS DE FLOREZ, Pomfret, Conn., assignor to The Texas Company, New York, N. Y., a Corporation of Delaware. Original application filed July 2, 1926, Serial No. 120,067. Divided and this application filed Apr. 17, 1929. Serial No. 355,754. 2 Claims. (Cl. 196—116.)

2. The method of heating a medium to a desired temperature, which comprises burning a fuel to create a flame as a source of intensive radiant heat and impelling the flame and the products of combustion in a vertical unobstructed path, and passing the medium in radiative relation to the flame and the hot combustion products serially through vertical paths which are parallel to the path of the flame and products of combustion and substantially equidistant therefrom, to quickly absorb radiant heat and reduce the temperature of the products of combustion, while maintaining the products of combustion in substantially non-convective relation to said paths.



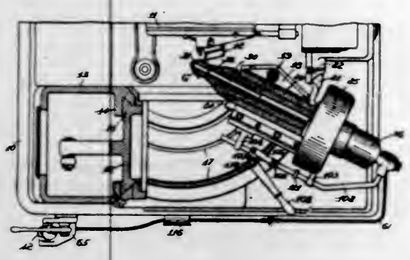
1,808,344. CONTROL FOR AIRPLANES. MICHAEL HENRY DEPUE, Homer, Ill. Filed Dec. 5. 1929. Serial No. 411,914. 4 Claims. (Cl. 244—12.)

1. In an airplane, a wing, buffers mounted on the wing and disposed in vertical planes, means for moving the buffers simultaneously at angles to the line of travel of the airplane, said buffers being normally in parallel rela-



tion, means for moving one series of buffers at an angle to the other buffers, and a clutch for causing a reversal of movement of one series of buffers.

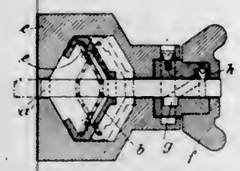
1,808,345. CONTAINER COVER. ROBERT C. EUWER, Wheeling, W. Va. Filed Apr. 12, 1929. Serial No. 354,505. 9 Claims. (Cl. 215—40.)



5. A new article of manufacture, a cover for a container comprising a stiff cap with a raised side, said side being substantially parallel to the enclosed portion of a container, a flat circular resilient ring fitting within said raised side, the inner diameter of the lower edge of the resilient ring being greater than the inner diameter of its upper edge and an abutment on its inner side extending around its side wall, said abutment being adapted to bear against said resilient ring when the cover is positioned on a container, to force a portion of said ring above and below said abutment whereby a seal is formed between said side wall and the enclosed portion of said container both above and below said abutment.

1,808,346. CHUCK. EYVIND FINSEN, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Sept. 26, 1928. Serial No. 308,537. 13 Claims. (Cl. 90—1.)

1. The combination with a chuck provided with means for actuating it into chucking position, of fluid pressure operated means for releasing it comprising a piston connected to said chuck, a cylinder in which said piston is movable, a pump, piping connecting said pump with said cylinder, said cylinder, piping and pump constituting a substantially closed system adapted to contain a substantially constant volume of fluid, and means for actuating the pump to force the fluid out of the pump chamber into the first named cylinder to move the chuck to released position.



1,808,347. CHUCK. EYVIND FINSEN, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed June 3, 1929. Serial No. 368,033. 18 Claims. (Cl. 90—1.)

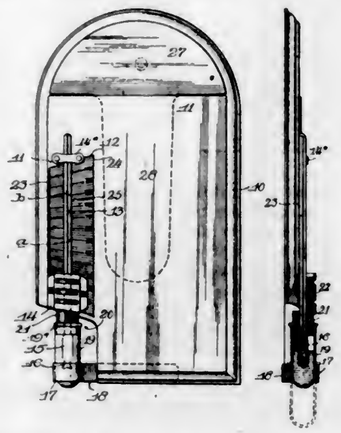
1. The combination with a cylinder, a piston movable therein and means for moving said piston in one direction in said cylinder, of a pump and piping connecting the pump with the opposite end of the piston, said pump, piping and cylinder forming a closed hydraulic system such that when the pump is actuated, a column of liquid is forced from the pump chamber into the cylinder to move the piston in the direction opposite to that first mentioned, and when the pump is released, the first named means moves the piston in the first named direction in the cylinder forcing the liquid from said cylinder back into the pump chamber, and means for automatically connecting said system during the last named movement with a source of liquid supply to allow liquid to flow in either direction between the system and the source of supply depending on the amount of liquid in the system.

15. The combination with a spindle, of a chucking attachment therefor comprising a draw rod reciprocable in the spindle, a cylinder mounted on the spindle, a piston secured to the draw rod and reciprocable in the cylinder, means constantly urging the piston in one direction in the cylinder, a plunger pump, piping connecting the pump with the cylinder at one end of the piston, said cylinder, piping and pump constituting in operation a closed hydraulic system whereby when the plunger is depressed in the pump the piston is moved in the cylinder against the resistance of the first named means, a valve communicating with the system adapted to be closed on depression of the pump, means connecting the valve with the plunger for opening the valve when the plunger is raised in the pump, and means for positively raising the plunger when released.

1,808,348. REVERSING MECHANISM. RICHARD GATZSCHE, Bad Blankenburg, Germany. Filed Apr. 5, 1929, Serial No. 352,734, and in Germany Apr. 12, 1928. 4 Claims. (Cl. 74—14.)

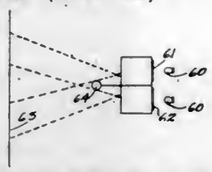
1. In a reversing mechanism, the combination of two movable control elements, a spring member arranged between said control elements, said spring member adapted to move beyond its dead position with one of said control elements and to thereby effect the movement of the other control element in the opposit direction, one of said control elements being in the form of a frame in which said spring member is housed and means for moving the one of said control elements with said spring member.

1,808,349. PREPARATION OF DIPHENYLENE OXIDE. WILLIAM J. HALE and WESLEY C. STOESSER, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Aug. 17, 1929. Serial No. 386,735. 7 Claims. (Cl. 260—54.)



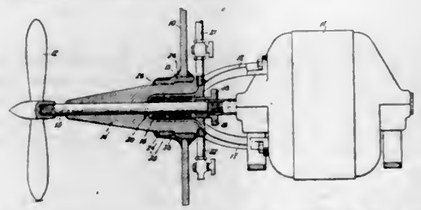
1. The method of making diphenylene oxide which comprises heating the vapors of ortho-phenyl phenol at a temperature between 300° and 800° C.

1,808,350. RATCHET WRENCH. CLARENCE W. HELBLING, Black River Falls, Wis. Filed Mar. 23, 1928. Serial No. 264,198. 6 Claims. (Cl. 81—61.)



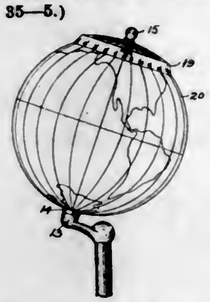
1. A wrench of the character described including a casing, a sleeve journaled in said casing and having a ratchet wheel secured thereto, means for rotating the ratchet wheel and sleeve, and a pin for securing the sleeve and ratchet wheel together and extending into the open center portion thereof for receiving an attachment which extends at an angle to the wrench.

1,808,351. PSYCHROMETRIC DEVICE. EARL VERNON HILL, Chicago, Ill. Filed May 31, 1927. Serial No. 195,393. 1 Claim. (Cl. 73—24.)



A psychrometric instrument comprising a base, a thermometer with a bulb at its bottom end mounted on said base, a scale associated therewith, means providing a stopper fixed to said thermometer above said bulb, a wick on the bulb of said thermometer, a water containing cup enclosing said wick-covered bulb and normally held in closed relation with respect to said bulb by its engagement with said stopper, and a supporting device carried by the base below said bulb, said supporting device and cup having parts adapted to interengage to support said cup when said cup is depressed below said stopper to expose said wick to the surrounding air.

1,808,352. PHOTOGRAPHIC PROCESS. HENRY JOHN HOLLEN, Chicago, Ill. Filed Nov. 9, 1925. Serial No. 67,965. 2 Claims. (Cl. 88—24.)

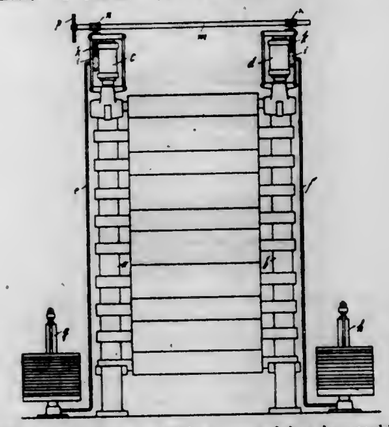


2. The herein described process of projecting blended images from photographic pictures taken from different positions, which consists in projecting light simultaneously through two or more positives or negatives upon an image-receiving surface, certain portions of the light projected through one negative or positive overlapping that projected through another adjacent negative and positive and simultaneously causing a decrease of the intensity of light from the outer edges of the overlapped area to the center thereof.

1,808,353. AGITATOR. WILLIAM H. JACKSON, Douglaston, N. Y. Filed June 21, 1927. Serial No. 200,483. 10 Claims. (Cl. 308—134.)

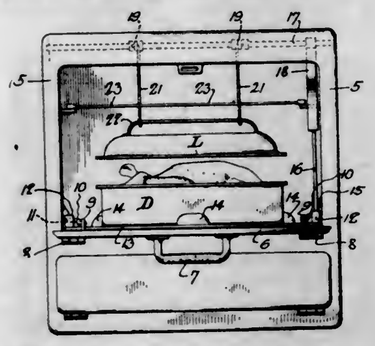
4. In an agitator installation, an elongated shaft bearing projecting through a wall of the tank and secured thereto; a spun metallic shield surrounding the bearing and presenting a sharp feather edge adapted to conform to and be clamped against the inside of the tank wall to seal the joint, and a packing gland at the outer end of said bearing, and an electric motor positioned outside of said tank, said motor having a shaft in alignment with and rigidly connected to the outer end of the agitator shaft.

1,808,354. SPHERICAL GEOGRAPHICAL GLOBE. PETER J. KING, Detroit, Mich. Original application filed Dec. 12, 1930, Serial No. 501,815. Divided and this application filed Apr. 23, 1928. Serial No. 272,015. 2 Claims. (Cl. 35—5.)



1. The combination with a globe and a post extending therethrough, of a time dial rotatably mounted on and secured to said post having an annular margin disposed angularly at a considerable angle to the surface of said globe.

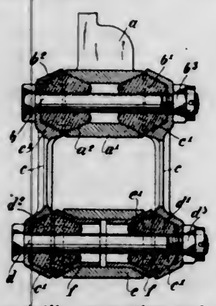
1,808,355. METHOD OF NITRIFICATION. AUGUSTUS B. KINZEL, Beechhurst, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed May 11, 1929. Serial No. 362,447. 9 Claims. (Cl. 148—16.)



1. The method of producing nitrogen-containing coatings on an alloy article which comprises embedding the article in a closed container in porous inert non-metallic material, passing into the container a gaseous substance which will give up nitrogen to the article, and heating.

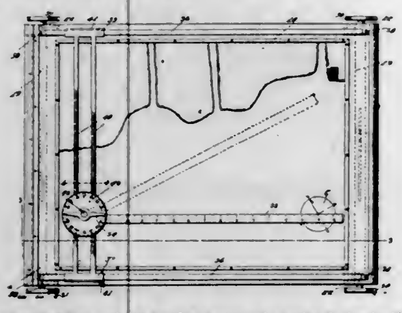
1,808,356. HYDRAULIC LEATHER, FABRIC, OR PAPER ROLLING MACHINE. JOHANNES KLEINEWEFERS, Krefeld, Germany, assignor to the Firm: Joh. Kleinewefers Söhne, Krefeld, Germany, a Firm of Germany. Filed June 10, 1929, Serial No. 369,900, and in Germany Dec. 22, 1927. 1 Claim. (Cl. 149—23.)

A hydraulic rolling machine, comprising in combination a machine frame, pressure cylinders movably guided on said machine frame in the direction of pressure, a nut on the outer side of each pressure cylinder, a vertical screw spindle in each nut, a common horizontal shaft having two worms one for each screw spindle, a worn wheel on the top of each screw spindle meshing with the corresponding worm, and means for rotating said horizontal shaft.



1,808,357. COVER LIFTER FOR ROASTERS. LESSING L. KOLE, Milwaukee, Wis. Filed Sept. 7, 1929. Serial No. 391,000. 5 Claims. (Cl. 126—340.)

1. In apparatus of the class described, the combination with a hinged oven door of a slidable grate having means

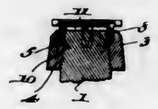


for releasably holding a roasting pan in a pre-determined place on the grate, means operatively connecting the grate with the upper portion of the oven door to cause the grate to move forward onto the oven door when the latter is swung to a nearly horizontal position, a rod having a fixed relation to the grate and moving with same, said rod extending upwardly and rearwardly, a rod rotatably mounted to the rear portion of the oven, said rod having a bar aligned with the rod that moves with the grate and adapted to be operated by same when the grate is moved outwardly onto the oven door, and bars connected to said rod, and means connecting the cover of the roasting pan with said bars whereby when the oven door is open and the grate carrying the roasting pan is moved outward the cover of the roasting pan will be lifted.

1,808,358. YIELDING CONE DISK. AUGUST H. LEIPERT, College Point, N. Y., assignor to The Rubber Shock Insulator Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 23, 1928. Serial No. 264,108. 1 Claim. (Cl. 267—54.)

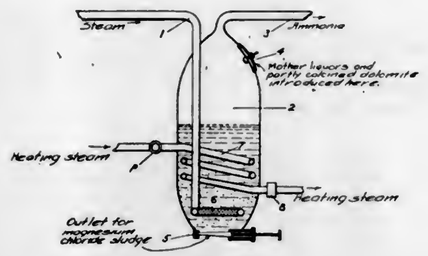
A wholly non-metallic connection and support between two metallic parts of a motor vehicle, one of which parts is to be connected to and supported by the other of said parts, comprising cup-shaped recesses carried by each of the respective parts having axially inclined bearing surfaces, independent blocks of yielding material spaced from one another and engaged along separate surfaces with the respective parts and having axial openings extending therethrough presenting extended bearing surfaces, and means extending through the openings in the blocks to secure the parts together, the first-named engaging surfaces of said blocks being relatively inclined to one another, and certain of the engaging surfaces of each of the respective blocks being relatively inclined with respect to each other and to the surfaces within the axial openings to engage the inclined bearing surfaces of the cup-shaped recesses.

1,808,359. NAUTICAL INSTRUMENT. WILLIAM E. LEWIS, West Mystic, Conn. Filed Mar. 23, 1928. Serial No. 264,196. 1 Claim. (Cl. 33—80.)



An apparatus of the character described including a base, a carriage slidably mounted on the base, a plate longitudinally adjustable on the carriage, a tubular member extending through the plate and rotatably supported thereby, a compass-rose revoluble with one end of the tubular member and having a depending circular flange surrounding said end, a protractor arm carried by the opposite end of the tubular member, split collars extending from each face of the plate respectively, one of said collars embracing the tubular member and the other of said collars embracing said circular flange, and means co-operating with each of the collars for causing the same to frictionally engage the tubular member and flange respectively.

1,808,360. POLISH. JAMES D. LINDSAY, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Apr. 16, 1927. Serial No. 184,433. 4 Claims. (Cl. 134—24.)

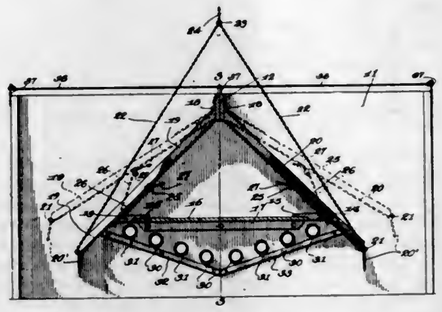


1. A polish comprising water, mineral oil, wilkinite, abrasive earth, oxalic acid and tartaric acid in such proportions as to adapt it for use on automobile and other highly polished surfaces.

1,808,361. STORAGE BATTERY CONNECTER. HERMAN OTTO LOCH and JOHN ROSS MILLER, Washington, D. C., and EDWARD ALDEN TIBBALS, Bethesda, Md. Filed May 27, 1926. Serial No. 112,000. 4 Claims. (Cl. 173—259.)

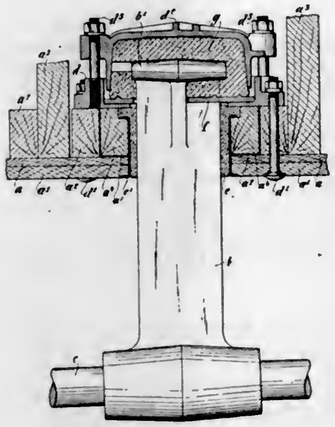
4. In a storage battery connector, a ring provided with means for connection to a conductor, said ring being adapted to be placed around the battery post, and a locking cap adapted to overlie the end of the battery post and having an integral elongated downwardly projecting prong adapted to be driven, by blows applied to the cap, between the ring and the battery post after the ring has been thus placed, for the purpose of locking said ring and post together.

1,808,362. PROCESS FOR MAKING MAGNESIUM CHLORIDE AND OTHER MAGNESIUM SALTS OF HIGH PURITY. RICHARD C. LORD, Gambier, Ohio, assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Feb. 23, 1924. Serial No. 694,778. 9 Claims. (Cl. 23—91.)



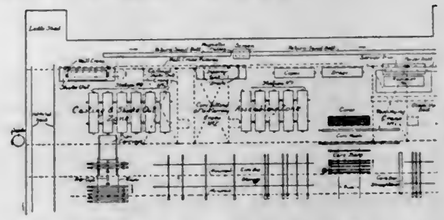
1. The process of preparing dolomitic limestones as for use in reclaiming ammonia from the mother liquors produced in the amonia-soda process which consists in calcining the same at temperatures below those customarily employed in the burning of lime while maintaining thereon during the calcination a partial pressure of carbon dioxide at least not substantially less than atmospheric pressure.

1,808,363. PRODUCTION OF PREPARATIONS FOR OILING FIBROUS MATERIALS. MARTIN LUTHER, Mannheim, and HANS BELLER, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 8, 1929, Serial No. 376,850, and in Germany Aug. 6, 1928. 12 Claims. (Cl. 19—66.)



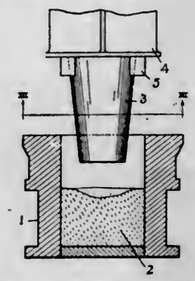
1. A preparation for oiling fibrous materials comprising a mixture of unsaturated carboxylic acids obtained by splitting off water from an oxidation product of high molecular organic compounds, and an alkaline agent.

1,808,364. BROODER. PERRY S. MARTIN, Harrisonburg, Va. Filed Jan. 21, 1927, Serial No. 162,528. Renewed Sept. 30, 1930. 18 Claims. (Cl. 119—31.)



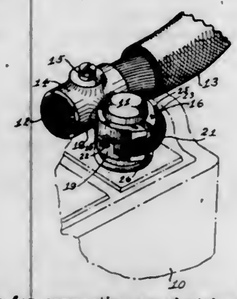
1. A brooder comprising a pair of adjustable hover tops hingedly carried at their upper edges and arranged to form an inverted V-shaped hover, said hover tops being arranged for movement which increases the size of the brooding chamber as the area for escape of heated air is increased, and a heating element arranged under said hover tops.

1,808,365. STRUT CONSTRUCTION. ALFRED F. MASURY, New York, N. Y., assignor to The Rubber Shock Insulator Corporation, Wilmington, Del., a Corporation of Delaware. Original application filed July 14, 1926, Serial No. 122,528. Divided and this application filed Jan. 6, 1928. Serial No. 244,790. 2 Claims. (Cl. 308—28.)



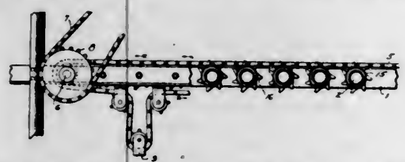
1. The combination with the hull of a vessel formed with an opening and a propeller shaft, of a strut formed with a bearing for the propeller shaft and an enlarged end, the shank of the strut passing through the opening in the hull, yielding non-metallic material surrounding and engaging the shank within the opening to resist gyratory movements, and means to secure the end of the strut within yielding non-metallic material under compression within the hull.

1,808,366. PLANT FOR AND METHOD OF MANUFACTURING CAST IRON PIPE AND THE LIKE. JAMES R. MCWANE, Birmingham, Ala., assignor to McWane Cast Iron Pipe Company, Birmingham, Ala., a Corporation of Alabama. Filed Sept. 20, 1927. Serial No. 220,731. 35 Claims. (Cl. 22—64.)



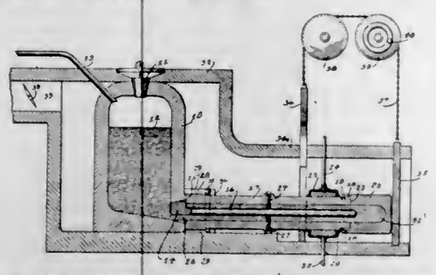
15. A plant for the manufacture of cast iron pipe and the like horizontally comprising, in combination, a bay having an assembling zone; a sand handling zone on one side of the assembling zone; and a pipe and core bar handling zone on the other side of the assembling zone; conveying means in the assembling zone for the core bars and flasks; a ramming machine at one end of the assembling zone; a core making machine placed in the assembling zone adjacent the pipe and core bar handling zone and open to both zones so as to take core bars from the latter and deliver finished cores into the former; said core making machine being near the ramming machine and between said machine and the assembling zone; and means for conveying the core bars, after casting, by a route which does not conflict with the movement of other parts, to the core machine.

1,808,367. PRESS FOR PLASTIC MATERIALS. EUGENE L. MESSLER, Pittsburgh, Pa. Filed May 9, 1929. Serial No. 361,619. 3 Claims. (Cl. 25—27.)



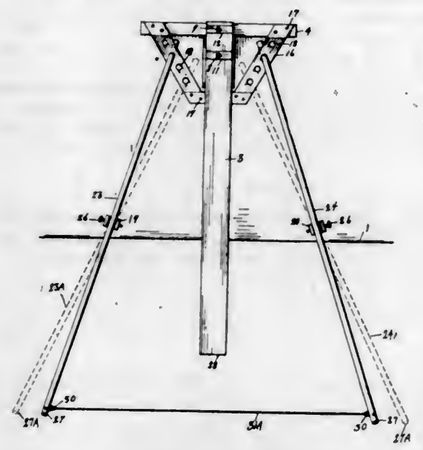
1. In a die structure for use in pressing plastic substances to form ingot mold hot tops the combination of a female die, a plunger head, a male die proper on said head arranged to forme a centrally disposed indentation in plastic material lying in a female die, and auxiliary male die means rigidly mounted on said head and spaced from the male die proper; said auxiliary die means being arranged to cooperate with the female die to form an external shoulder in the material lying between the male die proper and the interior surface of the female die, and the auxiliary die means being so formed that the indentation produced thereby is of slight depth relatively to the depth of the indentation produced by the male die proper, there being an inclination in at least one of the opposed surfaces of the male die proper and the auxiliary male die means of no less than five degrees.

1,808,368. STORAGE BATTERY TERMINAL CLAMP. WILFRED J. MONTAMBAULT, Waterbury, Conn. Filed Feb. 11, 1930. Serial No. 427,523. 3 Claims. (Cl. 173—259.)



1. In a clamp for connecting an electric cable to a battery terminal post, a tubular body member for fitting about said cable, means for locking said body member to said cable, said body member having a stationary jaw, a movable jaw hinged to said stationary jaw, and a coiled spring for resiliently connecting said jaws, said jaws having hooks for attachment to the ends of said spring.

1,808,369. SPROCKET. TREADWAY B. MUNROE, Chicago, Ill., assignor, by mesne assignments, to The Celotex Company, Chicago, Ill., a Corporation of Delaware. Filed June 21, 1926. Serial No. 117,644. 17 Claims. (Cl. 74—31.)

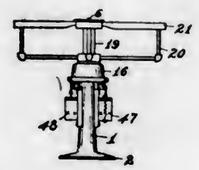


1. In a sprocket the combination of a plurality of teeth whose pitch is less than the pitch of the chain coacting therewith said teeth having a working face outwardly and backwardly inclined; a pocket formed by each tooth adapted to receive and hold a pintle of said chain; and means adapted to direct said pintle into said pocket.

1,808,370. APPARATUS FOR EXTRUDING SEAMLESS BRASS AND COPPER TUBES. NYLE R. MUNSON, Waterbury, Conn. Filed Jan. 17, 1930. Serial No. 421,344. 9 Claims. (Cl. 207—2.)

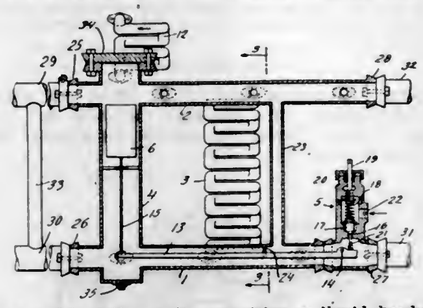
1. In an apparatus for continuously casting a metal tube, a vessel containing a supply of molten metal, a casing connected with said vessel, a mandrel within said casing, a water jacket on the outer section of said casing to cause the metal to congeal in the outer end thereof, whereby a solid tube may be continuously drawn from said casing, said vessel and casing being enclosed by a furnace for maintaining the temperature of said metal above the melting point, and a sliding door in said casing adapted to cut off said water jacket and the outer section of said casing from the hot gases of said furnace.

1,808,371. DIVING HURDLE. BRUNO W. OERTEL, Portland, Oreg. Filed Sept. 5, 1929. Serial No. 390,524. 6 Claims. (Cl. 272—59.)



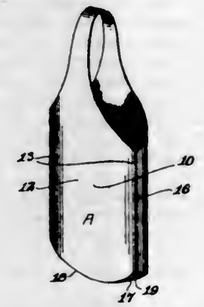
1. A pair of upright members, said upright members each having a bifurcated upper end to provide a cradle, the bifurcated portion of each upright being provided with a plurality of vertically spaced inclined pin holes, an inclined spar carried within each cradle, a pin extending through one of the aforesaid inclined holes supporting said spar, and a flexible member extending in a substantially horizontal manner between the upper ends of said spars.

1,808,372. PROCESS FOR THE OBTAINMENT OF SHEETS OF PLASTIC MATERIAL WHICH ARE COMBINED OR BACKED. JEAN PAISSEAU, Paris, France. Filed May 25, 1928, Serial No. 280,648, and in France July 5, 1927. 5 Claims. (Cl. 154—2.)



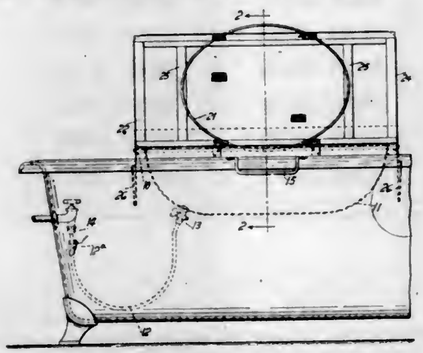
1. Process for the manufacture of sheets of plastic material which are combined or backed, consisting in applying, on a sheet of plastic material, a layer of a mixture adapted to attack but superficially the said sheet of plastic material and composed of a plastic material similar to that of the said sheet dissolved in a volatile compound comprising a mixture of a solvent of the said material and of a volatile liquid unable to dissolve the said material.

1,808,373. SHOCK ABSORBING MEANS FOR TURNSTILES. CLINTON J. PHARE, Cleveland, Ohio, assignor to Hoyt V. Bright, Cleveland, Ohio. Filed Apr. 26, 1928. Serial No. 272,919. 12 Claims. (Cl. 39—3.)



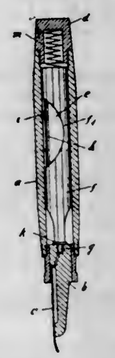
5. In a turnstile, the combination of a pedestal, a casing rotatably supported by the pedestal, arms carried by the casing, a ring-gear fixed to the casing, a pinion in mesh with the ring-gear, means for supporting the pinion, means for causing automatic rotation of the pinion after initial manual movement thereof and for stopping the rotation of said pinion at a predetermined point, and pneumatic means for cushioning the movement of said pinion prior to the stopping thereof.

1,808,374. REFRIGERATING APPARATUS. HARRY ALEXANDER PHILLIPS, Knoxville, Tenn. Filed Nov. 26, 1928. Serial No. 321,777. 18 Claims. (Cl. 62—126.)



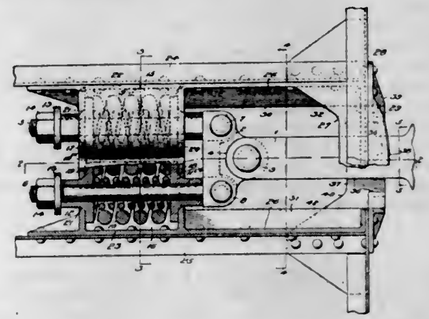
1. A refrigeration unit comprising a liquid header, a gas header, a refrigerating coil communicating with said headers, a float chamber communicating with said headers, a valve for admitting liquid refrigerant directly into said liquid header, and a float in said chamber for controlling said valve.

1,808,375. SHOPPING BAG. NEAL W. PLOOSTER, St. Paul, Minn. Filed Aug. 26, 1929. Serial No. 388,481. 1 Claim. (Cl. 150—1.7.)



A collapsible shopping bag including a pair of side members secured together along their vertical edges, an integral strap handle member, and an elliptical bottom member secured to said side members, creased along its longitudinal center to allow the bottom member to fold together and the entire bag to lie substantially flat.

1,808,376. BABY BATH APPLIANCE. MILTON POLACEK and EGON POLACEK, Cleveland Ohio. Filed Apr. 25, 1929. Serial No. 357,953. 5 Claims. (Cl. 4—177.)

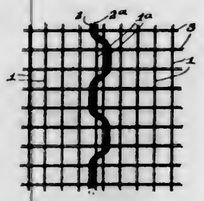


1. A baby bath appliance comprising a container including a frame, a second frame associated therewith and supporting a pad for receiving a baby for drying and dressing, said second frame being movable off the container frame to a nonobstructive position when said container is in use and being rotatable substantially about its geometrical axis on the container frame when moved onto the container frame for use.

1,808,377. FOUNTAIN PENHOLDER. ALBERT REICHENBACH, Pforzheim, Germany. Filed Aug. 29, 1930, Serial No. 478,694, and in Germany Mar. 31, 1930. 4 Claims. (Cl. 120—42.)

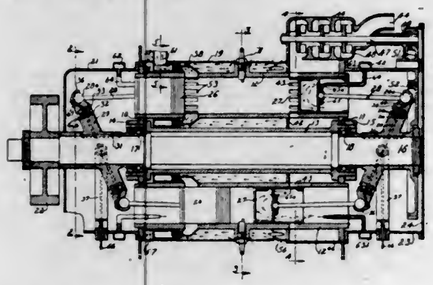
1. A fountain penholder, comprising in combination with the casing, an ink duct piece in the front end of said casing, a closing head screwed into the rear end of said casing, a metal sleeve tapered at the front end removably mounted in said casing, a rubber bag in said metal sleeve, and an outflow tube in the open end of said rubber bag and in the tapered end of said metal sleeve.

1,808,378. DRAFT GEAR. WILLARD F. RICHARDS, Depew, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed July 27, 1926. Serial No. 125,268. 8 Claims. (Cl. 213—49.)



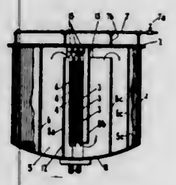
1. In a draft and buffing mechanism, the combination with center and end sills of a housing connected thereto having at one end portions adapted to reinforce the end sill and at the other end partitions forming compartments adapted to receive yielding means of said draft and buffing mechanism, said partitions being connected intermediate the ends by a longitudinally extending web.

1,808,379. WOVEN FABRIC. CHARLES ROSENSTEIN, Paterson, N. J., assignor to Rosenstein Bros. & Hook, New York, N. Y., a Corporation of New Jersey. Filed Feb. 23, 1929. Serial No. 342,226. 4 Claims. (Cl. 139—417.)



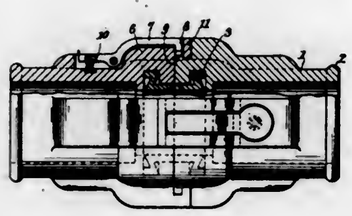
1. An open mesh fabric having a weft of artificial horsehair and a warp composed of artificial horsehair ground

threads and fiber threads arranged at intervals in said horse-hair warp over one or more intermediate threads, the fiber threads being crossed alternately from one side to



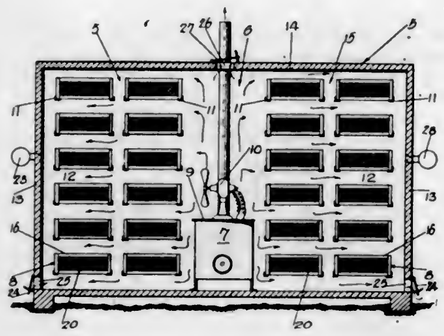
the other of the intermediate threads, forming parallel lines or stripes having a wavy appearance between adjacent bands of artificial horsehair fabric.

1,808,380. AIRPLANE ENGINE. JAMES M. ROYAL, Villa Park, Ill. Filed Feb. 6, 1929. Serial No. 338,014. 15 Claims. (Cl. 123—58.)



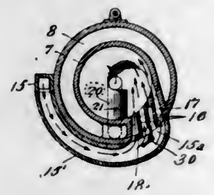
7. In an internal combustion motor a plurality of radially disposed longitudinally aligned cylinders, an assembly plate supporting the cylinders at each end, a centrally disposed shaft, a pair of mutually coacting pistons, in each cylinder means for transferring the movement of the pistons to the shaft, an auxiliary separating plate between the assembly plates with its plane parallel to the planes of said assembly plates, and a housing band disposed about the auxiliary plate and one assembly plate, the space so confined serving as an intake passageway for supplying combustible mixture under pressure to the cylinders, a central casing enclosing the greater portion of the cylinders, and means for moving a band of air through said casing in contact with the cylinders to cool the same, and deflectors on the inside of the casing, one between each pair of cylinders, for confining the moving air to increase its contact with the outer cylinder walls.

1,808,381. HEATING APPARATUS. JAMES H. SHEATS, Glen Ridge, N, J., assignor to Du Pont Viscoloid Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 27, 1928. Serial No. 315,440. 7 Claims. (Cl. 18—17.)



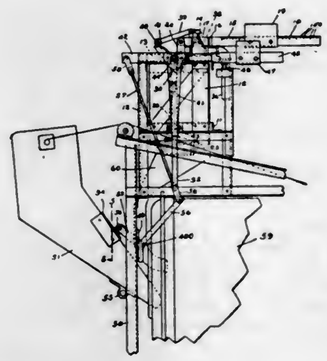
6. In an apparatus of the character described, in combination, a fluid container having a removable top, a plurality of holders for the reception of articles to be treated in said container, said holders having a size and contour adapting them for substantially vertical side-by-side reception in said container and for insertion and withdrawal from the container by way of the top opening thereof, and means for circulating temperature-pressure fluid in vertical flow and counter flow in and out of said container and about said holders.

1,808,382. COUPLING FOR HOSE, PIPE, OR OTHER CONDUCTORS. PAUL STAUFFER, Clearfield, Pa. Filed June 7, 1928. Serial No. 283,530. 4 Claims. (Cl. 285—67.)



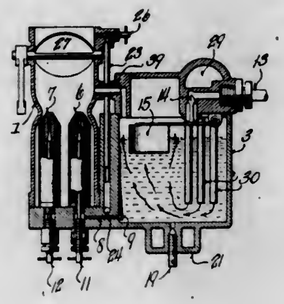
1. In a coupling, a pair of complementary identical coupling members, each being provided with an annular recess in the inner face thereof adjacent its free end, a flexible valve forming ring for disposition against the inner surface of each coupling member adjacent the outer end, an outwardly extending flange formed on the inner edge portion of each ring like member for disposition within the respective recess and normally abutting against one side of the said recess, the outer edge portion of each ring-like member projecting beyond the adjacent end of the respective coupling member, and a laterally disposed extension formed on the outer edge of the flange for engagement with the inner wall of the respective recess, the inner opposed edges of the ring-like members being disposed in abutting relation, the flange portion being shifted to a position diagonally within the respective recesses and bearing against the inner wall of the recess when the coupling members are secured together, as and for the purposes described.

1,808,383. PROPAGATING APPARATUS FOR MUSHROOM CULTURE. VERNON STEVES, Oleum, Calif. Filed Aug. 20, 1929. Serial No. 387,127. 2 Claims. (Cl. 47—17.)



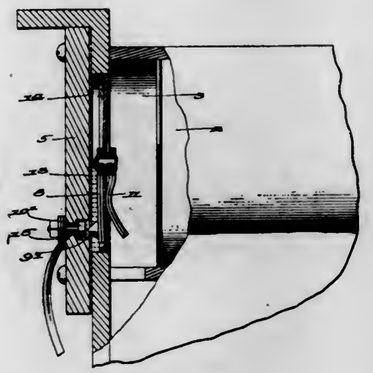
1. An apparatus for growing mushrooms comprising a darkened closed propagating room, means for admitting air to said room, means in said room for maintaining a predetermined desired temperature therein, humidifiers associated therewith for supplying a predetermined degree of humidity therein, ventilating means therefor, a plurality of racks in pairs in said room, said racks being spaced on all sides from each other and from the walls of the room to provide ventilating passages, propagating trays arranged in and slidably supported by said racks, the walls of said trays having ventilating spaces therein, and means for continuously circulating the humidified air through the propagating trays.

1,808,384. TWO-CYCLE ENGINE. JOHN TANEYHILL, St. Louis, Mo. Filed June 19, 1929. Serial No. 372,045. 3 Claims. (Cl. 123—73.)



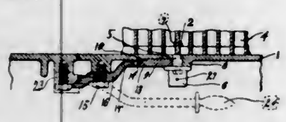
3. An internal combustion engine comprising a vertical cylinder having an exhaust valve at the top and a tangential air inlet port near the bottom at one portion of its wall for admitting air mixture, and having a fuel inlet port near the bottom for admitting a richer fuel mixture, and a piston operatively mounted in said cylinder and having a top formed in a rising spiral about the central axis, the bottom of said spiral at the bottom of the stroke communicating with said tangential air inlet port, and the upper portion of said spiral having a tubular radial passage extending from its inlet end in the cylindrical side of the piston towards the axis and curved upward at its central outlet, and its inlet end at the bottom of the stroke communicating with said fuel inlet port to deliver a richer fuel mixture in the center of the cylinder and in the vortex of the whirling air mixture, substantially as described.

1,808,385. WATER CONTROL DEVICE. ALBERT F. TEICHMAN and JOHN W. THEE, Cincinnati, Ohio. Filed Mar. 2, 1928. Serial No. 258,662. 8 Claims. (Cl. 249—58.)



1. In a water measuring device, the combination of a bracket, a beam structure tiltably mounted thereon, a tank suspended from the beam upon one side of the bracket, a counterweight on the beam on the other side of the bracket, a rod journalled in the tank, a valve controlling discharge from the tank and a water supply pipe providing water under pressure operable by rotatable movement of the rod, a cam on said rod, and a lever actuated quick flow water supply valve directly controlling said supply pipe and fixedly mounted above the tank and adapted to be opened by said cam.

1,808,386. CARBURETOR. ALEXANDER O. TESCH, Milwaukee, Wis. Filed Oct. 25, 1928. Serial No. 314,961. 2 Claims. (Cl. 261—15.)

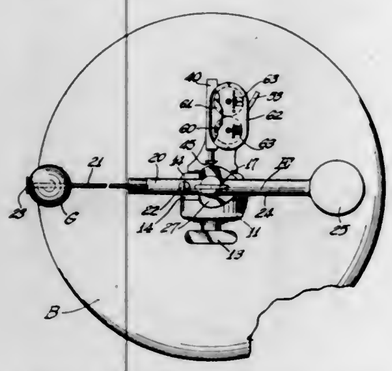


1. A carburetor comprising a fuel reservoir, a water reservoir, a heating jacket adjacent said reservoirs and adapted to receive exhaust gases, a fuel and a water nozzle connected to the respective reservoirs, electric heaters surrounding said nozzles, an electric heater within said fuel reservoir, and a mixing chamber within which said nozzles are located.

1,808,387. ELECTRIC SWITCH FOR METERING DEVICES. ERNEST H. THOMPSON, Evanston, Ill. Filed Dec. 3, 1928. Serial No. 323,541. 16 Claims. (Cl. 200—82.)

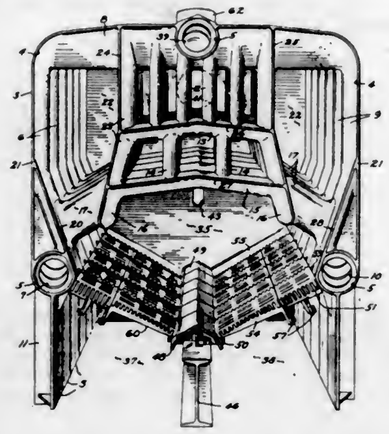
1. In an electrical switch, the combination with a stationary contact, of a movable contact, a member for moving said movable contact into engagement with the stationary contact, and a common mounting for said movable contact and member, the free ends of said movable contact and member respectively, being eccentrically disposed with respect to said mounting.

1,808,388. GAUGE LOCK. RALPH S. TYLER and HERBERT MCGEORGE, Cleveland Heights, and WILLIAM M. REICHART, Cleveland, Ohio, assignors to The Chandler and Price Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 13, 1927. Serial No. 225,953. 5 Claims. (Cl. 164—59.)



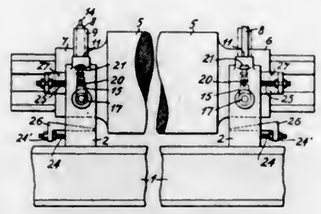
2. In a work-holding table, a bed, a slot in said bed, a back gauge having a tongue depending therefrom and extending through said slot, means engaging said tongue for adjusting said gauge longitudinally of said bed, and separate means laterally engaging said tongue for locking said gauge in adjusted position.

1,808,389. FROG FOR GROOVED RAILS. MATTHIAS UHRMACHER, Duisburg-Ruhrort, Germany, assignor to the Firm: Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Filed Apr. 3, 1928, Serial No. 267,044, and in Germany Nov. 4, 1927. 4 Claims. (Cl. 246—460.)



1. A wear-resisting crossing, comprising in combination a thick web grooved continuous rail, thick web grooved intersecting rails, a wear-resisting continuous insert of manganese steel in the thread of each intersecting rail bridging said continuous rail, and a wear-resisting interrupted insert in said continuous rail bearing with its joint faces against the inserts of said intersecting rails.

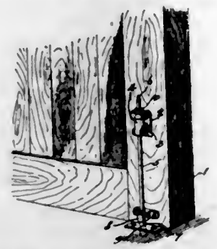
1,808,390. GOLF PRACTICING DEVICE. ANDREW C. VOLK, Duluth, Minn.; Metta A. Volk, executrix of said Andrew C. Volk, deceased, assignor to Estey M. Turner, Arcadia, Calif. Filed Nov. 9, 1927. Serial No. 232,060. 13 Claims. (Cl. 265—20.)



12. A device of the character described comprising means for supporting a golf ball, means for mounting the first means for rotary movement in response to striking of the ball, and an indicator for registering movement of the first means comprising a rotatable dial, means for urging the dial to rotate in one direction, an actuator mounted for movement, means operable in response to movement of the first means for operating the actuator, means operatively associated with the dial and actuator and operable by the latter, to rotate the dial in a direction opposed to its urged direction, and releasable means for latching the dial against movement in its urged direction.

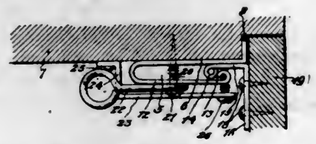
1,808,391. SECTIONAL HEATER. JOSEPH A. WADDELL, Williamsport, Pa., assignor to Spencer Heater Company, Williamsport, Pa., a Corporation of Pennsylvania. Filed Aug. 6, 1930. Serial No. 473,431. 8 Claims. (Cl. 122—212.)

5. A water heater comprising front, back and intermediate sections, with double grates, independent ash pits, single combustion chamber, and water-jacketed fuel magazines separated by connected flues, the water-jacket on one side of each magazine extended downwardly to form a water leg supporting one end of each grate.



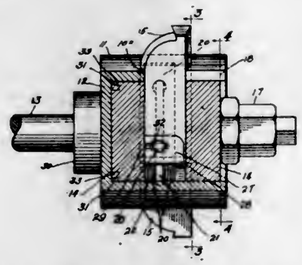
1,808,392. APPARATUS FOR GRINDING ROLLS. OSKAR WALDRICH, Siegen, Germany. Filed Mar. 2, 1927, Serial No. 172,143, and in Germany July 7, 1926. 2 Claims. (Cl. 51—49.)

1. Apparatus for setting rolls including a bearing, a pair of bearing blocks mounted in said bearing and adjustable in such mounting along lines of direction angularly disposed one to the other, gauging means including an arm rotatably mounted on said bearing, a gauge bolt extensibly mounted on said arm, and a second gauge bolt mounted on said bearing and extensible along a line which is transverse with respect to the line of extension of the bolt first named.



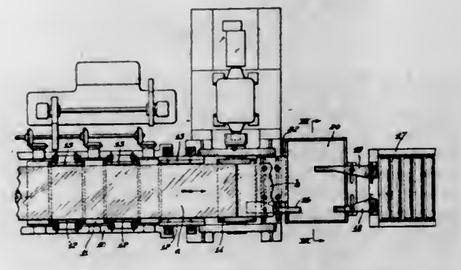
1,808,393. DOORSTOP. ANDREW J. WECKER, Dayton, Ohio. Filed Aug. 6, 1928. Serial No. 297,704. 11 Claims. (Cl. 292—338.)

1. In a door stop of the character described, a reciprocatory rod, a guide sleeve in which the rod is mounted for sliding motion, a bracket in which the guide sleeve is mounted for swinging motion about a transverse axis, a head upon the rod limiting its reciprocatory movement relative to said sleeve, said guide sleeve being counterbored, a bearing collar loosely surrounding the rod within the bore of said guide sleeve and movable to and fro



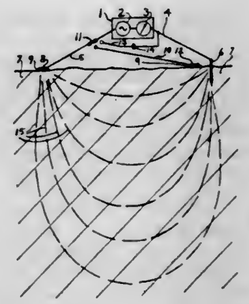
therein, stop means preventing the escape of the collar from the guide sleeve, said guide sleeve being reversible upon its pivotal bearing upon the retraction of the rod, to present said rod in an inclined position, and a stop shoulder upon the bracket upon which the end of the rod abuts when in such inclined position.

1,808,394. SCREEN DOOR CATCH. DAVID M. WOODS, Sacramento, Calif., assignor of one-half to J. H. Armstrong, Sacramento, Calif. Filed Apr. 28, 1930. Serial No. 448,018. 2 Claims. (Cl. 292—70.)



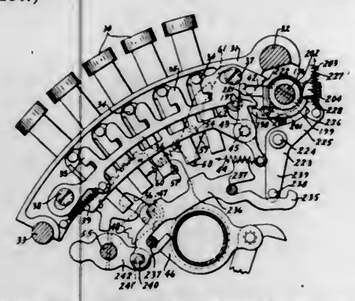
1. A door catch comprising a one-piece spring metal strip bent upon itself between its ends to provide a U-shaped spring socket to receive a door-carried tongue, one arm of said U-shaped socket being adapted to lie against a door jamb, and the other arm thereof being inwardly curved at its free end to engage the tongue, said arms having alined openings between their ends, a wood screw passing through said openings and adapted for driving into the door jamb to attach said socket, and a locking arm pivoted on said screw between the head of the latter and said other arm of the socket, said locking arm being swingable to a position at which it prevents springing of said other arm away from said one arm, tightening of said screw serving to force said locking arm and said other arm of said U-shaped socket further inward to compensate for wear.

1,808,395. SHAPER HEAD FOR WOOD WORKING MACHINES. TORVAL J. ANDERSON, Chicago, Ill. Filed Feb. 18, 1929. Serial No. 340,895. 7 Claims. (Cl. 144—230.)



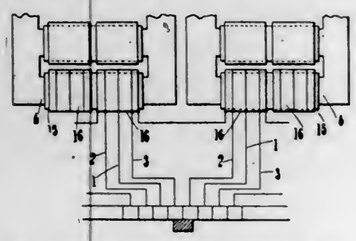
1. In a shaper head, the combination of opposed clamping members adapted to be mounted on a spindle shaft; a frame provided with longitudinal slots connected to one of said clamping members; traveling blocks slidably mounted in said slots; cutting knives provided with an opening near their inner ends mounted between said clamping members, said blocks provided with pins that register with the opening in said knives.

1,808,396. CROP END DISCHARGING APPARATUS. FLORENCE C. BIGGERT, Jr., Crafton, and JOHN A. SMITMANS, Pittsburgh, Pa., assignors to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 16, 1930. Serial No. 461,327. 4 Claims. (Cl. 164—68.)



1. The combination with a device for cutting strip material in motion, of a member for receiving and supporting one edge portion of the advancing end of the material, said member being spaced from said device, and means associated with said device for supporting the opposite edge portion only of said material as it issues from said device, whereby relatively long pieces of material will pass onto said receiving member but relatively short pieces will drop down at one edge portion so as to pass beneath the same.

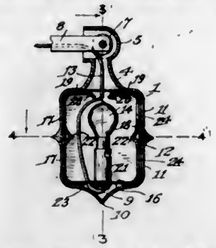
1,808,397. METHOD OF AND APPARATUS FOR LOCATING DEPOSITS OF OIL, GAS AND OTHER DIELECTRIC SUBTERRANEAN BODIES. LOUIS C. BILLOTTE, Revere, and EDWARD LIPSON, Chelsea, Mass., assignors to Oil Finding Corporation, a Corporation of Delaware. Filed Dec. 2, 1927. Serial No. 237,133. 14 Claims. (Cl. 175—182.)



1. The method of detecting the presence of oil or other dielectric deposits below the surface of the earth, which comprises applying high frequency alternating current electrostatically to the surface of the earth between points close to each other, applying said current between points more remote from each other, the short and long current paths thus formed being substantially in line and observing any difference between said currents, as an indication of the presence of such deposits, substantially as set forth.

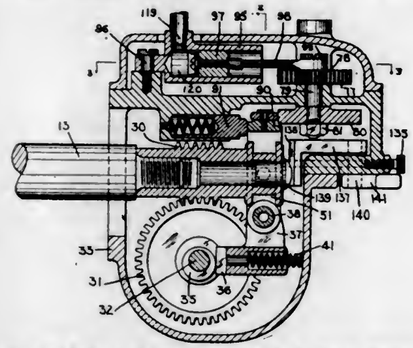
1,808,398. CASH REGISTER. SAMUEL BRAND, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed May 22, 1929. Serial No. 365,176. 20 Claims. (Cl. 235—130.)

1. In a machine of the class described; the combination with a group of manipulative keys; and a normally restrained release shaft adapted to be rocked to release the machine for operation; of a lock for the release shaft; key-operated means to disable the lock and free the release shaft for operation; a manipulatively controlled detent to lock the keys either in depressed position or undepressed position; and means positioned by the release shaft as the shaft moves from normal position to restrain the detent against movement to unlocking position after the release shaft returns to normal.



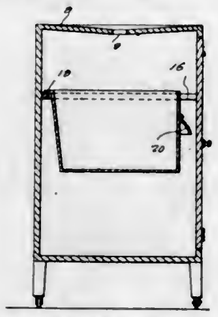
1,808,399. ELECTRIC CONVERTING APPARATUS. JOHN EARNSHAW CALVERLEY, Preston, and WILLIAM EDEN HIGHFIELD, London, England, assignors to The English Electric Company Limited, London, England, a Company of Great Britain. Filed Feb. 2, 1927, Serial No. 165,484, and in Great Britain Feb. 27, 1926. 1 Claim. (Cl. 171—123.)

Electric converting apparatus comprising in combination a plurality of static transformers, windings on said transformers in the form of a polyphase electrically symmetrical closed ring, tappings from said windings an equal number of turns apart and located so that some of the turns at the adjacent ends of each phase winding lie between two consecutive tappings, a stationary commutator, and connections from consecutive tappings to consecutive sections of said commutator respectively.



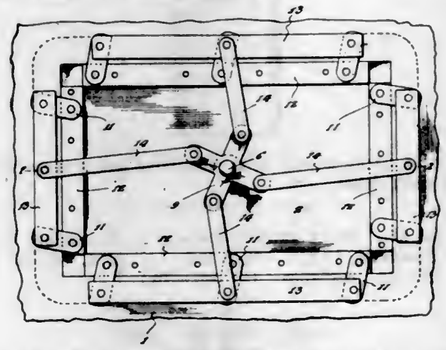
1,808,400. LAMP HOLDER. CARL F. CAPELL, Santa Monica, Calif., assignor of one-fourth to Herbert Gutler Brown, Los Angeles, Calif. Filed Apr. 4, 1929. Serial No. 352,520. 2 Claims. (Cl. 177—329.)

2. In a lamp holder, the combination of a casing having an entrance opening at its top for the passage therein of circuit connections, said casing being formed in its bottom with a recess, a resilient holder element conforming in contour to, positioned within and snugly engaging the top, bottom and one side of said casing, the bottom of said element extending across said recess and provided with an opening, the top of said element being formed with a pair of oppositely extending, spaced flanges, the space between said flanges registering with the inner end of said passage, and a vertical lamp socket integral with and depending below the bottom of said element and arranged adjacent said opening, the space between said flanges and said opening providing for the passage of said circuit connections into said recess and into the bottom



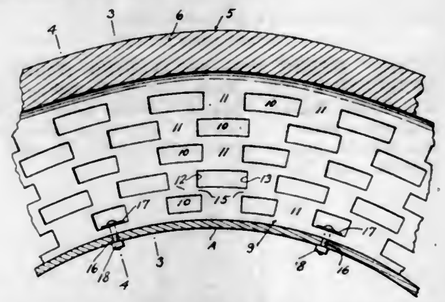
of said lamp socket, each of said flanges having an inturned inner end disposed at an inclination, said inturned ends extending at opposite inclinations with respect to each other.

1,808,401. GRINDING MACHINE. JOHN COOK, Syracuse, N. Y., and JOHN C. SPENCE and RAYMOND A. COLE, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1928. Serial No. 246,237. 18 Claims. (Cl. 51—34.)



1. A grinding machine comprising a work support, a wheel slide mounted for feeding movement towards the work, a grinding wheel thereon, a rotatable, axially movable spindle to support said grinding wheel, manually operable means to move said spindle axially to locate the grinding wheel in a predetermined grinding position, and automatically operated mechanism to move said spindle axially in the opposite direction to remove the grinding wheel from said grinding position.

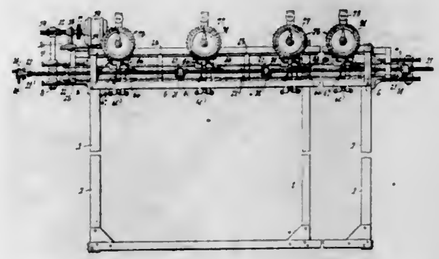
1,808,402. FERN STAND. SELEANA L. COOPER, Charlottesville, Va. Filed May 15, 1930. Serial No. 452,694. 1 Claim. (Cl. 47—39.)



A device of the class described comprising a cabinet, hinge doors for the cabinet, ribs in the cabinet, a drain pan having flanges restable on said ribs, the top of the cabinet having an opening, said top of the cabinet inclining downwardly and inwardly toward its center and the opening being formed in said center.

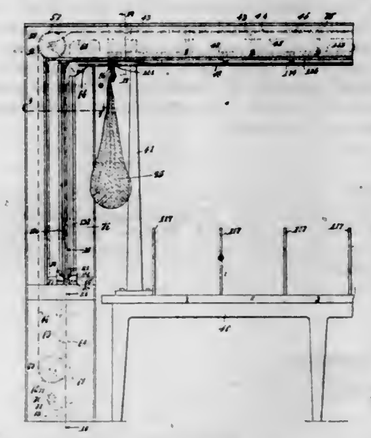
1,808,403. LATCHING MEANS FOR REMOVABLE CRANK CASE COVERS. AXEL A. EKLUND, Mount Vernon, Wash. Filed Apr. 19, 1928. Serial No. 271,285. 2 Claims. (Cl. 292—48.)

1. A readily removable and replaceable crank case cover having an opening and an integral boss and guard upon opposite sides in line with the opening, the edge of the guard being provided with a plurality of notches, a spindle mounted in the boss and extending through the guard and formed with an opening to receive a cotter pin which is engageable with selected notches of the guard to secure the spindle in an adjusted position, and latch means on the cover connected with the spindle to be operated thereby.



1,808,404. CUSHION TIRE. JOHN J. FREERKSEN, Steamboat Rock, Iowa, assignor of one-fourth to D. Claassen, Wellsburg, Iowa. Filed May 13, 1929. Serial No. 362,524. 1 Claim. (Cl. 152—5.)

A cushion tire composed of a ring of compressible elastic material provided with a series of radially alined openings elongated circumferentially of the ring and extending transversely of the tire from side to side with the openings of adjacent series in staggered and overlapping relation, alternate series of radially alined openings being shortest at the inner circumference of the tire and progressively increasing in elongation as they approach the "tread" of the tire and the intermediate series of radially alined openings being substantially of the same length.

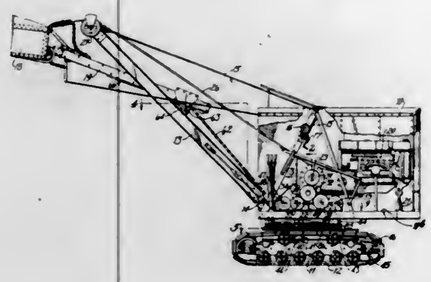


1,808,405. LAUNDRY CHECKING AND ASSEMBLING APPARATUS. EPHRAIM L. HURD, Oklahoma City, Okla., assignor to Alexander Gammell, Chicago, Ill. Filed Sept. 1, 1927. Serial No. 216,914. 14 Claims. (Cl. 209—80.)

1. Apparatus of the character described comprising carriers, means to mount laundry pieces on the carriers, receiving racks, and means to deposit complementary laundry pieces onto certain racks, said racks each comprising a fixed portion, a movable portion normally out of position but movable into position at the proper time to receive a laundry piece from a certain carrier, and means

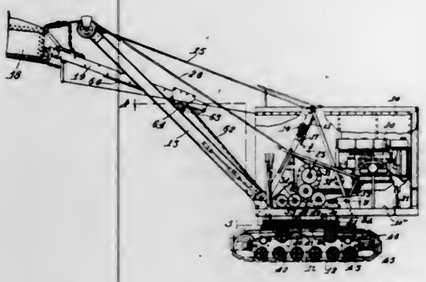
to release the laundry piece from the certain carrier and move the said movable rack portion into position to receive it, and key positioned means carried by the carrier to actuate said releasing and moving means for the purposes specified.

1,808,406. SORTING AND DISTRIBUTING MACHINE. ALEXANDER GAMMELL, Chicago, Ill. Filed Apr. 12, 1928. Serial No. 269,384. 25 Claims. (Cl. 209—80.)



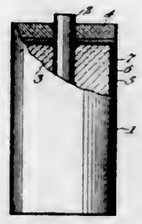
1. A sorting machine comprising, in combination, a conveyor, a plurality of carrier members secured to and adapted to be conveyed by said conveyor, a plurality of distributing stations, a tripping device for each distributing station, a plurality of article identification and attaching members bearing group indicia and station indicia, a plurality of group keys, and loading means adapted to engage one of said group keys, each group key adapted to permit engagement only of article attaching members of a corresponding group.

1,808,407. WRAPPING PAPER FOR THE INSULATION OF ELECTRIC CABLES. CARL AUGUST HAANEN, Cologne-Mulheim, and HANS MEURER, Cologne, Germany, assignors to Felten and Guilleaume Carlswerk Actien Gesellschaft, Cologne-Mulheim, Germany. Filed July 7, 1925, Serial No. 42,104, and in Germany Dec. 27, 1924. 1 Claim. (Cl. 92—68.)



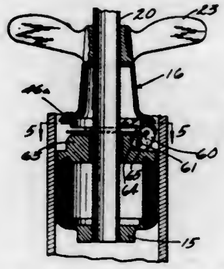
A method of increasing the resistance to puncture of wrapping paper for insulating electric cables which consists in subjecting the paper to a pressure which increases the density of the paper above .90 and still retains the necessary tensile strength for wrapping the conductor.

1,808,408. EXCAVATOR APPARATUS. CLIFFORD O. HANSON, Tiffin, Ohio. Filed Dec. 21, 1927. Serial No. 241,567. 7 Claims. (Cl. 214—135.)



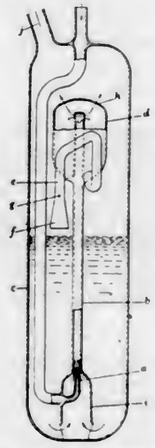
1. An excavator of the character described comprising; a chassis mounted on traction members; a platform rotatably mounted on the chassis; a boom pivotally connected to the platform; a dipper suspended from the end of the boom by a rope; a handle on the dipper with a rack bar; a crowd pinion on the boom engaging the rack bar on the dipper handle; an internal combustion motor power unit mounted on the platform having its longitudinal axis disposed in the same general direction as the boom and with a transverse drive shaft; said drive shaft being located at the end of said power unit nearest said boom a winch on one end of said drive shaft carrying the dipper rope; and drive connections from the other end of said drive shaft to move the traction members to propel the excavator, to operate the crowd pinion, and to rotate the platform on the chassis.

1,808,409. EXCAVATING APPARATUS. CLIFFORD O. HANSON, Tiffin, Ohio. Original application filed Dec. 21, 1927, Serial No. 241,567. Divided and this application filed Nov. 4, 1929. Serial No. 404,674. 1 Claim. (Cl. 180—92.)



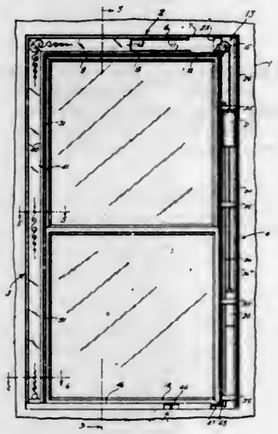
In an excavator of the character described; a chassis mounted on traction members, a platform rotatably mounted on the chassis; a motor mounted on the platform; disengageable drive connections between the motor and traction members on both sides of the chassis, including clutches normally in engagement; a cross-shaft slidably mounted on the chassis; connections between said cross-shaft and the clutches whereby shifting to either side will disengage the corresponding clutch; means for rotating the platform on the chassis; and means for shifting the cross-shaft by rotating the platform, said means including a part on the shaft and a part on the platform, said parts adapted to be moved so they will engage upon rotation of the platform.

1,808,410. DRY CELL AND LINING THEREFOR. GEORGE W. HEISE, Bayside, and ERWIN A. SCHUMACHER, Brooklyn, N. Y., assignors to National Carbon Company, Inc., a Corporation of New York. Filed June 11, 1924. Serial No. 719,416. 6 Claims. (Cl. 136—131.)



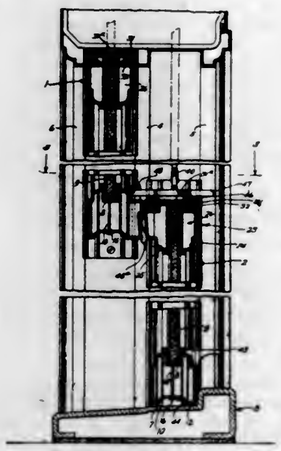
3. A lining for dry cells comprising one or more layers of kraft paper.

1,808,411. PIPE PLUG. DONALD R. HINKSTON, South Pasadena, Calif. Filed May 14, 1928. Serial No. 277,454. 6 Claims. (Cl. 137—76.)



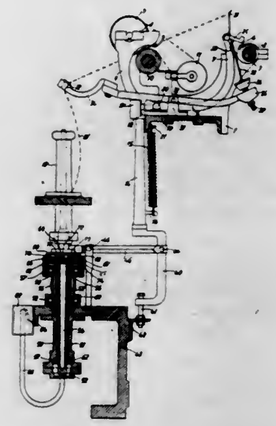
1. In a pipe plug the combination of: a base member; a plurality of jaws pivotally mounted on said base member and movable into engagement with said pipe; a sealing means adjacent said base member; and clamping means for simultaneously moving said jaws and said sealing means into engagement with said pipe.

1,808,412. MEANS FOR DELIVERING GASES AT MEASURED RATES. FRED HOWLES, Broughton Park, Manchester, England, assignor to Royles Limited, Irlam, England, a British Company. Filed Aug. 1, 1929, Serial No. 382,823, and in Great Britain Sept. 13, 1928. 6 Claims. (Cl. 73—167.)



2. An apparatus for delivering a gas at a measured rate, comprising the combination with a tube up which liquid is raised by the gas which is delivered into the liquid in said tube, of a vessel receiving the raised liquid from said tube, a siphon upon said vessel to draw off the liquid when it attains a predetermined height, and means receiving the gas used in raising the liquid and which separates from the latter.

1,808,413. WINDOW FRAME. ROY T. HURLEY, Dobbs Ferry, and WILLIAM J. CAREY, Brooklyn, N. Y., assignors to General Bronze Corporation, Long Island City, N. Y., a Corporation of New York. Filed Dec. 8, 1930. Serial No. 500,908. 12 Claims. (Cl. 189—75.)



1. In a window frame, in combination, a hollow sheet metal jamb and a weight guide frame insertable as a unit in the jamb and welded thereto.

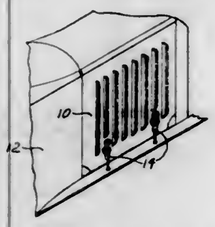
1,808,414. WINDOW CONSTRUCTION. ROY T. HURLEY, Dobbs Ferry, and WILLIAM J. CAREY, Brooklyn, N. Y., assignors to General Bronze Corporation, Long Island City, N. Y., a Corporation of New York. Filed Dec. 8, 1930. Serial No. 500,909. 13 Claims. (Cl. 189—76.)

1. A one piece sheet metal stile or rail tubing for windows, having a pane seat at one side thereof, and having a longitudinal, channel-shaped depression formed in the opposite side, the longitudinal edges of the sheet being brought together in said depression, and a weld seam uniting said edges.

1,808,415. TWISTING MACHINE. José JULIÁ, Barcelona, Spain. Filed Jan. 5, 1929, Serial No. 330,582, and in Spain Oct. 10, 1928. 7 Claims. (Cl. 118—40.)

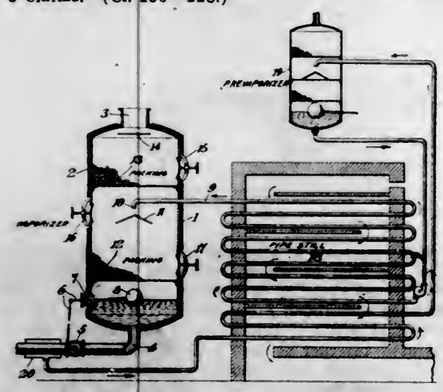
1. A driving mechanism for the spindles of twisting machines for twisting threads, permitting freedom of lateral inclination to the said spindle, comprising a supporting sleeve for the said spindle, a driving element rotatably mounted upon the said supporting sleeve, a bearing sleeve in which the spindle is rotatably mounted, said bearing sleeve being capable of lateral inclination in the said supporting sleeve, and a coupling between the said spindle and the said driving element comprising coupling plates partly carried by said spindle and partly engaged by said driving element, the said engagement permitting inclination of the axis of the spindle relatively to the axis of the driving element, substantially as hereinbefore described.

1,808,416. TRACTION BELT ATTACHMENT. DONALD STUART KENNEDY, Andover, England. Filed Dec. 2, 1929, Serial No. 411,115, and in Great Britain Mar. 8, 1929. 2 Claims. (Cl. 305—10.)



2. In a traction belt attachment for road vehicle wheels and of the kind in which transverse shoes are spaced from adjacent shoes by pivoted connecting links, a composite shoe comprising a central flexible section and two lateral rigid sections, said sections overlapping and being secured together at their adjacent edges, said lateral sections including outer members having means for pivoting the said connecting links thereto, and inner members extending between said outer members and said central flexible section, said inner members being convex towards the tire on which said shoe engages, the ends of said inner and outer members remote from the said central section being secured together and flared outwardly, and said flexible section extending into the space between the other ends of said inner and outer members.

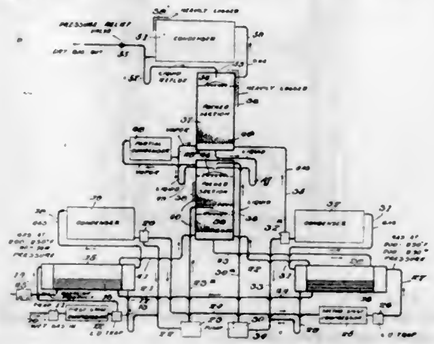
1,808,417. CLOTHES PEG USABLE FOR OTHER PURPOSES. VIOLET ISABELLA MAY LANGAN, Brisbane, Australia. Filed Oct. 1, 1930. Serial No. 485,756. 3 Claims. (Cl. 24—137.)



3. An improved clothes peg usable for other purposes consisting of wire formed into double joined coils spaced at the bottom, and an inverted U-shaped grip placed between said coils and having its free ends of its arms wrapped about the bottoms of the coils, as and for the purposes herein set forth.

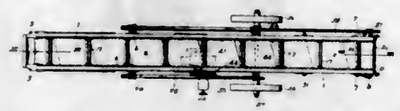
1,808,418. BUFFER. ROGER K. LEE, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 11, 1928. Serial No. 298,941. 10 Claims. (Cl. 180—69.)

1. A corner buffer comprising a body portion having tongues extending upwardly therefrom, rubber moulded around the entire surfaces of said body portion and its tongues, and an inwardly extending flange on at least two edges of said buffer adapted to form a recess for the reception of a part to be protected.



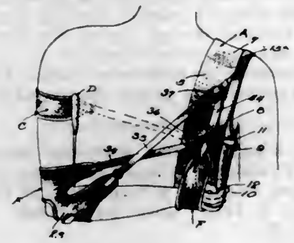
1,808,419. VAPORIZER AND PROCESS OF VAPORIZATION. EUGENE H. LESLIE and EDWIN M. BAKER, Ann Arbor, Mich. Filed Mar. 20, 1923. Serial No. 626,273. 6 Claims. (Cl. 196—128.)

1. In apparatus for the treatment of mineral oils the combination of heating means, a vaporizing chamber into which said heating means is arranged to deliver heated oil, a mass of packing material arranged below the liquid inlet in said chamber and providing extensive filming surfaces for rapidly attaining equilibrium between said liquid and the vapor flashed therefrom, said chamber being provided with outlets for exit of vapors and liquid, and means cooperating with said heating means for removing components more volatile than gasoline before the main body of oil is delivered into said vaporizing chamber.



4. The process of obtaining valuable products from a petroleum oil, which comprises initially heating a petroleum oil to substantially eliminate therefrom components more volatile than gasoline, superheating the residual oil in a pipe still to a temperature insufficient to cause cracking, discharging the superheated oil upon a mass of packing affording extensive filming surface and also providing a large percentage of its volume as free space for vapor, whereby relatively volatile constituents of said oil are flashed off and equilibrium between the resultant vapors and liquid is rapidly established, and separately conducting away said vapors and liquids.

1,808,420. PROCESS OF AND APPARATUS FOR SEPARATING DESIRED LIQUEFIABLE CONSTITUENTS FROM A GASEOUS MIXTURE. EUGENE H. LESLIE and EDWIN M. BAKER, Ann Arbor, Mich. Filed Nov. 22, 1924. Serial No. 751,572. 15 Claims. (Cl. 196—7.)



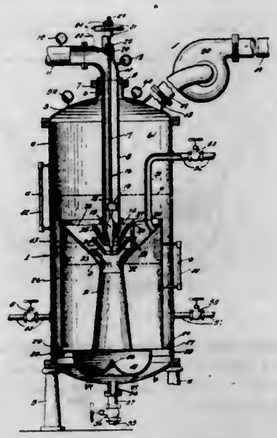
1. The process of obtaining a valuable liquid product from gaseous mixtures containing components of such liquid product, which comprises subjecting successive quantities of such a gaseous mixture to compression in a continuous operation, thereby obtaining a hot compressed gaseous mixture and a liquid compression condensate, said compression condensate comprising components of the original gaseous mixture which are normally liquid together with undesirable volatile components, bringing said hot compressed gaseous mixture into heat-transferring relation with an intermediate liquid product more nearly approximating in composition the desired final liquid product than does the aforesaid compression condensate, whereby to volatilize a portion of said intermediate liquid product, countercurrently contacting the resultant hot vapors with the aforesaid compression condensate to reduce its content of relatively highly volatile components and to obtain said intermediate liquid product, and leading away the unvaporized portion of said intermediate product as a product of the process.

1,808,421. LOADING MACHINE. WILLIAM K. LIGGETT, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 8, 1924. Serial No. 730,950. 22 Claims. (Cl. 198—204.)

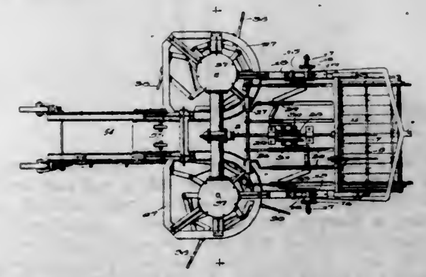
1. In a machine of the class described, the combination with a supporting frame consisting of two parallel spaced apart vertically rigid side members joined by a series of smooth flat plates of rhomboidal form and constituting a trough, the inclined edges of said rhomboidal plates being arranged transversely of said trough, and means carried by said frame to propel material along said trough.

1,808,422. CLAVICLE APPARATUS. WILLIAM C. MACDONALD, Malden, Mass. Filed Jan. 5, 1928. Serial No. 244,686. 7 Claims. (Cl. 128—94.)

1. In a clavicle apparatus, the combination with a half-vest adapted for application to the side of the patient opposite the broken clavicle, said half-vest including front and rear side portions and a connecting shoulder portion, and adjustable straps connecting said front and rear side portions along the lower portions of their edges at the outer side to form an arm opening, an inverted U-shaped metal bow attached to the half-vest and positioned over the patient's shoulder and engaging the body of the patient at front and back with its free ends to relieve the half-vest fitted shoulder of support pull, means for retaining the half-vest against movement while in position, and means engaging the arm of the patient on the injured side and adjustably connected at fixed points to the half-vest for supporting and retaining the injured shoulder in a plane higher than the other shoulder.



1,808,423. WEATHER STRIPPING. LOUIS A. MACKLANBURG, Oklahoma City, Okla. Filed Apr. 17, 1930. Serial No. 445,003. 6 Claims. (Cl. 20—69.)

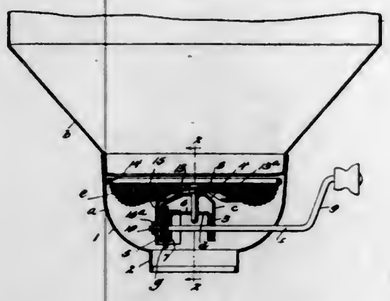


1. A flexible weather strip comprising in combination a packing strip and a reenforcement strip, the reenforcement strip engaging one face of the packing strip and provided with teeth bent around one edge of the packing strip and engaging its other face.

1,808,424. STEAM PURIFYING APPARATUS. RICHARD G. MANIFOLD, Los Angeles, Calif., assignor to The Frontier Development Company, Los Angeles, Calif., a Corporation of Nevada. Filed June 27, 1928. Serial No. 288,708. 4 Claims. (Cl. 122—459.)

1. A steam-purifying apparatus comprising a receptacle adapted for receiving and condensing steam therein; means for supplying water to the receptacle; means providing a water circuit within said receptacle; means for leading steam into the receptacle and for injecting the steam into the water circuit so that the steam is absorbed and condensed by the water; flow restraining means within the circuit enabling the steam to build up a superior pressure on the steam inlet side of said restraining means, whereby the water on said inlet side may be raised to a temperature approximating that of the incoming steam, and whereby said heated water in part flashes into steam on passing said restraining means; means for leading said last mentioned steam from the receptacle; means for collecting and for maintaining under pressure in the receptacle and separately from the incoming and the purified steam such non-condensable gases as are carried into the water circuit; and means for leading the non-condensable gases from the receptacle.

1,808,425. BALING PRESS. LLOYD MARKT, Oregon, Mo. Filed July 7, 1930. Serial No. 466,285. 5 Claims. (Cl. 100—25.)

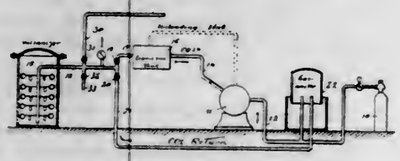


4. A baling press comprising in combination, means for receiving material to be baled and means for compressing such material, said compressing means comprising a plurality of rotary elements, each provided with a plurality of pressing plates, said plates being mounted axially of the elements and being dually connected to the axis, the dual connection of the plates including a radial rod and an arm connecting the same to the plate adapted to exert a thrust thereon and including also a toggle connection between the plate and another radial connection whereby to effect a sweeping movement of the first plate in a direction substantially normal to the cam track during its compressing stroke while permitting an angular withdrawal of the plate upon the completion of that stroke.

1,808,426. SIFTER FOR FLOUR, ETC. ORA N. MCCORMICK, Albany, Ind., assignor to McCormick Brothers Company, Albany, Ind., a Corporation of Indiana. Filed Oct. 30, 1930. Serial No. 492,822. 4 Claims. (Cl. 209—275.)

1. In a sifter, a casing, a support therein having two spaced vertically arranged parts at one side of the vertical axis of the casing, a horizontally arranged shaft

having a threaded end extending through said parts, a star wheel between said parts and threaded on to said shaft, a sifter basket having a central depending pin journaled in said support, and a tappet member depending

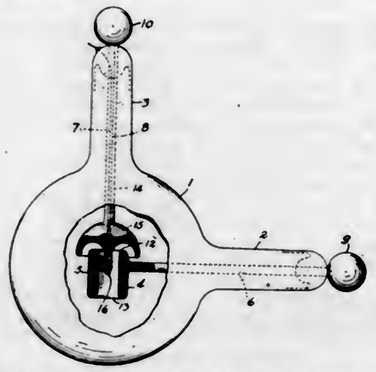


from the basket and having a transverse slot into which the end of the shaft extends and having also flanges at opposite sides of the shaft adapted to be engaged by the points on the star wheel.

1,808,427. COMPARTMENT TANK CONSTRUCTION. WALTER C. MCGAFFIC, Buffalo, N. Y. Filed Dec. 7, 1929. Serial No. 412,458. 6 Claims. (Cl. 220—20.)

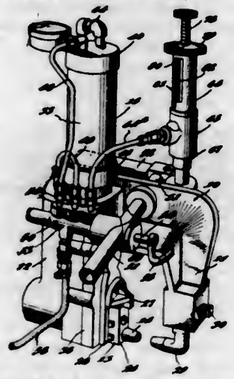
1. In a compartment tank, in combination, two or more tubular members arranged end to end and forming walls of tank compartments, and a single bulkhead plate forming a common wall for adjacent compartments, a peripheral portion of said plate being interposed between adjacent ends of two tubular members and permanently fastened and sealed to each of said members, whereby any leakage occurring through the joint between either tubular member and the bulkhead plate will pass to the outside of the tank.

1,808,428. PROCESS OF CURING TIRES AND THE LIKE. HENRY R. MINOR, Ossining, N. Y., assignor, by mesne assignments, to The Liquid Carbonic Corporation, a Corporation of Delaware. Filed June 24, 1927. Serial No. 201,037. 6 Claims. (Cl. 18—53.)



2. The method of curing rubber articles which comprises placing an expansible bag adjacent said articles, then filling said bag with carbon dioxide to produce initial pressure and backing up said initial pressure by steam.

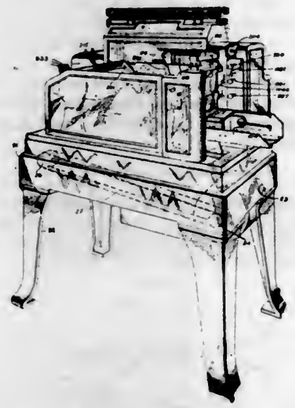
1,808,429. METHOD OF REGULATING AND MAINTAINING HEAT TRANSFER. HENRY R. MINOR, Ossining, N. Y., assignor, by mesne assignments, to The Liquid Carbonic Corporation, a Corporation of Delaware. Filed Feb. 7, 1928. Serial No. 252,676. 30 Claims. (Cl. 18—53.)



3. The method of establishing a heated medium for heat transfer which comprises supplying a fluid to an enclosed receptacle and supplying a heated fluid at a higher pressure to said receptacle, shutting off the supply of said fluid and maintaining the supply of heated fluid whereby the pressure of the heater fluid and the pressure of the first fluid together with the pressure resulting from the expansion of the first fluid through contact with the heated fluid equals the maximum pressure supplied to the receptacle, and preascertaining the pressure of the first fluid to obtain the desired temperature within the receptacle.

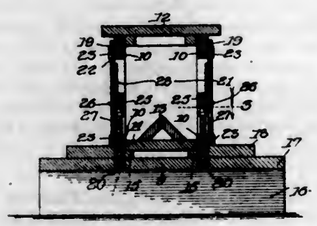
1,808,430. X-RAY TUBE. MONTFORD MORRISON, New York, N. Y., assignor, by mesne assignments, to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed May 9, 1922. Serial No. 559,569. 16 Claims. (Cl. 250—35.)

11. An electrical discharge device comprising an envelope having a gas pressure therein greater than .6 of a micron, electrodes comprising a thermionic electron-emitting cathode consisting of a refractory metal wire and an anode within said envelope, the electrodes being spaced apart a distance less than the electrode distance at which a detrimental amount of positive ionization will occur with a given gas pressure and applied voltage, the positive ions playing no essential role in the operation of the device.



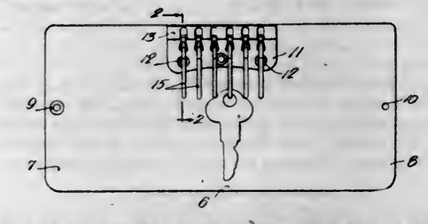
1,808,431. RIVETING APPARATUS. RAYMOND S. OSBORNE, Sewickley, Pa. Filed Oct. 18, 1928. Serial No. 313,348. 8 Claims. (Cl. 78—36.)

3. A device of the class described, comprising, a body providing a pair of jaws, a stationary die in one of said



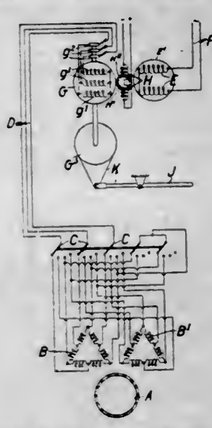
jaws, a screw plunger in the other jaw carrying a movable die, a nut engaging said plunger, a gear formed on said nut, a train of gears having one end gear meshing with the gear on the nut, a rack engaging the other end of the train, an air cylinder, a piston therein in connection with said rack, a throttle valve for alternately connecting a main air line with the drive and reverse ends of the cylinder, said throttle valve having a control pressure chamber therein, and an unloader valve in connection with the driving side of the main air cylinder and with the pressure chamber in the throttle valve, whereby the throttle valve is moved for a reversing of the main driving piston as the unloader valve acts under a predetermined pressure in the driving side of the cylinder.

1,808,432. ACCOUNTING MACHINE. JOHN ROYDEN PEIRCE, New York, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1923. Serial No. 682,865. 99 Claims. (Cl. 235—58.)



75. In a card controlled tabulating machine, in combination, means for automatically successively feeding record cards through the machine, means controlled by the cards thus fed for analyzing the cards for determining whether numbers represented in a field of a card shall be accumulated or their complements accumulated, and means for accumulating the numbers or their complements.

1,808,433. FEED STRUCTURE. JOHN G. POORMAN, Tinley Park, Ill. Filed Dec. 2, 1929. Serial No. 411,127. 14 Claims. (Cl. 119—61.)



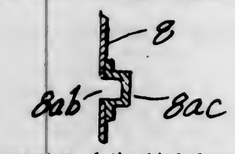
1. In combination with a feed receptacle, a barrier structure comprising elements arranged to present openings through which the heads of chickens may be projected into the feed receptacle, said elements being relatively adjustable individually to vary the size of said openings.

1,808,434. KEY CASE. GEORGE E. PRENTICE, Berlin, Conn., assignor to G. E. Prentice Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 1, 1930. Serial No. 472,284. 2 Claims. (Cl. 150—40.)

1. In a key case, an anchor member consisting of a split metal rivet having its legs shaped to enclose an eye opening for the reception of a key hanger.

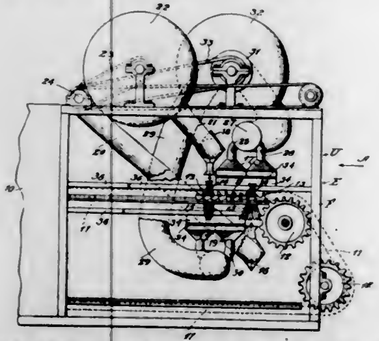
1,808,435. CONTROLLING SYSTEM FOR POLYPHASE ALTERNATING CURRENT MOTORS. FRANKLIN PUNGA, Eberstadt, near Darmstadt, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Apr. 20, 1927, Serial No. 185,840, and in Germany May 10, 1926. 3 Claims. (Cl. 172—274.)

1. A controlling system for polyphase alternating current motors comprising a polyphase alternating current motor, a source of single phase alternating current and a frequency-changer interposed between the motor and the source of alternating current, said frequency-changer consisting of a primary element carrying a winding connected to said source of alternating current, a secondary element carrying a polyphase winding connected to said polyphase motor, one of said elements being rotatable relatively to the other, an auxiliary rotor concentrically arranged relatively to said primary and secondary element and carrying a short-circuited winding and an exciting one, and means interposed between the primary and secondary element for controlling at will the relative angular speed of said elements between zero and the speed of synchronism.



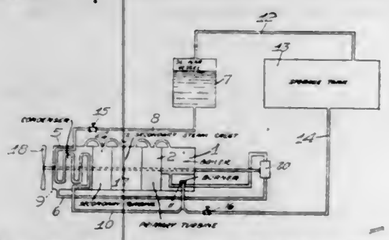
1,808,436. LINGERIE CLASP. LAURA V. ROONEY, Washington, D. C. Filed Mar. 3, 1931. Serial No. 519,856. 3 Claims. (Cl. 24—73.)

3. The hereindescribed lingerie clasp, consisting of a flexible body member, a pin having at one end a loop into



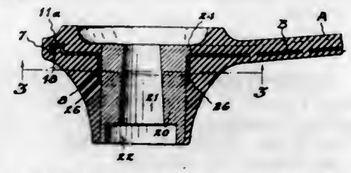
which an end of the flexible body member is linked, a member including a head having an opening and provided with a loop into which the other end of the body member is linked, and also including a sleeve projecting from the outer end of the head and provided with a flange at its free end, means carried by said flange and movable into and out of holding engagement with the pin adjacent the pointed end, a barrel slidably mounted relatively to said means and having one end adapted to exert pressure on the same to thereby force said means into holding engagement with the pin, and a tensioning spring mounted upon the sleeve and between said flange and the other end of the barrel, for holding said barrel normally in the position in which it exerts pressure on said pin engaging means.

1,808,437. CONTINUOUS-STATIONERY APPARATUS. MARCUS S. ROOSEVELT, Detroit, Mich., assignor to The Hamilton Autographic Register Co., Hamilton, Ohio, a Corporation of Ohio. Filed July 22, 1929. Serial No. 379,921. 5 Claims. (Cl. 197—133.)



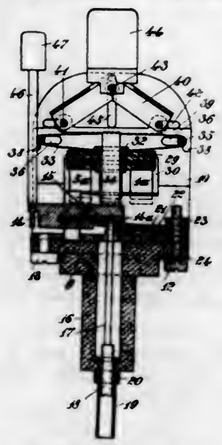
1. In an apparatus of the kind described, means for automatically preventing retraction of the strips and means dependent upon the integrity of a strip for preventing the operation of said automatic means.

1,808,438. TOBACCO CLEANING MACHINE. LEWIS R. SAMMETH, Goldsboro, N. C. Filed Oct. 16, 1930. Serial No. 489,150. 8 Claims. (Cl. 131—60.)



7. In a method of treating tobacco hands, the step of directing a blast of air endwise into the leafy ends of the hands to separate the leaves and blow out dust.

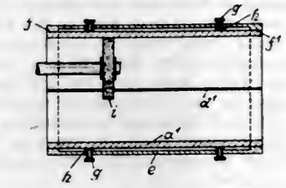
1,808,439. AIRCRAFT POWER GENERATING SYSTEM. CONSTANTINE A. SERRIADES, Chicago, Ill. Filed Sept. 19, 1927. Serial No. 220,576. 2 Claims. (Cl. 60—95.)



1. A power generating system for aircraft comprising a motor, a boiler for vaporizing liquid to drive the motor, a condenser for condensing the exhaust vapor from the motor, a source of liquid hydrogen, means within the condenser for subjecting the liquid hydrogen to the heat of the exhaust vapor, whereby the hydrogen is vaporized and the exhaust vapor is condensed to liquid form, and means for conveying the vaporized hydrogen to the burner.

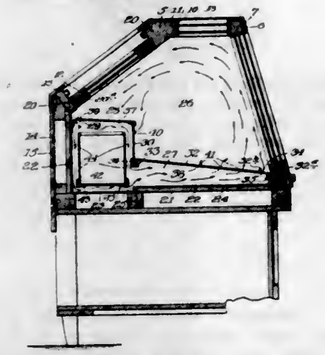
1,808,440. STEERING WHEEL. DAVID W. THOMAS, Youngstown, Ohio, assignor to The Niles Steel Products Company, Niles, Ohio, a Corporation of Ohio. Filed May 13, 1929. Serial No. 362,675. 5 Claims. (Cl. 74—33.)

1. In a steering wheel, a spider comprising integrally united rim, spokes and hub annulus, a depending polygonal flange integral with said hub annulus and defining the central opening thereof, and a separately formed polygonal hub member tightly telescoped with said flange, the intersecting faces of said hub member being rounded for a portion of their length to form overlying portions, said overlying portions having engagement with said hub annulus to insure axial alignment of said hub member with said spider.



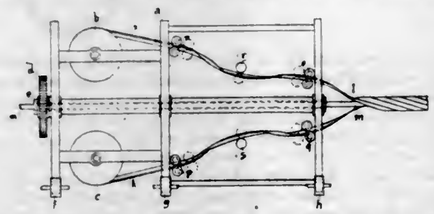
1,808,441. ELECTROMAGNETIC AUTOMATIC CIRCUIT BREAKER. HANS TRINKL, Augsburg, Germany. Filed Aug. 19, 1929, Serial No. 387,072, and in Germany Sept. 7, 1928. 14 Claims. (Cl. 200—88.)

1. An automatic circuit breaker of the type described comprising an electro-magnetic trip device and a breaking mechanism adapted to be actuated thereby, said trip device comprising a coil and an armature, said coil being formed by a plurality of contacts of said trip device which are interconnected when the circuit breaker is in closing position.



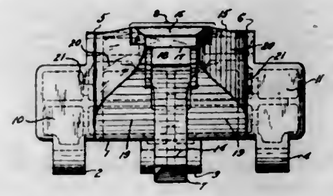
1,808,442. METHOD OF MANUFACTURING CYLINDRICAL PLATES OF GLASS OR A SIMILAR MATERIAL FOR USE IN CONNECTION WITH POLYGRAPHIC APPARATUS. RUDOLPH WEIDE, Berlin, Germany. Filed Sept. 11, 1929, Serial No. 391,922, and in Germany Mar. 6, 1928. 5 Claims. (Cl. 51—278.)

1. The method of manufacturing cylindrical plates of glass or a similar material for use in connection with polygraphic apparatus, consisting in cementing the circularly curved plate to a cylindrical drum; grinding it preliminarily on its outer circumferential surface; introducing the plate into a cylinder, the internal diameter of



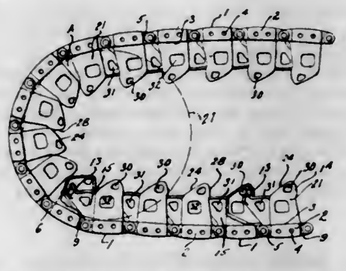
which corresponds to the curvature of the plate; grinding the inner surface of the said plate to the accurate measure; attaching the plate to a drum; grinding facettes on its frontal ends, and finally grinding also the outer surface of the said plate to the accurate measure.

1,808,443. REFRIGERATED COUNTER. WILLIAM C. WHITCHER, Niles, Mich., assignor to The "Dry-Kold" Refrigerator Co., Niles, Mich., a Corporation of Michigan. Filed Dec. 5, 1927. Serial No. 237,730. 13 Claims. (Cl. 62—37.2.)



1. A refrigerator structure comprising a compartment for the articles to be refrigerated, a second compartment extending along the underside of said first-named compartment with its forward portion vertically constructed, a refrigerating medium located in the rear portion of said second compartment below said first-named compartment and spaced from walls of said compartment, the top of said second compartment being apertured at its front and rear portions to afford communication between said compartments.

1,808,444. MANUFACTURE OF WIRE CABLES. GEORG ZAPF, Cologne, Germany, assignor to Felten & Guilleaume Carlswerk Actien-Gesellschaft, Koln-Mulheim, Germany. Filed Dec. 8, 1927, Serial No. 238,690, and in Germany Dec. 13, 1926. 2 Claims. (Cl. 117—20.)

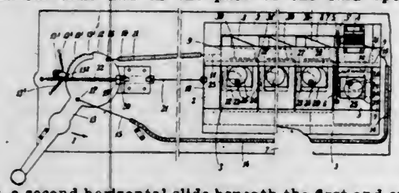


1. A laying machine for the manufacture of wire cables from wires of non-circular section comprising in combination a rotatable bobbin frame, a plurality of bobbins journalled therein, means for guiding the wires from said bobbins to the laying point comprising two pairs of rollers mounted in the bobbin frame so as to lie along the path of each wire coming from a bobbin and to revolve with said frame for twisting the wires about their axes, means on said frame interposed between the bobbins and the laying point for bending the wires, and means for adjusting the said pairs of rollers with respect to one another, as and for the purposes set forth.

1,808,445. TREAD LINK. ARTHUR P. ARMINGTON, Willoughby, Ohio, assignor to The Euclid Crane & Hoist Company, Euclid, Ohio, a Corporation of Ohio. Filed Sept. 21, 1928. Serial No. 307,358. 3 Claims. (Cl. 305—10.)

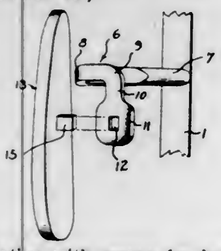
1. A tread link for the purpose described and having a ground-engaging shoe portion and a pair of integral beam-forming members upstanding therefrom, one of said beam-forming members being arched and arranged in straddling relation with a base portion of the other beam-forming member.

1,808,446. ENDLESS TREAD LINKAGE. ARTHUR P. ARMINGTON, Willoughby, Ohio, assignor to The Euclid Crane & Hoist Company, Euclid, Ohio, a Corporation of Ohio. Filed July 1, 1929. Serial No. 375,103. 2 Claims. (Cl. 305—10.)



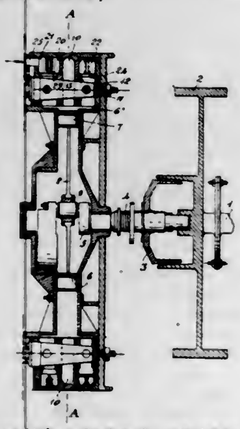
1. In a tread link of the class described and having a ground-engaging shoe portion with hinge lugs extending from its ends, and beam-forming portions extending upwardly and comprising hook and arch members, whereby an endless tread may be formed of a number of said links connected by hinge pins, said tread having bends and beam-forming stretches, the hook and arch members of said link having longitudinal side walls, the walls of the hook member being offset from those of the arch member whereby the hook of each link of said tread may extend between the side walls of the arch of the adjacent link, the side walls of the hook member extending within the arch member and to the hinge-pin-receiving lugs upon the opposite end of the shoe.

1,808,447. KEY CONTROL FOR LIQUID REGISTERS. OTTO ASPER, Horgen, near Zurich, Switzerland, assignor to the Firm Sauser A. G., Soleure, Switzerland, a Corporation of Switzerland. Filed Nov. 22, 1929, Serial No. 409,103, and in Switzerland and Germany Nov. 28, 1928. 3 Claims. (Cl. 235—94.)



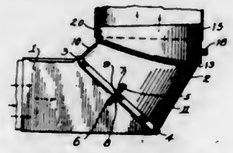
1. In the key-board of a controlling device for retailing liquids from a measuring apparatus provided with individual counters and keys for a plurality of buyers, in combination, a framing, a plurality of counters mounted there-

on, operating arms projecting from said counters into said framing, a horizontal slide guided in said framing and adapted to engage the operating arms of the counters, vertical slides slidably arranged in the frame above the horizontal slide and in the path of the said operating



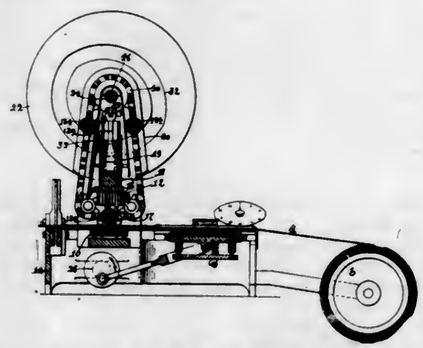
arms, a second horizontal slide beneath the first and capable of serving as locking member of the vertical slide, locks mounted on the frame and intermediate operating members associated with the locks and the slides as means for moving said locking member.

1,808,448. OPHTHALMIC MOUNTING. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 23, 1930. Serial No. 454,994. 5 Claims. (Cl. 88—49.)



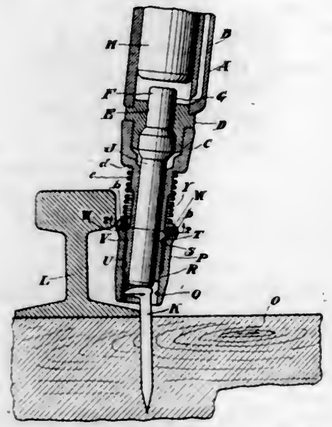
1. In combination with means for holding a pair of lenses before the eyes, an arm portion secured to each lens holding member, substantially at the horizontal meridian thereof, and extending rearwardly to a looped portion in said horizontal meridian and terminating in a downwardly extending end having an opening therein, anchor means in the opening and a nose pad secured by the anchor means to the arm portion, the securing point of said pad and arm portion being in a different plane from the said securing point of the arm portion to the lens holding means.

1,808,449. SPEED CHANGING DEVICE FOR MOTOR CARS. ROCCO BELLANTONI, Rome, Italy. Filed July 27, 1929, Serial No. 381,634, and in Italy July 27, 1928. 1 Claim. (Cl. 103—174.)



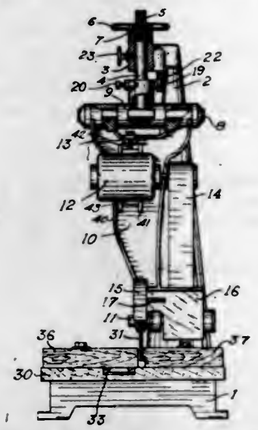
A power transmitting device for variable speed mechanisms including a plurality of compressing cylinders, pistons movable in said cylinders, a shaft, a collar on the shaft, radially disposed rods connecting the collar with the pistons, circumferential conduits arranged in parallel relation, and three-way plugs arranged in said conduits permitting the passage of fluid from one conduit to the other to permit the free circulation of fluid or the compression thereof, there being three separate circumferential channels in communication with the cylinders through the plugs, the plugs having three ports and the intermediate port corresponding to the middle circumferential conduit, the two other ports of the plugs corresponding with the other two circumferential channels, the first mentioned port being disposed perpendicularly with relation to the second mentioned ports.

1,808,450. UNIVERSAL SHOE OR RECEIVING BOX FOR FURNACE WORK. SAMUEL PAUL BURGESS, Rock Island, Ill., assignor to Rock Island Register Company, Rock Island, Ill. Filed Jan. 19, 1928. Serial No. 247,974. 1 Claim. (Cl. 285—97.)



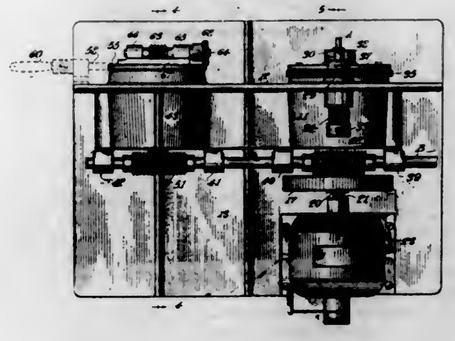
An adjustable elbow for pipes comprising an intermediate section and end sections, one end of said intermediate section and the adjacent end of one end section being rectangular and provided, the one with a flange removably telescoping upon a similar flange of the other, whereby the flanged ends may be relatively reversed, said intermediate section and said flanged end section having disassembleable adjusting means by which the telescopic flanges may be drawn together or the adjusting means disassembled for reversing the relation of said sections.

1,808,451. PRINTING MACHINE. JOHAN A. CARLSON, Ashland, Mass., assignor to Lucy F. Pratt, Ashland, Mass. Filed Nov. 20, 1929. Serial No. 408,446. 5 Claims. (Cl. 101—294.)



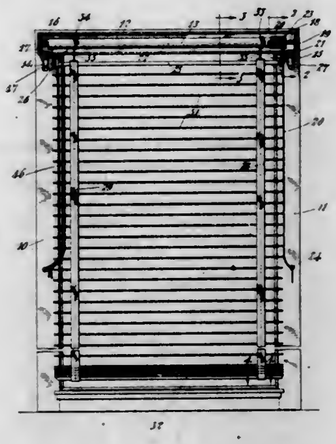
1. In a machine of the character described, in combination, co-operating printing members, one of which reciprocates with respect to the other, an inking device, an endless carrier upon which the inking device is mounted, a metal supporting member over which the inking device and carrier travel, an ink-distributing disk rotatably mounted upon the outer side of the supporting member in a position to contact with the inking device as the latter is moved thereover by the carrier, a ratchet-wheel connected to the ink-distributing disk and mounted upon the underside of the supporting member, a pawl co-operating with the ratchet-wheel, and means operatively connected with the reciprocatory printing member for actuating the pawl.

1,808,452. HOLDING DEVICE. GEORGE T. COUSINS, New Rochelle, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 17, 1928. Serial No. 313,096. 4 Claims. (Cl. 1—46.1.)



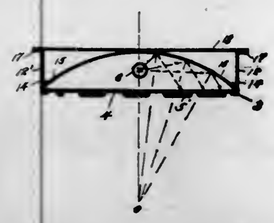
1. In a holding device for hammer tools, the combination of a cylinder and a hammer piston, a front head for the cylinder, an anvil block in the front head projecting beyond the forward end thereof to bear against an element intended to be driven for transmitting the blows of the hammer piston to such element, and a sleeve supported by the front head in position to extend over an end portion only of such element for maintaining the tool in operative striking relation with respect to such element, said operative striking relation being either coaxial or oblique.

1,808,453. COMBINATION SAWING MACHINE. ARTHUR E. DE KONING, Portland, Oreg. Filed June 10, 1929. Serial No. 369,737. 7 Claims. (Cl. 143—6.)



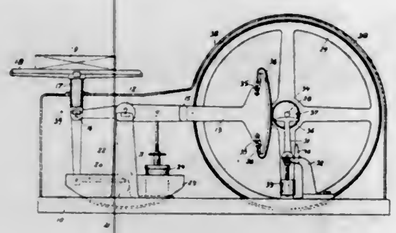
4. A combination sawing machine comprising, a standard secured to a base fitted with a table, a saw carriage attached to said standard by a universal joint comprising two perpendicularly disposed shafts and cooperating journals one of which shafts is vertical and adjustable axially through its journal formed in said standard by means of a hand-wheel engaging a thread thereon and bearing upon said standard, a pair of contacts rigidly attached to said vertical shaft adapted to engage a stop secured to said standard to limit the rotation of said saw carriage about its vertical axis to approximately ninety degrees wherein the vertical axis of said universal joint is disposed in the same plane as the saw blade.

1,808,454. MECHANICAL MOVEMENT. AUGUSTO DINA, Elizabeth, N. J., assignor to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 1, 1930. Serial No. 432,811. 13 Claims. (Cl. 74—7.)



1. A mechanical movement comprising a pair of rotatable casings, a load shaft supported on one of said casings in line with the axis of rotation thereof, a connection between the casings whereby the movement of one will move the other correspondingly, a second load shaft, means on the first casing connected to the second load shaft to drive the same, and means on the second casing engaging the second load shaft to control the movement of the second load shaft as the casings are moved.

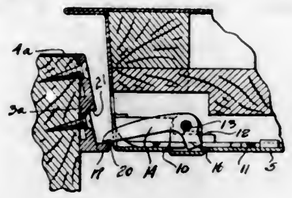
1,808,455. VENETIAN BLIND. WALTER E. DUNCANSON, New York, N. Y., assignor to J. G. Wilson Corp., New York, N. Y., a Corporation of Virginia. Filed Mar. 30, 1928. Serial No. 265,855. 2 Claims. (Cl. 156—17.)



1. In a Venetian blind construction, having a rotatable traverse roller lifting means secured in a box, the box arranged to detachably support on brackets fastened to the window opening, a blind in assembled formation, a tilting bar for tilting the slats, tiltably secured to the underside of the box, and means secured to the tilting bar for supporting and tilting the slats, in combination with a cord depending from the rotatable, longitudinally moving lifting mechanism in the box to a position alongside of the slats for raising and lowering the slats.

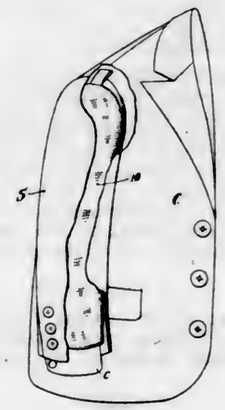
1,808,456. ILLUMINATED SIGN. MARY L. DWYER and ION E. DWYER, St. Louis, Mo. Filed Jan. 20, 1930. Serial No. 422,067. 2 Claims. (Cl. 40—132.)

1. A device of the character described comprising a box having top and bottom and end walls with front flanges on each and a translucent front wall, contrasting designating characters secured on the outside of the front wall, an elongated lamp bulb centrally located in said box and having electric connections, and a vertically disposed cylindrical reflector curved from the rear of said lamp to the front wall,—said end walls having portions cut and bent inward behind the reflector and cooperating with said front flanges to secure said reflector and front wall in place and providing ventilating openings, substantially as described.



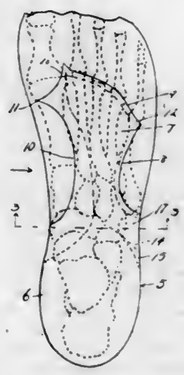
1,808,457. AUTOMATIC INCLINATION BALANCE. JOHANN FISCHER, Berlin-Charlottenburg, Germany, assignor to the Firm Ade Fabrik Automatischer Schnellwaagen G. m. b. H., Berlin-Reinickendorf, Germany. Filed Feb. 9, 1929, Serial No. 338,849, and in Germany Feb. 14, 1928. 9 Claims. (Cl. 265—37.)

1. An automatic inclination balance comprising a weigh-beam, a support for the goods to be weighed carried by the one arm of said beam, a segment attached to the other arm thereof, a counterweight suspending from said beam, a rotatable drum having a uniform scale on the face thereof, an eccentric fixed on the axle of said drum in engagement with said segment to be rotated thereby, the radius of said segment being so dimensioned in excess to the length of said arm carrying it that the distance of the axis of said drum from the axis of oscillation of said weigh-beam remains unaffected by oscillations of said weigh-beam regardless of the turns of said eccentric whereby to and fro horizontal motion of the axle of the drum is substantially eliminated and whereby the drum is turned to equal successive angles in response to successive equal increases of weights deposited upon the aforesaid support for goods.



1,808,458. DOOR KICK-OUT DEVICE. JOHN B. FLYNN, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 22, 1929. Serial No. 372,856. 9 Claims. (Cl. 292—167.)

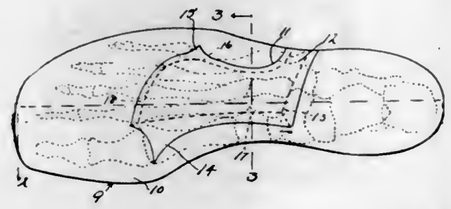
1. The combination with a vehicle door or the like, of a bolt having spaced lugs for holding the door closed, of means for moving said bolt to a position to permit opening of the door, and of a trigger having a portion projecting between said lugs and having a lost play connection with



said bolt lugs whereby the bolt is moved to a position to permit opening of the door before said trigger is engaged by one of said lugs to throw out the door.

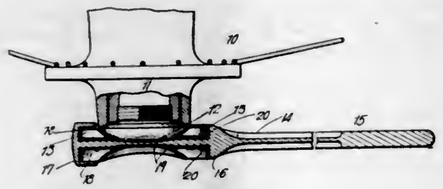
1,808,459. SLEEVE FORM FOR DISPLAY PURPOSES. EDWIN E. GOODMAN, New York, N. Y. Filed Mar. 18, 1930. Serial No. 436,675. 4 Claims. (Cl. 223—18.3.)

1. In a sleeve form, an outer fabric, a series of layers of wadding having a stiffening of haircloth between said layers, and an inner fabric of cambric having pleats therein and on opposite sides thereon.



1,808,460. COMBINED HEEL AND ARCH SUPPORT. OTTO GREGAREK, Philadelphia, Pa. Filed Apr. 21, 1930. Serial No. 445,847. 2 Claims. (Cl. 36—71.)

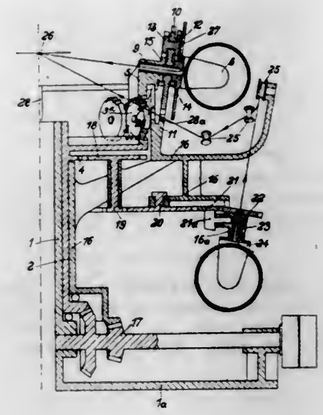
1. A device of the kind described consisting of a heel element, an arch supporting element formed integral with



the heel element and fashioned to provide concaved side edges and a convex forward edge, an extension projecting from the forward part of the exterior edge to underlie the fifth metatarsal bone, another extension projecting from the interior side adjacent the forward end to underlie the first metatarsal bone, all of said edges and the extensions being skived to form inwardly and upwardly inclined surfaces, and a ridge formed by the meeting of the forward and interior skivings, said ridge adapted to lie between the great and second toe.

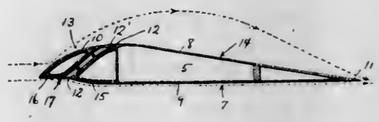
1,808,461. COMBINED INSOLE AND ARCH SUPPORT. OTTO GREGAREK, Philadelphia, Pa. Filed Apr. 21, 1930. Serial No. 445,848. 2 Claims. (Cl. 36—71.)

1. A device of the kind described comprising an integral structure consisting of an insole, an arch support on the under side of the insole, said support having an extension projecting toward the exterial side of the insole at the rear end of the support, another extension near the forward end projecting on the interior side of the support and the forward end of said support being curved convexly and all the edges except the outer end of the first mentioned extension being skived to provide inclined surfaces projecting inwardly and upwardly, said inclined surfaces being contiguous the under surface of the insole so that when in use said insole will be inclined toward its edges.



1,808,462. HUB CAP WRENCH. MARTIN HORETH, Brooklyn, N. Y. Filed July 27, 1929. Serial No. 381,552. 4 Claims. (Cl. 81—121.)

1. A hub cap wrench comprising a handle, a flat head extending longitudinally at one end of said handle and having a cavity in the side thereof, a closed socket communicating with the cavity and an open socket provided in said head communicating with the cavity and open on its outer side, the open and closed sockets being diametrically opposed to receive the opposite lugs of a hub cap, said open socket extending into the handle.



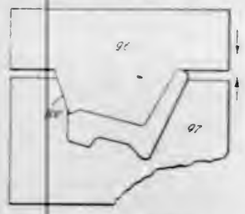
1,808,463. ROUND BRAIDING MACHINE. GUIDO HORN, Weissensee, near Berlin, Germany. Filed Dec. 28, 1928, Serial No. 329,042, and in Germany Dec. 29, 1927. 17 Claims. (Cl. 96—7.)

1. In a round braiding machine, a carrier, adapted to rotate round an axis and to travel in a circular path about the centre of the machine, a gear-wheel concentric to the axis of rotation of the carrier and means, adapted to give the gear-wheel, during a revolution of the carrier about

the centre of the machine, a single rotation in such a direction as to neutralize the twist resulting from the rotation of the carrier about the center of the machine.

1,808,464. AEROPLANE WING. GERARD L. HUISKAMP, Keokuk, Iowa. Filed July 16, 1929. Serial No. 378,703. 7 Claims. (Cl. 244—12.)

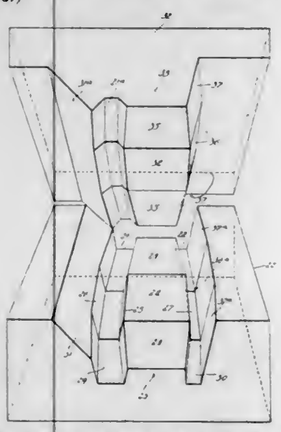
1. An aeroplane wing having one or a plurality of passages formed therein and extending therethrough from the top to the bottom surface thereof, said wing having a notch formed in the undersurface thereof, the notch extending rearwardly from the leading edge of the wing and communicating with said passages rearwardly of the leading edge of the wing.



1,808,465. PRODUCTION OF UREA. ALFONS KLEMENC and RUDOLF SCHOELLER, Vienna, Austria, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed May 22, 1929, Serial No. 365,224, and in Austria Aug. 6, 1926. 2 Claims. (Cl. 260—125.)

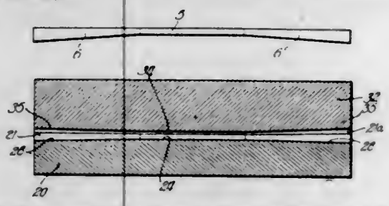
1. The process of producing urea which comprises bringing together carbon oxysulphide and ammonia, in the absence of water, with at least part of at least one of the said components in a liquefied state, and then heating the mass under pressure to between about 80 and about 120° C.

1,808,466. METHOD OF REFORMING BARS. GEORGE LANGFORD, Joliet, Ill., assignor to McKenna Process Company of Illinois, Joliet, Ill., a Corporation of Illinois. Original application filed July 16, 1926, Serial No. 122,864. Divided and this application filed Mar. 20, 1929. Serial No. 348,389. 1 Claim. (Cl. 29—169.)



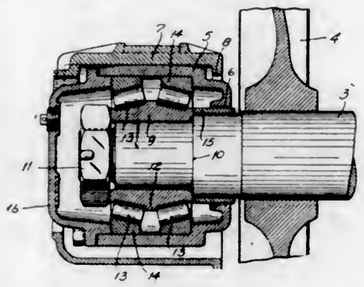
The method of reforming the flange fishing surface of an angle-type rail joint bar consisting in first applying

pressure to the bar is one direction and then applying a supplementary pressure in another direction during the



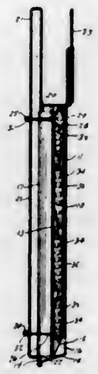
continuance of said initial pressure to the upper outer surface of the flange of the bar thereby to exert a lateral thrust thereon for reforming the flange fishing surface.

1,808,467. DIES FOR MAKING BARS. GEORGE LANGFORD, Joliet, Ill., assignor to McKenna Process Company of Illinois, Joliet, Ill., a Corporation of Illinois. Filed Apr. 10, 1929. Serial No. 354,142. 7 Claims. (Cl. 78—76.)



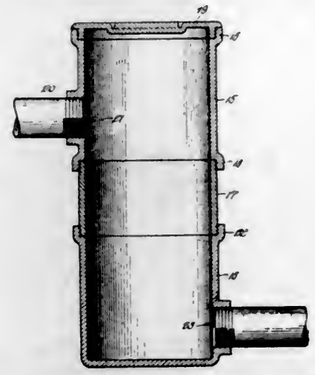
1. A die for reforming worn rail joint bars including a pair of opposing die members having cooperating die cavities defining a space generally corresponding to the rail joint shape, including intercommunicating spaces for the metal of the bar head, web and foot, certain of the longitudinal walls of said cavities being longitudinally convexed and the zenith of said convexities being in proximal relation to the most worn portions of the bar whereby to initially forge said bar at such points to flow the metal thereof into said worn portions prior to the complete closing of the dies on substantially the whole bar.

1,808,468. METHOD OF MAKING RAIL JOINT BARS. GEORGE LANGFORD, Joliet, Ill., assignor to McKenna Process Company of Illinois, Joliet, Ill., a Corporation of Illinois. Original application filed Apr. 10, 1929, Serial No. 354,142. Divided and this application filed Mar. 24, 1930. Serial No. 438,276. 8 Claims. (Cl. 29—169.)



1. The method of reforming worn rail joint bars which consists first in heating the bar to a working temperature, and then subjecting it to a forming pressure, the forming pressure being first concentrated at the central portion of the bar to effect a greater displacement of metal at such portion, and then progressively diminishing toward the ends of the bar.

1,808,469. ROLLER BEARING REMOVING PROCESS. MARCUS T. LOTHROP, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 15, 1927. Serial No. 240,139. 2 Claims. (Cl. 29—84.)



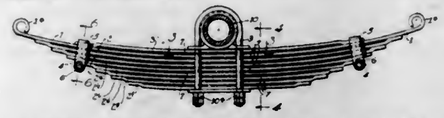
2. The process of removing a roller bearing from a roller bearing axle construction wherein the end portion of said axle is enclosed within a housing having a removable closure cap at its outer end and an axle receiving opening at its inner end, said bearing being interposed between said axle and said housing with its inner raceway member press-fitted on said axle, a wheel being mounted on said axle adjacent to the inner end of said housing, which consists in providing said construction with a sleeve mounted on said axle in abutting relation to the inner end of said inner raceway member and extending inwardly beyond the inner face of said housing, removing the closure cap from said housing, and then causing relative endwise movement between said axle and said wheel by moving one of these members longitudinally while holding the other member against such movement, whereby the pressure on one member is transmitted through said sleeve to the other member without the wheel and the housing coming in contact with each other.

1,808,470. PEA SHUCKER. BEATRICE I. MANGES, Cleveland, Ohio. Filed May 15, 1930. Serial No. 452,659. 6 Claims. (Cl. 130—30.)

1. A pea shucker comprising a frame having guides at the sides, a set of slotted tubes fixed to the frame, a slitter extending across the tubes and movable along said guides and having points projecting through the slots into the tubes to split pods therein, and a discharger extending across the tubes and movable along the guides and having fingers projecting through the slots to discharge peas from the split pods.

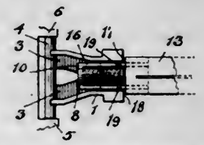
1,808,471. WASTE TRAP. WILLIAM J. MCCARTHY, Chicago, Ill. Filed Nov. 14, 1925. Serial No. 68,941. 3 Claims. (Cl. 182—7.)

1. A waste trap construction comprising a chamber having an inlet, a second chamber in communication with said first chamber having an outlet in its side and an opening at each end, and means whereby either end opening of said second chamber may be alternatively placed in communication with said first chamber, said side outlet being nearer one end of said end openings than it is to the other, whereby when the connection is reversed the level of said outlet will be changed.



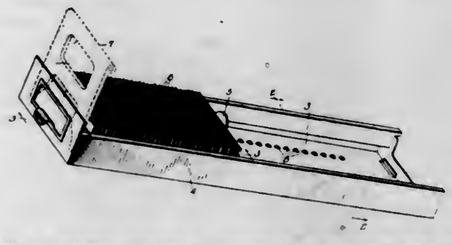
1,808,472. PAPER DRILL. HERMAN D. MIELKE, Chicago, Ill. Filed Sept. 3, 1929. Serial No. 389,906. 2 Claims. (Cl. 164—124.)

1. A drill comprising a shank and a drill integral with and extending downwardly from the lower end of the shank, said drill and shank having axially alined longitudinal openings therethrough, said shank having a recess through one side thereof a short distance above the upper end of the drill communicating with the opening through said shank and drill, and a rod secured in the opening in said shank having the lower end thereof cut in a plane located at an acute angle to the axis of the rod to form a deflecting edge inclined upwardly and outwardly toward the open side of said recess, and said rod at its lower end at each side of said deflecting edge having parts cut away on downwardly and inwardly inclined planes meeting substantially at the lowermost point of said rod.



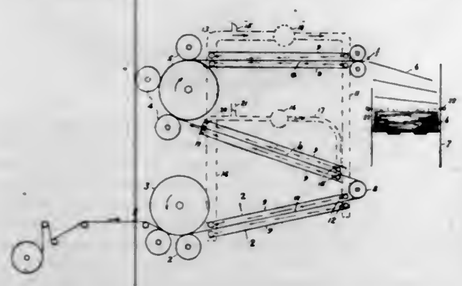
CARNEGIE LIBRARY OF ATLANTA

1,808,473. SPRING. OSCAR LINUS NEISLER, Chicago, Ill. Filed Dec. 27, 1924. Serial No. 758,370. 10 Claims. (Cl. 267—47.)



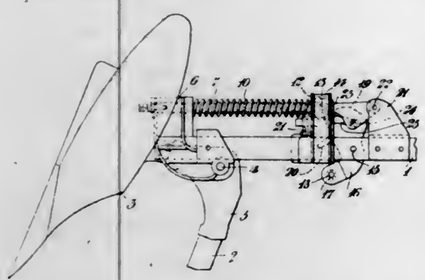
1. A spring comprising a series of spring leaves having their ends bent out of alignment with relation to the body portion of the leaf and projecting in the same general direction as the leaf, the bent ends having flat engaging faces, the flat engaging face of one spring leaf engaging the faces of the associated spring leaf so as to separate said spring leaves throughout their length between the bent ends, the leaves being substantially uniform in thickness and the bent ends being integral and the same thickness as the remaining portions but out of alignment therewith.

1,808,474. CONNECTION DEVICE FOR WRIST WATCHES. BEN OGUSH, New York, N. Y., assignor to Katz & Ogush, Inc., New York, N. Y., a Corporation of New York. Filed June 5, 1929. Serial No. 368,469. 1 Claim. (Cl. 63—5.)



A device of the class described comprising a connection member having an open-sided casing provided with a pair of side walls, means on said casing for attachment to a wrist watch, a tubular spring-container provided on said connection member and exposed at the open side of the casing, a wrist band, a yoke thereon provided with side arms which lie between the side walls of the casing and the spring-container, a cross-bar on said yoke, a pair of slots in the side walls of the spring-container in which said cross bar is movable, a spring within the spring-container exerting pressure on the cross bar, and guide means extending across the open side of the casing between the spring-container and walls of the casing for guiding the side arms of the yoke during their sliding movement.

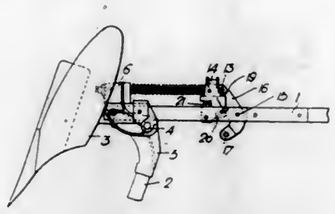
1,808,475. DRAWER FOR PRINTING DEVICES. ELMER A. OYEN, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 14, 1929. Serial No. 339,947. 3 Claims. (Cl. 129—16.)



3. A drawer having a bottom for supporting a plurality of printing devices on edge, said bottom having its supporting surface flat, and a row of protuberances on said supporting surface extending longitudinally of the drawer, said protuberances being rounded and spaced apart and alternating with flat sections of the supporting surface to permit printing devices to be slid bodily thereover but to prevent accidental slippage of the printing devices along the supporting surface.

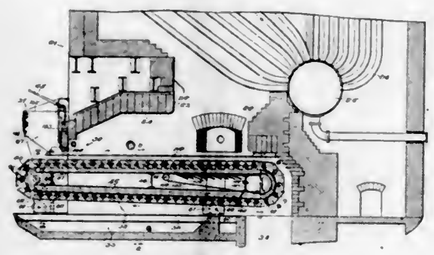
1,808,476. PRINTING. THOMAS F. PINDER, Merion, Pa. Filed Jan. 12, 1929. Serial No. 332,082. 9 Claims. (Cl. 101—416.)

1. A method of preventing offset at the freshly printed sides of a paper web traveling between plate and packing cylinders and of delivering the paper of proper moisture content, which consists in first superficially oxidising the ink on the first freshly printed side of the web by contacting the web with a current of hot air and then with a current of cold air, second superficially oxidizing the ink on the second freshly printed side of the web by contacting the web with a current of hot air, and thirdly subjecting the superficially oxidized ink and dried paper in sheet form to contact with a mist or spray of water.



1,808,477. RELEASABLE PLOW. OSCAR ADOLF KRISTIAN PRINTZ, Overum, Sweden. Filed Sept. 11, 1930, Serial No. 481,296, and in Sweden Apr. 22, 1930. 7 Claims. (Cl. 97—184.)

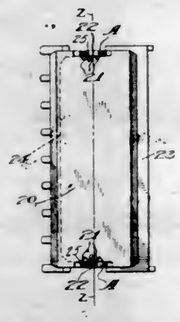
1. In a plow the combination with the plow frame of a plow beam pivotally connected thereto, a plow base carried by said beam, a lever pivotally mounted in the plow frame to be engaged by the free end of the plow beam to hold the plow base in working position, a spring arranged to act on said lever without being mechanically connected thereto to maintain said engagement and to be compressed to allow the lever to release the plow beam, when the plow base is forced out of working position due to a resistance in the ground, and a stop member to relieve the lever from the action of the spring when compressed and maintain the spring in compressed state.



4. In a plow the combination with the plow frame of a plow beam pivotally connected thereto, a plow base carried by said beam, a lever pivotally mounted in the plow frame to be engaged by the free end of said beam to hold the plow base in working position when in normal position, a spring arranged to act on said lever without being mechanically connected thereto to maintain said engagement, said lever being so shaped as to compress the spring during a first turning from its normal position and be capable of continued turning independently of the spring to enable releasing of the plow beam, another lever pivotally connected to a bracket on the plow frame, and a connection between said first-mentioned lever and said other lever so arranged as to hold said other lever out of engagement with the spring in the normal position of said first mentioned lever and bring it to a position in which it maintains the spring in compressed state after the firstmentioned lever has been turned to compress the spring.

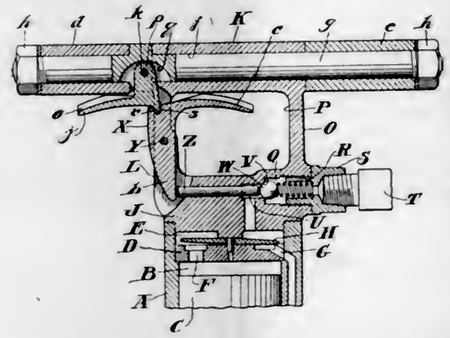
1,808,478. RELEASABLE PLOW. OSCAR ADOLF KRISTIAN PRINTZ, Overum, Sweden. Filed Feb. 26, 1929, Serial No. 342,830, and in Sweden Apr. 13, 1928. 6 Claims. (Cl. 97—184.)

1. In a plow, the combination with the plow frame, of a plow beam pivotally connected thereto, a plow base carried by said beam, a lever mounted in the plow frame to be engaged by the plow beam in the operative position of said plow base, sliding means in frictional engagement with said lever, a spring acting on said sliding means to press same against the lever to maintain said first mentioned engagement, and means to release the lever from the torque of the spring after a slight compression of the spring in order to permit the use of a powerful spring capable of securing a steady motion of the plow base irrespective of varying resistance in the ground.



1,808,479. STOKER. EMIL W. RITTER, Chicago, Ill., assignor, by mesne assignments, to Burke Stoker & Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 28, 1925. Serial No. 58,995. 15 Claims. (Cl. 110—40.)

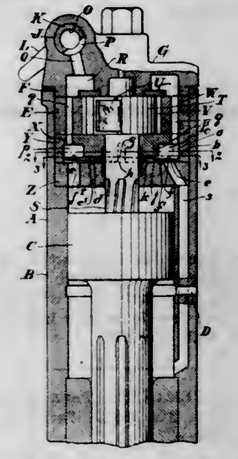
1. In combination, in a grate, a link having an angular depression in its top portion, rollers associated with the said link, an angle bar mounted in the said angular depression and secured to the said link by a bolt mounted within the said link, and a grate bar having a pair of opposite angular slots for receiving the ends of the legs of the said angle bar when it is slid thereon.



1,808,480. SAFETY RAZOR BLADE. WILLIAM C. ROGERS, Chicago, Ill. Filed Mar. 5, 1929. Serial No. 344,391. 2 Claims. (Cl. 30—12.)

1. A safety razor comprising a blade, a holder therefor, a blade positioning means comprising a plurality of notches in each end of the blade, all of which notches are eccentric with relation to the longitudinal center line of the blade, the opposed notches on said ends being in

alignment, projections, one at each end of the holder, said projections adapted to be received into any two opposed aligned notches on said blade.

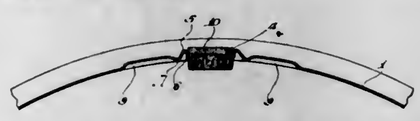


1,808,481. PNEUMATIC TOOL. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 4, 1929. Serial No. 411,494. 5 Claims. (Cl. 121—35.)

1. In a pneumatic tool, the combination of a cylinder and a back head having a handle whereby the tool may be held to the work, a throttle valve in the back head, a throttle lever pivoted on the handle and movable by manual pressure applied directly thereto to actuate the throttle valve when the tool is being held by the handle, a pair of grip members forming an alternative means of holding the tool, means for securing the grip members to the handle, and an actuating lever adjacent one grip member and engaging the throttle lever for transmitting the movement of the actuating lever through the throttle lever to the throttle valve, said actuating lever being movable by manual pressure applied directly thereto when the tool is being held by the grip members.

1,808,482. VALVE MECHANISM FOR ROCK DRILLS. WILLIAM A. SMITH, Jr., Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 22, 1928. Serial No. 321,133. 3 Claims. (Cl. 121—19.)

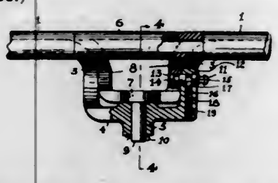
1. In a fluid actuated rock drill, the combination of a cylinder and a reciprocatory piston, a valve chest comprising a pair of plates one of which plates is recessed to form a cylindrical valve chamber, a valve seat on one of the plates, a rib on the other plate extending across the valve chamber to form an intermediate restricted portion in the valve chamber, said rib having an enlarged center portion and reduced neck portions thereon defining the curved inner edges of a pair of arcuate slots separated at their terminal ends by the neck portions of the rib to form separate pressure chambers, inlet passages leading from the pressure chambers to the cylinders, an oscillatory disc distributing valve in the valve chamber



controlling the inlet passages and having the major portion of its periphery spaced from the peripheral bounding surface of the valve chamber to permit the passage of pressure fluid to the inlet passages, said valve having an apex at each end to bear on the valve seat and the rib for preventing the flow of pressure fluid from one pressure chamber to the other through the restricted portion.

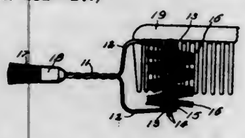
1,808,483. METALLIC RECEPTACLE. HUGH H. WARD, Chester, Pa. Filed June 18, 1928. Serial No. 286,150. 1 Claim. (Cl. 206—24.)

A cask-like receptacle having a bung-hole in a curved wall thereof and surrounded by an annular ridge bent outwardly from said wall and having an inturned grooved lip for the engagement of a driven bung and a reenforcing plate conforming to the contour of and fixed to the inner surface of said wall and having thereon an outwardly turned collar housed between the members of said ridge and reenforcing said lip.



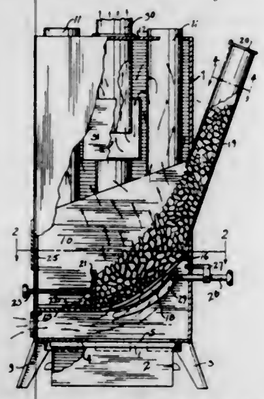
1,808,484. METALLIC RECEPTACLE. HUGH H. WARD, Chester, Pa. Filed June 18, 1928. Serial No. 286,151. 1 Claim. (Cl. 220—24.)

A container comprising a cylindrical sheet metal body having annular rolling and reenforcing hoops bent outwardly therefrom, said body having a bung hole formed in the curved wall thereof between said hoops and being pressed outwardly into a convex ridge surrounding said bung hole and comprising a resilient lip with a projecting tongue thereon, a section of the middle of the body surrounding the bung hole having outwardly projecting ribs pressed therefrom with their outer ends adjacent to said hoops and their inner ends adjacent to the annular



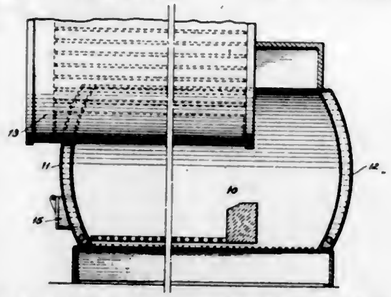
ridge, said ribs extending radially and being of different lengths, and a wooden bung engaged by the tongue of said resilient lip.

1,808,485. HAND WHEEL. JOSEPH E. WHITFIELD, Pittsburgh, Pa., assignor to Whitfield-Johnson Motor Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Aug. 7, 1929. Serial No. 384,118. 8 Claims. (Cl. 74—33.)



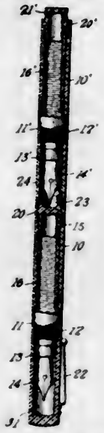
1. In a hand wheel, the combination of a rim having an interrupting gap, and a movable rim section mounted so as to be swung in a path lying within the same plane as that of the first mentioned rim into and out of completing relation with the rim.

1,808,486. COMB CLEANER. PAUL M. WRIGHT, Omaha, Nebr. Filed Feb. 12, 1931. Serial No. 515,285. 4 Claims. (Cl. 132—27.)



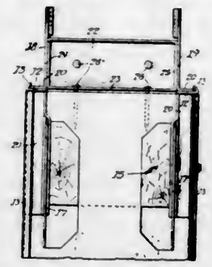
1. A comb cleaner, comprising a shank having a laterally enlarged fork at one end and a loop at its other end, a shaft rotatably mounted across the ends of the fork, a spiral row of radiating bristles mounted on the shaft, a bunch of bristles overturned and secured intermediate their ends through said loop of the shank, and a ferrule slidably mounted on the shank and having an enlarged open end for passage over the loop and the overturned portion of the bunch of bristles.

1,808,487. HEATING STOVE OR FURNACE. ALFRED AHLBERG, Indianapolis, Ind. Filed Aug. 20, 1929. Serial No. 387,187. 9 Claims. (Cl. 126—73.)



1. In a stove or furnace, a housing, a fire box bottom therein comprising a flat portion and a grate bar portion curved upwardly from the flat portion, a fuel magazine discharging by gravity at the top of the curved portion, and a baffle plate on the flat portion to arrest the fuel, said plate being separate from and adjustable toward and from the curved portion.

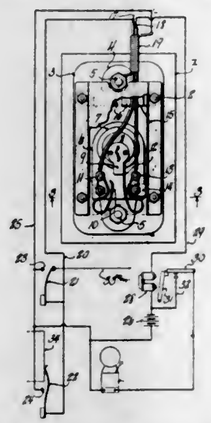
1,808,488. BOILER. FREDERIC W. BAKER, Claymont, Del. Filed Sept. 10, 1928. Serial No. 304,852. 4 Claims. (Cl. 122—106.)



1. In a jacket structure for a boiler furnace, a wall concavo-convex in vertical cross-section and comprising substantially vertically disposed spaced curved plates having substantially parallel upper and lower edges and cooperating to form a fluid section.

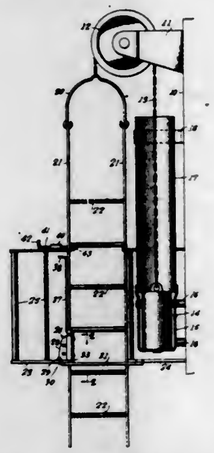
1,808,489. FOUNTAIN PEN. ADOLPH BASSI, New York, N. Y., assignor to Chameleon Fountain Pen Corp., a Corporation of Illinois. Filed June 18, 1929. Serial No. 371,938. 3 Claims. (Cl. 120—42.)

1. The combination with two independent fountain pens provided with screw threads on their front and rear ends, of a connecting sleeve having screw threads adapted to engage selectively with the front or rear ends of either fountain pen whereby both fountain pens may be rigidly joined together to produce a duplex writing implement.



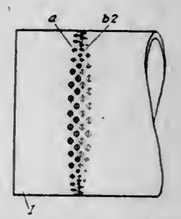
1,808,490. CORNER CONNECTION FOR FRAMES. ISAAC A. BAUM, Chicago, Ill. Filed Oct. 14, 1929. Serial No. 399,620. 7 Claims. (Cl. 189—46.)

1. In combination, side and head frame members of generally channel shape in cross section, wood blocks



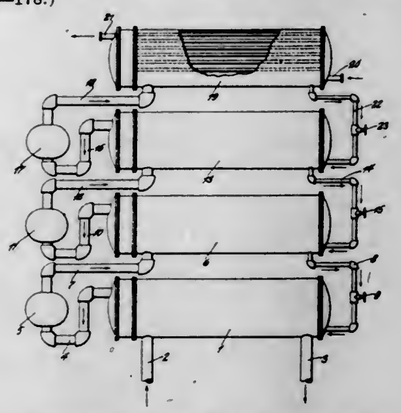
carried by the respective members near their ends, a pair of angle plates, a web joining and spacing the plates, means providing sliding interlocking engagement between the legs of the angle plates and the respective frame members, and fastening devices extending through the web into the wood blocks.

1,808,491. BURGLAR ALARM AND LOCK THEREFOR. EDWARD BELLMAN, Rockford, Ill. Filed Nov. 26, 1928. Serial No. 321,930. 5 Claims. (Cl. 200—42.)



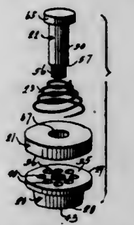
1. In an alarm system having three conductors, a lock comprising an outer plate, a pair of contact members connected to two of said conductors, one of said two conductors being connected to said metal plate, a cam member controlled by said lock for operating said contact members, and means connected to the third conductor and adapted to contact with a portion of the lock connected to one of said two conductors, when the lock is pried loose.

1,808,492. SAFETY FIRE ESCAPE. ERNEST BOCCHINO, Newark, N. J. Filed Mar. 3, 1928. Serial No. 258,771. 7 Claims. (Cl. 227—51.)



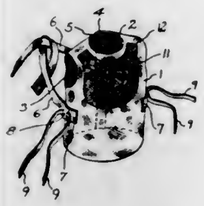
1. In a fire escape for buildings having a platform, a ladder serving the platform movable vertically with respect thereto, a partial counter-poise for the ladder, a clamp adjustable on the ladder, said clamp having a roll, and a strip on the platform engaging said roll and over which it may be passed to release the ladder.

1,808,493. SUCTION ROLL SHELL DRILLING. HARRY C. BURDEN, Sandusky, Ohio, assignor to The Paper & Textile Machinery Company, Sandusky, Ohio. Filed Nov. 23, 1928. Serial No. 321,405. 14 Claims. (Cl. 92—53.)



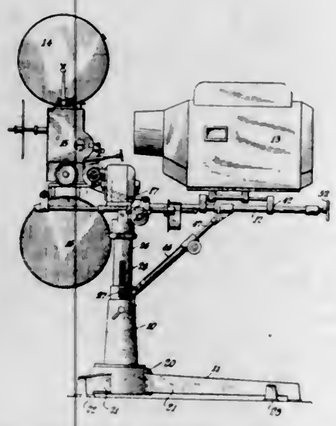
4. A suction roll shell provided with perforations disposed in an ellipse.

1,808,494. REFRIGERATING PROCESS. SAMUEL C. CARNEY, Tulsa, ROBERT E. BAKER, Drumright, and FRANK C. CUTTING, Tulsa, Okla., assignors to Shell Petroleum Corporation, a Corporation of Virginia. Filed Feb. 15, 1926. Serial No. 88,489. 8 Claims. (Cl. 62—178.)



1. A refrigeration system which consists in expanding a series of refrigerants of different boiling points, subjecting the vapor of the expanded refrigerant of the lower boiling point to the cooling action of the refrigerant of higher boiling point, the last of said series of refrigerants condensing at substantially atmospheric pressure, and subjecting a fluid to be cooled to the cooling action of the low boiling point refrigerant.

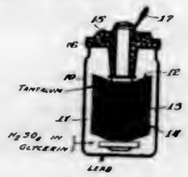
1,808,495. VALVE. WILLIAM J. DADDYSMAN and ALONZO F. DADDYSMAN, Charleston, W. Va. Filed Apr. 19, 1927. Serial No. 184,960. 6 Claims. (Cl. 251—158.)



1. An acid and alkali carbon resisting valve construction comprising a valve seat composed of graphite and coke, a valve member composed of graphite and coke, a guide stem of graphite and coke rigid with the seat for guiding the opening or closing relation of the valve member with respect to the seat.

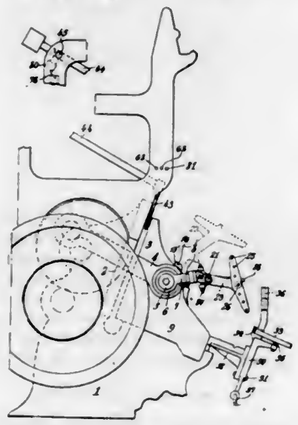
1,808,496. GARMENT. GEORGE W. DILLON, Ware, Mass. Filed Dec. 21, 1928. Serial No. 327,558. 3 Claims. (Cl. 2—111.)

1. A jacket garment having neck and arm openings, a back tie strap secured to each side of the jacket intermediate its top and bottom and extending sufficiently away therefrom to be tied around the jacket to secure it to the body of the wearer, a loop in each tie strap adjacent its connection to the jacket and a detachable securing strap extending through each loop, said securing strap being removable to permit the use of the garment either with or without the securing strap.



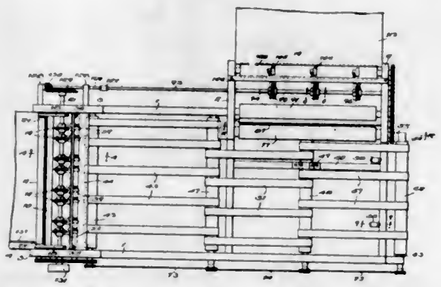
1,808,497. ADJUSTABLE SUPPORT FOR MOTION PICTURE PROJECTION MACHINES. AUGUSTO DINA, Jersey City, N. J., assignor to International Projector Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 18, 1927. Serial No. 213,715. 5 Claims. (Cl. 248—47.)

1. In a motion picture projecting apparatus having a lamp house, projection head and film magazines, a supporting pedestal therefor and a frame pivotally mounted on said pedestal and supporting said apparatus, means for controlling the angular position of said frame, comprising a diagonal strut, said strut being extensible for obtaining a coarse adjustment of the angularity of said frame, and means for varying the point of support of said strut for securing a fine adjustment thereof.



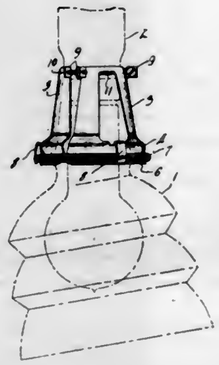
1,808,498. ELECTROLYTIC FILTER CONDENSER. EDGAR W. ENGLE, Lake Forest, Ill., assignor to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Mar. 22, 1928. Serial No. 263,772. 8 Claims. (Cl. 175—315.)

1. In a filter circuit, a rectifier, an inductance unit, an electrolytic condenser bridged across the circuit between the inductance and the rectifier characterized by a filmed electrode immersed in substantially dry glycerin solution of an electrolyte and adapted to act as a safety valve at high voltages whereby the rectifier and inductance unit are protected.



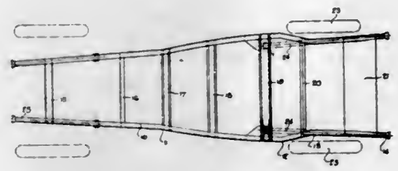
2. An electrolytic filter condenser comprising a tantalum electrode and a substantially anhydrous glycerin solution of sulphuric acid.

1,808,499. THROW-OFF MECHANISM FOR PRESSES. CARL F. FRAUENBERGER, Franklin, Mass., assignor to Thomson National Press Co. Inc., a Corporation of Delaware. Filed May 8, 1928. Serial No. 276,086. 3 Claims. (Cl. 101—299.)



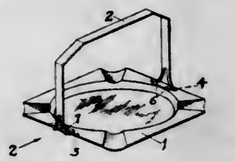
1. In a platen press, means to adjust the impression of the platen, a shaft to unlock the adjusting means to throw off the impression, two levers on said shaft, a tripping lever adapted to be moved into the path of either one of said levers to actuate the said shaft and means for operating said tripping lever.

1,808,500. PERFORATING MACHINE. MICHAEL HOLNY, Chicago, Ill. Filed Oct. 22, 1927. Serial No. 228,031. 14 Claims. (Cl. 164—99.)



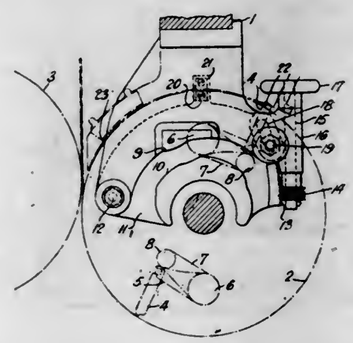
7. In a perforating machine, means for perforating a sheet of material in a plurality of directions comprising means for perforating said sheet of material in one direction and delivering same to a stop, and means for perforating said sheet of material at a right angle thereto including revolving means to receive a side edge of said material, a second stop adjacent said revolving means in the path of said side edge, a second revolving means opposite said first revolving means and on the opposite side of said sheet, means for moving said revolving means relatively toward each other when said sheet of material engages said first-mentioned stop, and means cooperating with said last-mentioned means for removing said second stop.

1,808,501. HOLDER FOR REFLECTORS. NIELS LANG, Lakewood, Ohio. Filed Dec. 8, 1928. Serial No. 325,134. 15 Claims. (Cl. 240—134.)



1. A reflector holder comprising rigid means for effecting engagement of the one end thereof with a support, rigid means at the other end thereof for engaging a reflector, and means whereby engagement of the holder with the reflector will tend to render said other engaging means ineffective uniformly thereabout, thereby facilitating positioning of the holder preparatory to effecting engagement of the holder with a support.

1,808,502. CHASSIS CONSTRUCTION. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 29, 1928. Serial No. 289,138. 4 Claims. (Cl. 280—106.)

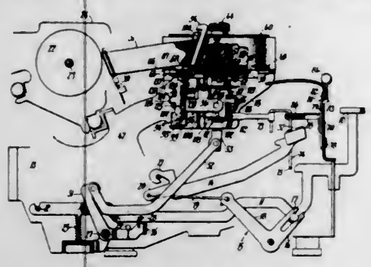


1. A vehicle chassis construction having side sills bodily bulged-outwardly of the chassis intermediate the front and rear wheels to substantially the plane of the wheels and offset inwardly in their rear portions, whereby to receive the inner portions of the wheels within said offset portions, and springs suspending the rear wheels from the chassis having their rear ends secured to the rear ends of said offset portions of the sills and their forward ends secured to the chassis in said bulged-out region through a direct cross connection joining the bulged-out portions of said sills.

1,808,503. MEANS FOR ATTACHING HANDLES TO TRAYS AND THE LIKE. HENRY J. MCCARTHY, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 24, 1928. Serial No. 264,508. 2 Claims. (Cl. 220—94.)

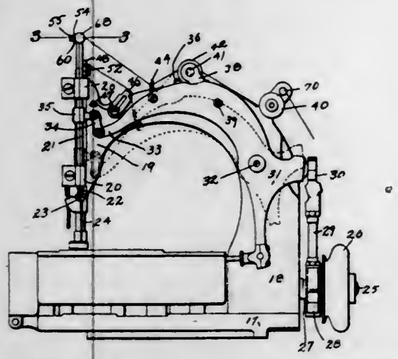
1. A receptacle having a finished surface, strips of deformable metal secured beneath the surface of the receptacle before it is finished and spaced therefrom, and a handle having inwardly turned extensions fitting under the strips and held in place by pinching the strips down on the extensions.

1,808,504. PRINTING AND STITCHING MACHINE. EDWARD THOMAS MORRIS, London, England, assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed July 24, 1926, Serial No. 124,786, and in Great Britain Sept. 7, 1925. 8 Claims. (Cl. 1—7.)



8. In a stitching machine, the combination of a frame, a pair of cylinders mounted thereon, means for rotating said cylinders, a staple forming plunger mounted on one of said cylinders, a cam pivotally mounted on said frame and adapted to operate said plunger, means for moving said cam into and out of operative position, means for limiting the movement of said cam, and means for locking said cam in position.

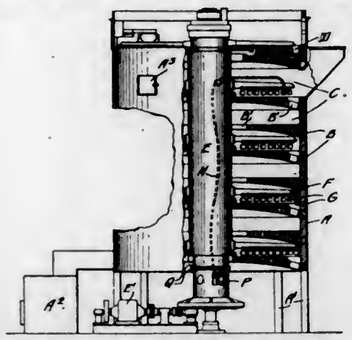
1,808,505. TYPEWRITING MACHINE. GEORGE H. MYERS, Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed June 2, 1928. Serial No. 282,303. 12 Claims. (Cl. 197—151.)



1. In a typewriting machine, the combination of a horizontal ribbon-spool at each side of the machine, instrumentalities for rotating each of said spools to wind the ribbon on either spool, including for each spool a coaxial ratchet-wheel, a drive pawl, a detent-pawl and a member operatively connected to said drive-pawl and oscillated at each type-glow, devices for disabling the rotating instrumentalities for either spool, including a cam-member coaxial with each spool for controlling the pawls thereof, a

connection between said cams, whereby, when the pawls of one spool are made effective, the pawls of the other spool are made ineffective, a normally-ineffective pivoted device operatively connected to each pawl-driving oscillating member to oscillate therewith for operating the associated

cam, and mechanism operated by movement of the ribbon when it is substantially unwound from one spool to make the associated pivoted and oscillatable device effective for operating said cams whereby to effect a change in the direction of rotation of said spools.

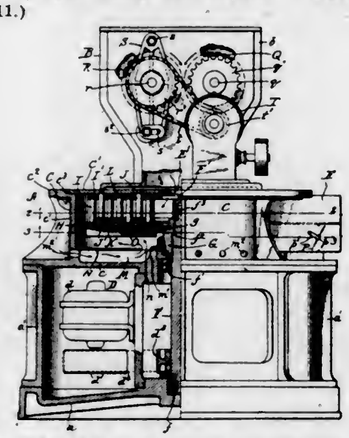


1,808,506. THREAD PULL UP FOR SEWING MACHINES. ROBERT E. PIERCE, St. Louis, Mo., assignor to Bemis Bro. Bag Co., St. Louis, Mo., a Corporation of Missouri. Filed Oct. 7, 1925. Serial No. 61,024. 4 Claims. (Cl. 112—241.)

1. A device of the class described comprising a sewing machine having an arm, a head integrally carried thereby, a needle bar mounted in said head, a needle bar lever mounted on said arm for operating said needle bar, a needle carried by said bar, a slotted adjustable arm mounted on the sewing machine arm, an adjustable arm carried by the head, means carried by the needle bar lever and the needle bar and co-acting with the arms carried by the head and the sewing machine arm for imparting a pull-up on the needle thread during the last portion of the needle descent, and means carried by the sewing machine arm for clamping and arresting the feed of needle thread from a source of supply while the pull-up is applied.

1,808,507. PYROMETER FOR METALLURGICAL FURNACES. FOSTER M. POOLE, Kansas City, Mo., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1929. Serial No. 332,894. 3 Claims. (Cl. 263—26.)

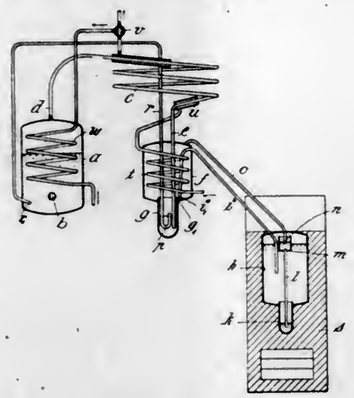
1. The combination, with a furnace having at least one hearth and at least one rabble carrying arm sweeping over the hearth, and a rotatably driven shaft carrying said arm, of a thermo-responsive element supported by said arm in a position to contact with the surface layer of material on the hearth and to be protected by a rabble from direct erosive action by the material, a temperature



exhibiting instrument mounted on said shaft, and means directly connecting the element and instrument for transmitting the temperature responsive effect therebetween.

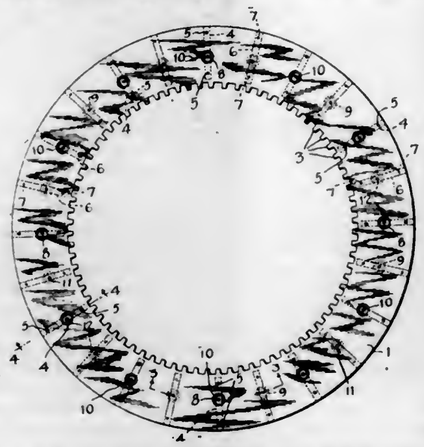
1,808,508. SPRING COVER. DANIEL K. POPE, Cleveland, Ohio. Filed July 7, 1928. Serial No. 291,026. 5 Claims. (Cl. 267—37.)

1. In a cover for leaf springs composed of flexible material and of a shape to wrap about a spring with opposite edges adjoining longitudinally of the spring, a fastening device comprising a bendable sheet metal tongue having a flat inner end secured upon the outer face of the cover adjacent an edge of the cover, an eye formed to receive said tongue, said eye being alined with the tongue and attached to the opposite edge of the cover, whereby said tongue may be passed through said eye to draw said edges together and tighten the cover on the spring and be bent back upon itself to secure the same against separation, and means for clamping the bent back end of the tongue against the flat inner end thereof.



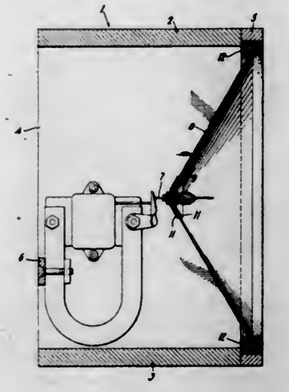
1,808,509. CLAY DISINTEGRATOR. THEODORE C. PROUTY and WILLIS O. PROUTY, Hermosa Beach, Calif., assignors to American Encaustic Tiling Company, Ltd., New York, N. Y., a Corporation of New York. Filed June 20, 1928. Serial No. 286,736. 7 Claims. (Cl. 83—11.)

1. In a disintegrator, a chamber provided with an axial inlet for material, a rotary member therein, concentric



rows of stationary pins, other concentric rows of rotary pins carried by said rotary member, and inclined baffles in the intervals between pins of the stationary series and of the rotary series.

1,808,510. REFRIGERATING APPARATUS OF THE ABSORPTION TYPE. FRIEDRICH WILHELM HEINRICH REEHSING, Bremen, Germany, assignor to Aktiebolaget Absorbator, Stockholm, Sweden, a Limited Company. Filed Jan. 23, 1928, Serial No. 248,790, and in Sweden July 1, 1927. 6 Claims. (Cl. 62—120.5.)

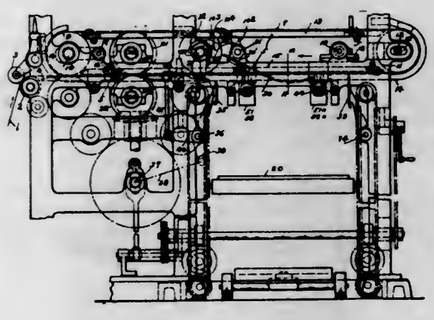


1. A refrigerating apparatus of the absorption type, characterized by a closed circulation system, comprising a boiler, a condenser, a condensate collector and an evaporator, a water collector communicating with the interior of said condensate collector positioned at a lower level with respect thereto and a condenser conduit extending from said condenser into the lower portion of said water collector.

1,808,511. FRICTION DISK. AZOR D. ROBBINS, New York, N. Y., assignor, by mesne assignments, to Mechanical Development Corporation of America, a Corporation of Delaware. Filed July 14, 1928. Serial No. 292,726. 2 Claims. (Cl. 192—113.)

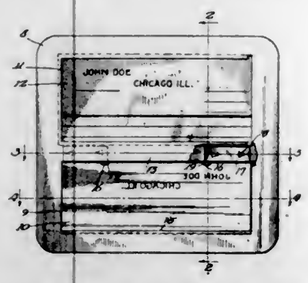
1. A new article of manufacture comprising a plurality of rings each having openings therein arranged circularly thereof and equidistantly apart, and bars for securing the rings together face to face and capable of holding them apart and each crossing an opening and adapted to permit fluid circulation through the openings and around said bars.

1,808,512. SOUND RADIATING APPARATUS. LAZARUS SHAPIRO, New York, N. Y. Filed June 16, 1928. Serial No. 285,796. 3 Claims. (Cl. 181—31.)



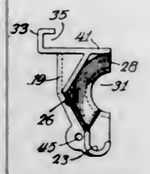
1. In a sound radiator, in combination a vibrating member, driving means therefor, a baffle surrounding said member, and a ring of soft, compressible, non-vibratory material sealing the space between the member and the baffle and having its inner diameter a little less than the maximum diameter of the member, the peripheral edge of said member engaging the inner circumferential face of the ring.

1,808,513. AMMUNITION. TAGE F. WERME, Fairfield, Conn., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Nov. 19, 1927. Serial No. 234,553. 4 Claims. (Cl. 52—6.)



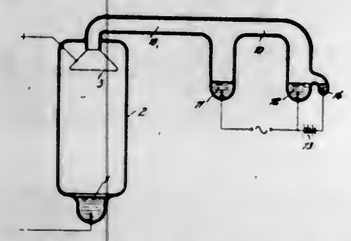
3. A small-arms cartridge containing a propellent powder in which lead dust is intermixed in a quantity sufficient to form a corrosion preventing coating in the bore of the gun in which the cartridge is fired.

1,808,514. SHEET HANDLING MECHANISM. ADOLPH M. ZUCKERMAN, New York, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 5, 1925. Serial No. 48,227. 11 Claims. (Cl. 271—79.)



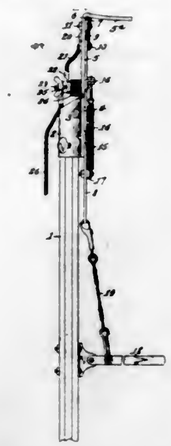
1. In a delivery, the combination of means for forwarding a web, from which a sheet is to be cut, sheet forwarding grippers arranged to take the web by its side edges, means for adjusting the grippers widthwise of the sheet path to take sheets of different widths, a receiver to which the cut sheet is forwarded by the grippers, and means for clearing the tail of a sheet from the head of a succeeding sheet.

1,808,515. PRINTING DEVICE. JAMES A. BAILEY, Chicago, Ill., assignor to Addressograph Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 11, 1928. Serial No. 298,973. 3 Claims. (Cl. 101—369.)



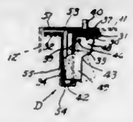
1. A printing device comprising a frame and a printing plate, said frame having a back and a mat thereon and an opening in said mat to receive said plate, a flange at one edge of said opening to receive an edge of the plate, and a hook clamp projecting from the opposite edge of said opening to engage the opposite edge of said plate.

1,808,516. ANGLE COCK HOLDER. HERBERT E. BARTSCH, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed May 31, 1930. Serial No. 458,101. 4 Claims. (Cl. 248—31.)



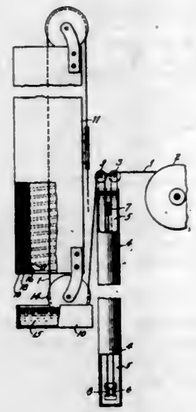
1. In an angle cock holder, a body portion divided into two sections, means for hinging said sections together, said sections having opposed channels at their upper ends for embracing a support, said sections being provided with cooperating recesses to form an opening transversely through said body portion, a U-bolt extending upwardly through vertical apertures in said sections, the curved portion of said bolt extending into said opening, and means for preventing the accidental removal of said U-bolt.

1,808,517. METAL VAPOR RECTIFIER. RUDOLF G. BERTHOLD, Berlin-Siemensstadt, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed July 11, 1928, Serial No. 291,819, and in Germany July 15, 1927. 5 Claims. (Cl. 175—354.)



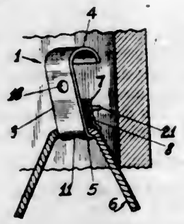
1. In a metal vapor rectifier in combination, a sieve-like anode, and means for producing a stream of vapor passing through the perforations of the anode sieve and directed away from the active anode face.

1,808,518. CURRENT COLLECTOR FOR TROLLEY WIRES. FRED BOARD, Bridgeport, Ohio. Filed Dec. 4, 1929. Serial No. 411,487. 1 Claim. (Cl. 173—273.)



A current collector of the character described comprising a pole, an upright plate carried in rigid relation to said pole, upright arms carried by said plate, said arms having angularly disposed parallel terminals for occupying overlying seated relation to an electric wire, a vertically slidable bar having its upper end disposed between said arms, brackets carried by said plate constituting guides for said bar, a contact member carried by said bar, said member having a length materially exceeding the width of said bar and being adapted to seat upon a substantial length of the underside of the wire between said terminals, retractile coil springs having their upper ends attached to one of said guide brackets and their lower ends connected to said bar whereby the latter is normally held in elevated position presenting said member in underlying engagement with the wire, and means for manually retracting said bar, said means including a lever pivoted on said pole and a connection between said lever and said bar.

1,808,519. COIN CONTROLLED MECHANISM. MARTIN BOHLIG, St. Paul, Minn., assignor of one-half to Pauline Bohlig Warner, St. Paul, Minn. Filed Aug. 2, 1928. Serial No. 297,018. 11 Claims. (Cl. 194—71.)

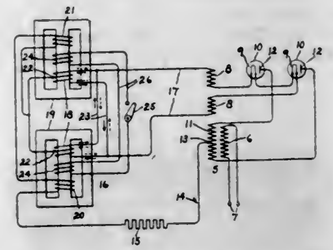


1. The combination with a reversible actuator for operating an associated device upon either stroke of the actuator, of a coin controlled mechanism for said actuator including a cage embodying two spaced walls forming a coin slide, a group of tumblers hinged to the cage, the bodies thereof being adapted to swing into and out of the coin slide, each tumbler having individual means for yieldingly holding the same with the body thereof in position within the coin slide, a dual coin embracing yoke connected with said actuator and comprising two end fingers and intermediate finger, all movable in said slide, the intermediate finger and one end finger being adapted closely to embrace the group of tumbler bodies within the coin slide, a guide for directing a tumbler retracting coin into the coin slide between the tumblers and the opposing wall, said tumblers, when retracted by a coin overreaching the group thereof, offering no obstruction to the intermediate finger, but acting progressively to enter behind said finger within the coin slide.

1,808,520. INSULATED CONDUCTOR. DAVID R. BAOBST, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1925. Serial No. 68,058. 1 Claim. (Cl. 204—1.)

The method of treating an insulated conductor which comprises immersing the conductor in a bath of cellulose acetate, causing a flow of electric current through the conductor and the bath, and subsequently in succession passing the conductor through a bath of cellulose acetate and through a drying chamber.

1,808,521. PICTURE HANGER. REUBEN BRODER, New York, N. Y. Filed Mar. 20, 1930. Serial No. 437,532. 6 Claims. (Cl. 40—145.1.)

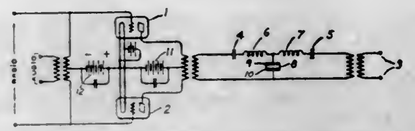


1. A picture hanger comprising a body having an upper supporting hook curved downwardly to engage a wall molding, a lower cord-supporting hook curved upwardly, the upper and lower hooks being located on the same side of the body, the said cord-supporting hook being inwardly bent and adapted to embrace and clamp a picture cord therein, and being also provided with a straight end portion having a nail-receiving aperture therein.

3. In combination, a picture hanger having an upper hook curved to engage a molding head bead, a device for covering said hanger provided with a projecting fastening element and adapted to enter an aperture in the body of said hanger, said element projecting therefrom and resting below the head bead so as to prevent accidental disengagement of the hanger from the molding.

1,808,522. PROTECTIVE REGULATING MEANS FOR ALTERNATING CURRENT RECTIFIER. WILLIAM W. BROWN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 29, 1928. Serial No. 302,779. 11 Claims. (Cl. 175—363.)

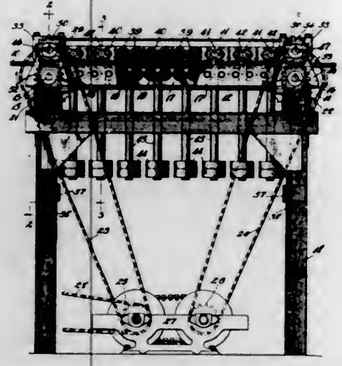
1. In an electrical apparatus, the combination with a hot cathode rectifier, of a reactance winding connected in the cathode circuit thereof and means inductively coupled with said winding for regulating the cathode excitation in response to changes in load current from said rectifier, said means being operative to render the load current stable within a certain range of loads and unstable at other loads.



2. The combination of rectifying means provided with cathode heating and anode circuits, means for controlling the impedance of said cathode heating circuit in accordance with the current in said anode circuit, and starting means operable to control said impedance independently of said anode current.

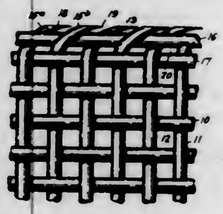
1,808,523. TROUSERS PRESSER. ALEXANDER M. BURTON, Lincoln Place, Pa. Filed June 5, 1929. Serial No. 368,487. 1 Claim. (Cl. 100—57.)

A device comprising a pair of resilient plates of relatively stiff sheet-metal, said plates being mutually hinged along one edge and adapted to receive between them a pair of trousers which are arranged for pressing, each of said plates being provided along the edge thereof which is opposite to its said hinged edge with means for interlocking the plates, one of said plates being deflected along its extent to provide an area which is inclined from the body of the plate toward said hinged edge, and one of said plates being deflected along its extent to provide an area which is inclined from the body of the plate toward its said interlocking means; the above-mentioned characteristics of said sheet-metal being such, and the inclined areas of said plates being so disposed, that in service the two plates assume, with the exception of said inclined areas, substantially a position of parallelism, and exert flattening pressure upon the trousers throughout their width, and exert a pinching effect along the creases of said trousers.



1,808,524. ELECTRICAL APPARATUS. IRVING F. BYRNES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 19, 1927. Serial No. 206,968. 3 Claims. (Cl. 178—44.)

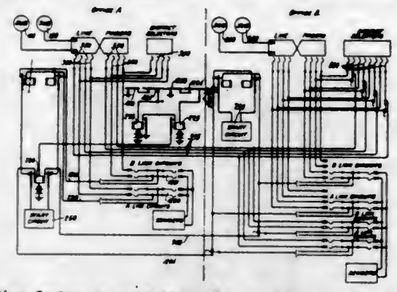
2. The combination of a circuit, a pair of inductances connected in series with said circuit and a piezo electric



element connected in shunt to said circuit at a point intermediate said inductances, said element having a free vibration period corresponding to the frequencies of the currents which are to be excluded from said circuit.

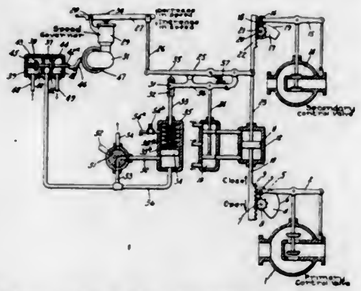
1,808,525. STRIP-FEEDING APPARATUS. CHARLES C. CADDEN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 11, 1928. Serial No. 305,168. 3 Claims. (Cl. 18—2.)

3. Strip-feeding apparatus comprising an elastic belt adapted to convey a strip longitudinally disposed thereon, means for driving the belt at a relatively fast speed at its strip-receiving position, means for driving it at a relatively slow speed at its strip-delivering position, and means operative between the two said positions for resisting the forward movement of the belt to cause it to retain a part of its stretch while it moves a substantial distance from its strip-receiving position.



1,808,526. WIRE CLOTH SELVAGE. LEGGETT C. CAMPBELL, Newark, N. J., assignor to Newark Wire Cloth Company, Newark, N. J., a Corporation of New Jersey. Filed Sept. 21, 1929. Serial No. 394,324. 16 Claims. (Cl. 245—10.)

14. A selvage for a woven wire cloth fabric comprising a series of substantially parallel wires and free end portions on said wires each bent along a line of single curvature substantially in the plane of the face of the cloth through a angle of approximately 90° and terminating at the extreme edge of the cloth to form said edge.

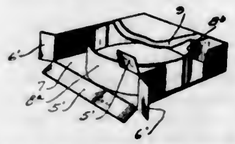


1,808,527. AUTOMATIC TELEPHONE EXCHANGE SYSTEM. WARREN W. CARPENTER, Queens Village, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1930. Serial No. 418,878. 11 Claims. (Cl. 179—18.)

1. A telephone exchange system comprising a plurality of offices, line finder-district selector trunks at each of said offices, auxiliary line finders at one office, means at another of said offices for disassociating certain district selectors thereat from their associated line finders and for associating said district selectors with the auxil-

iary line finders of said first office, and means at said first office for rendering said auxiliary line finders effective only when the line finder links thereat are all engaged.

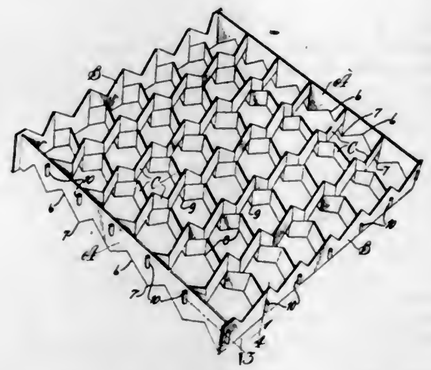
1,808,528. ELASTIC FLUID TURBINE. REED J. CAUGHEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 19, 1928. Serial No. 279,149. 14 Claims. (Cl. 137—158.)



1. The combination with an elastic fluid turbine having primary and secondary valve means, a governor, and mechanism through which the governor effects the positioning of said valve means, of means for locking said mechanism whereby the governor is prevented from effecting opening of said secondary valve means.

1,808,529. MOLDABLE MATERIAL AND PROCESS. ROY E. COLEMAN and FRANK J. GROTEN, Meriden, Conn., assignors, by mesne assignments, to The Monowatt Electric Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed June 28, 1928. Serial No. 289,073. 15 Claims. (Cl. 18—55.)

13. The process of preparing a molded article which comprises mixing a filler with a binder comprising a liquid drying oil and oil varnish ingredients miscible therewith, heating said mixture under oxidizing conditions to cause said binder to be converted to a non-fusible state and comminuting said product, mixing a heat convertible phenolic resin therewith, and molding said mixture.



1,808,530. CHEESE CONTAINER. HERBERT E. COOLEY, West Bend, Wis. Filed Apr. 15, 1929. Serial No. 355,085. 3 Claims. (Cl. 206—1.)

1. A container for drum cheese comprising an outer fiber carton having a rectangular top and bottom and

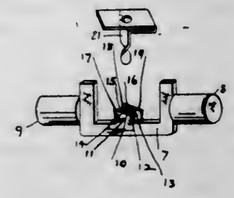
vertical sides and ends connected to each other and to the top and bottom, a rectangular bottom plate of thin sheet-like wood co-extensive with the bottom of the carton and lying flatly thereon, a ribbon of thin sheet-like wood vertically disposed within the carton with its lower edge engaging the bottom plate, said ribbon being of curved form and adapted to approximately parallel and surround the periphery of a drum of cheese set in the container and resting on said bottom plate, the upper edge of the ribbon being located above the top of the drum of cheese, and a top plate of thin sheet-like wood co-extensive with the top of the container and set on the upper edge of the ribbon and supported thereby and engaged with the underside of the top of the carton.

1,808,531. EGG CASE FILLER. AUGUSTA W. COYLE, London, Ontario, Canada, assignor to Leon Benoit, Chicago, Ill. Filed June 15, 1928. Serial No. 285,523. 10 Claims. (Cl. 217—30.)

8. An egg case filler comprising a plurality of intersecting walls each having alternate recesses and projections on its upper and lower edges, said recesses and projections being complementary in shape and size, said intersecting walls being so arranged that the apexes of the alternate recesses of intersecting walls are in point to point contact.

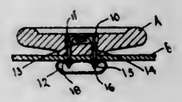
1,808,532. NEEDLE. LEONARD G. DAHM, Chicago, Ill., assignor to T. Buettner & Co. Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1929. Serial No. 388,020. 1 Claim. (Cl. 223—33.)

A needle of the kind described, relatively flat and flexible in one direction only, and provided adjacent one end with transversely spaced unconnected eyes for receiving and drawing a multiplicity of threads between the threads of a fabric without twisting of the drawn threads.



1,808,533. CABLE TYPE CONDENSER. EUGENE D. EBY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 18, 1930. Serial No. 421,830. 4 Claims. (Cl. 175—358.)

1. A combined condenser and current transformer including an insulating bushing, a cable having a conductor and a metal sheath surrounding and insulated from the conductor, said cable being in the form of a loop with its two ends extending into said bushing, the two ends of said sheath being sealed to one end of said bushing, a pair of terminals near the other end of said bushing,

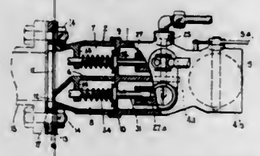


said cable conductor being connected between said terminals, and a current transformer surrounding the looped part of said cable.

1,808,534. ELECTRIC SWITCH. GEORGE HENRY ELWELL, New Haven, Conn., assignor to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Oct. 10, 1927. Serial No. 225,198. 5 Claims. (Cl. 173—355.)

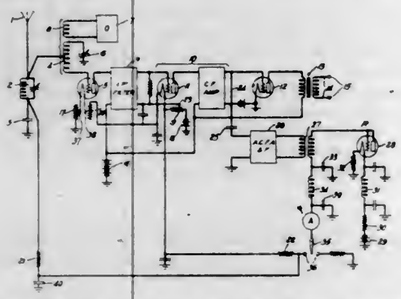
1. An electric switch comprising a movable member mounted upon a supporting base, a conductive spring fixed to the base and having an extremity adapted for an intermediate at-rest position and for a forced arc of movement in both directions obliquely across the path of the movable member, and conductive and non-conductive means carried by the movable member and engaged by the spring extremity to move the extremity into and out of contact with the conductive means.

1,808,535. BUTTON FASTENER. LAWRENCE B. ERWIN, Marblehead, Mass. Filed Sept. 26, 1930. Serial No. 484,613. 6 Claims. (Cl. 24—90.)



1. A button fastener comprising in combination an element having pointed extensions adapted to pass through the perforations of a button and to yield axially, and provided near the ends of such extensions with enlarged portions forming shoulders; a holding element having openings in axial agreement with the pointed extensions; means adapted to yield under axial pressure, to permit passage of the shoulders through the openings to engage the holder and to resist separation of the elements.

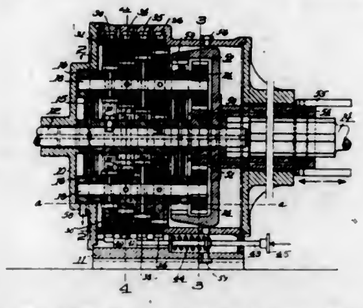
1,808,536. IMPRINT DEVICE. IRA T. FISK, North Hoosick, N. Y., assignor to Stevens & Thompson Paper Company, North Hoosick, N. Y., a Corporation of New York. Filed Jan. 19, 1929. Serial No. 333,679. 18 Claims. (Cl. 92—48.)



1. In a paper making machine, the combination with a marking roll, of means for heating said roll, a platen roll, and a dryer felt running between said rolls adapted to convey the paper into contact with the marking roll.

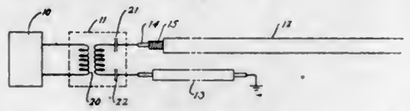
1,808,537. CARBURETOR. ORVILLE Z. FRAZIER, River Rouge, Mich., assignor of one-half to R. J. St. Louis, River Rouge, Mich. Filed Apr. 17, 1926. Serial No. 102,632. 1 Claim. (Cl. 261—41.)

A carburetor having dual mixture passages, differentially restricted, means for delivering a mixture to said passages, means in each of said passages automatically regulating the flow therethrough, a flat plate secured to said carburetor having an opening through which said passages discharge, and a flat plate pivoted in said opening in back of the first mentioned plate and successively movable across said passages to open and close the same.



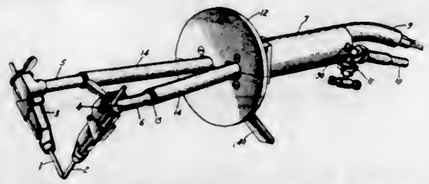
1,808,538. TRANSMISSION REGULATION. JOHN C. GABRIEL, New York, and FRANK A. HUBBARD, Lynbrook, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 11, 1929. Serial No. 345,987. 5 Claims. (Cl. 250—20.)

1. In combination a space discharge device including a hot electrode and at least one cold electrode, a circuit through which heating current is supplied to said hot electrode, means for deriving from said heating circuit a normally fixed potential and applying it to said cold electrode, means in the heating circuit for changing the potential difference between said hot and cold electrodes while maintaining constant said normally fixed potential and means actuated by the output current of said space discharge device for varying said normally fixed potential.



1,808,539. SPEED CHANGING TRANSMISSION MECHANISM. ERNST GESSNER, Worcester, Mass. Filed Jan. 31, 1930. Serial No. 424,963. 10 Claims. (Cl. 74—34.)

1. Speed changing transmission mechanism comprising a driving shaft, a driven shaft, a bearing frame rotatable with said driving shaft, a plurality of short shafts mounted in bearings in said frame and freely rotatable therein, a series of gears fixed on each short shaft, ring gears

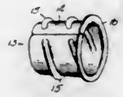


meshing therewith, gear connections from said short shafts to said driven shaft, and means to positively rotate a selected ring gear as said driving shaft is rotated.

1,808,540. SIGNALING SYSTEM. JOHN J. GILBERT, Douglaston, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 31, 1929. Serial No. 367,489. 4 Claims. (Cl. 178—63.)

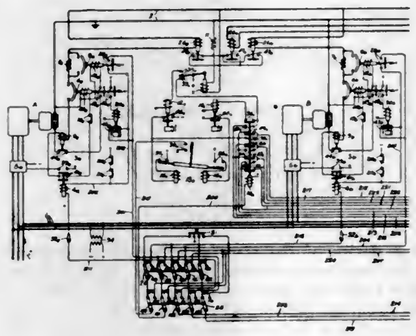
1. A continuously loaded signaling conductor having a magnetic loading with a desired magnetic property which is impaired by disturbing current impulses in said conductor excessively strong as compared with signaling current impulses and a network associated with a terminal of said cable for passing signaling current impulses and having a high impedance to disturbing current impulses of frequencies below those of the signaling current impulses said impedance being high enough to prevent the impairment of said magnetic property by said distorting impulses.

1,808,541. WELDING TORCH. ROBERT T. GILLETTE, Schenectady, and EDWARD S. WEBSTER, Troy, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Sept. 12, 1927. Serial No. 218,893. 6 Claims. (Cl. 219—8.)



1. A welding torch comprising a plurality of electrode holders, a spring member for independently supporting each of said electrode holders, and means movable relatively to and acting on each of said spring members for deflecting them relatively to one another to move said electrode holders relative to one another.

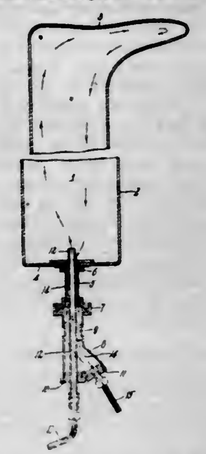
1,808,542. THREADED BUSHING FOR ARMORED CABLE. HENRY GINSBURG, New York, N. Y. Filed Apr. 5, 1929. Serial No. 352,639. 1 Claim. (Cl. 247—43.)



In combination, an armored electric cable comprising insulated conductors and a spirally wound protective

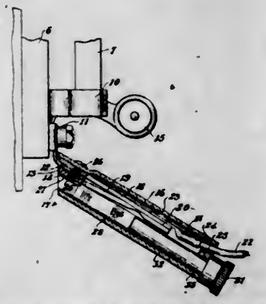
metal covering, the latter being formed of a metal strip which is substantially concave in transverse section on its face adjacent the insulated conductors, whereby the winding of the strip forms a spiral interior thread in the covering, and a threaded bushing to screw into the said interior thread of the covering between the latter and

the insulated conductors, said bushing comprising a longitudinally divided slightly tapered cylindrical member having an exterior spiral thread to engage the spiral thread in the covering and a flanged end to abut the end of the covering and form a protection for the insulation of the conductors.



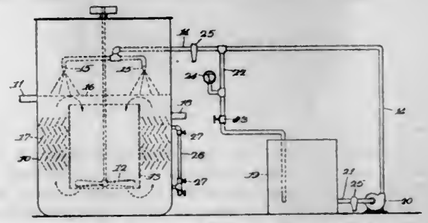
1,808,543. AUTOMATIC SWITCHING SYSTEM. WILLIAM N. GITTINGS, Upper Darby, and HAROLD T. SEELEY, Yeadon, Pa., assignors to General Electric Company, a Corporation of New York. Filed Mar. 6, 1930. Serial No. 433,836. 16 Claims. (Cl. 171—118.)

2. In combination, a multiple unit station, automatic switching means associated with each unit for placing it in operation, starting means associated with each automatic switching means for effecting the operation thereof, a plurality of master elements, timing means associated with each master element for effecting the operation of a starting means after the associated master element has remained in a predetermined position for a predetermined time, said timing means being normally associated respectively with different starting means so that each master element normally controls a different starting means, means responsive to a predetermined abnormal condition of said station for effecting independently of the positions of said master elements the shutting down of all the units in operation, and means for effecting, when said abnormal condition is restored to normal, the immediate operation of the automatic switching means associated with all of the units which were shut down in response to said predetermined abnormal condition to effect the operation of the associated units.



1,808,544. BOOT TREE. ALFRED A. GLIDDEN and THOMAS M. KNOWLAND, Watertown, and HERBERT L. DAVIS, Walpole, Mass., assignors, by mesne assignments, to Hood Rubber Company, Inc., Wilmington, Del., a Corporation of Delaware. Filed Aug. 22, 1927. Serial No. 214,622. 1 Claim. (Cl. 18—46.)

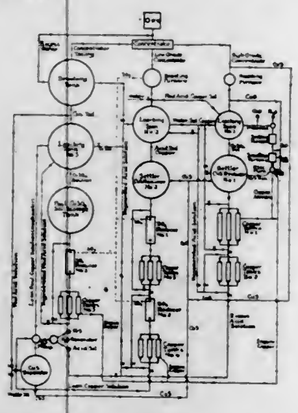
A hollow boot tree comprising a wall comprising rubber and constituting substantially the entire work-receiving portion of the tree, the said wall alone being of such stiffness as to sustain the shape of the tree against the force



of the operations of building a boot thereon but of such stretchability as to serve as an expansible core in molding the boot under internal fluid pressure.

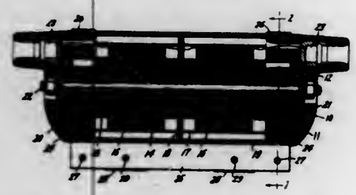
1,808,545. TEST CLIP. RICHARD W. GRACE, Canton, Ohio, assignor to The Superior Switchboard & Devices Company, Canton, Ohio, a Corporation of Ohio. Filed July 18, 1928. Serial No. 293,547. 3 Claims. (Cl. 173—273.)

1. A test clip including a tubular casing, a pair of normally open clamping jaws within one end portion of the casing for receiving a test ear, and a manually operable plunger slidable within the casing and protruding from the other end thereof and engaging the casing and one of the jaws for clamping them upon a test ear.



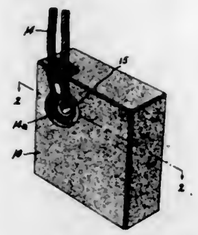
1,808,546. PROCESS AND MEANS FOR CONTROLLING THE APPLICATION OF REAGENTS TO SOLUTIONS. WALTON C. GRAHAM, Denver, Colo., assignor to Gilchrist & Company, a Corporation of Delaware. Filed July 2, 1925. Serial No. 41,222. 3 Claims. (Cl. 127—47.)

2. A method of treating a liquid with a reagent comprising recirculating a body of the liquid continuously,



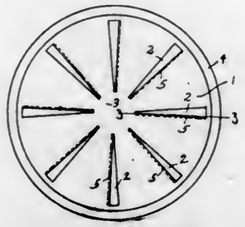
adding fresh liquid to and withdrawing treated liquid from said body continuously, spraying the reagent continuously onto a large surface of said body always at the same points in the cycle or recirculation, continuously segregating average samples of the liquid under treatment and conducting them past a point of observation and returning them thereafter to the main body of the liquid, continuously pumping a quantity of reagent from a reagent source and spraying a portion of it onto said surface, regulating the pressure of the reagent between the pump and the spray and hence varying the amount sprayed by varying a restricted return flow of the reagent from the delivery side of the pump back to said source, the amount of said pressure being varied in accordance with a characteristic of the liquid flowing past said point of observation and simultaneously maintaining the speed of recirculation of the main body of juice to aid the upbuilding of the flocs and prevent deflocculation by too rapid agitation.

1,808,547. COPPER EXTRACTION PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed Jan. 7, 1927, Serial No. 159,671. Renewed Oct. 28, 1930. 23 Claims. (Cl. 204—15.)



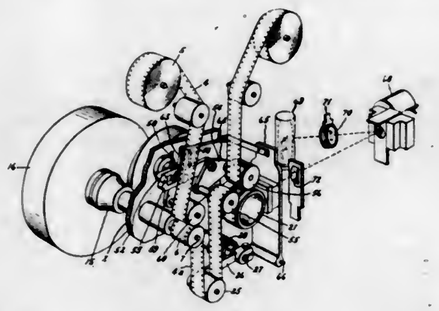
6. A process comprising, treating copper ore containing rare or precious metals to separate a high grade and a low grade concentrate, separately roasting and leaching the high grade and the low grade concentrate, and concentrating the residual metal values in the high grade concentrate residue by fusion.

1,808,548. INDUCTION COIL. LEONARD GRIFFITHS and CECIL J. MORTON, Coventry, England, assignors to General Electric Company, a Corporation of New York. Filed Apr. 15, 1930, Serial No. 444,570, and in Great Britain Nov. 29, 1929. 4 Claims. (Cl. 171—242.)



1. An induction coil having a U-shaped magnetic core, primary and secondary windings arranged between the arms of said U-shaped core, and a magnetic core member extending across the arms of said U-shaped core and adjustable about the axis of said windings to vary the time constant thereof.

1,808,549. BRUSH FOR DYNAMO-ELECTRIC MACHINES. WILLIAM H. HARDMAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 15, 1927. Serial No. 226,473. 4 Claims. (Cl. 171—326.)

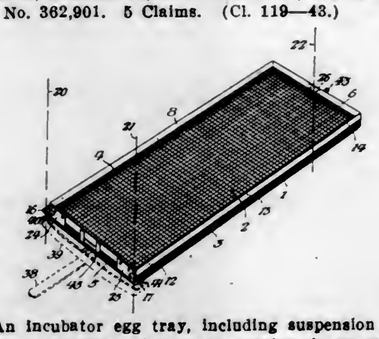


1. In combination, a brush having an opening therein, a flexible conductor, and means extending through said opening for securing said conductor to said brush including a tubular rivet and a spring on said rivet.

1,808,550. HEAT DISTRIBUTOR FOR COOK STOVES. CHARLES A. HARPMAN, Youngstown, Ohio. Filed Apr. 18, 1930. Serial No. 445,489. 1 Claim. (Cl. 126—215.)

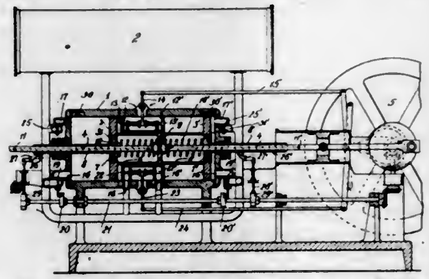
In a device of the class described, a body member, a base for said body member, said body member having the form of a concave disk, a plurality of radial openings, said radial openings starting at a point adjacent to a central portion of said body member and enlarging as they extend to points adjacent to an outer circumference of said body member, a depended deflecting fin formed from material cut out from said openings, a detachable reducing ring functioning with said body member, a detachable pad positioned above said detachable reducing ring.

1,808,551. FILM DRIVING. CHARLES L. HEISLER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 11, 1927. Serial No. 212,349. 9 Claims. (Cl. 271—2.3.)



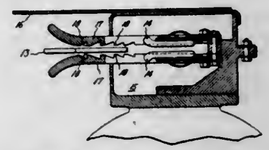
1. The method of moving the film in a sound recording or in a sound reproducing apparatus having a common driving member and a sprocket drive and a belt-type drive connected therewith and arranged in successive engagement with the film which comprises operating the sprocket drive at the same angular speed as the driving member independent of the load and varying the connection of the driving member with the belt-type drive in accordance with the length of film between the two drives.

1,808,552. INCUBATOR EGG TRAY LOADER. WILLIAM FINNEY HILLPOT, Frenchtown, N. J. Filed Mar. 24, 1928. Serial No. 264,321. 5 Claims. (Cl. 119—35.)



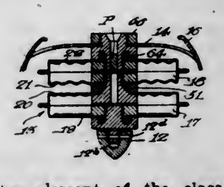
1. An incubator egg tray loader, including suspension means affording respective points of suspension, in spaced relation, adapted to detachably fit in openings in respective flexible suspension connectors; and means arranged to rectilinearly limit the movement of a tray upon said loader, including a guide rail; whereby said loader is adapted to temporarily support a tray while guiding it to and from engagement with said suspension connectors.

1,808,553. INCUBATOR EGG TRAY. WILLIAM FINNEY HILLPOT, Frenchtown, N. J. Filed May 14, 1929. Serial No. 362,901. 5 Claims. (Cl. 119—43.)



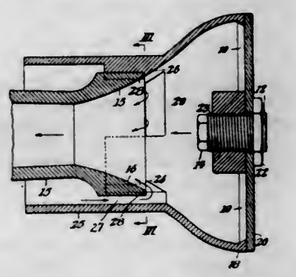
1. An incubator egg tray, including suspension means affording respective points of suspension, in spaced relation, adapted to detachably fit in openings in respective flexible suspension connectors; and guiding means on said tray arranged to limit to rectilinear reciprocation the movement of said tray upon a loader guide rail; whereby said tray is adapted to be temporarily supported and guided, upon a loader, to and from engagement with said suspension connectors.

1,808,554. AIR COMPRESSOR. LAWRENCE H. HYATT, New York, N. Y. Filed Aug. 23, 1927. Serial No. 214,801. 7 Claims. (Cl. 230—46.)



1. An air compressor comprising the combination of a tank, a compression cylinder, a piston in the cylinder, an intake valve, a discharge valve leading to the tank and means for introducing air at tank pressure into the cylinder at the termination of the intake stroke.

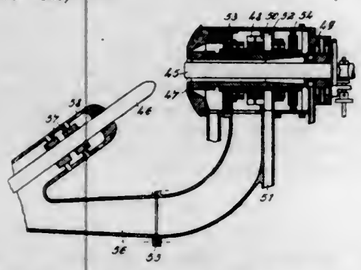
1,808,555. ELECTRIC SWITCH. EIKICHI ISHIMARU, Tokyofu, Japan, assignor to General Electric Company, a Corporation of New York. Filed Aug. 8, 1927, Serial No. 211,399, and in Japan Oct. 26, 1926. 5 Claims. (Cl. 200—166.)



1. A switch comprising a movable contact, a cooperating fixed contact, and means for removing ice and the like from said movable contact on movement thereof to the switch closed position comprising spaced members having opposed faces provided with projections between which the movable contact is movable before engaging the fixed contact, the outer ends of said members diverging to form a guide for said movable contact.

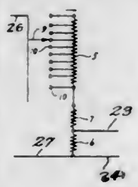
1,808,556. VALVE. WILLIAM T. JONES, Newtonville, Mass., assignor, by mesne assignments, to Barnes & Jones, Inc., a Corporation of Massachusetts. Filed Jan. 26, 1928. Serial No. 249,599. 8 Claims. (Cl. 297—9.)

1. An actuator element of the class described, said actuator element having an expansible cell comprising at least one flexible metallic annulus and a central hub member, said hub member having parts which clamp the inner portion of the annulus between them, at least one of said hub parts having a chamber in which the edge of the annulus is disposed, and packing material disposed in said chamber to prevent leakage of fluid.



1,808,557. GAS BOILER. THOMSON KING, Pottstown, and DANIEL G. BURKERT, Boyertown, Pa., assignors to The Peerless Heater Company, Boyertown, Pa., a Corporation of Pennsylvania. Filed May 21, 1928. Serial No. 279,532. 6 Claims. (Cl. 158—118.)

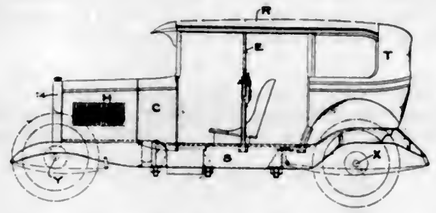
1. In a gaseous fuel mixer; the combination with a burner; of a combustion chamber, secluding said burner from the outer atmosphere; a gas orifice nozzle arranged to direct gas in a stream; a mixer casing inclosing said



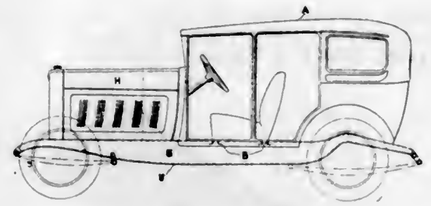
nozzle and forming a mixing chamber having an outlet for said mixture; and means for forming an air passage, arranged to introduce primary air to said mixing chamber in a direction opposite to said gas stream, and between said stream and outlet; whereby mixture of said gas and air is effected before reaching said outlet; wherein said mixer casing is located outside of said combustion chamber, but the primary air is drawn therein solely from said combustion chamber.

1,808,558. ELECTRIC ARC LAMP. OTTO KAELL, Berlin-Dahlem, and HANS GERDIEN, Berlin-Grunewald, Germany, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Aug. 17, 1927, Serial No. 213,602, and in Germany July 6, 1926. 9 Claims. (Cl. 176—66.)

2. In an arc lamp in combination two electrodes and holders therefor, circuits for connecting said electrodes to a current source, a motor, a tube spaced around the positive electrode and forming the rotor shaft for said motor, and means for supplying cooling liquid into the space between said positive electrode and said tube.



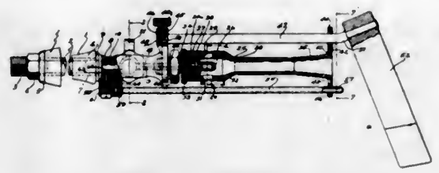
1,808,559. ELECTRICAL SYSTEM FOR VOLTAGE REGULATION. JOHANNES KUBLER and ARNOLD HALLER, Baden, Switzerland. Filed Feb. 16, 1929, Serial No. 340,442, and in Germany Jan. 27, 1928. 3 Claims. (Cl. 171—119.)



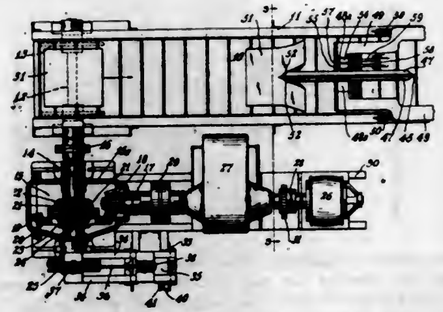
1. In an electrical system of the character described, electrical-supply leads, leads for connection to a load, transformer apparatus comprising primary windings normally connected in series relation with respect to each other across said supply leads and a secondary winding connected permanently across said load leads independently of said primary windings, one of said primary windings being variable, and connections for connection and disconnection in a predetermined sequence in said system to reverse the connection of the variable primary winding in said system while maintaining an electrical circuit between said supply leads through one of said primary windings.

1,808,560. PRESSED METAL VEHICLE BODY. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 3, 1927. Serial No. 158,487. 39 Claims. (Cl. 296—28.)

1. A pressed metal underframe for an automotive vehicle comprising main side sills interconnected by cross braces, which sills have their rear ends deflected inwardly and are adapted in their inward positions to have vehicle wheels directly sprung therefrom, and means projected inwardly of the side sills and secured thereto to support the forward ends of the springs, whereby the springs may be arranged in vertical planes parallel to the longitudinal axis of the underframe.

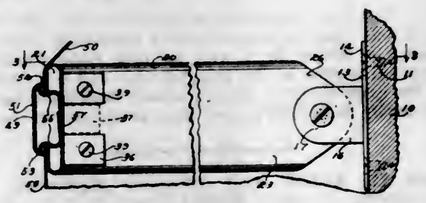


1,808,561. PRESSED METAL VEHICLE BODY. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1927. Serial No. 159,827. 37 Claims. (Cl. 296—28.)



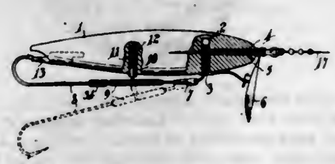
1. A vehicle body wall unit comprising a sheet metal stamping forming body paneling and having a closure opening within the margins thereof, the edges of said stamping surrounding the opening being flanged inwardly to a depth sufficient to form an endless framing for said closure opening including vertical and horizontal portions of the main body framing.

1,808,562. SOLDERING IRON OR THE LIKE. EDUARD LÜTGERT, Sheboygan, Wis., assignor, by mesne assignments, to Air Reduction Sales Company, New York, N. Y., a Corporation of Delaware. Filed May 14, 1928. Serial No. 277,410. 9 Claims. (Cl. 158—26.)



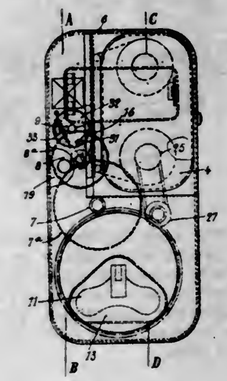
1. A device of the character described comprising a valve casing having an internally threaded outlet opening formed with a socket at its inner end, a nipple having a head at its inner end fitting in said socket, a coupling sleeve loosely mounted on the nipple, abutting the head and threadedly connected with the outer opening of the valve casing, said nipple having its outer end threaded, a gas injector tip threadedly connected to the nipple and a mixing chamber receiving and threadedly connected to the gas injector tip.

1,808,563. LOAD-LIMITING METHOD AND APPARATUS. ROBERT MAYNE, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1928. Serial No. 311,406. 14 Claims. (Cl. 192—125.)



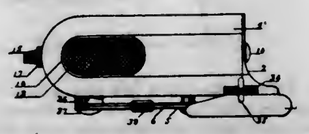
1. The method of limiting the load imposed upon a driving mechanism by a driven mechanism which comprises interposing in a system of forces including the force of the driving mechanism and the resistance of the driven mechanism, a normally statical resistance of such magnitude as to be overcome by the force of the driving mechanism when the resistance of the driven mechanism attains a determinate magnitude, the said statical resistance being so interposed in the system as to fulcrum the force of the driving mechanism for driving the driven mechanism by leverage of the third order.

1,808,564. AWNING. VIRGIL M. MCCONNELL, Jamestown, N. Y. Filed Oct. 18, 1929. Serial No. 400,559. 6 Claims. (Cl. 156—42.)



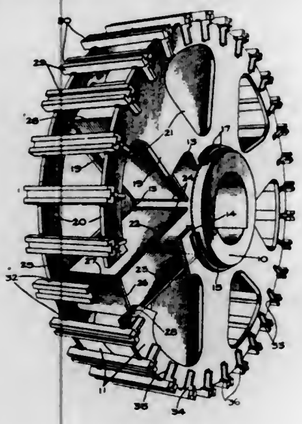
4. In an awning, a frame having front and side rails, inturned flanges defining a longitudinal opening in each of said rails, means on said front rail engaging said side rails, awning cloth mounted on and covering the openings in said rails, clips, spring flanges defining the longitudinal edges of said clips, said clip flanges being adapted to engage said rail flanges whereby to secure said cloth between said rail and clip flanges.

1,808,565. FISHING LURE. FRANK MCLAUGHLIN, Toronto, Ontario, Canada, assignor, by mesne assignments, to William Crawford Goffatt, Toronto, Ontario, Canada. Filed Apr. 11, 1929. Serial No. 354,235. 8 Claims. (Cl. 43—35.)



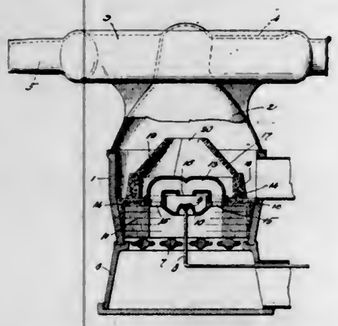
1. In a fishing bait, the combination of a body; a hook having its shank swingably and rotatably mounted relative to the body whereby on the hook rotating about the axis of its shank the point of the hook may occupy a position shielded by the body or a position spaced from the body; and means for normally retaining the hook with its point in the shielded position, the hook and body being relatively displaceable to release the hook for rotation.

1,808,566. POCKET VIEW-TAKING CINEMATOGRAPHIC CAMERA WITH SPRING-MOTOR. ANDRÉ NOËL MERLE, Vincennes, France, assignor to Pathé Cinéma, Anciens Établissements Pathé Frères, Paris, France. Filed Apr. 25, 1929, Serial No. 357,892, and in France May 7, 1928. 3 Claims. (Cl. 88—17.)



3. In a cinematographic camera, in combination a spring motor, a film case containing a winding reel and an unwinding reel, said spring motor and said reels being placed edge to edge and substantially in line relatively to each other, two main plates disposed on either side of said spring motor and film case and adapted to support said two members, a box only slightly wider than one of said two members and adapted to contain said plates with said members, and, disposed between said main plates: a shutter mechanism, a claw mechanism and an objective lens.

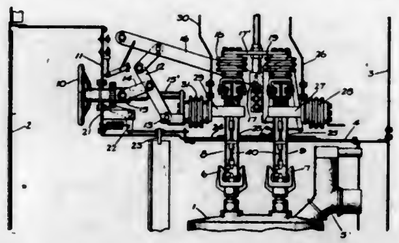
1,808,567. ENVELOPE SEALING DEVICE. CHARLES A. MEZGER, Brooklyn, N. Y. Filed June 10, 1930. Serial No. 460,146. 5 Claims. (Cl. 120—6.)



1. A device for moistening and sealing envelopes comprising a casing enclosing a collapsible reservoir having inlet and exhaust valves, the reservoir adapted to be filled with a moistening liquid by alternately compressing and releasing the sides of the same through apertures in the casing, a moistening member connected to and adapted to be supplied with liquid from the reservoir, the said member having a groove depressed in a surface of same forming a shallow basin for maintaining a supply of liquid from the reservoir, a control member having a tensional contact with the surface surrounding the grooved outlet adapted to form a normal seal for same, means for regulating the tension of the contacting surfaces, and a closing member adapted to press the moistened flap into sealed contact with the envelope.

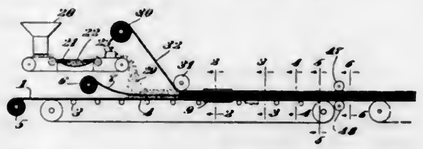
1,808,568. ROTOR FOR DYNAMO ELECTRIC MACHINES. HARRY S. PAGE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 12, 1929. Serial No. 370,200. 4 Claims. (Cl. 171—252.)

1. A fabricated rotor for dynamo-electric machines including disks spaced apart axially of the rotor, means including radially extending spaced plates for securing said disks together, one of said plates having a portion extending peripherally of said disks and attached to the other plate for reinforcing the rotor, and a core structure carried by said disks.



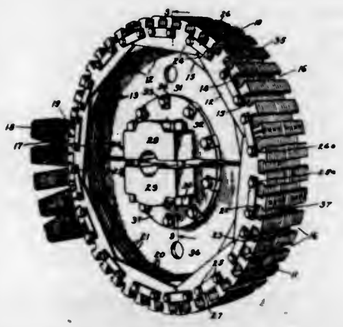
1,808,569. OIL BURNER. ANTOINE P. PLAUT, Flint, Mich. Filed Jan. 12, 1925. Serial No. 1,756. 2 Claims. (Cl. 158—4.)

1. In a furnace having a fire box, a hearth therein, a combustion chamber on said hearth forming a flame enclosure having a base of substantial area, said enclosure extending upwardly from said base and narrowing to an outlet directed towards the upper part of said furnace, a mixing device open to said chamber and substantially closing the bottom of the chamber, oil supply means entering said mixing device, an air inlet device open to said mixing device and closed to said chamber, whereby air other than that directed from the mixing device into said combustion chamber is excluded from the combustion chamber.



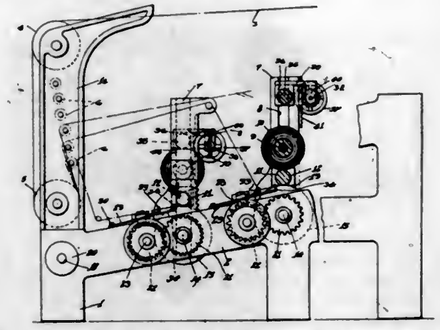
1,808,570. DISCONNECTING DEVICE. JAMES H. POWERS, Yeadon, Pa., assignor to General Electric Company, a Corporation of New York. Filed Mar. 26, 1930. Serial No. 439,195. 7 Claims. (Cl. 200—163.)

1. A disconnecting device comprising operating means, a movable contact adapted to be moved into closed and open circuit positions thereby, said movable contact having a lost-motion connection with said operating means, cam structure fixed with respect to said operating means, and a stationary contact for coacting with said movable contact, said operating means being movable through said



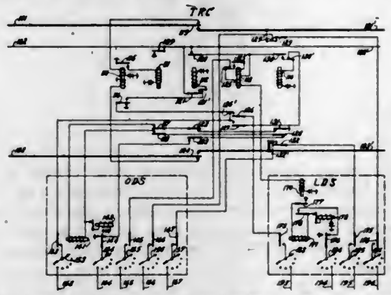
lost-motion connection with respect to the movable contact for causing the cam structure to force the movable contact into firm contacting engagement with the fixed contact prior to opening and closing movement of the movable contact.

1,808,571. REENFORCED WALL BOARD. HARRY C. RAYNES, Portsmouth, N. H., assignor, by mesne assignments, to Bemis Industries, Incorporated, Boston, Mass., a Corporation of Delaware. Filed Nov. 1, 1926. Serial No. 145,484. 4 Claims. (Cl. 154—45.9.)



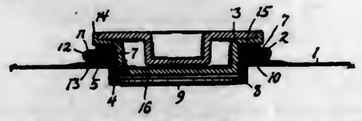
1. Wall board comprising a frangible slab, cover sheets of fibrous material thereon, and a reinforcing strip comprising a fibrous sheet with an edge embedded in the marginal portion of the frangible slab and lying parallel to the cover sheets, a portion of said strip being inclined outwardly to lie near a cover sheet at the edge of the slab.

1,808,572. ROTOR FOR DYNAMO ELECTRIC MACHINES. HENRY G. REIST, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 22, 1928. Serial No. 327,817. 5 Claims. (Cl. 171—252.)



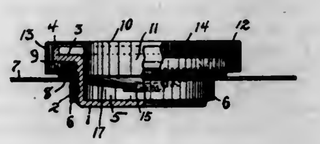
1. A rotor for dynamo-electric machines comprising separable sectors, each sector including staggered plates interleaved with the plates of the adjacent sector to form a joint therewith, means for securing said plates together, a hub member having parts corresponding to said sectors, means for securing said sectors to their respective parts of said hub member, and pole pieces carried by said sectors.

1,808,573. MACHINE FOR FORMING YARN PACKAGES. ARTHUR L. REMINGTON and ARMON J. JAVERY, Worcester, Mass., assignors to Warp Compressing Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 21, 1928. Serial No. 307,365. 7 Claims. (Cl. 242—17.)



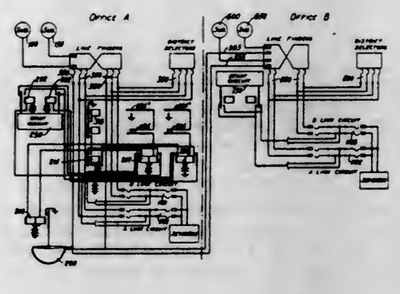
1. In a machine of the class described, the combination with a rotatable shaft adapted for vertical movement, a rotatably driven roll supported only at its ends, with its upper surface supporting said shaft, means for conducting yarn around the free under surface of said roll to the surface of said shaft, and means for imparting a traverse to said yarn, whereby the pressure between said shaft and said roll serves to hold the yarn at the point at which it is laid by said traversing means, the upward movement of said shaft as the yarn package wound thereon increases in diameter, being independent of said roll and of said traversing means.

1,808,574. TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Nov. 10, 1926, Serial No. 147,418. Renewed Aug. 11, 1930. 50 Claims. (Cl. 179—18.)



1. In a telephone system, two offices, two register senders in one of the offices, and means for utilizing both said register senders to control the establishment of a single connection between a calling line in one office and a called line in other office.

1,808,575. SEAL FOR BUNG FIXTURES OF CONTAINERS. IRVIN H. RIEKE, Auburn, Ind., assignor to Rieke Metal Products Corporation, a Corporation of Indiana. Filed Oct. 30, 1929. Serial No. 403,519. 6 Claims. (Cl. 220—39.)

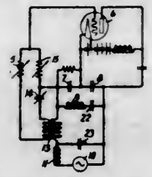


1. In an appliance of the class described, an assemblage, consisting of a bung ring having an external flange at one end, a gasket disposed on the flanged end of the ring, and a seal in the form of a cup into which the end of the ring opposite its flange extends and is closed thereby, said cup having a flange at its top provided with an annular pocket into which the outer marginal portions of the flange of the ring and the gasket extend and by which the assembled parts are initially held together.

1,808,576. BUNG AND SEALING MEANS. IRVIN H. RIEKE, Auburn, Ind., assignor to Rieke Metal Products Corporation, a Corporation of Indiana. Filed Mar. 31, 1930. Serial No. 440,257. 5 Claims. (Cl. 220—39.)

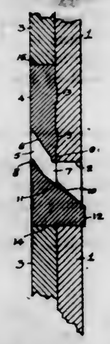
1. In a bung for a container and sealing means therefor, the combination of a cup shaped bung having a wrenchhead and a circular chamber opening through said wrenchhead, and a sealing means comprising a fragile shell having a cup shaped to fit telescopically in said chamber and provided with a cowl at its top for encasing said wrenchhead when the sealing means is applied to said bung, and an anchor attached to the bottom of the shell cup having jaws that engage the wall of the bung cup and lock the sealing means in place.

1,808,577. AUTOMATIC TELEPHONE EXCHANGE SYSTEM. FREDERICK J. SCUDDER, Queens Village, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 11, 1930. Serial No. 420,072. 14 Claims. (Cl. 179—18.)



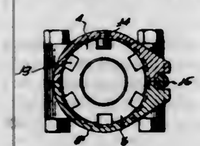
1. A telephone exchange system comprising a plurality of offices, call distributing and call extending equipment at each office, an overflow office common to said offices, interoffice trunks appearing as calling lines at said overflow office and terminating in call distributing equipment at said other offices, and means at each of said other offices for diverting calls originating thereat over said line finders and trunks to said overflow office.

1,808,578. RUBBER COMPOSITION AND METHOD OF PRESERVING RUBBER. WALDO L. SEMON, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1930. Serial No. 421,597. 17 Claims. (Cl. 18—50.)



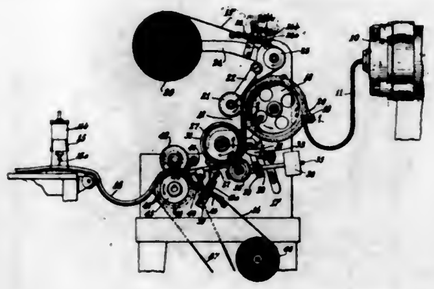
1. The method of preserving rubber which comprises treating rubber with a halogen substituted diarylamine.

1,808,579. GENERATION OF ELECTRIC CURRENTS. LEON J. SIVIAN, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1926. Serial No. 105,400. 16 Claims. (Cl. 250—36.)



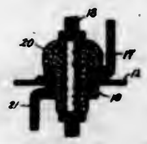
1. In a band frequency oscillation generator, an oscillation circuit for determining the frequency of the current produced by said generator, said circuit including an inductance having a fixed magnetic circuit comprising solid magnetic material, and means for continuously varying the permeability of said material so as to cause the frequency of said generator current to correspondingly continuously vary.

1,808,580. RAZOR BLADE DISCARD. LEON W. SLACK, Trenton, N. J., assignor, by mesne assignments, to Razor Blade Tile, Incorporated. Filed Nov. 5, 1928. Serial No. 317,239. 4 Claims. (Cl. 72—18.)



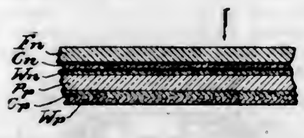
1. A tile adapted to receive discarded razor blades comprising a beveled rearwardly extending foot, beveled faces extending across and below an opening formed through the tiling, and an inclined bevel leading from the opening onto the rearwardly extending foot.

1,808,581. CONDUIT TERMINAL. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1929. Serial No. 344,646. 4 Claims. (Cl. 247—25.)



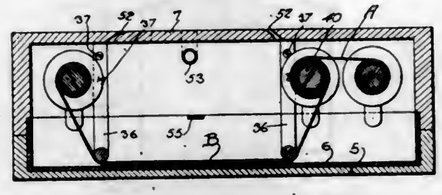
1. In a device of the character described, the combination with an apertured part, of a packing device associated with the aperture of said part including a packing member screwthreaded into said aperture and provided with an exterior annular flange provided with a peripheral opening, a collar adapted to be secured on a conduit, means on said collar and engaging said flange for axially fixing said collar and packing member, means on said collar and engaging said peripheral opening for angularly fixing said collar and packing member, and an engagement between said collar and said apertured part angularly fixing the same.

1,808,582. METHOD OF MAKING WINDOW GUIDE CHANNELS. JOSEPH I. TAYLOR, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 29, 1928. Serial No. 257,941. 4 Claims. (Cl. 154—2.)



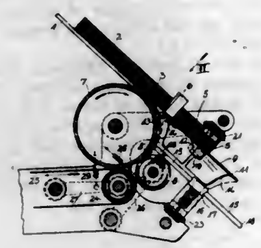
1. The method of making channeled strip material which comprises forming a channel-strip of unvulcanized rubber of widely open but complex cross-sectional shape, applying cover-material to said strip by progression lengthwise of the strip while it is in such shape, and thereafter shaping the covered strip to its ultimate form by progression lengthwise of the strip.

1,808,583. INCASED ELECTRICAL APPARATUS. EDWARD D. TREANOR, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 4, 1930. Serial No. 433,168. 5 Claims. (Cl. 173—318.)



2. Electrical apparatus enclosed in a casing of magnetic material, a pair of outside terminals, and a pair of conductors extending from said apparatus through an opening in said casing to said terminals, one of said conductors being in contact with the casing structure and connected to ground.

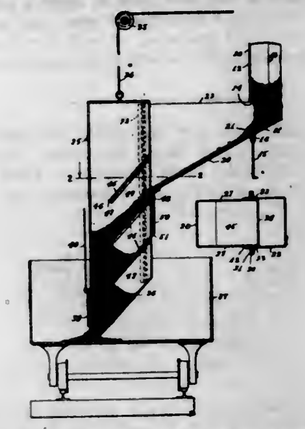
1,808,584. COLOR PHOTOGRAPHY. LEONARD T. TROLAND, Malden, Mass., assignor to Comstock & Wescott, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Sept. 9, 1921. Serial No. 499,425. 234 Claims. (Cl. 95—2.)



1. A sensitized element for use in color photography comprising an emulsion which is sensitive to complemental colors at different depths respectively.

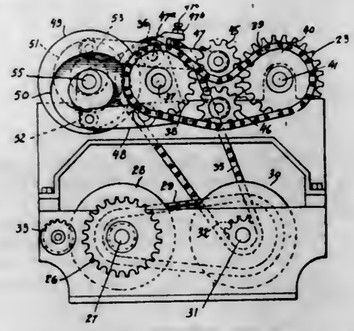
1,808,585. APPARATUS FOR DEVELOPING AND PRINTING PICTURES. EUGENE WASYLENKO, Chester, Pa. Filed Sept. 26, 1929. Serial No. 395,441. 6 Claims. (Cl. 95—90.5.)

1. In a device for preparing and printing films, comprising a container adapted for holding a developing fluid, a cover for the receptacle having transverse openings in its upper wall, and means for directing a film negative into close engagement with the bottom of the receptacle or through the transverse openings in the cover.



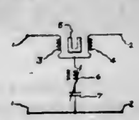
1,808,586. APPARATUS FOR THE WITHDRAWAL OF SHEETS OR THE LIKE. ALFRED WINKLER and MAX DÜNNEBIER, Neuwied, Germany. Filed Aug. 31, 1929, Serial No. 389,730, and in Germany Sept. 1, 1928. 6 Claims. (Cl. 271—23.)

1. Apparatus whereby the lowermost sheet is withdrawn in a diagonal direction from a stock of single or folded sheets or the like, comprising means for supporting the stack in an inclined position with one corner of the stack at the foot of the incline, means for forming a recess between the lowermost sheet and the one next thereto, a tongue adapted to penetrate said recess to bend down the lowermost sheet at the said corner of the stack, a relatively large main roller mounted beneath the stack, a relatively small counter-roller cooperating therewith and recessed centrally of its length to receive the corner of the sheet, and a rotary bell-shaped member carrying said tongue and mounted on an axis substantially parallel to the perpendicular axis of the stack and having a curved peripheral surface adapted to lie close to and in concentric relation to the peripheral surface of the main roller to bring the sheet into close and uniform contact with the main roller and to insert the corner of the sheet into the said recess in the counter-roller.



1,808,587. COAL LOADING METHOD AND APPARATUS. HENRY ADAMS, Plainfield, N. J. Filed Jan. 19, 1927. Serial No. 162,134. 24 Claims. (Cl. 193—32.)

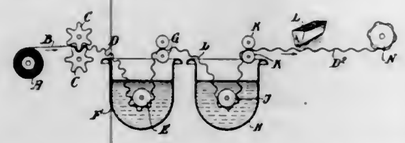
1. In combination, a delivery means and an upright chute associated with, and relatively adjustable to, each other; said chute including means entirely fixedly mounted thereon admitting material from said delivery means



into the chute at various positions of adjustment and preventing any material from flowing out of said chute intermediately thereof.

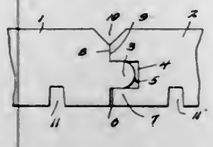
1,808,588. FEEDING AND SPACING DEVICE. HOWARD G. ALLEN, Niagara Falls, N. Y., assignor to H. R. Bliss Company, Inc., Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 2, 1928. Serial No. 296,889. 16 Claims. (Cl. 1—11.)

1. The combination with a wire stitching machine, of means having normally a uniform movement for feeding articles to be stitched past the stitching mechanism, and means acting in unison with the stitching mechanism and acting upon the feeding means so as to translate the feeding movement into an intermittent movement with periods of rest in the movement, the stitching machine and the said means acting in unison therewith being so timed that the stitching mechanism actuates during the periods of rest of the intermittent movement.



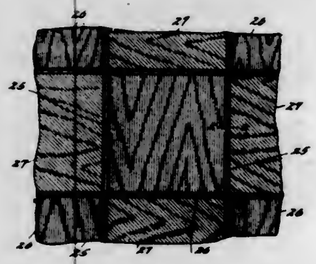
1,808,589. ELECTRICAL FILTER. RALPH D. AMSDEN, Lynn, Mass., assignor to General Electrical Company, a Corporation of New York. Filed Dec. 30, 1927. Serial No. 243,706. 3 Claims. (Cl. 178—44.)

3. An inductive filter for electrical circuits adapted to be inserted between a source of current and a load circuit and including a pair of inductively coupled coils, a common



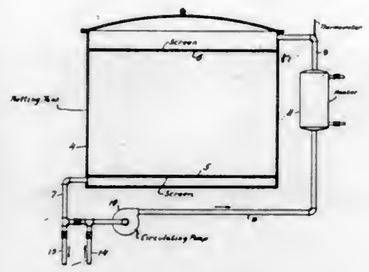
core of said coils, circuit leads connecting said coils in series relation, a coil and a condenser arranged to provide a shunt connection with said leads to apply a neutralizing voltage to one of said first named coils, and means connected in shunt with the other of said first named coils for rendering said filter insensitive to load current variations.

1,808,590. METHOD OF MANUFACTURING PAPER, PASTEBOARD, FELT AND THE LIKE. AUGUST WILHELM ANDERNACH, Beuel, Germany. Filed Dec. 5, 1929, Serial No. 411,778, and in Germany Sept. 3, 1928. 6 Claims. (Cl. 154—2.)



1. The method of producing a material of the character specified, which consists in undulating sheet pasteboard material, impregnating it with a substance rendering it water proof, and subsequently at least partly removing the undulations therefrom.

1,808,591. WOOD FLOORING. CHARLES ARTHUR BRUCE, Memphis, Tenn., assignor to E. L. Bruce Company, Memphis, Tenn., a Corporation of Delaware. Filed Apr. 10, 1929. Serial No. 354,124. 3 Claims. (Cl. 20—8.)

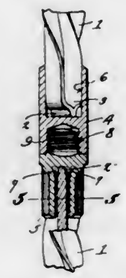


1. A floor formed of strips of wood united along their edges by a tongue and groove joint, the edges of the strips being in abutting relationship for only a part of the distance between the said tongue and groove and the front face of the strips and spaced apart for the remaining distance whereby the strips can expand edgeways above and below the said abutting edges without compressing the wood at such points.

1,808,592. WOOD BLOCK FLOOR. ROBERT G. BAUCE, Memphis, Tenn., assignor to E. L. Bruce Company, Memphis, Tenn., a Corporation of Delaware. Filed May 27, 1929. Serial No. 366,338. 4 Claims. (Cl. 20—8.)

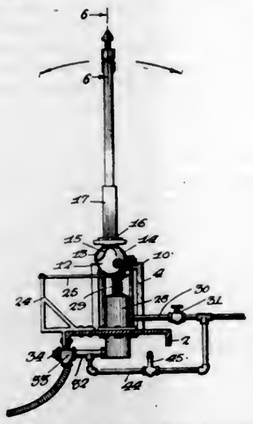
1. A panel formed of wood blocks having their sides in abutting relationship, the grain of the wood of adjacent blocks being at an angle to each other and running in the same plane as the face of the block, open grooves surrounding the faces of the blocks, the said grain and grooves bringing into relief the outline of each block.

1,808,593. MANUFACTURE OF FLAX FIBER. EDGAR RAYMOND CLARK, Pittsburgh, Pa., assignor to Milton S. Erlanger, New York, N. Y. Filed Aug. 17, 1927. Serial No. 213,511. 15 Claims. (Cl. 92—5.)



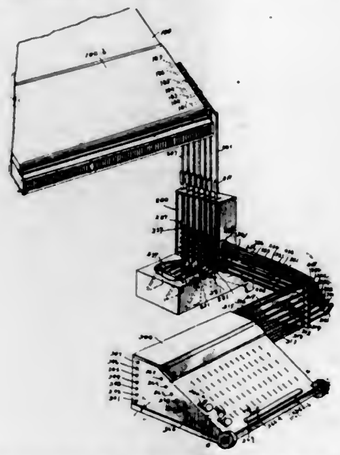
1. In retting flax, the improvement which comprises placing the flax in a tank, rinsing the flax in the tank by circulating cold water therethrough and, after draining off the rinsing water, supplying fresh water to the tank and maintaining it at a uniform elevated temperature by circulating it from the tank through an external circuit back to the tank and heating it while passing through the external circuit.

1,808,594. PROCESS FOR SEPARATING PLATINUM FROM THE OTHER PRECIOUS METALS. GEORGES AUGUSTE LOUIS ROBERT COLLARD, Vienne, (Isere), France, assignor to Comptoir Lyon-Alemand, Paris, France, a Joint-Stock Company of France. Filed Jan. 28, 1928, Serial No. 250,342, and in France Feb. 4, 1927. 8 Claims. (Cl. 75—17.)



1. A process for separating platinum from gold and silver which consists in forming a mixture of goldsmith's ash, lead oxide, matte, slags of silica, iron oxide and calcium compounds, thio-oxidizing agents and metallurgical coke; adding copper to said mixture sufficiently in excess of the amount affected by the thio-oxidizing agents in order to fractionally separate the platinum; fusing the mass obtained; and cooling said mass.

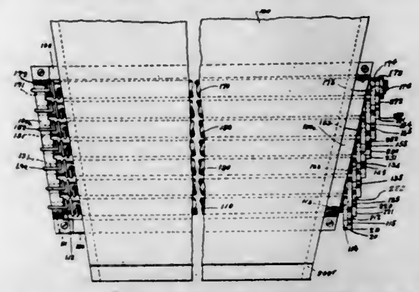
1,808,595. LIGHTNING ROD COUPLER. EARNEST C. CRIPE, Goshen, Ind. Filed July 10, 1929. Serial No. 377,303. 3 Claims. (Cl. 173—31.)



1. The combination with a rod having longitudinal ribs and means at the ends of the rod for closing the ends of the spaces between the ribs, thereby to form pockets, of coupling members having recesses into which the respective ends of the rod project, the walls of the recesses being pressed into the pockets to hold the rod against withdrawal from the recesses, and means carried by the coupling members for joining them to other elements.

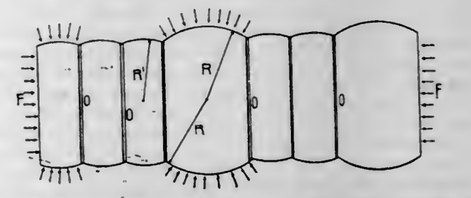
1,808,596. GREASING, LIFTING AND ROCKING MACHINE. ANTHONY W. DAINOS, New Orleans, La. Filed July 21, 1928, Serial No. 294,421. Renewed Feb. 18, 1931. 7 Claims. (Cl. 184—1.)

1. In a lubricating machine for automobiles, means engageable with the body of an automobile to raise the same to open the leaves of the springs thereof, means for imparting a rocking motion to the automobile when so raised, a lubricant pump and means operated by the rocking means for actuating the pump.



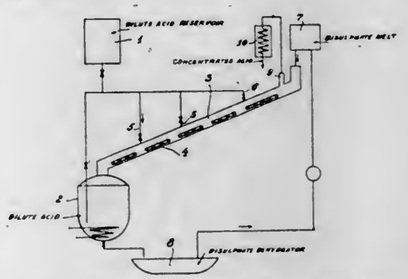
1,808,597. SELECTIVE MECHANISM. ROY EMERY, Brooklyn, N. Y. Filed June 23, 1925. Serial No. 39,155. 33 Claims. (Cl. 199—18.)

1. In a typographical machine having a selective mechanism adapted to be actuated by a keyboard mechanism, a plurality of keys, a lever for each of the keys, a weight movably held and adapted to be moved by each key lever, a plurality of extensions on each weight; a plurality of parallel blade elements movably held adjacent to the weights, and so formed that each of the weights will engage a selective number of the blade elements when moved by the keys; means for transmitting the movement to a corresponding number of selective elements of the selective mechanism to be actuated by the keyboard.



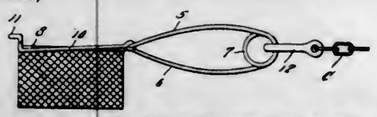
1,808,598. SELECTIVE MECHANISM. ROY EMERY, Brooklyn, N. Y. Filed Nov. 4, 1926. Serial No. 146,270. 19 Claims. (Cl. 199—18.)

1. Typographical escapement operating mechanism including, a releasing pawl of the character described, a releasing bar adapted to longitudinal movement for actuating said pawl, spring means for actuating the releasing bar; engaging elements of the said releasing bar, for engaging other engaging elements arranged in combination



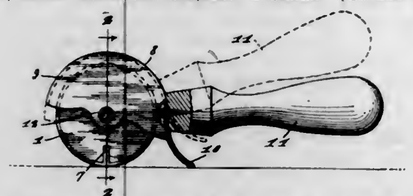
series upon a plurality of combination rods; means for moving said rods whereby the engaging elements on one or more of the rods will disengage the engaging elements upon the releasing bar; and timing means regulating the restoration of the releasing bar to its normal position.

1,808,599. RESISTANT SUBMARINE HULL OR THE LIKE. ROBERTO GALEAZZI, Muggiano, Spezia, Italy. Filed Sept. 22, 1927, Serial No. 221,275, and in Italy Oct. 25, 1926. 4 Claims. (Cl. 114—16.)



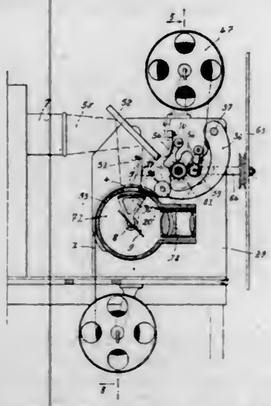
1. A rigid circumferentially corrugated container of circular cross section, comprising a shell made of adjacent nonresilient spherical undivided sections, the centers of said sections lying on the longitudinal axis of the container, and circular cross frames stiffening said spherical sections at the points where they unite.

1,808,600. PROCESS FOR CONCENTRATING VOLATILE ALIPHATIC ACIDS. ADOLF GORHAN, Liesing, near Vienna, Austria, assignor, by mesne assignments, to the Firm of Deutsche Gold- und Silber-Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed May 26, 1928, Serial No. 280,909, and in Germany June 16, 1927. 16 Claims. (Cl. 260—122.)



1. A process for the concentration of dilute acetic acid and its volatile higher homologous acids, which consists in converting the dilute acids into vapor, and then treating the resulting acid vapor and water vapor mixture with water absorbing material comprising sodium bisulfate in the liquid molten state.

1,808,601. COMBINED COIN HOLDER AND LETTER CLAMP. CHARLES K. HEISTAND, Epworth, Mo. Filed May 13, 1930. Serial No. 451,982. 4 Claims. (Cl. 232—33.)

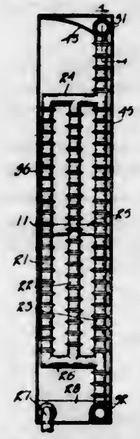


4. In a device of the character described, a pair of complemental jaws, means normally urging said jaws into clamping relation with respect to one another, and a receptable mounted on one of said jaws and having an open side adapted to be closed by the article clamped between said jaws.

1,808,602. BLOTTING DEVICE. EDWIN G. HOFFSTADT and ROBERT W. HOFFSTADT, Jackson, Mich. Filed Feb. 17, 1930. Serial No. 429,135. 1 Claim. (Cl. 120—26.)

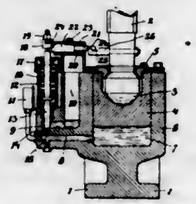
A blotting device comprising a handle carrying hood, that has its sides, at diametrically opposite points, depressed outwardly to provide concaved bearings, a blotter carrying roller having a fixed trunnion projecting from one of its ends and a spring influenced trunnion at its second end, said movable trunnion having an inner headed portion, a sleeve having an outer closed end in the roller and receiving the headed end of the trunnion therein, both of said trunnions designed to be received in the bearings in the roller and the said roller being susceptible to removal from the hood when a pressure is exerted against the end thereof carrying the fixed trunnion to depress the movable spring influenced trunnion to permit of the roller being drawn out of the support and said trunnions having outer rounded ends whereby when the movable trunnion is depressed both of the trunnions are brought against the inner sides of the hood and the roller may be moved in the hood to again bring its trunnions in the bearings.

1,808,603. MOVING PICTURE RECORDING AND PROJECTION APPARATUS. MARCEL REMY HUC, Toulouse, France. Filed Mar. 19, 1927, Serial No. 176,742, and in Belgium Mar. 23, 1926. 7 Claims. (Cl. 88—16.8.)



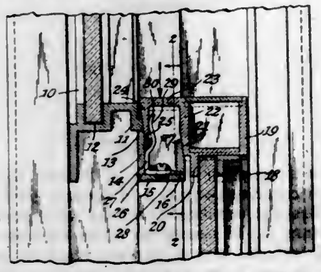
1. A film manipulating apparatus comprising in combination a fixed cylindrical film guiding surface having an aperture formed therethrough, a film storage reel, a film windup reel, a rotatable shaft located intermediate said reels, a cam mounted on said shaft, a toothed drum mounted on said shaft, framing means adapted to isolate a picture unit of the film passing in front of the aperture of the film guiding surface, a reflecting surface positioned so as to intercept light coming from said aperture, and means operable by rotation of the cam for oscillating said framing means and said reflecting means about a common axis at different angular velocities.

1,808,604. REFRIGERANT COMPOSITION. WALTER A. KUENZLI, Evansville, Ind., assignor to Servel Inc., New York, N. Y., a Corporation of Delaware. Filed June 18, 1930. Serial No. 462,152. 9 Claims. (Cl. 23—5.)



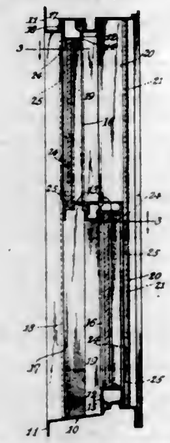
9. A refrigerant of the liquid gas phase type containing acrolein.

1,808,605. RADIATOR. JOSEPH W. PATE, Birmingham, Ala. Filed June 16, 1930. Serial No. 461,577. 2 Claims. (Cl. 257—151.)



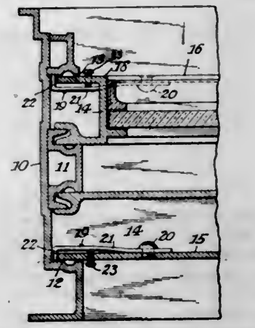
2. A radiator comprising end and intermediate sections secured together, each section having a vertically extending pipe, pipes parallel with, spaced from, and having the ends thereof connected with said vertical pipe intermediate the ends thereof, plates secured to the front and back of said sections having their edges in alignment and contacting thereby forming a front and a back wall for said radiator, said front wall terminating at the ends of said second pipes thereby forming a draft flue adapted to circulate air through the radiator to absorb heat therefrom, and deflecting plates extending horizontally from the upper ends of said vertically extending pipes to the front edge of said radiator serving to deflect the heated air, substantially as set forth.

1,808,606. HYDRAULIC SAFETY DEVICE FOR POWER PRESSES AND THE LIKE. HENRY PELS, Berlin-Charlottenburg, Germany. Filed July 5, 1929, Serial No. 376,261, and in Germany Sept. 4, 1928. 6 Claims. (Cl. 74—48.)



1. In a press comprising a reciprocating tool carrier and a ram for reciprocating said carrier, means for compensating for excessive resistance offered to the working stroke of said carrier, said means comprising a fluid-confaining cylinder formed in said carrier, a piston connected to the ram and working in said cylinder, a chamber carried by said carrier, a conduit connecting said cylinder and chamber, a valve normally closing said conduit and opened by the pressure of the fluid in said cylinder and conduit when such pressure is caused by relative movement of said carrier and ram, during the working stroke of the ram, to exceed a predetermined degree, and means operative during the return stroke of the ram to hold said valve in open position until the ram has completed its working stroke and operable to permit the valve to close as the ram approaches the end of its return stroke.

1,808,607. CROSS RAIL SPRING CATCH FOR WINDOWS. JOHN POLACHEK, New York, and JULIUS A. JEPSEN and EDMUND PEREMI, Elmhurst, N. Y., assignors to General Bronze Corporation, New York, N. Y., a Corporation of New York. Filed May 24, 1929. Serial No. 365,609. 7 Claims. (Cl. 189—65.)



1. In a window construction a plurality of sliding sashes with meeting rails embodying contact web portions, a spring device secured to one of said rails and being adapted to engage a web of the other rail when the sashes are substantially in their closing position for drawing said sashes towards one another, said spring device being in the form of a curved leaf spring spaced from the contacting surface of the rail to which it is secured so as to receive the web of the other rail in the space so formed.

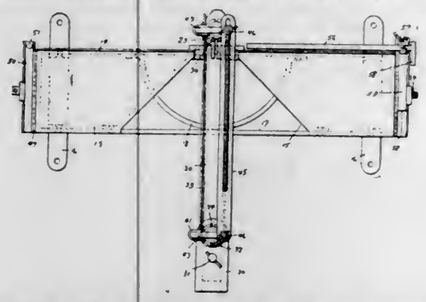
1,808,608. ANTIRATTLING SPRING FOR WINDOW SASHES. JOHN POLACHEK, New York, and JULIUS A. JEPSEN and EDMUND PEREMI, Elmhurst, N. Y., assignors to General Bronze Corporation, Long Island City, N. Y., a Corporation of New York. Filed May 24, 1929. Serial No. 365,610. 9 Claims. (Cl. 189—72.)

1. In a window embodying a frame having inner and outer guides and parting strips between which the stiles of the window sashes are operated, resilient elements comprising rods having their ends bent at an angle to the shank and arranged between the outer faces of the said stiles and said inner and outer guides of the frame, for the purpose set forth.

1,808,609. FLAT SPRING ANTIRATTLING DEVICE FOR WINDOWS. JOHN POLACHEK, New York, and JULIUS A. JEPSEN and EDMUND PEREMI, Elmhurst, N. Y., assignors to General Bronze Corporation, Long Island City, N. Y., a Corporation of New York. Filed May 24, 1929. Serial No. 365,611. 16 Claims. (Cl. 189—72.)

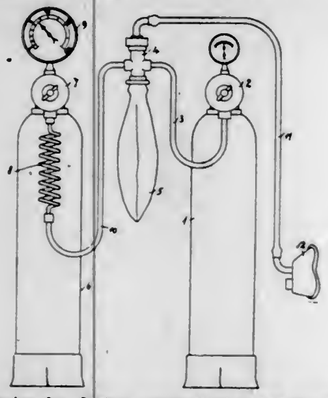
1. In a window embodying a frame having outer and inner guides, a centrally positioned parting strip, and sashes having upper, lower and meeting rails and side stiles, resilient elements arranged horizontally within the said rails of the window and having thrust engagement with the inner facea of said guides to move the sashes into intimate contact with said parting strip.

1,808,610. BRACE MOUNTING. ABRAHAM WILLIAM ROY, Lowell, Mass. Filed Feb. 7, 1930. Serial No. 426,661. 1 Claim. (Cl. 135—28.)



An umbrella brace mounting comprising a sleeve slidably mounted upon the umbrella staff, a sleeve member telescopically associated for sliding motion upon the sleeve, the sleeve member having slots arranged upon diametrically opposed sides and adjacent the outer end thereof, ears carried by and outwardly projecting from the adjacent end of the sleeve for selective reception within said slots and for frictional engagement with the mentioned end of the sleeve member, and flanges carried by and oppositely disposed upon the sleeve and sleeve member to provide a journal housing therebetween for the ends of said brace.

1,808,611. MITER BOX. JOHN GERHARD RUNNING, Miami, Fla. Filed May 24, 1930. Serial No. 455,360. 2 Claims. (Cl. 143—89.)

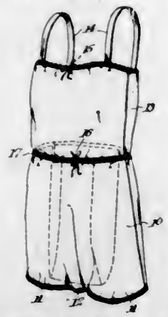


2. In a structure of the class described, in combination, a work supporting base, a horizontal rail pivotally mount-

ed on said base and swingable in a limited arc, a rigid upstanding tube on the pivoted end of said rail, a longitudinally slidable shoe on the rail movable toward and from the base, an upstanding tube carried by said shoe, retaining means for holding said shoe in different adjusted positions on the rail, vertically extensible standards mounted for adjustment in said tube, retaining means between the tubes and standards for holding the standards in a stationary elevated position said standards and tubes

adapted to slidably carry a saw movable in conjunction with the rail and shoe assembly, a rack on said base, a spring pressed latch carried by said rail and co-operable with said rack, together with stops carried by said tubes, and adjusting screws mounted on said tubes and co-operable with said stops for limiting the depth of cut of the saw said adjusting screws having cranks on their upper ends, and a connecting rod between said cranks for simultaneously and equally adjusting the screws.

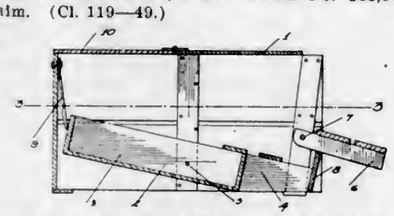
1,808,612. DEVICE FOR DOSING COMPRESSED GASES. HANS WILHELM CHRISTIAN SCHROEDER, Lubeck, Germany, assignor to Drägerwerk, Lubeck, Germany. Filed Mar. 22, 1928, Serial No. 263,800, and in Germany May 24, 1927. 5 Claims. (Cl. 128—203.)



1. A device for dosing compressed gases in regulatable amounts comprising an outlet communicating with a source of gas under pressure, a pressure reducing valve in said outlet, a capillary tube having a length of at least 20 centimeters connected to the outlet, and a pressure gauge connected to said outlet at a point between the capillary tube and the source of gas, the gas being adapted to flow past the pressure reducing valve before entering the capillary tube.

1,808,613. PROPELLANT EXPLOSIVE. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Feb. 19, 1926. Serial No. 89,418. 10 Claims. (Cl. 52—13.)

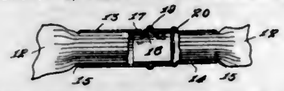
2. A smokeless and flashless powder comprising desensitized nitrostarch and a temperature-reducing agent, the latter being an addition product of an amine and nitric acid.



10. The process of rendering nitrostarch smokeless and flashless, which comprises thoroughly mixing nitrostarch granules with a material selected from the following group,— guanidine nitrate, ammonium nitrate, urea nitrate, nitroguanidine,—and thereafter bringing about surface colloidization of the nitrostarch granules and compressing the mass into "grains" of the desired form.

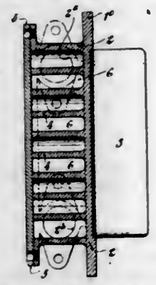
1,808,614. NETHER GARMENT. JACOB STEIN, Brooklyn, N. Y. Filed Oct. 15, 1928. Serial No. 312,612. 2 Claims. (Cl. 128—288.)

2. A nether-garment having a bodice supporting a lower trunk covering portion, said garment having a series of circumferential openings about the waist portion thereof, a sanitary shield consisting of an elongated strip of impervious material having its ends detachably secured respectively to the front and back waist portions of the garment, the ends of said shield having a series of transverse openings therein, a draw-string threaded through the openings of the waist in the garment and through the openings in said sanitary shield whereby the garment may be contracted about the waist and said shield may be detachably secured in position and rendered vertically adjustable.



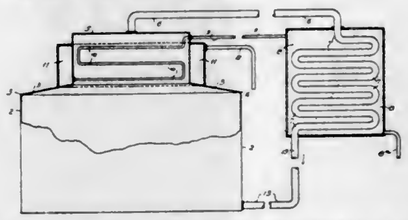
1,808,615. TRAP NEST. CHARLES STOCK, Baldwin Park, Calif. Filed Mar. 20, 1929. Serial No. 348,544. 1 Claim. (Cl. 119—49.)

A nest of the class described comprising a casing having its front open, a door member pivotally connected with the casing and moving to an open position under the action of gravity, a nest in the casing and having its sides extended forwardly, cross pieces on the extended sides forming a platform, means for pivotally supporting the nest in the casing an appreciable distance from its front end, an upright piece connected with the ends of the extensions and engaging the door to raise the same to closed position when the nest is occupied, the pivoted end of the door member engaging a part of the platform to limit the upward movement of the front end of the nest and to hold the same in a forwardly tilted position while the door is closed.



1,808,616. NECKTIE. EUGENE L. STOTT, Chattanooga, Tenn. Filed May 31, 1930. Serial No. 458,169. 2 Claims. (Cl. 2—157.)

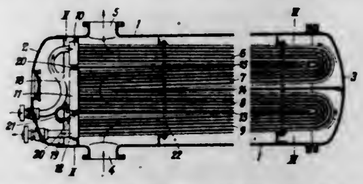
1. As a new article of manufacture, a neck tie having the neck band portion thereof severed at an appropriate point in its length, a detachable connection of sectional formation, the sections of the connection carried upon the ends of the neck band being telescopically associated at their adjacent ends, one of these sections having an an-



nular groove adjacent to and within the telescoping end thereof, and a yieldably mounted projection carried upon the other section and disposed within the groove establishing swivel connection between the sections.

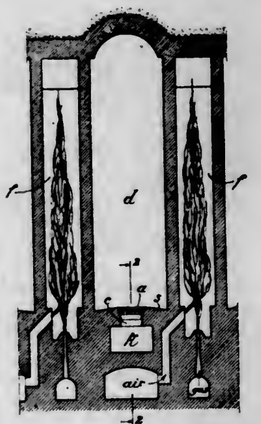
1,808,617. ELECTRIC TRANSFORMER COOLING MEANS. JOHN LINDLEY THOMPSON, Hayes, England. Filed Oct. 3, 1929, Serial No. 397,022, and in Great Britain Oct. 13, 1928. 6 Claims. (Cl. 257—191.)

4. A cooling device for use with a transformer oil tank, said cooling device comprising a plate member adapted to be secured at its marginal portion in a fluid tight manner to the outer side of a transformer tank over an opening therein, said plate member having at one side thereof, within said marginal portion, a plurality of vertically arranged heat absorbing fins extending laterally beyond the plane of said marginal portion and adapted to extend through said opening, and at the opposite side a tortuous passage through which cooling fluid can be caused to flow.



1,808,618. STORAGE OF VOLATILE LIQUIDS. SIDNEY THOMAS TREZISE, Rossburgh, South Africa. Filed Nov. 2, 1929, Serial No. 404,435, and in the Union of South Africa Sept. 19, 1929. 3 Claims. (Cl. 62—1.)

1. A storage tank for volatile liquids having means connected thereto for collecting and condensing the vapour arising from the surface of the liquid, means for returning the condensate to the tank, a refrigerator coil situated in that portion of the tank enclosed by the cover, a refrigerator jacket surrounding said cover and means for maintaining said coil and jacket at a low temperature.

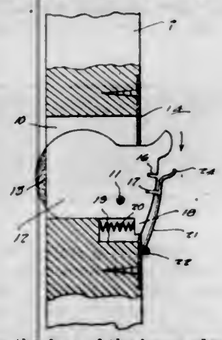


1,808,619. HEAT EXCHANGER. ROBERT UHDE, Cassel-Wilhelmshohe, Germany, assignor to Schmidt'sche Heissdampf-Gesellschaft mit beschränkter Haftung, Cassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed Feb. 20, 1929, Serial No. 341,505, and in Germany Mar. 3, 1928. 6 Claims. (Cl. 257—240.)

1. In a heat exchanger the combination of a closed container provided with an inlet connection and an outlet connection for the medium to be heated and with an inlet connection and an outlet connection for the heating medium, with a plurality of series connected groups of parallel connected heating tubes disposed within said container, said groups of heating tubes communicating with a plu-

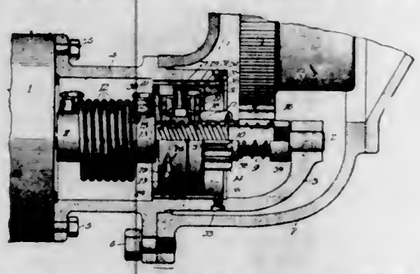
rality of headers movable with respect to the container, one of the end headers being connected to the inlet and the other end header being connected to the outlet of the heating medium, one of said two end headers being fixed and the other end header being freely movable in relation to the container.

1,808,620. COKE OVEN AND THE LIKE. CARL WESSEL, Borbeck, near Essen-on-the-Ruhr, Germany, assignor to the Firm: Carl Still, Reckinghausen, Westphalia, Germany. Filed July 6, 1926, Serial No. 120,731, and in Germany July 17, 1925. 5 Claims. (Cl. 202—257.)



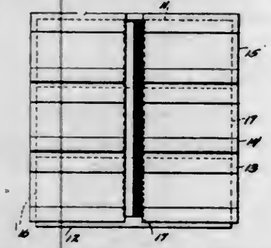
1. In a horizontal coke oven chamber provided with a gas offtake for said chamber comprising a series of openings or passages arranged in the base thereof and spaced away from the side walls, exchangeable grate frames seated in said openings with the tops of said frames flush with the top surface of the chamber base, the bars of said frames extending in a direction parallel to said chamber, and a channel extending longitudinally of said chamber and communicating with the chamber through said openings for receiving the volatile products of distillation.

1,808,621. SASH RETAINING MEANS. JULIAN N. WETMORE, Miami, Fla. Filed Aug. 6, 1929. Serial No. 383,906. 1 Claim. (Cl. 292—210.)



In a structure of the class described, a sash frame bar having an opening, a cam like retainer of the general outline of a mutilated circle having eccentric pivotal mounting in said opening, the lower part of said opening having a notch and said retainer having a depending extension, and an expanding coiled spring arranged in said notch and cooperable with said extension at a point below the pivotal mounting of the retainer, to urge said retainer in frictional and supporting engagement with the frame, one end of said retainer projecting through a corresponding end of the opening, and adapted to engage the window frame,

the opposite end projectible through and beyond the adjacent end of the opening and formed with a finger grip, a hingedly upwardly swinging latch having a detent ar-

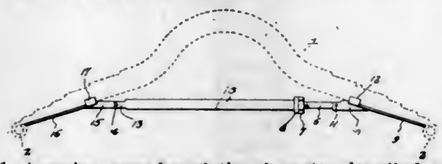


ranged to engage the face of the inner edge of the retainer, and said retainer having keeper seats with which said detent is selectively engageable.

1,808,622. ENGINE STARTER. MAURICE P. WHITNEY, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Dec. 5, 1923. Serial No. 678,733. 39 Claims. (Cl. 74—7.)

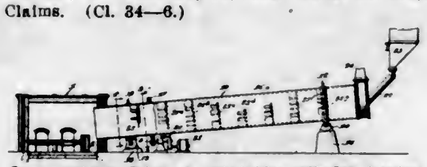
1. An engine starter including a member of the engine to be started, a drive adapted to engage and drive such engine member, means surrounding such drive for preventing cranking engagement with the engine member upon backward rotation of the latter.

1,808,623. WOOD BLOCK. CHARLES W. ALLEN, Memphis, Tenn., assignor to E. L. Bruce Company, Memphis, Tenn., a Corporation of Delaware. Continuation of application Serial No. 198,085, filed June 11, 1927. This application filed Mar. 30, 1929. Serial No. 351,435. 5 Claims. (Cl. 20—8.)



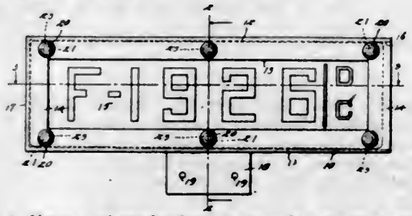
5. A structural unit comprising a plurality of strips of wood united along their edges by a tongue and groove joint, an open groove with parallel sides cut transversely of the grain of the strips, a stiff metallic tie in the said groove and in forced tight contact with the wood and in cooperation with the said tongues and grooves, preventing movement of the strips in all directions relative to each other.

1,808,624. COMPENSATING JOINT. EARLE BAGBY, Kahoka, Mo. Filed Feb. 27, 1930. Serial No. 431,815. 2 Claims. (Cl. 112—221.)



1. In a sewing machine of the character described, a needle bar, a driving lever for the needle bar, a wear compensating connection between one end of the driving lever and said needle bar, said compensating connection comprising a rigid barrel on the driving lever, a pair of bars disposed within said barrel and being normally spaced apart, resilient means interposed between said bars for maintaining the same spread apart, a head on one of said bars and a pivotal connection between said head and said needle bar.

1,808,625. SPRING SPREADER. REESE D. BARNHART, Uniontown, Pa. Filed Oct. 23, 1929. Serial No. 401,736. 5 Claims. (Cl. 29—87.1.)



1. A spring spreader of the character described comprising a tubular sleeve, a screw shaft extending longitudinally into said sleeve and projecting from one end thereof, means on the shaft engageable with the sleeve for shifting said shaft longitudinally therein and a pair of spring engaging feet on the free end of the shaft and the opposite end of the sleeve for engaging and spreading the opposite end portions of said spring, said feet disposed at an obtuse angle with respect to the shaft and sleeve in a manner to parallel the opposite end portions of the spring.

1,808,626. ROTARY DRIER. GERHARD MORRIS BECHTEL, Allentown, Pa. Filed May 13, 1929. Serial No. 362,683. 5 Claims. (Cl. 34—6.)

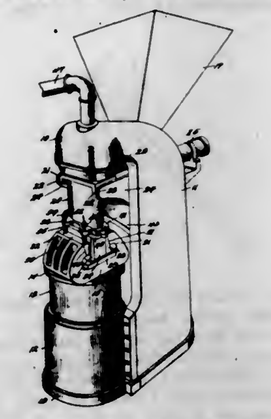
1. In a rotary drier, a rotatable cylinder having an inlet and an outlet, a baffle extending radially from one wall of the cylinder for a portion of the diameter thereof, said baffle being composed of a plurality of adjustably connected sections to provide for the expansion and contraction and having means to prevent the passage of air between the sections.

1,808,627. LICENSE PLATE HOLDER. MADISON H. BENSON, Austin, Tex. Filed Dec. 31, 1930. Serial No. 505,912. 4 Claims. (Cl. 40—125.)

1. A license plate holder of the character described, comprising a frame structure having a longitudinally disposed channel therein, said frame having a plurality of recesses in one face thereof, said recesses being adapted to receive pressed out portions of a license plate.

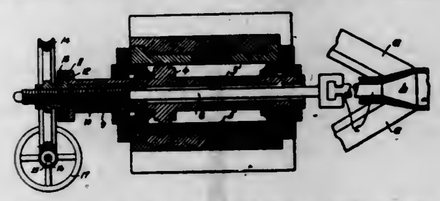
1,808,628. ROD FASTENER. LESTER W. BOND, New York, N. Y., assignor to The Kroder Reubel Company, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1929. Serial No. 395,692. 3 Claims. (Cl. 156—22.)

1. The combination with a curtain rod of a plurality of fasteners therefor, each fastener comprising a body and a pair of oppositely extending rod gripping portions and securing means extending through the body of each fastener, said fasteners being spaced apart for holding a rod rigidly in position.



1,808,629. LIFTING JACK. GEORGE A. BONGE, Hearne, Tex. Filed Feb. 1, 1930. Serial No. 425,283. 3 Claims. (Cl. 254—145.)

1. A device for the purpose set forth comprising a pair of oppositely disposed flanged supports, said supports being connected together at their lower ends and spaced from each other from their connected lower ends, means for connecting the upper ends of said supports together, each support providing a casing having depending therefrom a carrier for the casing, a shaft journaled in and extending through said casings and having fixed thereto a pair of spaced gears, each gear being arranged in a casing, a sprocket pinion fixed to said shaft between said gears, a lifting chain travelling over and operated by said pinion and having its stretches projecting from the front and rear of said supports, a supporting standard, means for connecting said supports to the standard, and means mounted on said casings for rotating said gears.

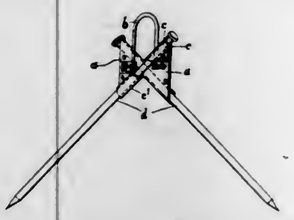


1,808,630. CORE FORMING MECHANISM. ROBERT N. BROWN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 27, 1930. Serial No. 431,935. 12 Claims. (Cl. 22—10.)

1. A core forming machine including, in combination, a vertically movable core box support, a yoke thereon to receive the parts of the collapsible core box between its arms, a sand transfer member laterally movable over the core box when the support is lowered, and a wedge device on said member to pass between the core box and one of

the yoke arms to clamp the core box parts together when the support is elevated to bring the core box in engagement with the transfer member.

1,808,631. TUBE EXPANDER. RUDOLF BUNGEROTH, Dusseldorf, Germany. Original application filed July 23, 1927, Serial No. 208,013, and in Germany Dec. 29, 1925. Divided and this application filed Dec. 17, 1927. Serial No. 240,884. 4 Claims. (Cl. 80—13.)



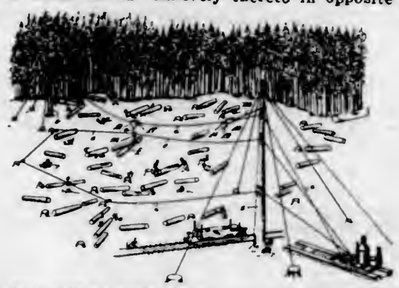
4. In apparatus for expanding metal tubes, a fluid cylinder mounted at the inlet side of the apparatus, a piston reciprocable therein, a mandrel shaft, a mandrel carried by the mandrel shaft, means connecting said piston and mandrel shaft, and means for regulating fluid pressure in the cylinder on both sides of the piston for giving rough adjustment to said mandrel, and other means associated with the piston and mandrel shaft for giving fine adjustment to the mandrel.

1,808,632. SMOKING PIPE. JOSEPH F. BUSHEE, Jersey City, N. J. Filed Aug. 27, 1928. Serial No. 302,376. 2 Claims. (Cl. 131—12.)

1. A smoking pipe comprising a bowl having a duct therein, a stem for said bowl having an enlarged bore therein, said bore providing a cooling chamber, said stem being also provided with a recess, which latter communicates with said bore and with said duct, a mouthpiece attached to said enlarged bore, and an inner tube terminally engaged in said mouthpiece and also terminally engaged in said recess, the medial portion of said tube disposed in said enlarged bore in spaced relation with the wall of the stem, said medial portion adapted to cool air passing therethrough and carrying smoke from the bowl of the pipe.

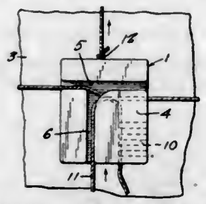
1,808,633. GROUND ANCHOR AND LIKE ANCHORING DEVICE. EDMUND CLIFTON CARVER, Burgess Hill, England. Filed Dec. 17, 1929, Serial No. 414,803, and in Great Britain Dec. 17, 1928. 1 Claim. (Cl. 189—90.)

A ground anchor of the character described comprising a vertical ground body consisting of a plurality of radiating wings, each having two separate guides disposed at opposite sides and at the upper and at the lower corner of the wing respectively, and stakes driven through said guides, each stake being held by an upper guide of one of the wings and by a lower guide of an adjacent opposite wing, whereby said stakes radiate obliquely from the vertical ground body.



1,808,634. THERMOMETER BULB. MOSES E. CHENEY, La Crosse, Wis., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Mar. 24, 1928. Serial No. 264,499. 7 Claims. (Cl. 297—3.)

2. In an instrument of the character described, a metallic thermometer bulb having one end formed with a reduced neck portion, with enlarged portions above and below said neck portion; there being an opening through said neck portion, a capillary tube extending through said opening and supported by the walls thereof and being soldered thereto, the solder being placed in the pocket formed by the inner wall of the outer enlarged portion and said capillary.

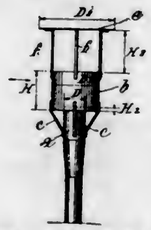


1,808,635. AUTOMATIC LATCHING DEVICE. MANLEY J. CHERRY and CARL A. BARTH, Cottage Grove, Oreg. Filed Nov. 25, 1929. Serial No. 409,705. 4 Claims. (Cl. 212—98.)

1. A latch device comprising a casing open at its lower side, a latch member pivotally mounted at one end within said casing and having its other end projecting forwardly of the open portion thereof, actuating means depending from said latch member and extending outwardly from the open side of said casing, a keeper adapted to automatically engage with and disengage from said latch member when moved relatively thereto in opposite direc-

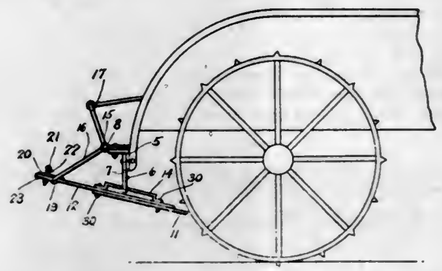
tions, and means movable in one direction with said keeper for causing said actuating means to move said latch member to released position.

1,808,636. CORD FASTENER. GUY F. CHESNEY, Spartanburg, S. C. Filed Dec. 22, 1930. Serial No. 504,172. 3 Claims. (Cl. 24—18.)



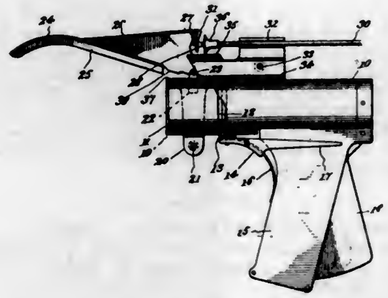
3. A cord fastener comprising a body having grooves in one face and arranged at right angles to each other and in communication with each other, said body having a chamber communicating with one of the grooves, a wrapping cord secured at one end to the body and passed about a package several times and extended through the grooves with the free end disposed in the chamber and projecting beyond one edge of the body, and staggered arranged ribs formed in said chamber to receive and grip the cord adjacent the free end.

1,808,637. RADIATOR CEMENT. GEORGE AUGUSTUS COLBERG, JOHN DANIEL HARRISON, and JOSEPH WINTERBERGER, Yale, Mich. Filed Feb. 12, 1929. Serial No. 339,486. 3 Claims. (Cl. 134—17.5.)



1. A cementing compound comprising fibre starch, plaster of Paris, yellow ochre, red pepper, ground pulp wood, Venetian red, powdered rosin, denatured alcohol and gelatine glue, the whole being mixed and added to sufficient quantity of water to form a liquid solution, substantially as set forth.

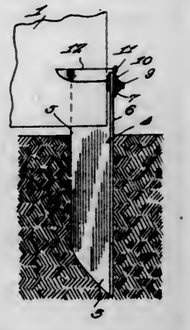
1,808,638. SECONDARY FLUID CURRENT PRODUCTION APPARATUS. CHRISTIAN COUPARD, Paris, France, assignor to Societe Anonyme "L'Aspiration Scientifique," Paris, France. Filed Mar. 9, 1928, Serial No. 260,412, and in Belgium Aug. 6, 1927. 4 Claims. (Cl. 98—66.)



1. A device of the class described comprising a pipe having an extremity of diameter D, a cylindrical element having a diameter D_1 and a length H mounted on one end of said pipe so as to present an overlapping portion of a length H_1, and a cap of diameter D_2 mounted at a distance H_2 from said cylindrical element, said dimensions D, D_1, D_2, H, H_1, H_2 satisfying the relations: $2D_1$ is greater than 3D and is less than 5D, $10H_1$ is greater than H and is less than 3H, 2H is greater than D and is less than 2D, $2D_2$ is greater than 3D and is less than 6D, $4H_2$ is greater than 3D and is less than 6D.

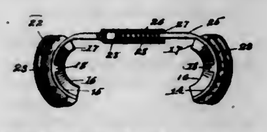
1,808,639. WHEEL SCRAPER. THEODORE W. DETAMORE, Osceola, Nebr. Filed July 24, 1930. Serial No. 470,446. 4 Claims. (Cl. 280—158.)

1. In an apparatus of the class described, a blade, an elongated plate, an inverted U-shaped bracket, means for securing the bracket, the plate and the blade together, a supporting plate having an elongated opening through which the bracket extends, and means for moving the plate attached to the blade for positioning the blade in wheel engaging position and to disengaged position.



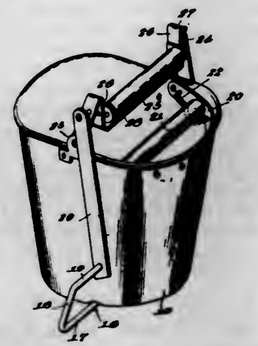
1,808,640. PHOTOGRAPHIC FLASH LIGHT DEVICE. LOUIS L. DRIGGS, Jr., New Rochelle, and HENRY B. FABER, New York, N. Y. Filed Nov. 12, 1929. Serial No. 407,072. 6 Claims. (Cl. 67—29.)

4. A photographic flashlight device comprising a pistol for producing a flash of light, a collar removably mounted on said pistol, a curved vane disposed along the muzzle of said pistol, reinforcing webs on said vane and having stop means cooperating with said collar, said webs being pivoted on the collar, a plate carried by said webs, clamp jaws also carried by said collar, and a camera shutter release mechanism held in said clamp jaws in operative relation to said plate.



1,808,641. DOOR RETAINER. JULES W. DROZ, Jr., Salt Lake City, Utah. Filed May 27, 1929. Serial No. 366,415. 3 Claims. (Cl. 292—238.)

1. A combined abutment and latch for outwardly swinging doors, comprising a rightangular stake designed to be partly driven into the ground and to have one flange thereof contacted by a door when the latter is swung to open position, and a hinged catch on the upper

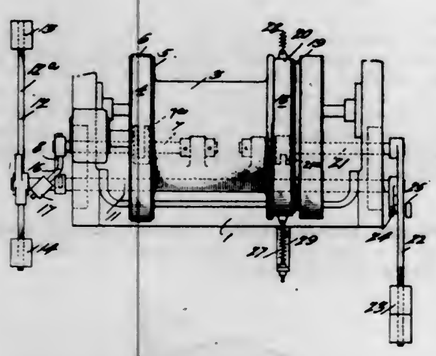


face of its second flange swingable and designed to rest on the said upper end of the second flange for engaging with the face of the door.

1,808,642. SHIELD ATTACHMENT FOR BINOCULARS. CHARLES HUGH DUFFY, Miami, Fla. Filed Mar. 2, 1928. Serial No. 258,618. 1 Claim. (Cl. 88—34.)

A readily detachable eye-shield attachment for binoculars, including a pair of arcuate frame members shaped to directly engage the rotatable eye-pieces of binoculars, eye-shields mounted on said frame members, each of said arcuate frame members including an outwardly inclined portion and a lug, between which outwardly inclined portion and lug a rotatable eye-piece of the binoculars is received, means for connecting the arcuate frame members together, said means including an extensible and contractable mechanism for resiliently drawing the frame members into operative engagement with the rotatable eye-pieces of the binoculars.

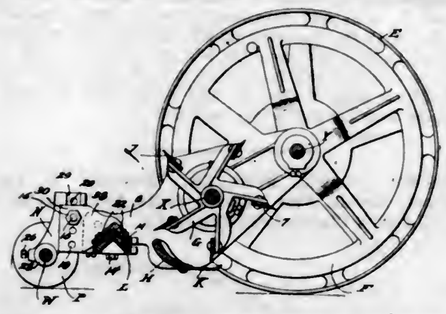
1,808,643. MOP WRINGER. JOSEPH H. DWORK, Newark, N. J. Filed Oct. 11, 1930. Serial No. 488,072. 4 Claims. (Cl. 15—262.)



1. In a mop wringer, a receptacle having a bottom transversely dished, a bearing mounted therein, a treadle member oscillatably mounted in said bearing, and said treadle member extending laterally upon opposite sides of said receptacle to provide a support for said receptacle.

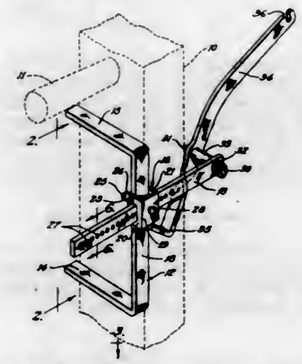
1,808,644. STOPPLE. GUST R. ERIKSON, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 12, 1929. Serial No. 399,289. 1 Claim. (Cl. 150—8.)

A stopple for hot water bottles comprising a screw threaded portion for engagement with a socket in the neck of the bottle, a washer at the lower end of said screw threaded portion for engagement with a flange at the inner end of the socket, and an end projection on the stopple having an enlarged head retaining the washer, said head being convexly curved and of sufficient size to engage the edges of the flange to shape same for proper seating of the washer thereon when said flange is deformed.



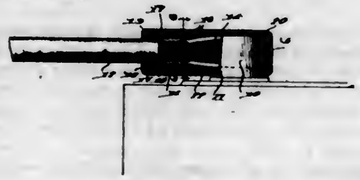
1,808,645. MECHANICALLY OPERATED SAFETY BRAKE. HERMANN FAEHRMANN, Brooklyn, N. Y., assignor to J. S. Mundy Hoisting Engine Company, Newark, N. J., a Corporation of New Jersey. Filed Aug. 19, 1930. Serial No. 476,365. 20 Claims. (Cl. 188—174.)

3. In combination with a shaft, means for manually applying a braking force to said shaft, and means for automatically applying a braking force to said shaft upon release of said first-mentioned means, said second-mentioned means including a weighted lever, means associated with said weighted lever and said first-mentioned means whereby the said weighted lever is maintained in an inoperative position during the manual operation of the first-mentioned means.



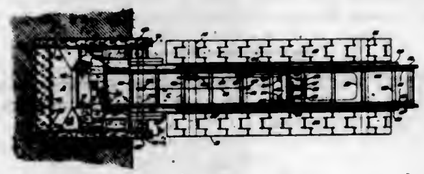
1,808,646. LAWN MOWER. FRANK T. FARMER, Detroit, Mich., assignor of one-half to Robert E. Farmer, New York, N. Y. Continuation of application Serial No. 28,143, filed May 5, 1925. This application filed Mar. 21, 1928. Serial No. 263,256. 16 Claims. (Cl. 56—249.)

9. In a lawn mower of the type provided with drive wheels, end frames supported by the drive wheels and a ground roller during the cutting operation, a rotary reel provided with knives and carried by the end frames and



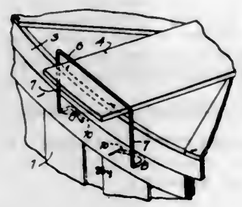
rotating on an axis intermediate the axis of the drive wheels and the ground roller, the improvement consisting in providing a three point support for the mower frame.

1,808,647. SUPPORTING DEVICE. FRED G. FAZEKAS, Maywood, Ill. Filed Nov. 3, 1930. Serial No. 493,139. 5 Claims. (Cl. 248—22.)



1. A device for supporting articles from either horizontal or vertical supports comprising a pivotally mounted arm including a jaw adapted to grip a support, a member pivotally connected to said arm, a clamp through which said member is slidable, and a bracket pivotally connected to said clamp so as to be movable in a plane at right-angles to the direction of movement of said member through said bracket.

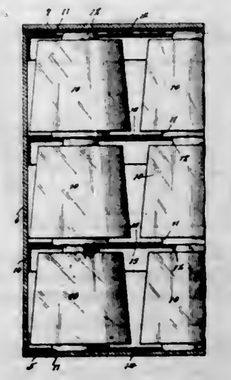
1,808,648. STORAGE BATTERY TERMINAL CONNECTER. ALLAN WILLIAMS FISHER, St. Petersburg, Fla. Filed Nov. 1, 1929. Serial No. 404,154. 1 Claim. (Cl. 173—259.)



A storage battery connector comprising a split resilient ring provided with parallel transversely bowed clamping arms extending from the ends of said ring and adapted to receive a conductor terminal therebetween, the clamping arms being externally threaded, an internally threaded sleeve screwed on the clamping arms and serving to hold the split ring in clamped engagement with a battery binding post and to hold the arms in clamped engagement with the battery terminal, the outer wall of the sleeve tapering inwardly from the outer end and a housing formed of yieldable rubber surrounding and snugly fitting the split ring and the internally threaded sleeve, said housing having an opening located in registration with the split ring, the walls of the opening being adapted to yieldably grip a battery binding post to effect a liquid seal around the same, the portion of the housing surrounding the sleeve having the inner walls thereof tapered in an opposite direction to the tapering of the sleeve so that when the sleeve is screwed into place the outer walls of the sleeve will form a tight fit with the inner contacting walls of that portion of the housing which embraces the sleeve.

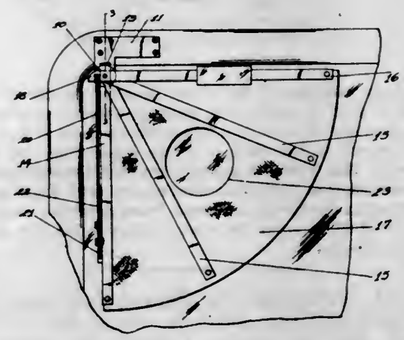
1,808,649. MINING MACHINE. ROBERT M. FLEMING, Colver, Pa., assignor to Ebensburg Coal Company, Colver, Pa., a Corporation of Pennsylvania. Filed June 3, 1927. Serial No. 196,344. 9 Claims. (Cl. 262—5.)

1. The combination in a mining machine, of a mining section; endless chain cutters located at each side of said mining section; and transverse upper and lower cylindrical cutter bars located between the endless chain cutters and between which the operative sections of the endless chain cutters extend substantially vertically.



1,808,650. WIRE HANDLE FOR CONTAINERS. OSCAR E. FLORANG, Burlington, Iowa. Filed July 18, 1930. Serial No. 468,810. 5 Claims. (Cl. 217—125.)

1. In combination, a container, a wire loop having fastener members integral therewith, passing loosely transversely through the wall of said container, said fastener members including a clincher arm disposed close to the inner wall of the container, said loop bendable into different positions relative to said fastener members, and said clincher arm lying substantially parallel to the axis of bending between said loop and said fastener members.

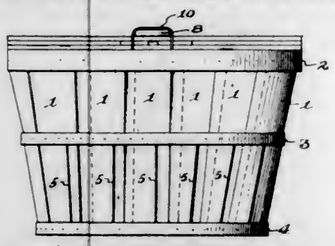


1,808,651. SHIPPING CONTAINER. WALTER BEATH GIBB, Chester, and FRANK BUCHA MARTIN, Moores, Pa., assignors to The Viscose Company, Marcus Hook, Pa., a Corporation of Pennsylvania. Filed June 4, 1930. Serial No. 459,168. 2 Claims. (Cl. 206—46.)

1. A yarn package, comprising a container, and rows of yarn cones therein in combination with partitions consisting of two layers of corrugated cardboard between each two rows of cones, the upper partition layer having holes

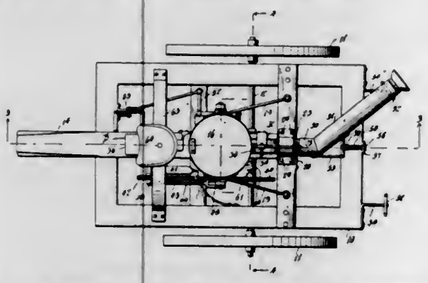
to receive the larger ends of the cones of the upper row while the lower partition layer has openings to receive the smaller ends of the cones of that row.

1,808,652. SAFETY DEVICE. LIAS H. GUMP, New Martinsville, W. Va. Filed Apr. 19, 1929. Serial No. 356,463. 1 Claim. (Cl. 296—97.)



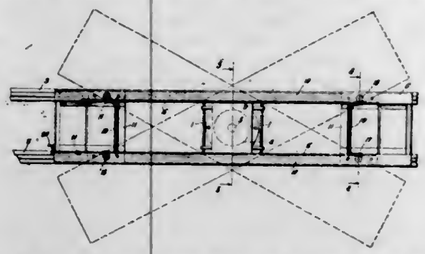
A glare shield comprising a fixed arm, a plurality of blades pivotally connected therewith, a movable arm swingably mounted upon the fixed arm to occupy a position at rightangles thereto, foldable material of substantial fan shape having connection at the side edges thereof with the fixed and movable arms and at intervals therebetween to said blades, said material having a right opening between said blades, an extension projecting from the mounted end of the movoble arm, a connecting arm having connection with said extension, and an operating lever mounted upon the fixed arm having eccentric operative connection with the connecting arm to facilitate coincision and right-angular disposition of said arms respectively.

1,808,653. BASKET. JOHN MCKENZIE GUNN, Cuthbert, Ga. Filed Apr. 28, 1930. Serial No. 448,043. 3 Claims. (Cl. 217—122.)



1. A container or basket of the class described, comprising a side wall formed of staves and a top, the staves contacting to form an imperforate, surrounding wall in the upper side portion of the basket or container, said wall having in its lower portion ventilating slots extending up from near the bottom of the basket not farther than

approximately the middle of the basket, the top of the basket or container being also constructed of open work to allow the air to pass through the slots in the lower portion

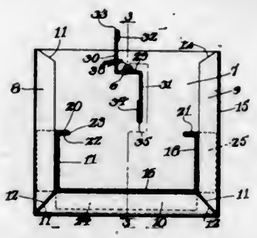


of the sides of the basket and be drawn up by the draft created by said imperforated upper portion, through the contents and out through the open work at its top.

1,808,654. POISON OR POWDER DISTRIBUTOR. WALTER G. HAGENS, near Yoakum, Tex. Filed Mar. 20, 1930. Serial No. 437,494. 2 Claims. (Cl. 43—148.)

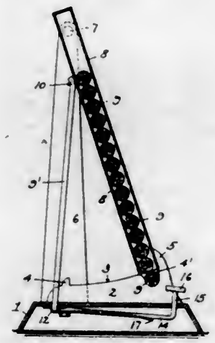
1. In a machine of the class described, a distributing nozzle, a duct to supply the material thereto, said nozzle being swiveled on said duct and having a portion deflected with respect to the duct, a frame supporting the duct, means on the frame at spaced locations for engagement by said deflected portion, a bracket on said duct, and a pin engaging the bracket and said frame arranged coaxially with the duct to serve as a pivot upon which the nozzle may be swung.

1,808,655. AUTOMOBILE TURNTABLE AND CARRIER. CHARLES E. HARRIS, Montpelier, Idaho. Filed Oct. 18, 1929. Serial No. 400,573. 2 Claims. (Cl. 104—44.)



1. A device of the class described comprising a wheel supported turntable, an elongated frame supported at its center on the turntable, a second frame supported by the first frame, vertically arranged screw shafts having their upper ends connected with the second frame, nut members carried by the first frame and engaging the screw shafts, a worm gear associated with each nut member, a pair of longitudinally extending shafts in the first frame, worms on said shafts engaging the before mentioned worm gears, chain and sprocket means for connecting the two shafts together and a handle for rotating one of the shafts for raising and lowering the second frame.

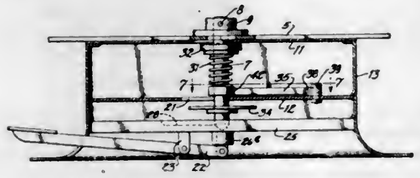
1,808,656. BRUSH FOR SCRUBBING MACHINES. ANTHONY A. HARTMAN, Niagara Falls, N. Y. Filed Mar. 25, 1929. Serial No. 349,757. 1 Claim. (Cl. 15—50.)



A brush for scrubbing machines comprising a circular-shaped head having a centrally arranged offset portion projecting from one face of said head to provide a gear seat and a journal to be engaged by a support, said head having a centrally arranged fluid receiving chamber extending into the offset portion and opening through the opposite face of the head from said offset portion, a removable closure plate overlying the chamber and radially extending passages in the head in communication with the chamber and opening outwardly through the last named face of the head at a plurality of points between the peripheries of the head and plate, and tufts of bristles secured to the head between said peripheries of the plate and head.

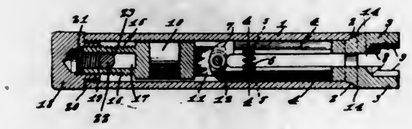
1,808,657. POULTRY FEEDER. LUTY HAWKINS, Mount Vernon, Ill. Filed May 20, 1929. Serial No. 364,612. 4 Claims. (Cl. 119—61.)

1. In a poultry feeder a pair of end members provided with inwardly extending folds at the sides and bottoms to oppose, in spaced relation, the inner faces thereof, a channel-shaped body member having depending flanges at its bottom and laterally disposed, outwardly directed flanges at its sides, said flanges extending between said folds and inner faces of the body of said end members for connecting said body member to and between said end members, said body member seating on the top edges of the folds at the bottoms of said end members.



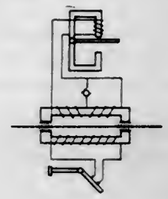
1,808,658. CIGARETTE DISPENSER. JOHN H. HOSIER, Roanoke, Va. Filed Feb. 6, 1930. Serial No. 426,354. 2 Claims. (Cl. 312—77.)

1. A base having uprights thereon, a container for cigarettes having an open bottom pivotally secured to the base



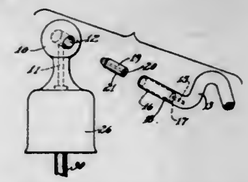
and which cigarettes are arranged one over another, guides having arcuate faces on which the open bottom of the container rests and having their outer inclined portions provided with depressions affording pockets and means for swinging the container to bring the same over the pockets, said means including a rod which is loosely connected to the rear of the container, having an offset end which is pivotally secured to the base and having an extension that merges into an upright portion that is provided with a head.

1,808,659. REVERSIBLE SEAT OR CHAIR. CHARLES R. HULTGREN, Chicago, Ill., assignor to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed Dec. 10, 1928. Serial No. 324,933. 10 Claims. (Cl. 155—96.)



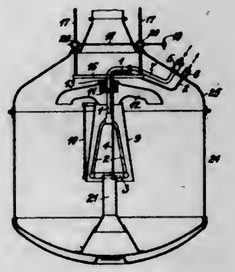
10. In a chair of the character described comprising a base, a seat structure mounted upon the base, and connecting means between said base and said seat structure; means for shifting said seat structure upon the base from a normal central position to a limiting lateral position and back to said central position during a half revolution of said seat structure, said shifting means comprising a throw-arm adapted to move simultaneously with said connecting means, a member secured to the base, said member being provided with a guide slot axial with the line of lateral movement and a cam slot positioned adjacent one end of said guide slot, and a guide-member extending from the free end of said throw-arm into said cam slot.

1,808,660. SOCKET WRENCH. JAMES OSCOE JOHNSON, Kokomo, Ind. Filed May 21, 1929. Serial No. 364,846. 2 Claims. (Cl. 81—113.)



1. In a wrench, a barrel made in one piece from its forward end to its rear end, the barrel having an internal beveled mouth at its forward end, the barrel being of polygonal cross section externally and being of a common cross section externally from end to end, the barrel being of polygonal cross section internally and being of a common cross section internally from end to end, excepting the mouth, a foot bearing directly against the rear end of the said one-piece barrel, a slide mounted to reciprocate in the barrel and having threaded connection with the foot, jaws having shanks pivoted to the slide, the shanks being so shaped in cross section as to correspond with the internal polygonal cross section of said barrel, said jaws bearing directly against the forward end of said one-piece barrel, the jaws being inclined to fit in the beveled mouth of the barrel and having cooperating work-receiving recesses on their inner surfaces, the jaws being of such length that the recesses will be disposed externally of the barrel when the jaws are in parallelism, the joints of engagement between the jaws and the forward end of the said one-piece barrel being close to the rear ends of the recesses.

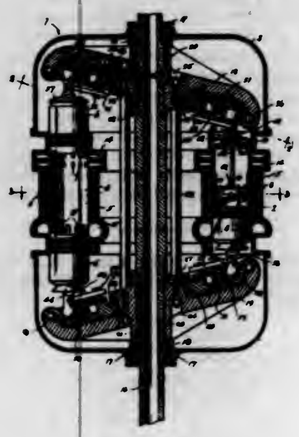
1,808,661. RAILWAY SIGNALING SYSTEM. GUSTAV KEMMANN, Berlin-Grunewald, Germany. Filed May 18, 1928, Serial No. 278,827, and in Germany May 20, 1927. 4 Claims. (Cl. 246—63.)



1. A railway signaling system comprising in combination on the locomotive or other vehicle a magnet with windings, a relay connected to said windings and governing the train influencing device, and on the track several so called track magnetizable cores with windings connected through a signaling switch to relays governing the blocking operations, said locomotive magnet and said track magnets being so arranged that when juxtaposed to each other by the running train the locomotive magnet influences the track magnet and is mutually influenced by the same track magnet according to the position of said signaling switch.

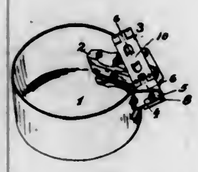
1,808,662. ATOMIZER. MAX KLINE, New York, N. Y. Filed Apr. 20, 1928. Serial No. 271,598. 3 Claims. (Cl. 299—88.)

3. An atomizer head including an air tube extending therethrough having the terminal portion of its bore enlarged to provide an internal shoulder, said tube having a liquid port communicating with the enlarged portion of the bore and with a liquid passage extending inwardly from one end of the head and a nozzle snugly fitting in the enlarged portion of the bore with its inner end impinged against the shoulder, said nozzle having a substantially concentric air passage communicating with the air tube bore and a longitudinally extending groove registering with the liquid port.



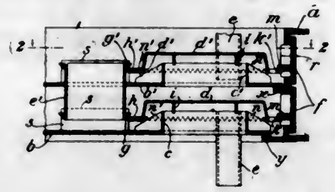
1,808,663. BOILER AND EVAPORATOR. HANS RUDOLPH FRIEDRICH KOCK and KARL ALFRED RUDOLF QUITT, Lubeck, Germany. Filed June 4, 1928, Serial No. 282,802, and in Austria June 27, 1927. 16 Claims. (Cl. 257—220.)

1. A boiling and evaporating device for boiling vessels specially for brewer's coppers, comprising in combination



with the vessel proper, a rising pipe communicating with the lower portion of said vessel and a heating element in and closed against said rising pipe, means for admitting steam to the heating element, the upper end of said rising pipe communicating with the upper portion of said boiling vessel, and means for conveying the water of condensation of the steam in the heating element away from said element.

1,808,664. INTERNAL COMBUSTION ENGINE. FRANK KOSCHKA, Brooklyn, N. Y. Filed Mar. 19, 1930. Serial No. 437,167. 3 Claims. (Cl. 123—58.)

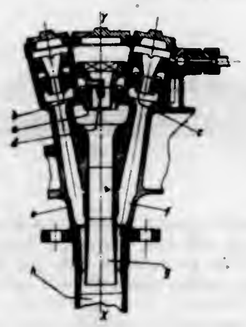


1. In an engine of the class described, a plurality of cylinders symmetrically arranged about a common axis, a pair of pistons working in each cylinder, each cylinder having a port for admitting an explosive mixture between the pistons to effect reciprocation thereof in opposite directions, a shaft mounted concentric to the cylinders, oppositely inclined cam disks fixed upon the shaft at the opposite ends of the cylinders, an annular thrust disk rotatable with respect to each cam disk, operative connection between each piston and the respective thrust disk, and bracing rods arranged about the shaft and secured at their ends to the cam disks.

1,808,665. PENCIL SHARPENING DEVICE. GEORG KÖNIG, Berlin-Dahlem, Germany. Filed Nov. 1, 1928, Serial No. 316,459, and in Germany Nov. 12, 1927. 11 Claims. (Cl. 120—85.)

1. A pencil sharpener consisting of a base portion, a frame pivoted on the base portion, and a sharpening device suspended from the frame to swing relatively thereto.

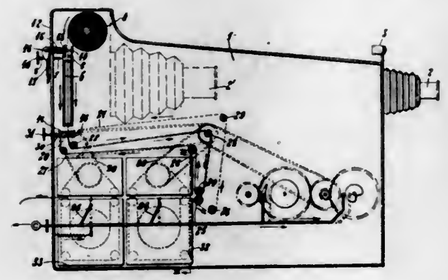
1,808,666. DISTILLATION AND LIKE COLUMN. ARTHUR KUHN, Recklinghausen, Germany, assignor to the Firm: Carl Still, Recklinghausen, Germany. Filed Feb. 1, 1926, Serial No. 151,998, and in Germany July 16, 1926. 6 Claims. (Cl. 261—114.)



1. In a column for distillation and like purposes, a tray bearing an overflow element and a vapor collar, a hood arranged in position over the collar, and means, a part of which is on said element, for holding the hood in position.

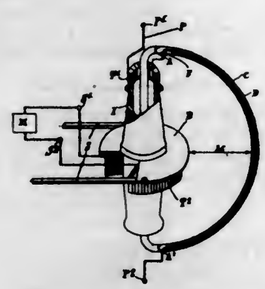
1,808,667. WOOD BLOCK. JOHN A. LEE, Memphis, Tenn., assignor to E. L. Bruce Company, Memphis, Tenn., a Corporation of Delaware. Filed Oct. 4, 1930. Serial No. 486,458. 2 Claims. (Cl. 20—8.)

2. A block having a transverse groove in its underside, a longitudinal groove along the edge of the block, the transverse groove being relatively shallow adjacent the underside of the longitudinal groove to avoid weakening the under lip of the longitudinal groove.



1,808,668. STEAM EJECTOR OF VACUUM BRAKES. PAUL MARIE EUGÈNE LÉOTARD, Paris, France. Filed Dec. 18, 1928, Serial No. 326,837, and in Germany Jan. 7, 1928. 3 Claims. (Cl. 303—12.)

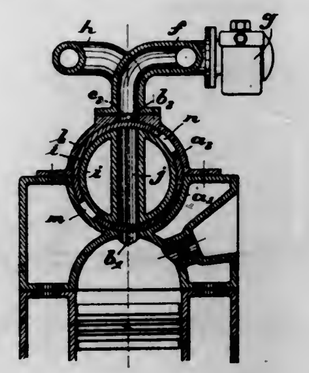
1. A combined ejector for automatic vacuum brakes, comprising a main ejector, a continuously operating small ejector and a small auxiliary ejector wherein the small ejectors are symmetrically disposed with relation to the main ejector and form with the latter a very small angle.



1,808,669. PHOTOGRAPHIC CAMERA. ALEXANDER IEZEKIL LIBERMAN, Paris, France. Filed June 29, 1929, Serial No. 374,647, and in France July 26, 1928. 3 Claims. (Cl. 95—14.)

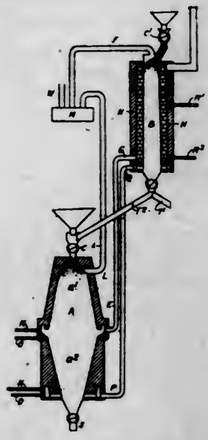
1. In an automatic photographic camera capable of taking positive or negative pictures or both simultaneously, the combination of two photographing chambers, two developing chambers for developing, respectively, the negative and positive pictures, a displaceable slide member including two pairs of arms adapted to grip between them the two films to be photographed, means including two cams for selectively operating said arms to grip or

release the films, said slide member when displaced progressing gripped film through said photographing chambers, a knife common to both said photographing chambers for severing portions of film, independently acting means for feeding film to said developing chambers, and means for selectively operating said means for feeding film to the developing chambers.



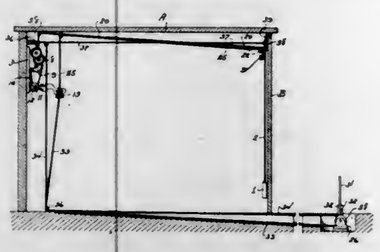
1,808,670. TRANSFORMER. HENRI RENÉ LOUBET, Paris, France, assignor to Compagnie pour la Fabrication des Compteurs et Materiel d'Usines a Gaz, Montrouge France, a Joint-Stock Company of France. Filed Mar. 14, 1930, Serial No. 435,855, and in France Mar. 20, 1929. 3 Claims. (Cl. 175—358.)

1. In a device for feeding current to electrical measuring apparatus, the combination of a transformer designed to take a high current, an electric circuit, a bushing insulator passing through said transformer, an auxiliary transformer supported by said bushing insulator and including a primary fed by the current flowing in said circuit, a secondary to said auxiliary transformer forming the primary of said first transformer and stepping up the current to the high value for which said first transformer is designed, and a secondary to said first transformer adapted to step down the current to a low value commensurate with that taken by the electrical measuring apparatus.



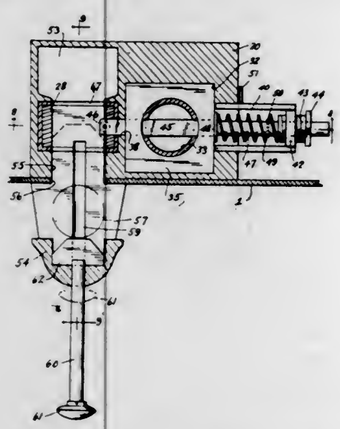
1,808,671. ROTARY DISTRIBUTION VALVE. CHARLES LUYCKX, Louvain, Belgium. Filed July 29, 1927, Serial No. 209,320, and in Belgium Aug. 4, 1926. 3 Claims. (Cl. 123—80.)

1. In an internal combustion engine, a valve casing having a cross-sectionally cylindrical chamber provided with an inlet port and an exhaust port for each engine cylinder, a tubular valve element fitted in said chamber and having diametrical inlet and exhaust ports for each engine cylinder, and a central core element in said valve element



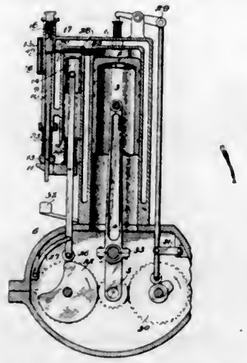
and having diametrical conduits corresponding with said inlet and exhaust ports, said core element being arranged for relative angular movement with said valve casing.

1,808,672. PROCESS OF PRODUCING MIXED WATER GAS AND COAL GAS. ARTHUR HENRY LYMN, London, England. Filed Feb. 23, 1927, Serial No. 170,365, and in Great Britain Feb. 23, 1926. 2 Claims. (Cl. 48—202.)



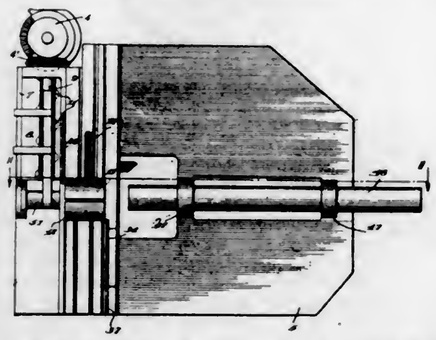
2. A process for producing a mixture of water gas and coal gas of uniform quality from bituminous fuel in a plant comprising an "up" and "down" steam run shaft gas generator with a water gas generating zone and superimposed coal distillation zone, and a coal carbonization retort in a detached shell; said process consisting in passing an air-blow upwardly through the water gas generating zone of said generator, passing the resulting air-blow gases directly from said water gas generating zone into external heating relation to said retort, then alternately passing steam up and down through the gasification zone to generate water gas, enriching both the "up-run" and the "down-run" water gases from said gasification zone by passing the "up-run" water gases through the fuel distillation zone in the shaft of said generator and simultaneously adding superheated steam at the base of the distillation zone, then passing the "down-run" water gases through said externally heated carbonization retort, and mixing the thus enriched "up-run" gases with the thus enriched "down-run" gases to produce a rich combustible gas mixture.

1,808,673. AUTOMATIC GARAGE DOOR OPENING AND CLOSING DEVICE. JONATHAN S. MARSDEN, Edgerton, Wis. Filed Dec. 21, 1929. Serial No. 415,815. 4 Claims. (Cl. 268—35.)



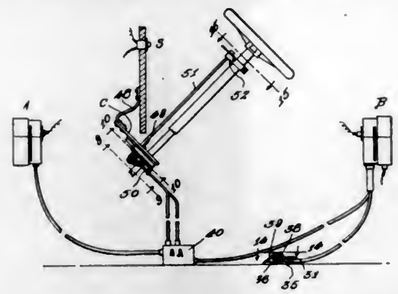
1. In combination with a garage and a door, means for normally holding the door in closed position, motor driven means for opening the door, including a drum and clutch means therefor and a switch in the motor circuit, means operated by a vehicle approaching the door for closing the switch to cause the motor to open the door, means for opening the switch when the door reaches open position, manually operated means for releasing the clutch means to permit the door to close and means operated by a vehicle leaving the garage, including the means operated by a vehicle approaching the garage and the manually operated means for moving the clutch to inoperative position whereby the doors will close after the vehicle passes from the garage and means operated by the closing of the door for returning the clutch to operative position.

1,808,674. COIN CONTROLLED GASOLINE VENDING MACHINE. CARTER R. MASSIE, Ironton, Ohio. Filed Mar. 14, 1930. Serial No. 435,853. 3 Claims. (Cl. 194—69.)



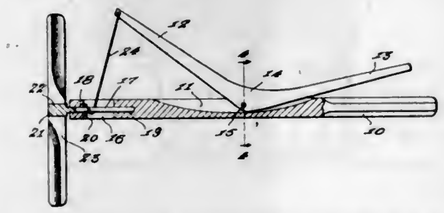
1. A coin controlled gasoline vending machine of the character described comprising a casing, a tank mounted thereon, means for discharging gasoline into the tank, a vertically shiftable member disposed in the casing, a discharge pipe mounted on the upper end of the member and extending for vertical sliding movement into the tank, an abutment on the vertically shiftable member, a threaded tubular rod mounted in the casing in spaced parallel relation to the vertical member, a series of stop bars adjustably mounted in longitudinally spaced relation on the threaded bar and engageable with the member in a manner to retain the same against downward movement and coin controlled manually operable means for disengaging said stop bars from said member.

1,808,675. INTERNAL COMBUSTION ENGINE. EDWARD MAYE, Washington, D. C. Filed Dec. 27, 1927. Serial No. 242,859. 2 Claims. (Cl. 123—33.)



1. In an internal combustion engine, in combination with a working cylinder and piston, a air compresaig cylinder and piston for compressing air to inject fuel into the working cylinder, an air pipe extending from an opening in the wall of the upper end of said air compressing cylinder into the upper end of said working cylinder, a cylinder and piston for pumping fuel into contact with the compressed air from the air compressing cylinder, à fuel injector tube extending from an outlet opening in the wall of the upper portion of the pump cylinder through and across the upper end of the air compressor cylinder and through its walls and the wall of the working cylinder and within said air pipe to a point adjacent the mouth of said air pipe and within the working cylinder, a fuel inlet to said pump cylinder, means for operating the air compressing piston, a finger on the compressor piston rod having an opening through which the fuel pump piston rod extends, and a collar fixed to said pump piston rod adapted to be engaged by said finger to move the pump piston by the compressor piston on the compression stroke.

1,808,676. ASPARAGUS TRIMMING AND CANNING MACHINE. CHARLES C. MCDONALD and CHARLES L. TROUTMAN, Elyria, Ohio. Filed Apr. 28, 1928. Serial No. 273,676. 8 Claims. (Cl. 226—101.)

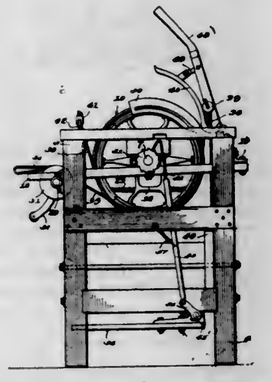


1. In an automatic stalk canning and trimming machine, a base, fixed and movable coacting jaws mounted thereon for retaining stalks in bunched relation, a sliding door normally closing one end of the jaws to retain the stalks therein, a cutter operable across the other end of said jaws to sever projecting ends of the stalks, a reciprocating ejector for ejecting the stalks into a can placed in registration with the jaws when in operative position, and a common mechanism for actuating the cutter, door, ejector and movable jaw to operative and inoperative positions in timed relation.

1,808,677. AUTOMOBILE SIGNAL DEVICE. PATRICK WILLIAM MURRAY, Dubuque, Iowa. Filed July 17, 1929. Serial No. 379,035. 3 Claims. (Cl. 116—36.)

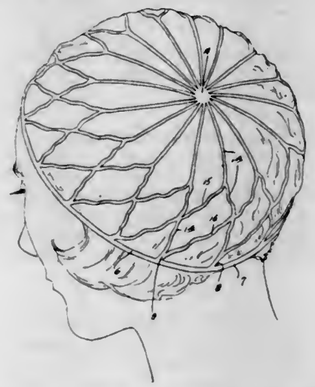
1. An automobile signal device including pivotally mounted signal arms having signalling and non-signalling positions and a supporting casing, shafts journaled in the casing, studs on the shafts, flexible means connecting the studs to the signal arms, operating means connected to the shafts for rotating the latter in one direction to move the signal arms into their signalling position, and tension means connected to the shafts and casing to rotate the shafts in an opposite direction when released by the operating means to permit the signal arms to assume non-signalling position.

1,808,678. TOY. ANDREW PAUL and FRANK STURNI, Seward, Pa. Filed Oct. 7, 1930. Serial No. 487,064. 2 Claims. (Cl. 46—14.)



1. A whirligig toy comprising a body having a pocket within one side thereof, a lever structure embodying oppositely diverging arms pivotally mounted for rocking motion at the point of intersection thereof within said pocket, the body having a slot extending at right angles thereto and adjacent one end, a mandrel journaled within the body and exposed through said slot, a flexible connection established between the lever and exposed portion of the mandrel, and a whirling object carried upon the outermost projecting end of the mandrel.

1,808,679. ELASTIC MATTRESS AND OTHER DEVICE FOR REPOSE OF THE BODY. HÉCTOR CÓRSICO PICCOLINI, Buenos Aires, Argentina. Filed Mar. 29, 1929. Serial No. 351,100. 1 Claim. (Cl. 5—239.)



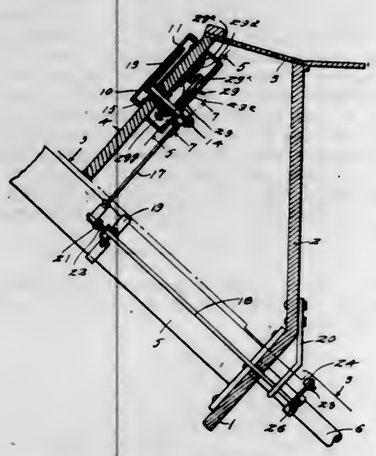
An elastic bed bottom comprising a frame having side and end members, horizontal grooves disposed in said end members, bottom slats for said frame, flexible supporting rods having their ends secured in said grooves, said rods having spaced apertures therein, supporting members having projections extending upwardly into said apertures, rubber washers disposed about said projections below said apertures, disk portions upon said supporting members having downwardly directed grooves therein, said slats being provided with grooves aligned with said last mentioned grooves, said supporting members having downwardly directed guiding elements and spiral springs seated in said slat grooves and said downwardly directed grooves upon said supporting members and being guided by said guiding elements.

1,808,680. BARREL FORMING MACHINE. JOHN C. RAMSEY, Suffolk, Va., assignor to Ramsey Package Corporation, Suffolk, Va., a Corporation of Virginia. Filed Oct. 18, 1927. Serial No. 226,949. 1 Claim. (Cl. 147—1.)

In a barrel forming machine, a support, a collapsible mandrel supported thereon, a plurality of flexible elements underlying the mandrel, pulleys supported to one side of the mandrel and over which one end of the flexible elements are trained, weights attached to the depending ends of such flexible elements, upstanding plates attached to the support at the opposite side of the mandrel, and a channel-shaped securing member carried by the opposite end of each of the flexible elements and removably engaged with one of the upstanding plates whereby the flexible elements take a substantial U-shaped form to constitute cradle-like temporary supports for staves placed on the mandrel, and means for securing the ends of the staves to the mandrel until hoops have been secured on such staves.

1,808,681. CAP. GEORGE B. RAYBURN, Los Angeles, Calif. Filed Oct. 13, 1930. Serial No. 488,527. 5 Claims. (Cl. 132—49.)

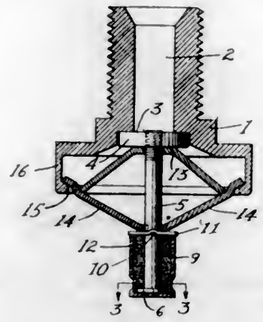
1. An elastic rubber cap of the type described comprising a one piece circular flat body comprising a center



portion, and a plurality of curved strips projected from the center portion formed by slitting the said body, and a plurality of oppositely curved and similarly formed strips projected toward the center portion and defining a circumferential border, and joined to said curved strips to form a mesh.

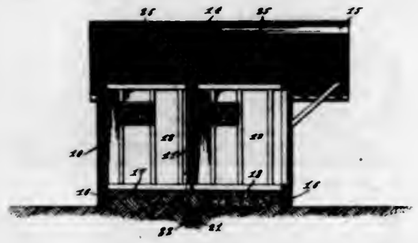
1,808,682. PULVERIZED FUEL BURNER. RALPH C. ROE, Englewood, N. J. Filed Jan. 9, 1928. Serial No. 245,425. 17 Claims. (Cl. 110—104.)

1. A fuel burner comprising, fuel and primary air mixture outlet means designed to project a stream of fuel and primary air mixture continuously, secondary air outlet means closely adjacent said first mentioned means and designed to project secondary air against the stream of fuel and primary air mixture, and power drivable control mechanism designed to alternately increase and decrease the volume of air from different parts of said secondary air outlet means.



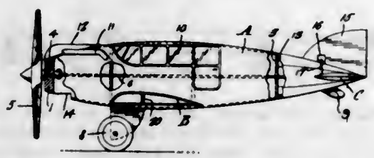
1,808,683. SWITCH FOR DIRECTION SIGNALS. WILLIAM T. ROONEY, Los Angeles, Calif. Filed June 7, 1924. Serial No. 718,514. 2 Claims. (Cl. 200—166.)

1. A device of the class described comprising a mounting member, a shaft journaled therein, a U-shaped arm having one leg longer than the other, said shaft passing through said legs with the shorter leg in contact with the mounting member, means to secure the arm in said position on the shaft, said arm having a contact on its longer leg so that the same will function as a switch arm.



1,808,684. THERMOSENSITIVE RELEASE UNIT. ARTHUR C. ROWLEY, Philadelphia, Pa., assignor to Globe Automatic Sprinkler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1928. Serial No. 317,105. 6 Claims. (Cl. 137—161.)

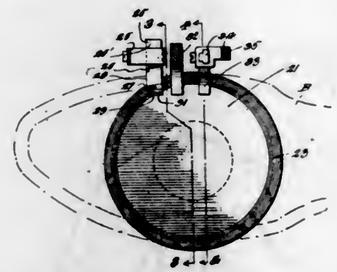
1. In a thermosensitive release unit, a relatively fixed member, a second member comprising elements spaced apart and relatively adjustable to vary the distance therebetween one of said elements comprising a fusible compound, and a system of struts and levers confined between said elements and reacting with said relatively fixed



member to support said second member in the latter, said system being releasable by fusion of said fusible compound to permit displacement of said second member from the relatively fixed member.

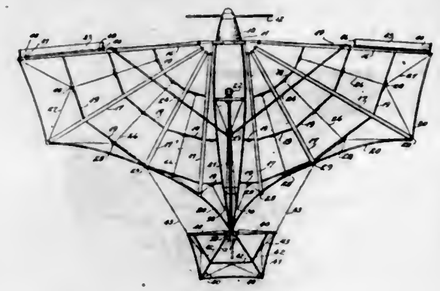
1,808,685. POULTRY HOUSE. EMANUEL SCHINDLER, Salem, Oreg. Filed Dec. 17, 1928. Serial No. 326,559. 1 Claim. (Cl. 119—21.)

A poultry house having a partition subdividing same into multiple compartments, the entrance compartment having a pit filled to the level of the earth floor within the adjacent compartment with a suitable dust, a wall of earth of U-shape formation insulating the contents of the pit from the house foundation, and the partition wall and a wall of the poultry house immediately adjacent the pit compartment having entrances whereby the poultry may cleanse themselves with the dust before entering the other compartment.



1,808,686. MODEL AEROPLANE. ARNOLD LOUIS SCHULTZ. Portland, Oreg. Filed Aug. 7, 1928. Serial No. 298,075. 2 Claims. (Cl. 46—50.)

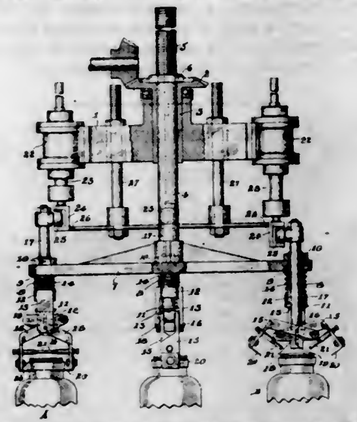
1. A toy aeroplane comprising a fuselage, wings secured to the fuselage, propelling means carried by the fuselage, a shaft journalled in the rear end of the fuselage and extending from opposite sides of the latter, elevators



secured to the ends of the shaft, a rudder carried by the rear end of the fuselage and having a notch, and an arcuate shaped member connecting the elevators and extending across the fuselage and through the notch and capable of varying the angles of the elevators by the positioning of different sizes of blocks between the arcuate shaped member and the fuselage.

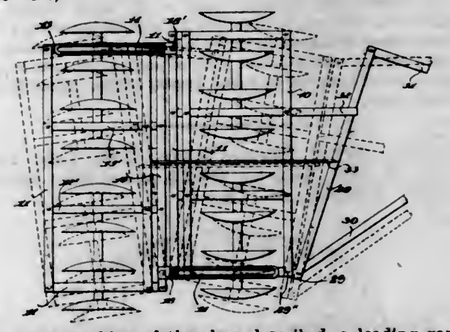
1,808,687. APPARATUS FOR CHANNELING SHOES. WILLIS S. SHAFT, Faribault, Minn., assignor to Shaft-Pierce Shoe Company, Faribault, Minn. Original application filed Jan. 25, 1927, Serial No. 163,492. Divided and this application filed Apr. 15, 1927. Serial No. 184,143. 4 Claims. (Cl. 12—27.)

1. An apparatus for channeling combination inner and middle soles comprising a work disk having its upper face provided at the margin thereof with an inwardly beveled surface, a presser foot for holding the sole stock against the bevel face, and a reciprocatory knife arranged at one side of the diametric center of the disc and substantially parallel therewith movable toward said foot.



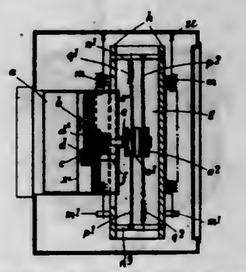
1,808,688. AEROPLANE. ALEXANDER SMITH, Pittsburgh, Pa., and JOHN SCHMIDT, New York, N. Y. Filed Mar. 18, 1930. Serial No. 436,871. 18 Claims. (Cl. 244—12.)

1. In an aeroplane, a fuselage, wings attached to said fuselage, each including a series of ribs pivoted to the fuselage to be divergently arranged when spread, folding struts between adjacent spars of said wings, and means to spread said wings, simultaneously.



1,808,689. TRANSFER APPARATUS. THOMAS STENHOUSE and DAVID STENHOUSE, Washington, Pa., assignors to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed July 24, 1925. Serial No. 45,891. 21 Claims. (Cl. 214—1B.)

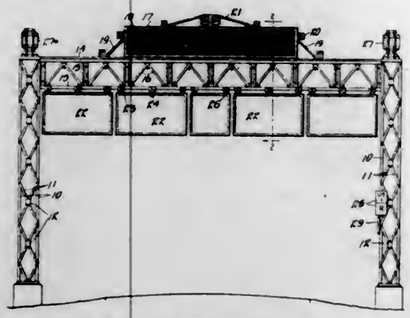
1. A transfer apparatus including a continuously rotating arm, a gripper unit carried by the arm, and means for operating the grippers during the continued rotation of said arm, said means including a vertically movable shoe



and a roller adapted to be brought into cooperative relation therewith, said shoe being of sufficient length to permit operation of the grippers during their continued travel.

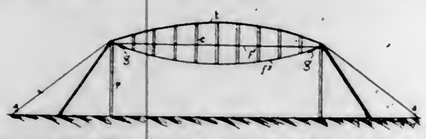
1,808,690. AGRICULTURAL MACHINE. JAMES S. STEWART, Redlands, Calif., assignor, by mesne assignments to George Voss, San Bernardino, Calif. Filed Aug. 26, 1927. Serial No. 215,700. 7 Claims. (Cl. 55—83.)

1. In a machine of the class described, a leading gang frame, a trailing gang frame, extensible coupling means extending between both ends of said gang frames, and means for effecting longitudinal adjustment of said coupling means one independently of the other, to dispose said gang frames at various relative angular positions.



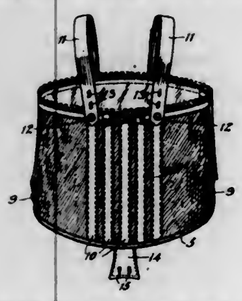
1,808,691. WINDING MECHANISM FOR TIMEPIECES. HUBERT LESLIE STRINGER, Rockbeare Hill, near Exeter, England. Filed Mar. 14, 1929, Serial No. 347,024, and in Great Britain Mar. 22, 1928. 4 Claims. (Cl. 185—39.)

1. Means for winding a clockwork mechanism comprising the combination of a weight mounted to oscillate in re-



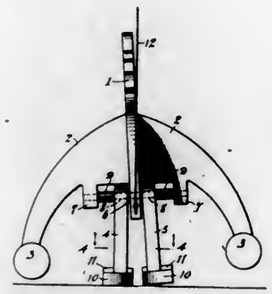
sponse to vibration and unidirectional device consisting of a pulley in driving connection with the spring of the clockwork mechanism, a flexible member encircling said pulley and having both of its ends anchored so as to move with said weight, and a spring inserted in the length of said flexible member to apply tension thereto.

1,808,692. HIGHWAY ADVERTISING SIGN. EARL W. SUDDUTH, Birmingham, Ala. Filed July 18, 1930. Serial No. 468,834. 2 Claims. (Cl. 40—125.)



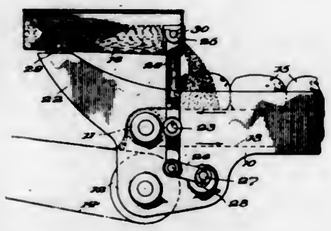
1. A highway display device comprising posts positioned at opposite sides of the highway said posts being made up of a plurality of angle beams secured together and reenforced by a network of connecting straps to form a light but rigid post, a beam connecting the tops of said posts across the highway said beam being formed of angle irons connected together by supporting straps the whole being V-shaped in cross section, and a plurality of plates hinged to the lower side of said cross beams said plates being adapted to carry display signs, substantially as set forth.

1,808,693. TENT. UMBERTO TERZOLI, Rome, Italy. Filed Apr. 16, 1929, Serial No. 355,556, and in Italy Apr. 25, 1928. 5 Claims. (Cl. 135—1.)



1. A supporting structure for flexible coverings, comprising an elongated flexible member, a covering arranged above said member, and rigid struts arranged between said member and said covering for transferring substantially the entire load of the covering to the member.

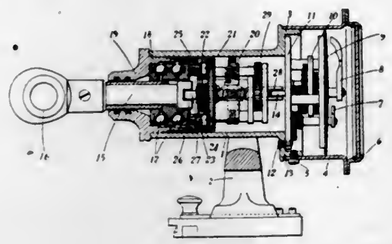
1,808,694. INFANT'S BELLY BAND. CHARLOTTE M. TOGNIERI, Long Island City, N. Y. Filed Aug. 8, 1929. Serial No. 384,320. 2 Claims. (Cl. 2—111.)



1. A belly band for infants including front and rear sections, the front section being constructed of a heat retaining material and of a size to extend from the crotch upwardly to a point below the arms and from a point slightly to the rear of one side to a point slightly to the rear of the other side and formed with a fullness at the medial portion for conforming to the shape of the infant's belly, said medial portion merging into a gathered part at each side edge for causing the front section to conform to the shape of the region which it covers so that the marginal edges intimately contact with said region and means on said front section for resisting the tendency of the same to wrinkle horizontally without unduly stiffening the same.

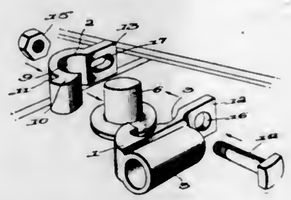
1,808,695. WALKING TOY. JOHN H. VAN DEVENTER, Yonkers, N. Y. Filed Nov. 2, 1929. Serial No. 404,339. 5 Claims. (Cl. 46—40.)

1. A walking toy, comprising a pair of independently swinging legs, feet at the lower ends of the legs having bottoms consisting of plane surfaces inclined transversely and heavier at their rear portions than at their front portions, a body pivotally connected to the axis of the legs, and weighted arms rigidly connected to the body.



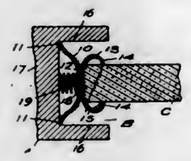
1,808,696. DOUGH HANDLING APPARATUS. FRANK H. VAN HOUTEN, Beacon, N. Y., assignor to Dutchess Tool Company, Beacon, N. Y., a Corporation of New York. Filed July 31, 1930. Serial No. 472,091. 6 Claims. (Cl. 107—7.)

5. In dough handling apparatus, the combination of a support, a receptacle movable with respect to said support, said receptacle having a foraminous surface therein, a rock shaft, arms on said shaft, trunnions on said receptacle supported on said arms, and means for rocking said shaft.



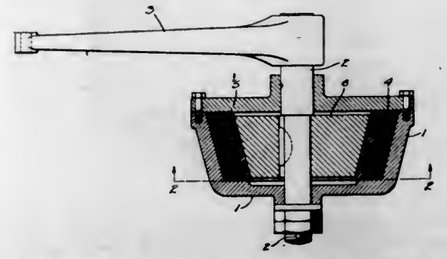
1,808,697. SHIP LOG. JEFFERY WALKER, Birmingham, England. Filed Jan. 7, 1929, Serial No. 330,880, and in Great Britain Nov. 8, 1928. 5 Claims. (Cl. 73—122.)

1. A ship log comprising an elongated open ended casing, a log indicator mechanism secured bodily to one end of the casing and having its driving spindle extended within the casing, a primary log spindle and reduction gearing operated thereby, means supporting said primary log spindle and reducing gearing and received bodily there-



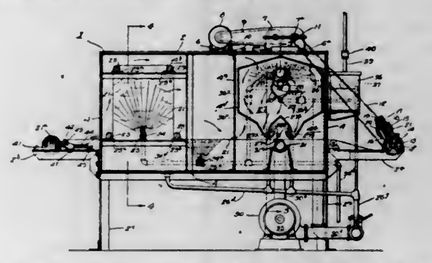
with within the casing through the other end of the latter, said gearing having means detachably engaging the extended portion of the driving spindle of the log indicating mechanism for operating the same.

1,808,698. TERMINAL CLAMP. LONNIE A. WALLIS, Joplin, Mo. Filed Dec. 7, 1927. Serial No. 238,360. 2 Claims. (Cl. 173—259.)



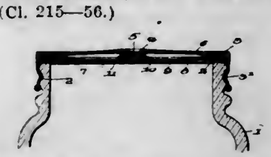
1. A battery terminal comprising two members adapted to enclose between them a battery post, one of said members having a wire receiving socket open at both ends and being provided at one side of the wire running socket with an arc shaped recess extending from its upper to its lower face and terminating in a retaining shoulder extending towards the battery post, and the other member having at one end a head adapted to fit the arc shaped recess of the other member and terminating in a shoulder adapted to engage the retaining shoulder thereof the head being movable into and out of the arc shaped recess by a sliding movement and in a direction parallel with the battery post, and means for drawing the free ends of said members together.

1,808,699. WINDOW GLASS CHANNEL. HUGH MOSS WATKINS, Lake Charles, La. Filed June 19, 1930. Serial No. 462,350. 7 Claims. (Cl. 296—445.)



1. A mounting of the kind described, comprising a convexed resilient supporting strip adapted to be frictionally locked within a window panel or glass guide channel, and a resilient gripping strip formed with the supporting strip to grasp the edge of a panel or glass when introduced into the last named strip and through impact with the median of the latter.

1,808,700. SHOCK ABSORBER. EVERT J. WENDELL, Wayne, Pa. Filed Apr. 9, 1928. Serial No. 268,628. 14 Claims. (Cl. 188—130.)

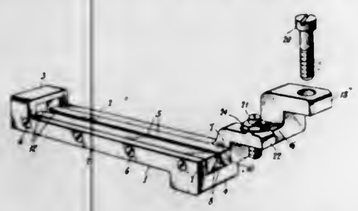


1. In a shock absorber, the combination with spaced members adapted for angularly convergent movement, of a resilient rubber element occupying the space between said members to predeterminedly regulate said movement.

1,808,701. CLOTH CONDITIONING MACHINE. HARRY H. WIGGLESWORTH, Mount Airy, Pa. Filed Feb. 19, 1930. Serial No. 429,715. 20 Claims. (Cl. 26—47.)

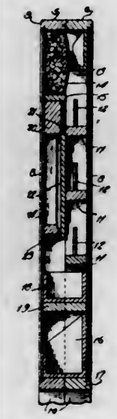
1. In a cloth conditioning machine including a housing having a tempering compartment and a humidifying compartment, means in the tempering compartment for subjecting the cloth to a steam bath by means of sprays, the humidifying compartment having a trap controlled outlet for the humidity therein and under which the cloth passes, and means including a suction pipe for drawing the humidity through the cloth.

1,808,702. METALLIC CAP FOR GLASS CONTAINERS. JOHN J. WILLIAMS, Wheeling, W. Va., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed June 27, 1927. Serial No. 201,709. 7 Claims. (Cl. 215—56.)



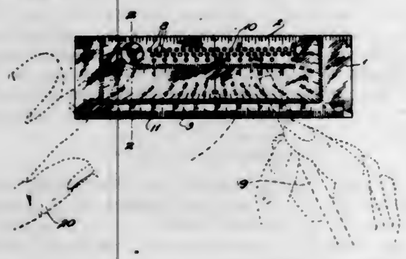
1. A closure for glass containers, including a cap, screw threads on the cap for positively securing the cap to the container, sealing means between the cap and the upper edge of the container, said cap having an opening therein, a disc adapted to be gripped between the cap and the container and provided with an opening therein, and means carried by said disc for normally sealing the opening in the cap.

1,808,703. ATTACHMENT FOR BREAKING TYPE SLUGS. LE ROY W. WILLIS, Brooklyn, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed June 18, 1929, Serial No. 371,924. 7 Claims. (Cl. 199—1.)



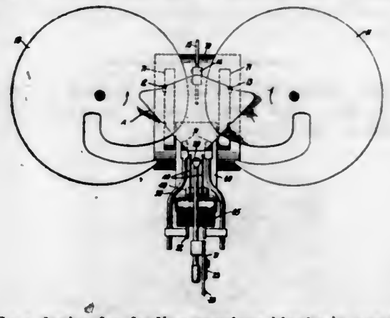
1. A device for detaching the gate from the oppositely-grooved type-bearing portion of a type slug, comprising

opposed relatively fixed jaws spaced to receive the type-bearing portion of such slug and shaped to fit into the



grooves therein and to expose the gate of the slug for angular displacement relatively to the type-bearing portion thereof.

1,808,704. SEWING SCREEN. ETTA G. ZIZELMAN, New York, N. Y. Filed Mar. 4, 1930. Serial No. 433,129. 2 Claims. (Cl. 223—53.)

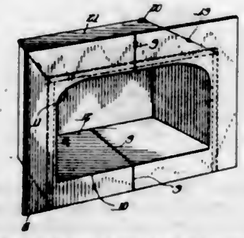


1. A screen structure comprising frame members hingedly connected at one edge, said frame members having compartments opening at their inner sides, a bar located in one frame member and disposed across the compartment thereof, a pad located in said frame member and mounted upon said bar and having a portion projecting beyond the plane of the edges of said frame member, a ledge member located in the other frame member opposite said pad and adapted to be engaged by the projecting portion of the pad when the frame members are closed with relation to each other.

1,808,705. COMBINATION COMPASS PROTRACTOR AND RULER. WILLIAM E. OWEN, Jr., Cedar Rapids, Iowa. Filed May 8, 1928. Serial No. 276,124. 1 Claim. (Cl. 33—27.)

A device of the character described comprising a transparent body portion formed with relatively parallel straight edge sides having graduated markings indicative of linear measurements upon its face side and adjacent to said straight edge sides, a portion of said body in parallel proximity to one straight edge side having a plurality of relatively parallel rows of spaced openings formed therein, the various openings of said rows being staggered with respect to the openings of the adjacent row, a centering eyelet mounted in said body portion adjacent one end of the parallel rows of spaced openings and in substantially longitudinal alinement with one row and said face side of the body portion having linear markings thereupon adjacent one edge, all of said last mentioned markings converging toward a common center adjacent the opposite edge.

1,808,706. FEEDING MECHANISM FOR ENVELOPES AND THE LIKE. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 15, 1928. Serial No. 319,501. 19 Claims. (Cl. 271—29.)



1. In a device for feeding envelope blanks in overlapped relation, in combination, a support for holding a stack of blanks, means for initiating the separation of the outside blank, a conveyor, means for bringing the separated portions of the blank against said conveyor comprising a pair of deflector members; means for constraining said separator portions against said conveyor comprising a pair of rollers having a to and fro movement, said deflector members being straddled by said roller members, the conveyor presenting a more or less flat surface and being more or less parallel to the plane of a blank in the stack.

1,808,707. SMOKING TOBACCO. DUDLEY HOWARD WIGGINS, Indianapolis, Ind. Filed Jan. 7, 1929. Serial No. 330,965. 2 Claims. (Cl. 131—31.)

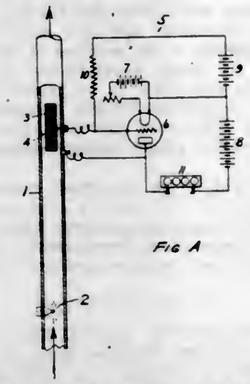
1. A smoker's mixture comprising smoking tobacco and silica gel in powdered form intermingled with the tobacco.

1,808,708. STAGE DISPLAY DEVICE. HENRY ZIEMMERMAN, Chicago, Ill., assignor to Chicago Cardboard Company, Chicago, Ill. Filed Mar. 19, 1928. Serial No. 262,872. 2 Claims. (Cl. 46—37.)

1. A foldable miniature stage display comprising a front member with a central rear score line adapting the front sides to fold forwardly face to face, a rear member attached at its ends to the sides of the front and having

vertical fold lines to form two sides and a back for the stage, one only of the sides being scored vertically to fold inwardly upon itself so that the outer portions thereof are face to face in their folded relation, the other side and the back portion of the rear member being of sufficient length to extend around the scored end of the front member when the structure is folded and having a fold line in alignment with the central fold line of the front member, thereby substantially enclosing the front member and protecting it in its compact folded form.

1,808,709. APPARATUS FOR METERING GASEOUS FLUIDS. ALFRED E. BLAKE, Haverford Township, Delaware County, Pa., assignor to The United Gas Improvement Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 18, 1928. Serial No. 313,218. 4 Claims. (Cl. 73—167.)



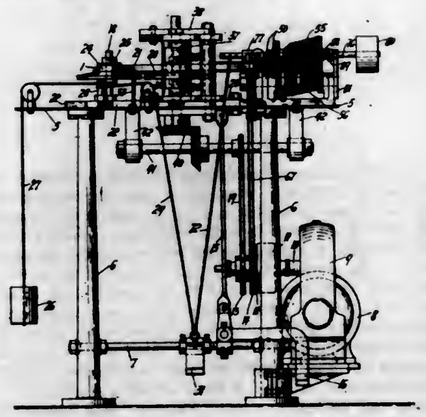


FIG A

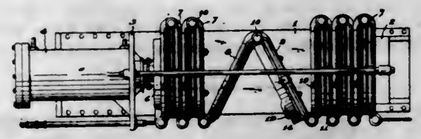
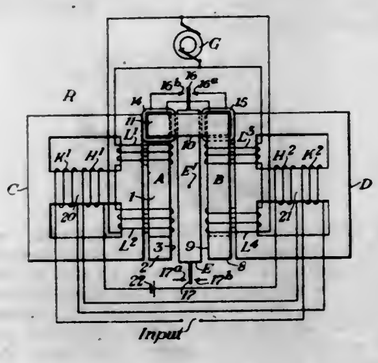


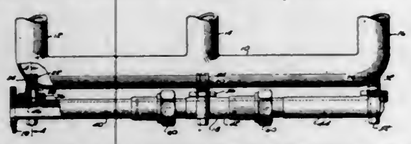
1. A gas meter including an element of radio-active material, a tube through which gas to be measured is adapted to flow, an element within said tube and electrically insulated therefrom, said tube and element forming a pair of spaced electrodes one of which is electrically insulated from said radio-active element, said electrodes being located relative to said radio-active element so as to be sensitive to the ionization of gas ionized by the radio-active element upon a flow of gas past the radio-active element.

1,808,710. PROCESS AND APPARATUS FOR COVERING TIRE BEADS. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 19, 1925. Serial No. 38,228. 5 Claims. (Cl. 154—9.)



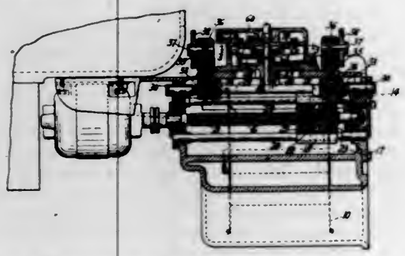
1. In an apparatus for covering tire beads, a plurality of rollers to support the bead, a support for certain of said rollers which bear against the inner circumference of the bead, and means to move said support toward the center of the bead to permit removal thereof.

1,808,711. VULCANIZING APPARATUS. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Nov. 9, 1927, Serial No. 233,597. Divided and this application filed Jan. 20, 1930. Serial No. 422,074. 16 Claims. (Cl. 18—17.)



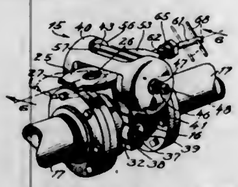
15. A vulcanizing heater comprising a supporting platform, a fixed standard at one end of the platform, a head mounted at the opposite end of the platform for movement toward and away from the fixed standard, a mold section connected by a vertical hinge to said standard, a mold section connected by a vertical hinge to said head, intermediate mold sections pivoted to the first mentioned mold sections and to each other by vertical hinges, said sections having recesses forming mold chambers, successive hinge connections being on opposite sides of said intermediate sections whereby said sections may be folded into a pack, means for separately heating the mold sections, means for selectively locking adjacent mold sections against separation, and means for selectively supplying fluid under pressure to the mold chambers.

1,808,712. ELECTRICAL RELAY. PHILIP H. DOWLING, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 30, 1930. Serial No. 464,763. 24 Claims. (Cl. 175—337.)



1. An electrical relay comprising a first core, means for at times supplying flux to said core, a movable armature controlled by the flux in said core, a second core for shunting flux away from said first core, and a winding on said second core operating when supplied with current to vary the shunting effect of said second core.

1,808,713. MANIFOLD FOR SUPPLY OF SUPPLEMENTAL GASES TO INTERNAL COMBUSTION ENGINES. ARLINGTON MOORE, New York, N. Y., assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 169,826. 10 Claims. (Cl. 123—52.)

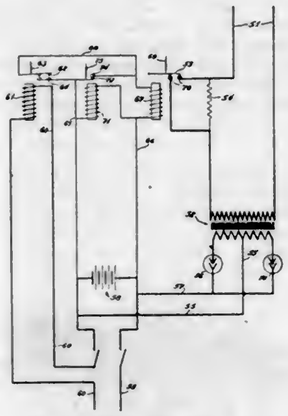


1. A secondary manifold made in telescoping sections, and means for locking the sections together in position adjusted for manifolds of different makes, each section provided with means for connecting to a principal manifold.

1,808,714. DISTRIBUTING APPARATUS FOR SPOOLERS ON WIRE DRAWING MACHINES. NORMAN H. NYE, Cuyahoga Falls, Ohio, assignor to The Vaughn Machinery Company, Cuyahoga Falls, Ohio, a Corporation of Ohio. Filed July 9, 1929. Serial No. 376,968. 13 Claims. (Cl. 242—158.)

1. In an apparatus of the character described, a spool and a distributor including a guide movable to and fro parallel to the spool axis, a screw shaft to move the guide, a reversible motor connected to the shaft, a reversing switch, and means operable by the guide at the limit of its movement to snap the switch and thereby reverse the direction of the motor.

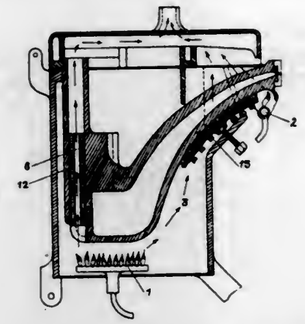
1,808,715. SLIDING VALVE. EDWARD P. REYNOLDS, Los Angeles, Calif. Filed Feb. 27, 1929. Serial No. 342,977. 12 Claims. (Cl. 137—75.)



1. A valve comprising a body provided with a passage for fluid therethrough and with a channel transverse to the fluid passage; a valve member mounted in the channel so as to be adapted to slide to and from a position for obstructing the flow of fluid through the passage and to be seated when it is in its flow-obstructing position; a valve member rotatably mounted in the valve body and provided with an opening so as to allow the slidable valve member to pass therethrough to and from its flow-obstructing position in the channel when the rotatable valve member is in its open position; a housing adapted to receive the slidable valve member therein and secured to the rotatable valve member so that the housing registers with the opening in the rotatable valve member and that thus the housing may be swung with the rotatable valve member to the open position of the rotatable valve member, thereby allowing the slidable valve member to be slid from the housing to its flow-obstructing position in the channel or to be slid from the flow-obstructing position into the housing, or that the housing may be swung with the rotatable valve member to the closed position of the rotatable valve member, thereby allowing the slidable valve member to be inserted into the housing from the outside of the valve body or to be removed from the valve body, which is formed so as to allow the rotative movement of the rotatable valve member with the housing thereon; and means for effecting the sliding movements of the slidable valve member.

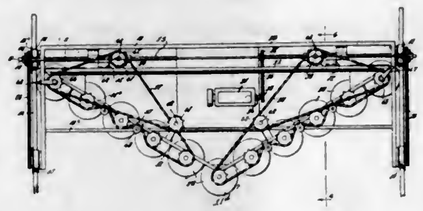
1,808,716. RESIN COMPLEX AND METHOD OF PRODUCING THE SAME. ISRAEL ROSENBLUM, Jackson Heights, N. Y. Filed June 14, 1929. Serial No. 371,066. 37 Claims. (Cl. 260—4.)

1. The method which comprises reacting a phenol, an aldehyde and an organic salt of a metal selected from the group consisting of the members of the alkali metal group and of the second group of the periodic system, lead, manganese and cobalt, in the presence of a natural resin, adding a polyhydric alcohol in quantity sufficient to form partial esters with such resin, and further heating the mass until a soluble resinous reaction product is obtained.



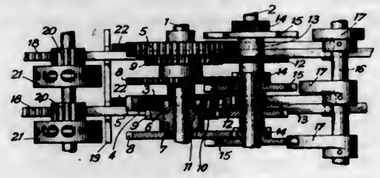
36. The method which comprises condensing phenol and formaldehyde in the presence of an organic salt of zinc in an amount up to approximately 7.5%, calculated as oxide, of the amount of the phenol until a soluble phenol-formaldehyde-zinc salt reaction product is obtained.

1,808,717. AUTOMATIC RECTIFIER REGULATOR. CLINTON E. STRYKER, Highland Park, Ill., assignor to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed June 18, 1927. Serial No. 199,701. 1 Claim. (Cl. 171—314.)



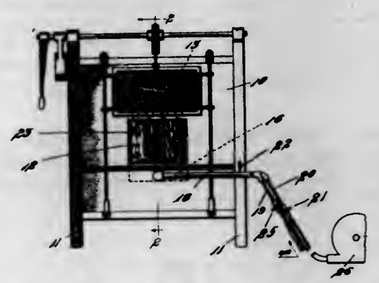
In combination, a transformer having a primary winding and a secondary winding, a storage battery and a load connected therewith, a rectifier means for connecting said storage battery to said secondary winding through said rectifier, a voltage relay coil connected across said battery and a current relay coil connected in series with said load, switches adapted to be opened and closed by said relay coils, a third relay coil, connections whereby the coil of the third relay is energized when either of the first-named switches is closed, a third switch, and means operated by the closure of said last-named switch for increasing the voltage of said secondary winding to increase the charging current through said battery upon decrease of the voltage across said battery and upon increasing the load current.

1,808,718. HEATING MEANS FOR CASTING POTS. THEODOR BADER, Waldshut, Germany. Filed Mar. 29, 1928, Serial No. 265,668, and in Germany Feb. 27, 1928. 11 Claims. (Cl. 263—11.)



1. The combination with a melting pot for typographic machines; of both gas heating means and electric heating means for the pot, and control mechanism common to both of said heating means to automatically render one of said means operative when the other fails.

1,808,719. CONCRETE ROAD LENGTHWISE FINISHING MACHINE. ROY T. GILES, Pittsburgh, Pa. Filed Oct. 28, 1927. Serial No. 229,434. 8 Claims. (Cl. 94—39.)

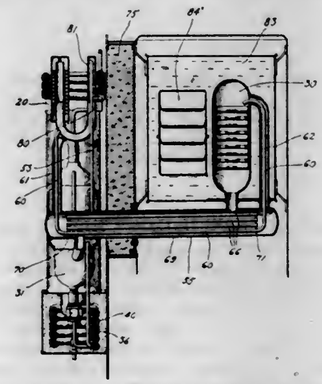


4. A road machine for gradually changing a crowned surface with no oscillating side thrust to a flat surface, comprising a plurality of juxtaposed drums, a supporting frame therefor, said drums being arranged in rearwardly and outwardly converging relation to each other from the center line of the machine, and each drum overlapping the path of the next drum thereto.

1,808,720. COUNTING MECHANISM FOR CALCULATING MACHINES AND THE LIKE. HANS HUBER, Zurich, Switzerland. Filed Mar. 17, 1926, Serial No. 95,341, and in Switzerland Mar. 25, 1925. 4 Claims. (Cl. 235—60.)

2. A device of the type described, comprising in combination, a plurality of individual driving gears for the different denominations, a differential gear interposed between the driving gears of adjacent denominations for the transfer of the tens, individual indicating means for each denomination, means adapted to bring said indicating means into operative engagement with said driving gears, a star-wheel for each denomination and driven by the driving gear of the latter, and angularly staggered segments cooperating with said star wheels and adapted to return the latter consecutively, beginning with the star-wheel for the lowest denomination, into their zero position and to set thereby the indicating means to show the result.

1,808,721. METHOD FOR HEAT TREATMENT. CARL I. HAYES, Providence, R. I. Filed May 25, 1929. Serial No. 365,975. 9 Claims. (Cl. 148—16.)



1. A method of heat treating comprising mixing combustible and oxygen bearing substances in predetermined proportions, combusting the mixture in a combustion chamber and utilizing the gaseous products of said combustion in a heat treating chamber as an enveloping atmosphere for the material to be heat treated.

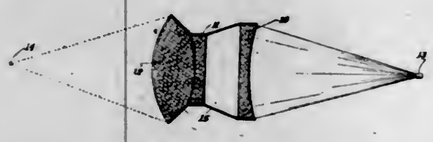
1,808,722. MANUFACTURE OF PHENOLATES. ALBERT HEMPEL, Leipzig-Oetzsch, Germany. Filed July 7, 1930, Serial No. 466,034, and in Germany Apr. 9, 1929. 4 Claims. (Cl. 260—154.)

1. The method which comprises fusing an aryl sulfonate with an alkali whereby there is obtained a mixture containing an alkali metal phenate corresponding to the aryl sulfonate, alkali sulfite and unreacted alkali, neutralizing the unreacted alkali by the addition of a phenol corresponding to the alkali metal phenate and subsequently allowing the phenate to stratify into a distinct separable layer and finally isolating the stratified phenate.

1,808,723. REFRIGERATION. CARL GEORG MUNTERS, Stockholm, Sweden, assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 28, 1926, Serial No. 132,160, and in Germany July 26, 1926. 28 Claims. (Cl. 62—119.5.)

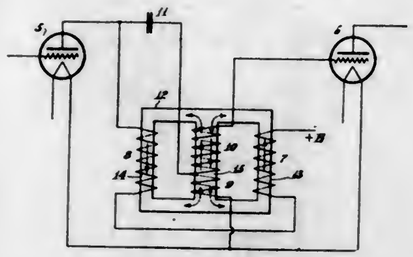
1. Those steps in refrigerating through the agency of an absorption system which consist in generating vapor

of a refrigerant, condensing the refrigerant vapor, passing the condensed refrigerant into heat exchange relation with the generated vapor, evaporating condensed refrigerant in said heat exchange relation, recondensing the refrigerant so evaporated, conducting the condensed refrigerant to an evaporating space, providing a pool of liquid in said heat exchange relation and maintaining said pool of liquid due to the supply of condensed refrigerant to said evaporating space.



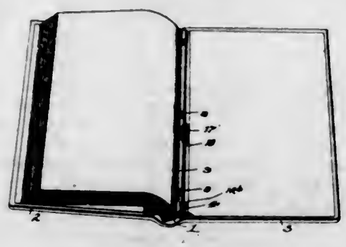
10. In a device of the character described, a generator, a vertically extending separator comprising a first path and a second path, an upwardly extending conduit from said generator to said separator connected with said first path, a condenser connected to said first path to receive vapor therefrom and connected to said second path to deliver liquid thereto, and means to conduct liquid from said second path outside said generator.

1,808,724. GOLF BAG PROP. JOHN CARLON, Crete, Nebr., assignor of one-half to John E. Mekota, Crete, Nebr. Filed Dec. 7, 1928. Serial No. 324,400. 3 Claims. (Cl. 150—1.5.)



1. In a device of the character described, a pair of longitudinally extending guide sleeves adapted to be secured in alignment on a golf bag, a rod freely slidable through said guide sleeves and adapted to be projected at its lower extremity into the ground when the bag is disposed upright upon the ground, and means on the upper of said guide sleeves for securing said rod in inoperative position when the lower end thereof is withdrawn from the ground.

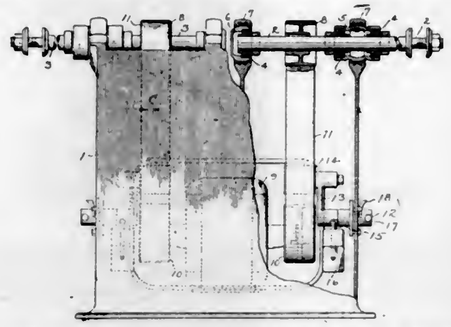
1,808,725. SCREEN FOR MOTION PICTURES AND THE LIKE. MARSHALL DE FRANCISCO, New York, N. Y. Filed Apr. 9, 1927. Serial No. 182,218. 8 Claims. (Cl. 88—24.)



1. A screen for photographic reproduction comprising a glass element having a curved exterior face, a second glass element in the path of light rays passing to the first element, said second glass element having a finely ground surface on which the image is first projected and acting as a screen, and a third glass element between the first and cseond element, said third element having a regularly curved face to produce refraction without substantial distortion, the light rays passing directly through said elements, said screen being adapted to reproduce a projected image such as to be viewed by an audience.

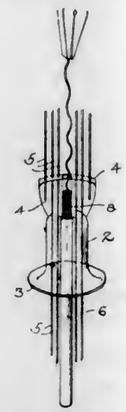
1,808,726. AUDIO FREQUENCY COUPLING. HAROLD P. DONLE, Meriden, Conn., assignor, by mesne assignments, to Radio Inventions, Inc., a Corporation of New York. Filed May 9, 1928. Serial No. 276,346. 7 Claims. (Cl. 179—171.)

1. An audio frequency coupling device having capacitative and inductive elements for a vacuum tube amplifier, the latter consisting of a closed iron core having a central leg and two outer legs, windings upon said outer legs connected in series, said windings being so directioned as to cause their magnetic paths to include substantially only the periphery of the core and serving to feed plate potential to the plate of the previous tube and a step-up auto transformer having windings carried by said central leg the input to said auto transformer being through said capacity element and having its output connected to the succeeding vacuum tube.



1,808,727. LOOSE LEAF BINDER. JOHN L. MCMILLAN, Syracuse, N. Y., assignor to McMillan Book Company, Syracuse, N. Y., a Corporation of New York. Filed Dec. 24, 1925, Serial No. 77,564. Renewed Dec. 7, 1929. 10 Claims. (Cl. 129—24.)

8. In a device of the class described, a back member, a housing having an open end secured to the back member, a pintle-carrying slide slidably mounted in the housing, a removable member engaging the end of the slide to restrain the latter from movement, and means on the member interlockingly engaged with the housing for locking said member in position.

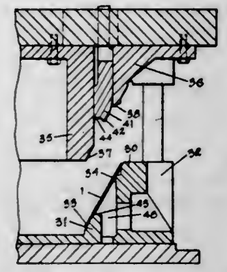


1,808,728. GRINDING AND POLISHING LATHE. RAYMOND C. MITCHELL, Springfield, Ohio, assignor to The Mitchell Engineering Co., Springfield, Ohio, a Corporation of Ohio. Filed May 9, 1924. Serial No. 711,987. 5 Claims. (Cl. 51—166.)

1. In a construction of the character described a hollow supporting pedestal, a shelf mounted in the lower portion of said pedestal for oscillatory movement in a vertical direction, means for securing said oscillatory shelf in different positions of swinging adjustment, a motor mounted upon said shelf within the hollow pedestal, a spindle located at the top of said pedestal, drive and driven pulleys carried by the motor and spindle respectively, a belt having therein excessive slack connecting said driving and driven pulleys, automatic belt tightener means for taking up the slack of said belt, an operating lever located exteriorly

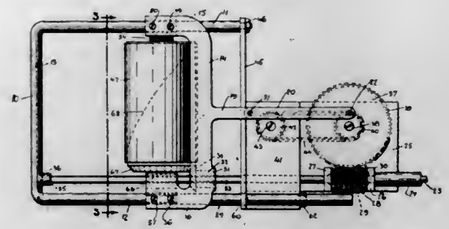
of the pedestal and connected with the belt tightener means for retracting said belt tightener and relaxing the driving tension of the belt and a detent extending into the path of movement of said lever for engaging and holding said lever in retracted position.

1,808,729. MEANS AND METHOD OF TUBULATING LAMP BULBS. JOHN S. VAN HORNE, Franklin, Ohio, assignor to Van Horne Tube Company, Franklin, Ohio, a Corporation of Ohio. Filed Aug. 6, 1925. Serial No. 48,493. 31 Claims. (Cl. 176—7.)



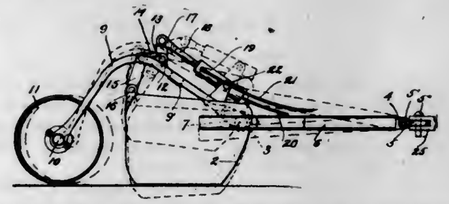
25. The combination with a lamp bulb or the like, and a mount connected therewith, and having lead wires extending through said mount, a tubulating stem sealed within said mount and a resilient bushing within the tube at the region where it is so sealed to prevent the collapse thereof and to maintain communication with the interior of the bulb.

1,808,730. METHOD FOR MAKING A STABLE POWDER FROM WHOLE MILK. CARL BÖHM VON BÖRNEGG, Frankfort-on-the-Main, Germany. Filed Aug. 13, 1927, Serial No. 212,848, and in Germany May 6, 1926. 1 Claim. (Cl. 99—5.)



A method for making stable whole milk powders which consists in skimming whole milk, desiccating the cream and the skimmed milk by separate atomizers in the same atmosphere and regulating the feeding of the cream and the skimmed milk in such a manner that a mixture of the desiccated cream powder and the desiccated skimmed milk powder is obtained, which corresponds to the natural composition of the whole milk.

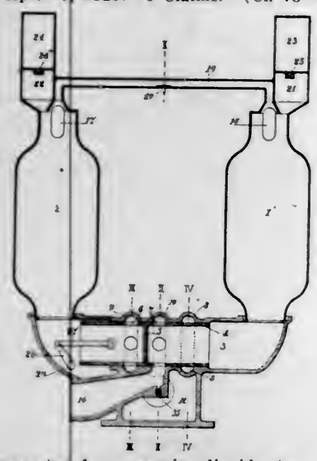
1,808,731. METHOD OF FORMING SHELLS. GEORGE E. IRELAND, Toledo, Ohio, assignor to The City Machine & Tool Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 25, 1930. Serial No. 447,380. 20 Claims. (Cl. 113—51.)



1. The process of forming a radiator shell which consists in shaping sheet metal parts, welding edge portions of the parts to produce a continuous flaring band roughly conforming to the shape of the shell, gripping opposite edges of the flaring band and stretching the portions intermediate the opposite edges of the flaring band by projecting such portions into space.

1,808,732. SURFACING MACHINE. EDWARD O. NORRIS, Greenwich, Conn. Filed Dec. 22, 1928. Serial No. 327,801. 1 Claim. (Cl. 51—176.)

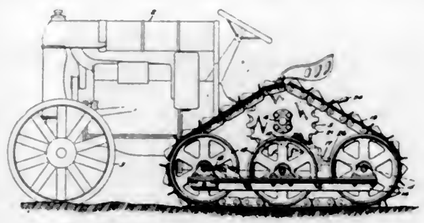
In a surfacing machine, a surfacing element having a gear on one side of same, a shaft, a supporting member for said element, a spur gear connected to said shaft and meshing with said gear on the element, a worm gear on the shaft, a large pinion meshing with said worm gear, a small pinion attached to said large pinion, a second pinion set off from the small pinion, a link chain traveling on the last two mentioned pinions, a link revolvably attached to said supporting member, a pin in the free end of said link, said pin being set in one of the links of said chain and adapted to travel with said chain for causing forward or backward movement of said element.



1,808,733. EARTH MOVING IMPLEMENT. LEN O. BIRD, Glendale, Calif., assignor to W. L. Adams, Rexburg, Idaho. Filed Apr. 1, 1930. Serial No. 440,814. 6 Claims. (Cl. 37—169.)

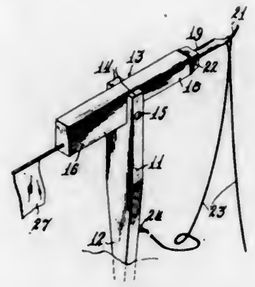
6. An implement of the class described comprising a scraper member, a bar carried thereby, a tongue secured to said bar and arranged for pivotal connection with a tractor, a wheeled frame having an upwardly bowed portion

extending over and above the top edge of said scraper member and the forward end of which is hingedly connected to said bar, a shaft, arms secured to said shaft, links pivotally connecting said arms with the top of the scraper member, and means on the frame to oscillate said shaft and thereby lift or lower said scraper member.



1,808,734. LIQUID METER. MARIO CARBONARO, Paris, France. Filed Mar. 15, 1926, Serial No. 94,935, and in France Apr. 10, 1925. 6 Claims. (Cl. 73—38.)

1. In apparatus for measuring liquids, two receptacles each of definite capacity having inlet and outlet conduits, the former communicating with a source of liquid under pressure, distributing valve mechanism controlling said conduits for allowing the alternate filling of said receptacles by the liquid under pressure and the discharging of said liquid from said receptacles, said mechanism including a pressure actuated distributing valve, movable responsively to liquid pressure in the one or the other of said receptacles upon the complete filling thereof a venting conduit for discharging atmosphere displaced by the incoming liquid, liquid level responsive means for closing said conduit, means associated with each receptacle for receiving a body of air during the filling of the respective receptacle, means forming a compression chamber associated with the air trapping receiving means and wherein the received air is displaced and compressed by the rising liquid after the closing of said vent by said liquid level responsive means, a valve controlling the displacement of said received air, said valve being closed when reached by said rising liquid, the closing of said valve by preventing further movement of the liquid column from said source to said receptacle suddenly building up in the latter the pressure to the value at which the distributing valve moves, the initial movement of said distributing valve in response to said pressure value being continued past the point of closure of said conduits by expansion of the compressed fluid in said compression chamber, the pressure of said expansion carrying said distributing valve to a position in which the discharge conduit for the filled receptacle and the inlet conduit for the other receptacle are simultaneously opened.

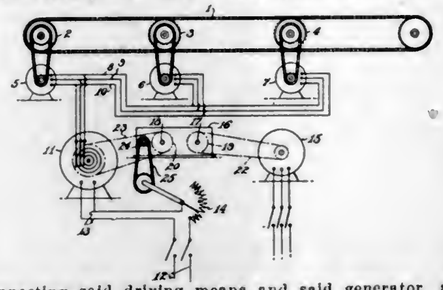


1,808,735. TRACTOR. CLARENCE A. HENNEUSE and CHARLES A. HAWKINS, Sacramento, Calif., assignors, by mesne assignments, to W. A. Riddell Company, Bucyrus, Ohio, a Corporation of Ohio. Filed Dec. 1, 1923. Serial No. 677,962. 9 Claims. (Cl. 305—3.)

5. The combination with a tractor having a driving axle and a housing enclosing said axle, of a bracket secured to said housing, a pivot pin carried by said bracket below and in the vertical plane of the axis of the axle, a driving sprocket secured to said axle, an endless flexible track passing over the driving sprocket, three spaced rollers under which the track passes, the centers of said rollers being below the driving axle, a frame on which said rollers

are mounted and a bracket secured to the frame and carrying the axle of the central roller mounted on said pivot pin, said pin being disposed above the centers of said rollers.

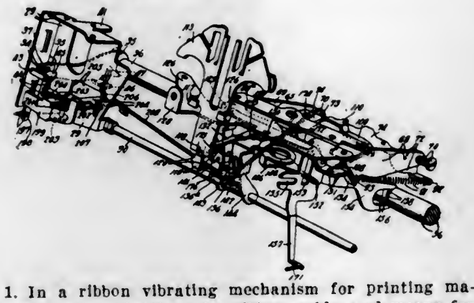
1,808,736. DIP UP. ALBERT WILLIAM HERNKE, Cudahy, Wis. Filed May 22, 1929. Serial No. 365,210. 3 Claims. (Cl. 43—17.)



1. An article of the class described comprising, in combination, a vertical support; a cross member pivotally balanced on the upper end of said support; an indicator on one end of the cross member and a hook on the other end to detachably receive a line thereover, said cross member having a longitudinal bore therein for receiving a plurality of spherical weights adapted to have free movement therein to overbalance said cross member whereby it may assume and be retained either horizontally or vertically.

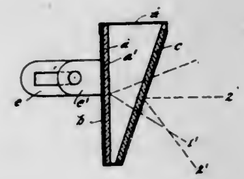
1,808,737. METHOD OF PRODUCING CITRUS FRUIT PRODUCTS. HUGO G. LOESCH, Rochester, N. Y., assignor, by mesne assignments, to General Foods Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 29, 1925. Serial No. 78,235. 13 Claims. (Cl. 99—11.)

7. The method of producing pectin and citric acid from lemons comprising processing the fruit, separating the resulting solution from the insoluble matter, clarifying the solution with a starch solution, concentrating the clarified solution and then precipitating the pectin in the concentrate with alcohol and recovering the citric acid in the motor liquor as citrate of lime.



1,808,738. SEGREGATED DRIVE FOR LONG CONVEYERS. WILLIAM R. PERRY, Columbus, Ind., assignor to Reeves Pulley Company, Columbus, Ind., a Corporation of Indiana. Filed June 4, 1928. Serial No. 282,528. 1 Claim. (Cl. 172—293.)

The combination with a plurality of driven elements, of a plurality of electric motors one for each of said elements, a generator for supplying current to all of said motors, means operating at a constant speed for driving said generator, means for controlling the current supplied to the field of said generator, a variable speed transmission for



connecting said driving means and said generator, and connecting means between said variable speed transmission and said controller.

1,808,739. TYPEWRITING MACHINE. HENRY ALLEN AVERY, Groton, N. Y., assignor to L C Smith & Corona Typewriters Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 23, 1928. Serial No. 272,121. 13 Claims. (Cl. 197—151.)

1. In a ribbon vibrating mechanism for printing machines, the combination of a ribbon guide, and means for vibrating said guide to cause a ribbon to cover and uncover a printing point, said means comprising two members swinging in different directions about different parallel axes, one of said members being movable by the other to a position in which the guide is positioned to cover the printing point with a ribbon and each member has two opposed contacts with the other member at two points at one side of its axis located different distances from its axis.

1,808,740. DUPLEX REAR-VIEW MIRROR. HERBERT E. WETHERBEE, Cleveland Heights, Ohio, assignor of one-third to Richard F. Grant, New York, N. Y., and one-third to Howard M. Hanna, Cleveland, Ohio. Filed Oct. 9, 1928. Serial No. 311,380. 3 Claims. (Cl. 88—1.)

1. In a device of the class described, the combination with a high intensity reflector member, of a clear glass member positioned at an acute angle therewith, and an adjustable mounting for said associated members, whereby an acute angle adjustment of the device permits a high intensity reflection from the one member in the day time and a low intensity reflection from the clear glass member in the night time.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 407—No. 2 TUESDAY, JUNE 9, 1931 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Reissue Application—Patent Involved in Interference Practice

U. S. Patent Office, *Washington, May 19, 1931.*

(Order No. 3,193)

My attention has been called to the fact that, in some instances, a reissue of a patent has been granted while the patent was involved in an interference.

In *Lattig and Goodrum* v. *Dean*, 111 O. G. 301, 1904 C. D. 255, the Commissioner, with reference to a case in which the claims in issue had been omitted in the reissue, said: "It was irregular and improper to permit such reissue during the progress of the interference."

Hereafter, if an application for reissue of a patent is filed while the patent is involved in interference, that application must be called to the attention of the Commissioner before any action by the Examiner is taken thereon.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,656,364, W. B. Rulon, Method for forming reconstructed carbonaceous fuel, decided May 22, 1931, claims 3 and 4.

Pat. 1,692,762, C. W. Peterson, Loud speaker, decided April 2, 1931, claim 3.

Pat. 1,714,173, J. M. Kessler and O. B. Helfrich, Ether-alcohol esters of polycarboxylic acids, claims 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 13, 14, 15, and 16.

Pat. 1,732,946, I. E. O'Brien, Hose supporter, decided April 23, 1931, claim 6.

Pat. 1,738,807, George Walker, Direction indicator and recorder for ships, etc., decided May 9, 1931, claim 8.

Pat. 1,753,408, L. A. Gebhard, Inductance system, decided May 16, 1931, claims 1, 2, 3, 4, 5, 6, 7, and 8.

Pat. 1,764,402, W. F. Hamilton, Disc cultivator, decided May 19, 1931, claims 1, 2, and 8.

Service of Papers in Contested Cases

Attention is called to Rule 153 (*a*), which requires that "every paper" filed in a contested case in the Patent Office must be served upon the other parties.

This includes all appeals in such cases.

Notice of Cancellation

U. S. Patent Office, *Washington, May 11, 1931.*

Quaker Hat Co., Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Hodshon-Berg, Incorporated, Fifth Avenue and 57th Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Quaker Hat Co., Inc., of 64–70 West 36th Street, New York, N. Y., No. 244,585, dated July 24, 1928, and the notice of such proceeding sent by registered mail to the said Quaker Hat Co., Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Quaker Hat Co., Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business May 23, 1931

(Total number of applications awaiting action, excluding Trade-Mark Division, 95,062; Trade-Mark Division, 1,238. Oldest new case, Sept. 2, 1930; oldest amended, Sept. 3, 1930. The dates given are 1930 except where † indicates 1931.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE SWAN

No. 2,593. Decided February 11, 1931

PATENTABILITY—MANIFOLDING A FOUR CYLINDER ENGINE.

Claims for an improvement in manifolding four-cylinder engines *Held* noninventively different from the claims of applicant's own patent.

APPEAL from the Patent Office. Affirmed.

Mr. Joseph H. Milans and *Mr. Calvin T. Milans* for Swan.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.:*

The appellant has filed a divisional application for a claimed improvement in manifolding four-cylinder internal-combustion engines. He was allowed, as we are advised, claims 1 to 8, inclusive, while claims 9, 10, 11, and 12 were rejected by the Examiner and by the Board of Appeals. In this court the appellant has abandoned all of his claims except rejected claim 9, which is as follows:

9. The combination with a four-cylinder engine having suitable inlet ports, of a manifold having a main manifold duct level throughout its length, a straight or substantially straight riser duct adapted to connect the carbureter with the central portion of the main duct and being at right angles, or substantially at right angles thereto, the interior of the connection of the riser to the main duct being at substantially right angles throughout the connection, secondary ducts operatively associated with the cylinder inlet ports to supply fuel mixture to the cylinders through their said ports in keeping with the induction cycles of the four cylinders, said secondary ducts being at right angles, or substantially right angles to the main duct, a distributing zone being formed at the junction of the main duct and riser, the secondary ducts being parallel, or substantially parallel to each other and perpendicular or substantially perpendicular to the main duct and on the interior making right angle connections with the main duct.

Claim 9 was rejected on reference to a patent taken out by appellant on April 28, 1925, being Patent Office No. 1,836,044. Appellant's device is as fully set forth in claim 9 as is necessary for the purposes of this case. On reference to the former patent to appellant, we find Figure 7 of the drawings picturing a four-cylinder engine with a manifold constructed in substantially the same way as appellant's manifold in the case at bar. The specification filed in the patent is also broad enough to include such four-cylinder construction.

Twenty-three claims were filed and allowed in connection with said patent, many of which, notably claims 1 to 8 and 11 to 13, are broad enough to include an engine of any number of cylinders, including four. We quote the first and fourth claims of said patent as illustrative:

1. A method of distributing a fuel mixture to an engine which consists in moving the mixture in a straight line to a zone from which it is distributed to a plurality of engine cylinders, and modifying said movement by forces which tend to distribute the mixture uniformly in all directions in a plane transverse to said movement.

4. A method of distributing a fuel mixture to an engine which consists in moving the mixture in straight line to a zone from which it is distributed to a plurality of engine cylinders, directing said movement by forces which tend to distribute the mixture uniformly in all directions in a plane transverse to said movement, and further directing the movement of the mixture by forces tending to move it successively in a plurality of directions transverse to the original direction, to the cylinders.

It will be observed that these claims are broad enough to include the application of the principle which appellant has invented, to a four-cylinder engine. If appellant is to be allowed claim 9 of this application, it must be upon the theory that there is a patentable distinction between his former patent and this further and more specific claim, and that he further points out in this claim for a new patent some particular application of his general idea to the specific mechanism, namely, a four-cylinder engine.

We are unable to see wherein the appellant has done this in the case at bar. There is nothing in rejected claim 9 which is not substantially covered by claims 1 and 4 of the reference patent. It is not sufficient for appellant to recite that he uses his combination with a four-cylinder engine, and expect to get a specific patent upon this device used with such type of engine, unless he shows further wherein his claim is limited to this type of engine. This has been pointed out, and properly so, by the tribunals of the Patent Office. The appellant has been allowed eight claims in this application, which were framed in such a way as to recite the precise structure which he employed in fitting his manifold to a four-cylinder engine. The rejection of claim 9 by the Patent Office was not based upon the idea that there might not be a patentable distinction between the application of appellant's manifold to a six-cylinder engine and a four-cylinder engine, but upon the general grounds that claim 9 was not different, in substance, from the patent already granted to the appellant. Appellant may not extend his monopoly in this way. This is the doctrine of *In re Isherwood*, 46 App. D. C. 507; *In re Woodsome*, 56 App. D. C. 138, and *In re Hutter*, 55 App. D. C. 210.

We are in harmony with the conclusion reached by the Examiner and by the Board of Appeals, and the decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

MYERS *v.* SPENCER

No. 2,607. Decided February 11, 1931

INTERFERENCE—PRIORITY—RIGHT TO MAKE THE CLAIMS.

Record reviewed and *Held* that priority should have been awarded to M. on the ground that S., the senior party, cannot make the claims in issue.

APPEAL from the Patent Office. Reversed.

Mr. Elliott J. Stoddard, Messrs. Milans & Milans, and *Mr. Charles Howson* for Myers.

Mr. Bonifant Hamilton, Mr. Delos G. Haynes, Mr. Robert L. Kahn, and *Mr. Samuel L. Ostrolenk* for Spencer.

HATFIELD, *J.:*

This is an appeal in an interference proceeding from the decision of the Board of Appeals affirm-

ing the decision of the Examiner of Interferences awarding priority of invention to appellee.

The invention in issue relates to automatically regulated electric flatirons.

Appellant's application, filed January 8, 1925, matured into patent, No. 1,634,431, July 5, 1927.

Appellee's application, No. 565,256, was filed June 1, 1922.

The counts of the interference were copied by appellee from appellant's patent and an interference was declared November 2, 1927.

The counts in issue read:

1. In an apparatus of the kind described, the combination of a heating element, and a thermostatic regulator therefor, *united together to form an integral structure adapted to be removed and replaced as a unit.*

2. In an apparatus of the kind described, the combination of a heating element, and a thermostatic regulator therefor, *having a constituent element in common so constructed and united as to form an integral structure that can be removed and replaced as a unit.*

7. In an electric iron, a heating unit and a temperature regulator therefor *employing a structural element in common aside from their mutual electrical connections.*

8. In an electric iron, a heating unit and a tempreature regulator therefor so combined as to be *structurally interdependent* and *to form a unitary structure removable as a whole* whereby less parts are required were each of said elements to be functionally complete when detached from the other. (Italics ours.)

Appellant moved to dissolve the interference on the ground that appellee could not make the claims in issue.

The Law Examiner overruled the motion in so far as it applied to the involved counts.

The Examiner of Interferences held that, as the date alleged in appellant's preliminary statement for conception of the invention was subsequent to the filing date of appellee and, as appellant had failed to show cause why judgment on the record should not be entered against him, appellee was entitled to an award of priority.

The Board of Appeals affirmed the decision of the Examiner of Interferences.

It is conceded by counsel for appellant that, if appellee is entitled to make the counts in issue, he is entitled to an award of priority.

It is claimed by counsel for appellant, however, that appellant disclosed and claimed an electric flatiron having a heating unit and a thermostatic regulator therefor "structurally interdependent"; that is to say, appellant's heating unit and thermostatic regulator have parts in common and are so constructed and combined that they may not be separated without destroying the functions of each; that they are so constructed and united as to form an integral structure adapted to be removed and replaced as a unit; that the counts in issue are expressly limited to the structure disclosed by appellant; that appellee's disclosure relates entirely to a thermostatic regulator; that it was intended to be used for "controlling electric circuits as well as valves and switches of various types," and, therefore, was not intended to be so united with a heating element as to make the two elements "structurally interdependent"; and that, while appellee's heating element and the thermostatic contol may be united in an electric iron, they have no parts in common, and, when detached, each remains a separate and complete unit; and that, therefore, they are not structurally interdependent within the plain meaning of the counts in issue.

The Board of Appeals held that appellee disclosed a heating unit and thermostatic control so united that they might be removed and replaced as a unit; and that, when combined, they formed an integral structure within the meaning of the counts in issue.

We are not in accord with these views. It is evident from appellee's disclosure that he had in mind a thermostatic control for use with other entirely distinct and separate units.

In his decision the Law Examiner said:

Spencer shows a part "36" which at two points *is connected to the heating element and which holds part of the regulator device.* (Italics ours.)

While it is true that part "36" in appellee's disclosure, referred to in the Law Examiner's decision, may be the element that connects the two independent and separate units for use in an electric flatiron, it does not follow that those units when so attached are "structurally interdependent." In other words, while they are joined for operative purposes, each performs its separate function as an independent unit. Furthermore, when detached, each retains its essential characteristics and functions.

Counsel for appellee concedes that "the heating element and the thermostatic apparatus remain units when detached from each other." It is argued, however, that, when joined for operative purposes, they are "structurally interdependent."

It is true, as argued by counsel for appellee, that count 1 is broader in scope than counts 2, 7, and 8, and that it refers to a heating element and a thermostatic regulator united together to form an integral structure adapted to be removed and replaced as a unit. However, we are unable to find anything in appellee's disclosure to indicate that a heating element and thermostatic regulator were intended to be so united as to form an integral structure adapted to be removed or replaced as a unit. On the contrary, we think it is clear that the heating element and thermostatic regulator, as disclosed by appellee, were designed to be removed and replaced as separate and distinct units.

It will be observed that the involved counts are expressly limited to the precise structure disclosed by appellant. Accordingly, giving them the broadest interpretation which they will reasonably support, we are, nevertheless, of the opinion that, due to the limitations therein expressly contained, appelee is not entitled to make them.

For the reasons stated, the decision of the Board of Appeals is reversed.

Reversed.

International Convention Revised at The Hague

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA,

A PROCLAMATION.

Whereas, a Convention revising the convention for the protection of industrial property signed at Paris on March 20, 1883, revised at Brussels on December 14, 1900, and at Washington on June 2, 1911, was signed at The Hague on November 6, 1925, by the respective Plenipotentiaries for the United States of America, Germany, Australia, Austria, Belgium, the United States of Brazil, Canada, Cuba, Denmark, the Free City of Danzig, the Dominican Republic, Spain, Estonia, Finland, France, Great Britain and Northern Ireland, Hungary, the Irish Free State, Italy, Japan, Morocco, the United Mexican States, Norway, the Netherlands, Poland, Portugal, the Kingdom of the Serbs, Croats and Slovenes, Sweden, the Swiss Confederation, Syria and the Lebanon, Czechoslovakia, Tunis and Turkey, which Convention, in the French language, is word for word as follows:

[Translation]

CONVENTION OF UNION OF PARIS OF MARCH 20, 1883, FOR THE PROTECTION OF INDUSTRIAL PROPERTY

REVISED AT BRUSSELS DECEMBER 14, 1900, AT WASHINGTON JUNE 2, 1911, AND AT THE HAGUE NOVEMBER 6, 1925

The President of the German Reich; the President of the Republic of Austria; His Majesty the King of the Belgians; the President of the United States of Brazil; the President of the Republic of Cuba; His Majesty the King of Denmark; the President of the Dominican Republic; His Majesty the King of Spain; the President of the Republic of Estonia; the President of the United States of America; the President of the Republic of Finland; the President of the French Republic; His Majesty the King of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, Emperor of India; His Serene Highness the Governor of Hungary; His Majesty the King of Italy; His Majesty the Emperor of Japan; His Majesty the Sultan of Morocco; the President of the United Mexican States; His Majesty the King of Norway; Her Majesty the Queen of the Netherlands; the President of the Polish Republic, in the name of Poland and the Free City of Danzig; the President of the Portuguese Republic; His Majesty the King of the Serbs, Croats and Slovenes; His Majesty the King of Sweden; the Federal Council of the Swiss Confederation; the States of Syria and Greater Lebanon; the President of the Czechoslovak Republic; His Highness the Bey of Tunis; the President of the Turkish Republic,

Having deemed it expedient to make certain modifications and additions in the international convention of March 20, 1883, for the creation of an international union for the protection of industrial property, revised at Brussels on December 14, 1900, and at Washington on June 2, 1911, have appointed as their plenipotentiaries, to wit: [Names omitted.]

Who, having communicated to each other their respective full power, which were found to be in good and due form, have agreed upon the following articles:

ARTICLE 1

The contracting countries constitute themselves into a union for the protection of industrial property.

The scope of the protection of industrial property includes patents, utility models, industrial designs and models, trade-marks, commercial names and indications of origin, or appellations of origin, as well as the repression of unfair competition.

Industrial property is to be understood in the broadest meaning and is to be applied not only to industry and commerce as such, but likewise to agricultural industries (wines, grain, tobacco leaves, fruit, cattle, etc.) and extractive industries (minerals, mineral waters, etc.).

The term "patents" includes the various types of industrial patents granted by the laws of the contracting countries, such as patents of importation, improvement patents, patents and certificates of addition, etc.

ARTICLE 2

Nationals of each of the contracting countries shall, in all other countries of the Union, as regards the protection of industrial property, enjoy the advantages that their respective laws now grant, or may hereafter grant, to their own nationals, without any prejudice of the rights specially provided by the present convention. Consequently they shall have the same protection as the latter, and the same legal remedy against any infringement of their rights, provided they observe the conditions and formalities imposed on subjects or citizens.

Nevertheless no condition as to the possession of a domicile or establishment in the country where protection is claimed can be required of those who enjoy the benefits of the Union for the enjoyment of any industrial-property rights.

The provisions of the legislation of each of the contracting countries relative to judicial and administrative proceedings and to competent authority, as well as to the choice of domicile or the appointment of an authorized agent, which may be required by the laws on industrial property are expressly reserved.

ARTICLE 3

Nationals of countries not forming part of the Union who are domiciled or who have real and effective industrial or commercial establishments in the territory of any of the countries of the Union, shall be assimilated to the nationals of the contracting countries.

ARTICLE 4

(*a*) Any person who has duly applied for a patent, the registration of a utility model, industrial design or model, or trade-mark in one of the contracting countries, or his legal representative or assignee, shall enjoy, subject to the rights of third parties, for the purposes of registration in other countries, a right of priority during the periods hereinafter stated.

(*b*) Consequently, subsequent filing in any of the other countries of the Union before the expiration of these periods shall not be invalidated through any acts accomplished in the interval, either particularly, by another filing, by publication of the invention, or by the working of it, by the sale of copies of the design or model, or by use of the trade-mark.

(*c*) The above-mentioned periods of priority shall be twelve months for patents and utility models, and six months for industrial designs and models and trade-marks.

These periods shall start from the date of filing of the first application in a country of the Union; the day of filing is not counted in this period.

If the last day of the period is a *dies non* in the country where protection is claimed, the period shall be extended until the next working day.

(*d*) Any person desiring to take advantage of the priority of a previous application must make a declaration giving particulars as to the date of such application and the country in which it was made. Each country will determine for itself the latest date at which such declaration must be made.

The particulars referred to shall be stated in the publications issued by the competent authority, and in particular in the patents issued and the specifications relating thereto.

The contracting countries may require any person making a declaration of priority to produce a copy of the application (with the specification, drawings, etc.) previously made. The copy, certified as correct by the authority receiving this demand, shall not require any legal authentication, and in any circumstances can be filed at any time within the period of three months from the lodging of the last application. They may also require that the declaration shall be accompanied by a certificate by the proper authority showing the date of application, and also by a translation.

No other formalities may be required for the declaration of priority at the time of application. Each of the contracting countries shall decide for itself what consequences shall follow the omission of the formalities prescribed by the present article, but such consequence shall in no case be more serious than the loss of the right of priority.

At later stages, further proof in support of the application may be required.

(*e*) Where an application is filed in a country for the registration of an industrial design or model by virtue of a right of priority based on the registration of a utility model, the period of priority shall not exceed that fixed for industrial designs and models.

Furthermore, it is allowable to deposit in a country a utility model by virtue of rights of priority based on a patent application, and vice versa.

(*f*) If an application for a patent contains claims for multiple priority, or if examination discloses that the application contains more than one invention, the competent authorities must at least allow the applicant to divide it, subject to the conditions of internal legislation, reserving as date of each divisional application the date of the initial application and, if there is occasion for it, the benefits of the right of priority.

ARTICLE 4 BIS

Patents applied for in the various contracting countries by nationals of the Union shall be independent of the patents obtained for the same invention in other countries, whether such countries be or be not parties to the Union.

This stipulation must receive a strict interpretation; in particular, it shall be understood to mean that patents applied for during the period of priority are independent, both as regards the grounds for refusal and for revocation, and also as regards their normal duration.

This stipulation shall apply to all patents already existing at the time when it shall come into effect.

The same stipulation shall apply, in the case of the accession of new countries, to patents in existence, either on one side or the other, at the time of accession.

ARTICLE 5

The introduction by the patentee into the country where the patent has been granted of objects manufactured in any of the countries of the Union shall not entail forfeiture.

Nevertheless, each of the contracting countries shall have the right to take the necessary legislative measures to prevent the abuses which might result from the exercise of the exclusive rights conferred by the patent; for example, failure to use.

These measures will only provide for the revocation of the patent if the granting of compulsory licenses shall not suffice to prevent such abuses.

In all cases the patent will not be subject to such measures before the expiration of at least three years from the date of its grant and if the patentee produces just excuses.

The protection of designs and industrial models cannot be liable to cancellation by reason of the introduction of objects corresponding to those protected.

Articles shall not be required to bear any indication of registration for recognition of this right.

If in a country the use of a registered trade-mark is compulsory, the registration cannot be canceled until after a reasonable period, and only then if those interested cannot justify the causes of their inaction.

ARTICLE 5 BIS

A period of grace of at least three months will be granted for the payment of taxes prescribed for the maintenance of industrial-property rights, together with a surcharge if the internal legislation of a country so provides.

For patents of invention the contracting countries undertake moreover either to prolong that extended period to six months at least, or to provide for the restoration of a patent which has lapsed owing to the nonpayment of fees, it being understood that these provisions are subject to the conditions prescribed by internal legislation.

ARTICLE 5 TER

In each of the contracting countries the following shall not be considered as infringing the rights of the patentee:

(1) The use on board ships of other countries of the Union of anything the subject matter of his patent in the body of the ship, in the machinery, tackle, apparatus, and other accessories when such ships enter temporarily or accidentally the waters of the country, provided that such thing is employed there exclusively for the needs of the vessel.

(2) The use of anything the subject matter of the patent in the construction of or functioning of the engines of locomotion for air or land of the other countries of the Union, or of the accessories of these engines, when these enter the country temporarily or accidentally.

ARTICLE 6

Every trade-mark duly registered in the country of origin shall be admitted for registration and protected in the form originally registered in the other countries of the Union.

Nevertheless, the following marks may be refused or canceled:

(1) Those which are of such a nature as to prejudice rights acquired by third parties in the country in which protection is applied for.

(2) Those which have no distinctive character, or which consist exclusively of signs or indications which serve in trade to designate the kind, quality, quantity, destination, value, place of origin, or date of production, or which have become customary in the current language, or in the *bona fide* and unquestioned usages of the trade of the country in which protection is sought.

In arriving at a decision as to the distinctiveness of the character of a mark, all the circumstances of the case must be taken into account, and in particular the length of time that such a mark has been in use.

(3) Those which are contrary to morality or public order.

It is to be understood that a mark cannot be considered as contrary to public order for the sole reason that it does not conform to some legislative requirement concerning trade-marks, except in circumstances where this requirement itself relates to public order.

The following shall be deemed the country of origin:

The country of the Union where the applicant has an actual and genuine industrial or commercial establishment; and if he has not such an establishment, the country of the Union where he has his domicile; and if he has not a domicile in the Union, the country of his nationality in the case where he is under the jurisdiction of a country of the Union.

In no case shall the renewal of the registration of a trade-mark in the country of origin involve the obligation of renewal of the registration of the mark in other countries of the Union in which the mark has been registered.

The benefits of priority shall subsist in trade-mark applications filed in the period allowed by article 4, even when the registration in the country of origin is only completed after the expiration of such period.

The provisions of paragraph 1 do not preclude the right of requiring from an applicant a certificate, in due form, as to the registration of his mark, issued by the competent authority of the country of origin, but no legal authentication of such certificate shall be required.

ARTICLE 6 BIS

The contracting countries undertake to refuse or invalidate, either administratively if their legislation so permits, or at the request of an interested party, the registration of a trade-mark which constitutes a reproduction or imitation liable to create confusion with a trade-mark considered by the competent authority of the country of registration to be well known there as being already a mark of a national of another contracting country and used for products of the same or a similar kind.

A period of at least three years must be granted in order to claim the cancellation of these marks. The period shall start from the date of registration of the mark.

No period shall be established to claim the cancellation of fraudulently registered marks.

ARTICLE 6 TER

The contracting countries undertake to refuse or invalidate registration, and to prohibit by appropriate means the use, failing authorization from the competent authority, whether as trade-mark or as components of such, of all coats of arms, flags, and other state emblems of contracting countries, official control and guarantee signs and stamps adopted by them, and all imitation from an heraldic point of view.

The prohibition of official control and guarantee signs and stamps shall apply only in cases where marks which comprise them are intended to be used on merchandise of the same or a similar nature.

For the application of these provisions the contracting countries agree to communicate reciprocally, through the intermediary of the International Bureau of Berne, the list of State emblems and official control and guarantee signs and stamps which they desire, or will desire, to place, wholly or with certain reservations, under the protection of the present article, as well as all subsequent modifications added to the list. Each contracting country shall place the communicated list at the disposal of the public in due course.

Each contracting country may, within a period of twelve months from the receipt of the notification, and through the intermediary of the International Bureau of Berne, transmit its possible objections to any other country concerned.

For State emblems which are well known the provisions of paragraph 1 shall be applicable only to marks registered after the signature of this convention.

For State emblems which are not well known, and for official signs and stamps, these provisions shall be applicable only to marks registered more than two months after the receipt of the notification provided for in paragraph 3.

In the case of bad faith, countries shall have the right to cancel even the marks registered before the signature of the present convention and embodying State emblems, signs, and stamps.

Nationals of each country who are authorized to make use of State emblems, and signs and stamps of their country, may use them even if there be a similarity with those of another country.

The contracting countries undertake to prohibit the unauthorized use in trade of State coats of arms of other contracting countries when such use would be liable to cause confusion as to the origin of the product.

The preceding provisions will not prevent the countries' exercising the right to refuse or to invalidate, by

the application of No. 3 of paragraph 2 of article 6, marks containing without authority coats of arms, flags, decorations, and other State emblems or official signs and stamps adopted by a country of the Union.

ARTICLE 7

The nature of the goods on which the trade-mark is to be used can in no case form an obstacle to the registration of the trade-mark.

ARTICLE 7 BIS

The contracting countries undertake to allow the filing of, and to protect, trade-marks belonging to associations the existence of which is not contrary to the law of the country of origin, even if such associations do not possess an industrial or commercial establishment.

Nevertheless, each country shall be the sole judge of the particular conditions on which an association may be allowed to obtain protection for its marks.

ARTICLE 8

A trade name shall be protected in all the countries of the Union without the obligation of filing or registration, whether or not it form part of a trade-mark.

ARTICLE 9

All goods illegally bearing a trade-mark or trade name shall be seized on importation into those countries of the Union where this mark or name has a right to legal protection.

Seizure shall be effected equally in the country where the mark or name was illegally applied, or in the country to which the article bearing it has been imported.

The seizure shall take place at the request either of the proper Government department or of any other competent authority, or of any interested party or actual or legal person, in conformity with the domestic law of each country.

The authorities are not bound to effect the seizure in transit.

If the law of a country does not admit of seizure on importation, such seizure shall be replaced by prohibition of importation or by seizure within such country.

If the law of any country does not admit either of seizure upon importation, or of prohibition of importation, or of seizure within the country, and until such time as this legislation shall be accordingly modified, these measures will be replaced by the remedies assured in such cases to nationals by the law of such country.

ARTICLE 10

The stipulations of the preceding article shall be applicable to every product which may falsely bear as indication of origin the name of a specified locality or country when such indication shall be joined to a trade name of a fictitious character or used with the intent to defraud.

Any producer, manufacturer, or trader engaged in the production, manufacture, or trade of such goods and established either in the locality falsely designated as the place of origin, or in the district where the locality is situated, or in the country falsely designated, shall be deemed in all cases a party concerned, whether such person be actual or legal.

ARTICLE 10 BIS

The contracting countries are bound to assure to nationals of the Union an effective protection against unfair competition.

Every act of competition contrary to honest practice in industrial or commercial matters constitutes an act of unfair competition.

The following particularly are to be forbidden:

(1) All acts whatsoever of a nature to create confusion by no matter what means with the goods of a competitor.

(2) False allegations, in the course of trade, of a nature to discredit the goods of a competitor.

ARTICLE 10 TER

The contracting countries undertake to assure to the nationals of other countries of the Union appropriate legal remedies to repress effectively all acts set forth in articles 9, 10, and 10 *bis*.

They undertake, moreover, to provide measures to permit syndicates and associations representing the industry or the trade interested, and of which the existence is not contrary to the laws of their country, to take action in justice or before the administrative authorities, in view of the repression of the acts set forth in articles 9, 10, and 10 *bis*, so far as the law of the country in which protection is claimed permits it to the syndicates and associations of that country.

ARTICLE 11

The contracting countries shall, in conformity with the legislation of each country, accord temporary protection to patentable inventions, to utility models, and to industrial designs or models, as well as to trade-marks in respect of products which shall be exhibited at official, or officially recognized, international exhibitions held in the territory of one of them.

This temporary protection shall not prolong the periods provided by article 4. If later the right of priority is sought, the competent authority of each country may date the period from the date of the introduction of the product into the exhibition.

Each country may require, as proof of the identity of the object exhibited, and of the date of the introduction, such proofs as it may consider necessary.

ARTICLE 12

Each of the contracting countries agrees to establish a special Government service for industrial property, and a central office for communication to the public of patents, utility models, industrial designs or models, and trade-marks.

This service shall publish an official periodical paper.

ARTICLE 13

The international office, established at Berne under the name of International Bureau for the Protection of Industrial Property, is placed under the high authority of the Government of the Swiss Confederation, which is to regulate its organization and supervise its working.

The official language of the International Bureau is French.

The International Bureau centralizes information of every kind relating to the protection of industrial property and collates and publishes it. It interests itself in all matters of common utility to the Union and edits, with the help of documents supplied to it by the various Administrations, a periodical paper in the French language, dealing with questions regarding the object of the Union.

The numbers of this paper, as well as the documents published by the International Bureau, are circulated among the Administrations of the countries of the Union in the proportion of the number of contributing units as mentioned below. Such further copies as may be desired, either by the said Administrations or by societies or private persons, will be paid for separately.

The International Bureau shall at all times hold itself at the service of members of the Union, in order to supply them with any special information they may need on questions relating to the international system of industrial property. The Director of the International Bureau will furnish an annular report on its working, which shall be communicated to all the members of the Union.

The expenses of the International Bureau will be borne by the contracting countries in common. Unless fresh sanction is given, they must not exceed the sum of 120,000 Swiss francs per annum. This sum may be increased in cases of necessity by a unanimous decision of one of the conferences provided for by article 14.

To determine the part which each country should contribute to this total of expenses the contracting countries and those which may afterwards join the Union shall be divided into six classes, each contributing in the proportion of a certain number of units, namely:

	Units
First class	25
Second class	20
Third class	15
Fourth class	10
Fifth class	5
Sixth class	3

These coefficients will be multiplied by the number of countries in each class, and the sum of the result thus obtained will supply the number of units by which the total expense has to be divided. The quotient will give the amount of the unit of expense.

Each of the contracting countries will designate, at the time of its accession, the class in which it wishes to be placed.

The Government of the Swiss Confederation is to superintend the expenses of the International Bureau, to advance the necessary funds and to render an annual account which will be communicated to all the other Administrations.

ARTICLE 14

The present convention shall be submitted to periodical revisions with a view to the introduction of amendments calculated to improve the system of the Union.

For this purpose, conferences shall be held successively in one of the contracting countries between the delegates of the said countries.

The Administration of the country in which the conference is to be held will make preparation for the transaction of that conference, with the assistance of the International Bureau.

The Director of the International Bureau will be present at the meetings of the conferences, and will take part in the discussions, but without the privilege of voting.

ARTICLE 15

It is agreed that the contracting countries respectively reserve to themselves the right to make separately, as between themselves, special arrangements for the protection of industrial property, in so far as such arrangements do not contravene the provisions of the present convention.

ARTICLE 16

The countries which have not taken part in the present convention shall be permitted to adhere to it upon their request.

The accession shall be notified through the diplomatic channel to the Government of the Swiss Confederation, and by the latter to all the other Governments.

It shall entail, as a matter of right, accession to all the classes, as well as admission to all the advantages stipulated in the present convention, and shall take effect one month after the dispatch of the notification by the Government of the Swiss Confederation to the other countries of the Union, unless a subsequent date has been indicated by the acceding country.

ARTICLE 16 BIS

The contracting countries have the right of acceding to the present convention at any time on behalf of their colonies, possessions, dependencies, and protectorates, or territories administered by virtue of a mandate from the League of Nations, or any of them.

For this purpose they may either make a general declaration, including all their colonies, possessions, dependencies, and protectorates, and the territories referred to in paragraph 1, in the accession, or may expressly name those included, or may confine themselves to indicating those which are excluded therefrom.

This declaration shall be notified in writing to the Government of the Swiss Confederation and by the latter to all the other Governments.

Under the same conditions, the contracting countries may denounce the convention on behalf of their colonies, possessions, dependencies, and protectorates, or for the territories referred to in paragraph 1, or for any of them.

ARTICLE 17

The execution of the reciprocal engagements contained in the present convention is subordinated, in so far as necessary, to the observance of the formalities and rules established by the constitutional laws of those of the contracting countries which are bound to procure the application of the same, which they engage to do with as little delay as possible.

ARTICLE 17 BIS

The convention shall remain in force for an unlimited time, till the expiration of one year from the date of its denunciation.

This denunciation shall be addressed to the Government of the Swiss Confederation. It shall affect only the denouncing country, the convention remaining in operation as regards the other contracting countries.

ARTICLE 18

The present act shall be ratified and the ratifications deposited at The Hague not later than the 1st of May, 1928. It shall come into force, between the countries which will have ratified it, one month after such date. However, if before May 1, 1928, it should be ratified by at least six countries, it will come into force between those countries one month after the Government of the Swiss Confederation has notified them of the filing of the sixth ratification, and for the countries which should subsequently ratify, one month after the notification of each of these ratifications.

This act shall replace, as regards relations between the countries which ratify it, the convention of the Union of Paris of 1883, revised at Washington June 2, 1911, and its final protocol, which shall remain in force as regards relations with countries which have not ratified the present act.

ARTICLE 19

The present act shall be signed in a single copy, which shall be deposited in the archives of the Government of the Netherlands. A certified copy shall be forwarded by the latter to each of the Governments of the contracting countries.

In witness whereof, the respective plenipotentiaries have signed the present act.

Done at The Hague, in a single copy, the 6th day of November, 1925.

And whereas, the said Convention has been duly ratified on the part of the United States of America, and the instrument of ratification by the United States of America was deposited with the Government of the Swiss Confederation on January 22, 1931;

And whereas, notification of the said deposit was given by the Government of the Swiss Confederation to all other contracting parties on February 6, 1931;

And whereas, in accordance with the terms of the said Convention, the Convention will come into force in respect of the United States of America, one month from the date of such notification, namely, on March 6, 1931;

And whereas, the said Convention is now in force in respect of the Governments of Austria, Belgium, the United States of Brasil, Canada, France, Morocco (French and Spanish Zones), Germany, Great Britain and Northern Ireland, Hungary, Italy, the United Mexican States, the Netherlands, Portugal, Spain, the Swiss Confederation, Syria and the Lebanon, Trinidad and Tobago, Tunis, Turkey and Yugoslavia, whose instruments of ratification have been deposited, or whose notifications of adherence have been given, in conformity with the requirements of the said Convention;

Now, therefore, be it known that I, Herbert Hoover, President of the United States of America, have caused the said Convention to be made public to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States of America and the citizens thereof.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this sixth day of March in the year of our Lord one thousand nine hundred and thirty-one, and of the Independence of the United States of America the one hundred and fifty-fifth.

[SEAL.] HERBERT HOOVER.

By the President:
HENRY L. STIMSON,
Secretary of State.

General Inter-American Convention for Trade Mark and Commercial Protection

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

A PROCLAMATION

Whereas, a General Inter-American Convention for Trade Mark and Commercial Protection was signed by the respective plenipotentiaries of the United States of America, Peru, Bolivia, Paraguay, Ecuador, Uruguay, Dominican Republic, Chile, Panama, Venezuela, Costa Rica, Cuba, Guatemala, Haiti, Colombia, Brazil, Mexico, Nicaragua and Honduras, at Washington on the twentieth day of February, one thousand nine hundred and twenty-nine, and a Protocol on the Inter-American Registration of Trade Marks was signed on the same day by plenipotentiaries of the said countries except Uruguay, Chile and Guatemala, which Convention and Protocol are word for word as follows: [For text of convention See 380 O. G. 245.]

And whereas the said Convention and the said Protocol have been duly ratified on the part of the United States of America and the instrument of ratification by the United States of America was deposited with the Pan American Union on February 17, 1931;

And whereas the said Convention and Protocol have been ratified by the Government of Cuba, whose instrument of ratification thereof was deposited with the Pan American Union on April 2, 1930; and the said Convention has been ratified by the Government of Guatemala, whose instrument of ratification thereof was deposited with the Pan American Union on December 30, 1929;

Now, therefore, be it known that I, Herbert Hoover, President of the United States of America, have caused the said Convention and the said Protocol to be made public to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States of America and the citizens thereof.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this twenty-seventh day of February in the year of our Lord one thousand nine hundred and thirty-one, and of the Independence of the United States of America the one hundred and fifty-fifth.

[SEAL.] HERBERT HOOVER.

By the President:
HENRY L. STIMSON,
Secretary of State.

Disclaimers

1,653,065.—*Frederick N. Rose*, Pontiac, Mich. BUTTON-ATTACHING MACHINE. Patent dated December 20, 1927. Disclaimer filed May 13, 1931, by the assignee, *The Button Attaching Machine Co.*

Therefore enters this disclaimer to claims 20 and 21 of said patent which are in the following words, to wit:

"20. In a button attaching machine, the combination of means for attaching a tack and button to a piece of fabric, means for injecting one of said members to said attaching means, feeding means, and means carried by said injecting means for detaching one of the members being fed from the feeding means and positively injecting the same to the injecting means.

"21. In a button attaching machine, the combination of means for attaching a tack and button to a piece of fabric, means for injecting one of said members into said attaching means, feeding means, and means carried by said injecting means for detaching one of the members being fed from the feeding means and positively injecting the same to the injecting means at a point remote from the said attaching means."

1,670,893.—*Samuel P. Levenberg*, New York, N. Y. ELECTRICAL SYSTEM. Patent dated May 22, 1928. Disclaimer filed May 18, 1931, by the assignee, *Radio Corporation of America.*

Hereby enters this disclaimer to claim 1 in the said specification which is in the following words, to wit:

"A radio system adapted for use from power mains comprising in combination a plate circuit, a filament circuit and means for by-passing audio frequency oscillations between the terminals of the filament circuit comprising a large capacity condenser connected across the filament terminals."

1,703,321.—*Herman H. Rubin*, New York, N. Y. ASSIST GRIP. Patent dated February 26, 1929. Disclaimer filed May 18, 1931, by the patentee.

Hereby enters this disclaimer to that part of the claim in said specification and patent, which is in the following words, to wit:

"1. An assist grip comprising a body portion of coiled flexible material, attaching means at one end thereof, a grip at the other end thereof, and a resilient member positioned within the coils of said body portion and free to move longitudinally with respect thereto.

"2. An assist grip comprising a flexible body portion, attaching means at one end thereof, a grip at the other end thereof, and a spring within said flexible member and with its respective ends free to move longitudinally with respect to said attaching means and said grip.

"3. An assist grip comprising a plurality of twisted cords forming a body portion, attaching means at one end thereof, a grip at the other end thereof, and a spring concealed and surrounded by said twisted cords and capable of endwise movement relatively thereto."

1,733,016.—*Elmer E. Hicken*, Collingswood, N. J. LOCOMOTIVE TENDER. Patent dated October 22, 1929. Disclaimer filed May 13, 1931, by the patentee.

Hereby enters this disclaimer of that particular part of the claim in said specification which constitutes claim 1 thereof and which is in the following words; to wit:

"The combination in a locomotive tender, having a base; a body portion; and partition plates separating the fuel section of the tender from the water section thereof, the fuel section being designed to receive stoker mechanism, the forward end of the tender having a compartment at one side of the fuel section for the engine of the stoker mechanism."

1,747,224.—*Warren W. Carpenter*, Queens Village, N. Y. TELEPHONE-EXCHANGE SYSTEM. Patent dated February 18, 1930. Disclaimer filed May 15, 1931, by the assignee, *Bell Telephone Laboratories, Incorporated.*

Hereby enters this disclaimer to the said claims of said Letters Patent which are in the following words to wit:

"1. In a telephone exchange system, a first office, other offices, a sender at said first office having registers for registering the office code and numerical designations of wanted lines for controlling selector mechanism, selector mechanism operable in accordance with the office code designation of a wanted line for extending a connection to either of said other offices, and selector mechanism individual to each of said other offices and selector mechanism common to said other offices operable in accordance with the numerical designation of a wanted line for completing a connection to a wanted line in either of said other offices.

"2. In a telephone exchange system, a first office, other offices, a sender at said first office having registers for registering the office code and numerical designations of wanted lines for controlling selector mechanism, selector mechanism operable in accordance with the office code designation of a wanted line for extending a connection to either of said other offices, and selector mechanism individual to each of said other offices and selector mechanism common to said other offices operable in accordance with the numerical designation of a wanted line for completing a connection to a wanted line in either of said other offices, said common selector mechanism being also operable in accordance with said code designation.

"3. In a telephone exchange system, a first office, other offices, a trunk line for connecting said first office to any of said other offices, a sender at said first office having registers for registering the office code and numerical designations of wanted lines for controlling selector mechanism, selector mechanism operable in accordance with the office code designation of a wanted line in any of said other offices to extend a connection over said trunk line, and selector mechanism individual to each of said other offices, and selector mechanism common to said other offices operable in accordance with the numerical designation of a wanted line for completing a connection to a wanted line in any of said offices.

"4. In a telephone exchange system, a first office, other offices, a sender at said first office having registers for registering the office and numerical designations of wanted lines for controlling selector mechanism, selector mechanism operable in accordance with the office code designation of a wanted line for extending a connection to any of said other offices, selector mechanism individual to each of said other offices and selector mechanism common to said other offices operable in accordance with the numerical designation of a wanted line in any of said other offices, and means for controlling said common selector mechanism in accordance with the office code designation of a wanted line to select the selector mechanism which is individual to the desired line.

"5. In a telephone exchange system, a first office, other offices, a sender at said first office having registers for registering the office and numerical designations of wanted lines for controlling selector mechanism, selector mechanism operable in accordance with the office code designation of a wanted line for extending a connection to any of said other offices, an incoming selector common to said other offices, final selectors individual to each of said other offices, said incoming selectors having access to final selectors in all of said other offices, and means controlled by said sender jointly in accordance with the office and numerical designation of a wanted line to extend said connection to a wanted line in any of said offices."

"7. In a telephone exchange system, a first office, other offices, a sender at said first office having registers for registering the office code and numerical designations of wanted lines for controlling selector mechanism, selector mechanism operable in accordance with the office code designation of a wanted line for extending a connection to either of said other offices, selector mechanism individual to said other offices and selector mechanism common to said other offices operable in accordance with the numerical designation of a wanted line for completing a connection to a wanted line in either of said other offices, and means in said sender operable in accordance with the registered office code to determine whether said last selector mechanism shall extend a connection to selector mechanism in one or another of said other offices."

1,759,877.—*Thomas N. Wynne*, Indianapolis, Ind. COAL SPREADER. Patent dated May 27, 1930. Disclaimer filed May 20, 1931, by the patentee.

Hereby disclaim that part of the thing patented which is covered by said claim 3, which claim 3 reads as follows:

"3. In combination with an automatic stoker having a hopper, a swinging coal-feeding chute for feeding coal into and distributing it along said hopper, a member movable along said hopper, said member being connected to said chute, a rotatable shaft, driving means for rotating said shaft constantly in one direction, and periodically reversible power-transmission mechanism operatively interconnecting said shaft and said member to cause reciprocation of said member and chute along the hopper."

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 9, 1931

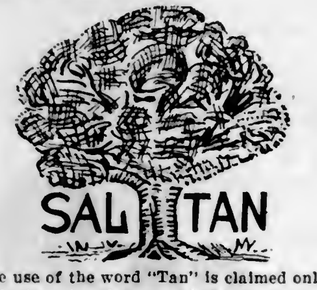
[VOL. 407. No. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1



Raw or Partly-Prepared Materials.

Ser. No. 278,891. W. ATLEE BURPEE CO., Philadelphia, Pa. Filed Feb. 5, 1929.

Goldinhart

For Garden Vegetable Seeds.
Claims use since Dec. 20, 1928.

Ser. No. 312,775. ADOLPH SALOMON & SON, Chicago, Ill. Filed Mar. 31, 1931.

Exclusive use of the word "Tan" is claimed only in association with the other features of the mark.
For Sole Leather.
Claims use since Oct. 9, 1929.

Ser. No. 313,270. THE CONARD PYLE COMPANY, West Grove, Pa. Filed Apr. 11, 1931.

PROTECT O KOTE

For Plants Treated to Preserve Them During Their Dormant State and Shipments.
Claims use since Apr. 7, 1931.

Ser. No. 313,462. JOSEPH BRECK & SONS CORPORATION, Boston, Mass. Filed Apr. 17, 1931.

SETAB

For Lawn Seed.
Claims use since Mar. 1, 1928.

Ser. No. 313,463. JOSEPH BRECK & SONS CORPORATION, Boston, Mass. Filed Apr. 17, 1931.

Velturf

For Lawn Seed.
Claims use since Apr. 6, 1931.

Ser. No. 313,879. ADLER & OPPENHEIMER AKTIENGESELLSCHAFT, Berlin, Germany. Filed Apr. 23, 1931.

„Adlero"

For Leather, Leather Dressed by the Chromic Process, Leather Dressed by the Hole Process, Patent Leather.
Claims use since about 1900.

CLASS 2

Receptacles

Ser. No. 313,112. AMERICAN LACE PAPER COMPANY, Milwaukee, Wis. Filed Apr. 8, 1931.

The words "Milwaukee, U. S. A." are disclaimed apart from the mark as shown.
For Cast Paper Pulp Cups.
Claims use since Mar. 26, 1931.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 299,849. ARTHUR CALDER LYONS, Brantford, Ontario, Canada. Filed May 2, 1930.

'YEASTINE'

For Complexion Soap and Shaving Soap.
Claims use since Feb. 3, 1930.

Ser. No. 310,433. CELOLAC PRODUCTS COMPANY, Minneapolis, Minn. Filed Jan. 26, 1931.

CELOKLENZ

For Cleaner for Duco, Lacquer, Paint, Enamel, Glass, Porcelain, and Metal Finishes.
Claims use since Sept. 10, 1930.

Ser. No. 311,935. THOMAS W. SLACK, Fort Worth, Tex. Filed Mar. 9, 1931.

Aluminators Illuminate Aluminum

The word "Aluminum" is claimed only as associated with the mark shown in the drawings.
For Cleaning and Polishing Pads for Aluminum, Tinware, Brass, and All Kitchen Utensils.
Claims use since June 1, 1929.

Ser. No. 312,081. THE ABSORENE MANUFACTURING COMPANY, St. Louis, Mo. Filed Mar. 13, 1931.

ABSO

For Cleaning Compounds Having Water Softening Properties.
Claims use since Feb. 23, 1931.

Ser. No. 312,366. D'ORSAY PERFUMERIES CORPORATION, New York, N. Y. Filed Mar. 21, 1931.

DUO D'ORSAY

The word "D'Orsay" is disclaimed apart from the mark as shown in the drawing.
For Soaps.
Claims use since Nov. 6, 1930.

Ser. No. 312,588. A. S. & L. CLEANING PRODUCTS COMPANY, Bayonne, N. J. Filed Mar. 24, 1931.

KLEENS E-Z RUG CLEANER

The exclusive use of the word "Kleens" when expressing the sense of "clean" is disclaimed in itself, but with a reservation of whatever common-law rights may be possessed therein. The words "Rug Cleaner" are disclaimed apart from the other features of the mark shown in the drawing.
For Rug, Carpet, and Upholstery Cleaning Compound.
Claims use since Feb. 1, 1930.

Ser. No. 313,030. ERASM CHEMICAL CORPORATION OF AMERICA, INC., Cincinnati, Ohio. Filed Apr. 7, 1931.

E-RA-SM

For Dry Window Cleaning Powder and Metal Polish.
Claims use since Mar. 25, 1931.

Ser. No. 313,135. FRANK H. JONES, Boston, Mass. Filed Apr. 9, 1931.

BRITE-LITE

For Chemical Jelly Compound for Cleaning, Scouring, and Polishing Metals.
Claims use since Oct. 1, 1930.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 271,445. LUCRETIA VANDERBILT, INC., Bridgeport, Conn. Filed Aug. 23, 1928.

For Depilatory Powders, Fumigating Pastilles, Hair Tonics, Hair Oils, Eye Drops, Eye Brow Pencils, Eyebrow and Eyelash Grower, Nail Polishes, Nail Bleaches, Astringents; Hair, Bath, Face, and Hand Lotions; Incense, Smelling Salts, Brilliantines, Bandolines, Beauty Packs.
Claims use since Dec. 1, 1927.

Ser. No. 290,439. ROCCO TRILLO, doing business as Monaderb Tea Co., Merchantville, N. J. Filed Sept. 30, 1929.

Monaderb

Applicant is the owner of registered Trade-Mark #251,077.
For Liquid Tonic Made from Herbs, Including Those Used as a Stomachic and Having a Mild Laxative Action, for Occasional Constipation and Containing Alcohol.
Claims use since Sept. 25, 1929.

Ser. No. 298,895. I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfort-on-the-Main, Germany. Filed Apr. 15, 1930.

Preventol

For Wetting-Out Agents and Preservatives for Animal and Vegetable Glues, Technical Albuminous Substances, Hides, Fabrics, Dressing Mediums, and Other Organic Technical Materials Liable to Decomposition by Micro Organisms.
Claims use since April, 1929.

Ser. No. 301,441. H. W. MFG. CO. INC., Bessemer, Ala. Filed May 28, 1930.

Flossy

For Toilet Articles, to-wit, Hair Dressing, Cold Cream, Vanishing Cream, Massage Cream, Shampoo, Hair Tonic, Hair Grower, Perfume, Face Powder, and Talcum Powder.
Claims use since Aug. 1, 1929.

Ser. No. 304,977. CHARLES W. STENGEL, Philadelphia, Pa. Filed Aug. 23, 1930.

-RICI- FACE AND HAIR LOTION

No claim is made to the words "Face and Hair Lotion."
For Face and Hair Lotion.
Claims use since July 21, 1930.

Ser. No. 305,202. WEISSBARD BROS., Newark, N. J. Filed Aug. 30, 1930.

Marie Duval

For Face Powder.
Claims use since May 15, 1930.

Ser. No. 306,265. ELWOOD J. GOODIER, doing business as Universal Laboratories, Dallas, Tex. Filed Oct. 1, 1930.

For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Eyebrow and Eyelash Grower, Eye Drops, Hand Lotions, Skin Lotions, After Shaving Lotions, Pomades, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Dandruff Preparations, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams, Nail Bleaches, Witch Hazel, Peroxide, Petroleum Jellies, Witch Hazel Salves, Camphor Creams, Foot Powders, Corn Salves, Deodorants, Disinfectants, Bay Rum, Perfumes and Toilet Waters.
Claims use since Sept. 16, 1930.

Ser. No. 306,473. ZAMARANG LABORATORIES, Van Nuys, Calif. Filed Oct. 6, 1930.

DR. JOEL K. JOEL'S
ZAMARANG

For Nerve Tonic and Blood Purifier.
Claims use since Sept. 1, 1930.

Ser. No. 306,618. NEWTON BALSAM COMPANY, Newton, Kans. Filed Oct. 10, 1930.

E. W. LASSELL'S
BLUE STEM BALSAM

Lassell

The surname Lassell is a facsimile of the signature of J. F. Lassell, a member of the applicant firm. The words "Kansas Blue Stem" and "Blue Stem Balsam" are disclaimed apart from the other features of the mark as shown in the drawings.
For Balsam Used Externally for the Relief of Backache, Neuralgia, Insect Bites and Stings.
Claims use since Sept. 1, 1930.

Ser. No. 308,281. AMERICAN DRUGGISTS SYNDICATE, INC., New York and Long Island City, N. Y. Filed Nov. 25, 1930.

ADS RUSS-OIL

Applicant disclaims the use of the trade-mark "Russ-Oil" apart from the mark as shown.
For Mineral Oils for Medicinal Purposes.
Claims use since Nov. 12, 1930.

Ser. No. 309,031. F. W. KARWACKI, doing business as Mighty Midgets Drug Co., Baltimore, Md. Filed Dec. 16, 1930.

MIGHTY MIDGETS

MIGHTY MIDGETS DRUG CO.

For Pharmaceutical Preparations in Capsules Intended to Relieve Head Colds.
Claims use since Oct. 23, 1930.

Ser. No. 309,156. CHARLES A. WOODRUFF, doing business as Woodruff's Chemicals, Detroit, Mich. Filed Dec. 18, 1930.

CAMPH-FIX

For Ointments, Salves, and Healing Solutions for Use on the Skin or Mucous Membranes as a Local Application for Relief of Colds, Irritations, and Itching.
Claims use since Nov. 1, 1930.

Ser. No. 309,247. LEFFINGWELL RANCHO COMPANY, Whittier, Calif. Filed Dec. 22, 1930.

XXX
TRIPLEX TRIPLEX TRIPLEX

For Insecticides, Liquid Spreader Compounds, a Compound of Emulsified Kerosene Used as a Disinfectant and Having Incidental Detergent Properties, Lime Sulfur.
Claims use since on or about Jan. 1, 1923.

Ser. No. 310,003. ABRAHAM ROSENBLUTH, Newark, N. J. Filed Jan. 14, 1931.

The applicant disclaims from the trade-mark, the terms "Paris" and "New York."
For Face Powders, Rouge, Lip Sticks, Face Creams, Hand Lotions, and Hair Lotions.
Claims use since Sept. 1, 1929.

Ser. No. 310,407. PABST CORPORATION, Milwaukee, Wis. Filed Jan. 26, 1931.

No claim is made to the representation of the bottles, label, or bottle cap, or to the wording other than the name "Pabst" and the name "Pabst Corporation."
For Malt Extract Used as a Tonic.
Claims use since June, 1889.

Ser. No. 311,471. COLUMBIA LABORATORIES INC., New York, N. Y. Filed Feb. 26, 1931.

I·A·S

For General Tonic.
Claims use since July 1, 1930.

Ser. No. 311,989. WALLACE-ROBERTS, INC., Boston, Mass. Filed Mar. 10, 1931.

For Medicinal Preparation for Relief of Alcoholic Excesses.
Claims use since Feb. 28, 1931.

Ser. No. 312,815. RESEARCH PRODUCTS CORPORATION, New York, N. Y. Filed Apr. 1, 1931.

DERMITE

For Preparation for Treating the Skin.
Claims use since Mar. 30, 1931.

Ser. No. 313,127. THE FERMENT COMPANY, New York, N. Y. Filed Apr. 9, 1931.

For Medicinal Preparations in Tablet and Liquid Form for the Treatment of Intestinal Putrefaction.
Claims use since Mar. 1, 1908.

Ser. No. 313,129. LELAND L. FRANK, doing business as The Settlesit Company, Decatur, Ind. Filed Apr. 9, 1931.

SETTLESIT BAG

The descriptive term "Bag" is hereby disclaimed for the purpose of this registration only.
For Preparation for Clarifying Black Sooty Cistern Water.
Claims use since February, 1928.

Ser. No. 313,154. REEFER'S NO-MOTH, INC., New York, N. Y. Filed Apr. 9, 1931.

CEDARAIRE

For Preparations for Protection Against Moths.
Claims use since Jan. 2, 1931.

Ser. No. 313,158. FREDERICK STEARNS & COMPANY, Detroit, Mich. Filed Apr. 9, 1931.

ESTERIN

For Headache Medicine.
Claims use since Apr. 2, 1931.

Ser. No. 313,204. L. T. PIVER, INC., Wilmington, Del., and New York, N. Y. Filed Apr. 10, 1931.

UN PARFUM D'AVENTURE

The word "Parfum" appearing on the drawing being disclaimed apart from the mark shown. The lining in the drawing designates shading only and is not intended to indicate color.

For Perfume, Toilet Water, Face Powder, Talcum Powder, Bath Salts, Brilliantine, Bandoline, Rouge, Lipstick, Dusting Powder, Sachet, Cold Creams, Lotion for the Skin and Hair, Powder and Rouge Compacts, and Vegetal.
Claims use since Mar. 30, 1931.

Ser. No. 313,295. THE HURON MILLING COMPANY, Harbor Beach, Mich. Filed Apr. 13, 1931.

WHEATEX

For Sizing Starch.
Claims use since Sept. 19, 1925.

Ser. No. 313,332. DAVID CURTIS, doing business as De-Ce Products Co. of New York, New York, N. Y. Filed Apr. 14, 1931.

DE-CE PRODUCTS CO.

For Local Anæsthetics, Surface Anæsthetics, Preparations for Sterilizing and Preserving Dental and Surgical Instruments, an Antiseptic Compound, Chlora-Percha Solution, a Formo-Cresol Compound Used for the Treatment of Putrescent Pulps and Abscesses, Eugenol, Sodium Salicylate Solution, a Preparation for the Relief of Tooth Ache, Solution for Prevention of Ivy Poisoning.

Wyandotte
STERILIZER

No claim is made to the word "Sterilizer" separate and apart from the remainder of the mark.
For Sterilizing Material.
Claims use since January, 1931.

Ser. No. 313,679. SOCIETY OF CHEMICAL INDUSTRY IN BASLE, Basel, Switzerland. Filed Apr. 22, 1931.

ALBATEX

For Chemical Product for Use as an Auxiliary Agent in the Textile Industry.
Claims use since Jan. 21, 1931.

Ser. No. 313,680. SOCIETY OF CHEMICAL INDUSTRY IN BASLE, Basel, Switzerland. Filed Apr. 22, 1931.

DIGIRAMIN

For Cardiotonic.
Claims use since Jan. 30, 1931.

Ser. No. 313,682. SOCIETY OF CHEMICAL INDUSTRY IN BASLE, Basel, Switzerland. Filed Apr. 22, 1931.

RESYL

For Pharmaceutical Product for the Treatment of Affections of the Respiratory Organs.
Claims use since Oct. 13, 1930.

Ser. No. 313,700. ANSOSURE PRODUCTS, INC., Royal Oak, Mich. Filed Apr. 23, 1931.

Absosure

For Antiseptic Paste.
Claims use since December, 1929.

Ser. No. 313,783. HUFFMAN & HULSEBUS, Harlan, Iowa. Filed Apr. 25, 1931.

KOR

For Chemical Preparation Used in the Treatment of Trees and Shrubs to Prevent Chewing by Rabbits, and an Insecticide.
Claims use since June 1, 1919.

Ser. No. 313,800. RÖHM & HAAS COMPANY, Philadelphia, Pa. Filed Apr. 25, 1931.

DEGOMMA

For Enzymic Product Used in Treating Fabrics.
Claims use since June 1, 1919.

CLASS 9

Explosives, Firearms, Equipments, and Projectiles

Ser. No. 314,055. IVER JOHNSON SPORTING GOODS CO., Boston, Mass. Filed May 1, 1931.

3 IN 1

For Firearm Cleaners, Swabs, and Brushes.
Claims use since Sept. 1, 1930.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 279,931. HUGO JUNKERS, Dessau, Germany. Filed Feb. 26, 1929.

For Wire Gauze, Wire Sieves and Strainers, Wire Springs for General Use, Sheet Metal Casings, Bathing Tubs and Fittings, Water-Closets, Metal Water Pipes and Drains.
Claims use since May 28, 1924.

Ser. No. 298,934. BYRON M. CHENEY, Chicago, Ill. Filed Apr. 16, 1930.

IDEAL

For Railroad Track Spikes.
Claims use since Dec. 1, 1927.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 306,502. THE MIDVALE COMPANY, Nicetown, Philadelphia, Pa. Filed Oct. 7, 1930. Under 10-year proviso.

MIDVALE

For Flanges, Forgings of Open Hearth and Electric Furnace Steel, Armor Plates, Locomotive Forgings, Iron Forgings, Stainless Steel Forgings, Corrosion resisting Steel, Special Heat Treated Steel, Steel Billets, Steel Ingots, Iron Ingots, Carbon Tool Steel in Bars, High Speed Steel in Bars, Mining Drill Steel in Bars, Alloy Steel in Bars, Stainless Steel in Bars, Stainless Iron in Bars, Gun Forgings, and Iron and Steel Castings.
Claims use since Mar. 1, 1881.

Ser. No. 311,355. ANACONDA WIRE & CABLE COMPANY, New York, N. Y. Filed Feb. 24, 1931.

CALSUN BRONZE

No claim is made herein to the registration of the word "Bronze" apart from the mark shown in the drawing.
For Copper Alloy Wire and Unfinished Copper Alloy Rods and Sheets.
Claims use since Aug. 14, 1926.

Ser. No. 313,347. LUDLUM STEEL CO., Watervliet, N. Y. Filed Apr. 14, 1931. Under 10-year proviso.

POMPTON

For Rolled Steel Bars, Steel Forgings, and Steel Castings.
Claims use since Jan. 1, 1885.

CLASS 15

Oils and Greases

Ser. No. 297,769. THE PARAFFINE COMPANIES, INC., San Francisco, Calif. Filed Mar. 22, 1930.

PABCO

For Paraffine Oil and Flux Oil—Namely, a Lubricating Oil and a Skid Oil, Respectively.
Claims use since June 30, 1923.

Ser. No. 312,719. PACIFIC COMMERCIAL CO., New York, N. Y. Filed Mar. 30, 1931.

Silver Reef

For Gasolene and Kerosene.
Claims use since Nov. 15, 1930.

CLASS 16

Paints and Painters' Materials

Ser. No. 312,283. THE GIBSON-HOMANS COMPANY, Cleveland, Ohio. Filed Mar. 18, 1931.

BLACK-JACK

For Asbestos Roof Coating in the Nature of Paint and Roof Paint.
Claims use since Mar. 3, 1931.

Ser. No. 312,445. THE MORGAN COMPANY, Chicago, Ill. Filed Mar. 23, 1931.

FLEETWAY

For Industrial Paint Enamels.
Claims use since May 15, 1930.

Ser. No. 313,186. HANOVIA CHEMICAL & MANUFACTURING COMPANY, Newark, N. J. Filed Apr. 10, 1931.

HANOVIA
CHEMICAL & MFG. CO.
NEWARK, N.J., U.S.A.

The term "Newark, N. J., U. S. A." is disclaimed apart from the mark as shown on the drawing.
For Ceramic Decorating Materials—Namely, Gold, Platinum, Silver, and Other Precious Metal Colors in Liquid, Dry, or Paste Form; Luster Colors, Overglaze and Underglaze Colors.
Claims use since Apr. 1, 1910.

Ser. No. 313,480. STANDARD OIL COMPANY OF NEW JERSEY, Wilmington, Del. Filed Apr. 17, 1931.

ENNJAY

For Pipe Coating Enamel of the Nature of Paint.
Claims use since Mar. 20, 1931.

Ser. No. 313,870. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed Apr. 27, 1931.

BOROL

For Paints in Paste, Semi-Liquid, or Ready-Mixed Form; Varnishes, Lacquers, Paint Enamels, and Clear Varnishes.
Claims use since Apr. 15, 1931.

Ser. No. 314,026. THE MURALO COMPANY, INC., New Brighton, N. Y. Filed Apr. 29, 1931.

VICTOR

For Dry Powder to be Mixed with Water and Used as a Calcimine or Decorative Wall Coating.
Claims use since Feb. 26, 1931.

CLASS 17

Tobacco Products

Ser. No. 313,614. M. TRELLES & COMPANY, New Orleans, La. Filed Apr. 21, 1931.

MAX-SELLER
MTB

For Cigars, Cheroots, Cigarettes, and Little Cigars.
Claims use since 1908.

PRINTASIGN

No claim is made herein to the name "Printasign" apart from the mark shown in the drawing.

For Machine for Printing Signs and Display Cards.

Claims use since April, 1917.

Ser. No. 312,724. THE TRAYLOR VIBRATOR COMPANY, Denver, Colo. Filed Mar. 30, 1931.

TRAYCO

For Material Treating Apparatus—Namely, Material Screening Apparatus, Material Conveyors, Parts Thereof, and Electric Vibrating Mechanisms for Use Therewith.

Claims use since Jan. 26, 1931, on screening apparatus; Feb. 26, 1931, on conveyor parts; Mar. 4, 1931, on conveyors.

Ser. No. 313,935. RICHARDSON & HOLLAND, INC., Seattle, Wash. Filed Apr. 28, 1931.

MARVEL

For Bakery Machinery—Namely, Cup and Layer Cake Dough Dropper.

Claims use since Jan. 4, 1931.

CLASS 24

Laundry Appliances and Machines

Ser. No. 313,742. FREDERIC MARTIN, Jr., doing business as Columbus Washboard Company, Columbus, Ohio. Filed Apr. 24, 1931.

RUB-LITE

For Washboards.

Claims use since Feb. 20, 1931.

Ser. No. 313,743. FREDERIC MARTIN, Jr., doing business as Columbus Washboard Company, Columbus, Ohio. Filed Apr. 24, 1931.

TIME SAVER

For Washboards.

Claims use since Feb. 20, 1931.

CLASS 26

Measuring and Scientific Appliances

Ser. No. 312,770. ALFRED M. PARKS, doing business as Parks Equipment Company, Philadelphia, Pa. Filed Mar. 31, 1931.

DRY-O-GRAPH

For a Device for Testing and Recording the Time of Drying, Said Device Comprising a Roller and a Clock Mechanism and Used in Connection with Inks, Varnishes, and the Like.
Claims use since Jan. 12, 1931.

Ser. No. 312,771. ALFRED M. PARKS, doing business as Parks Equipment Company, Philadelphia, Pa. Filed Mar. 31, 1931.

FILM-O-GRAPH

For a Device for Testing and Recording the Time of Drying, Said Device Comprising a Roller and a Clock Mechanism and Used in Connection with Inks, Varnishes, and the Like.
Claims use since Mar. 2, 1931.

Ser. No. 312,900. JABEZ BURNS & SONS, INC., New York, N. Y. Filed Apr. 3, 1931.

THERMOMATON

For Temperature Indicating Devices for Roasting Machines.
Claims use since Dec. 19, 1930.

Ser. No. 312,944. MAJOR BERTRAND DE JARNETTE, doing business as Chromoclast Laboratories, Nebraska City, Nebr. Filed Apr. 4, 1931.

CHROMOCLAST

For Co-Axial Disc Spectrum Selectors and Transformers for the Same.
Claims use since Dec. 1, 1930.

Ser. No. 313,650. DU PONT PATHÉ FILM MANUFACTURING CORPORATION, New York, N. Y. Filed Apr. 22, 1931.

TELECHROME

For Photographic Film.
Claims use since Apr. 18, 1931.

Ser. No. 313,651. DU PONT PATHÉ FILM MANUFACTURING CORPORATION, New York, N. Y. Filed Apr. 22, 1931.

TELEFILM

For Photographic Film.
Claims use since Apr. 18, 1931.

CLASS 28

Jewelry and Precious-Metal Ware

Ser. No. 307,791. SEIDMAN & COHAN, INC., New York, N. Y. Filed Nov. 11, 1930.

SEICO

For Articles of Jewelry Comprising Bracelets, Finger Rings, Pendants, Necklaces, Earrings, Watch Fobs and Watch and Neck Chains, Made of Gold, White Gold, and Platinum.
Claims use since June 5, 1930.

BARBARA

For Silver Flatware and Hollow-Ware for Table Use.
Claims use since Feb. 14, 1931.

CLASS 29

Brooms, Brushes, and Dusters

Ser. No. 313,840. EASTMAN KODAK COMPANY, Rochester, N. Y. Filed Apr. 27, 1931. Under section 5b of the act of 1905, as amended in 1920.

Eastman

For Squeegees and Spotting Brushes.
Claims use since 1886 on squeegees; since 1910 on spotting brushes.

CLASS 32

Furniture and Upholstery

Ser. No. 312,112. MULTISORT COMPANY, Boston, Mass. Filed Mar. 13, 1931.

MULTISORT

For Apparatus for Use in Arranging Papers, Cards, and the Like for Filing or Distribution.
Claims use since Dec. 15, 1930.

CLASS 34

Heating, Lighting, and Ventilating Apparatus, Not Including Electrical Apparatus

Ser. No. 304,621. LÖWENTHAL & WEISSBERGER G. M. B. H., Frankfort-on-the-Main, Germany. Filed Aug. 14, 1930.

Colibri

For Pyrophoric Pocket Lighters.
Claims use since May 18, 1927.

Ser. No. 306,890. HOLOPHANE COMPANY, INC., New York, N. Y. Filed Oct. 18, 1930.

WIDE-SPRED

For Metal and Combination Glass and Metal Globes and Reflectors.
Claims use since Sept. 30, 1930.

Ser. No. 311,000. F. KALLUS MANUFACTURING CO. INC., doing business as Trulite Electric Mfg. Co., Hoboken, N. J. Filed Feb. 12, 1931.

TRULITE

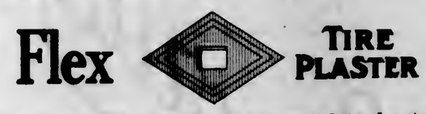
For Lighting Equipment—Namely, Shades and Reflectors.
Claims use since Nov. 15, 1930.

Ser. No. 311,361. BON-AIR RADIATOR CORPORATION, Boston, Mass. Filed Feb. 24, 1931.

BON AIR

For Heat Radiating Systems—Namely, Radiators, Humidifying Apparatus Operable by Heat Delivered from the Radiators, and Means for Controlling the Supply of Water to the Humidifying Apparatus.
Claims use since January, 1930.

Ser. No. 312,689. THE BEACON BURNER MANUFACTURING CORPORATION, Boston, Mass. Filed Mar. 30, 1931.



For Oil Burners.
Claims use since Mar. 1, 1931.

CLASS 35

Belting, Hose, Machinery Packing, and Non-metallic Tires

Ser. No. 303,990. THOMAS BELL, doing business as Bell Supply Co., Richmond, Va. Filed July 30, 1930.

The lines on the drawing are intended to denote the color red. Exclusive use of the words "Tire Plaster" and the representation of the goods is not claimed except in association with the other features of the mark.
For Tire Patches.
Claims use since July 19, 1929.

Ser. No. 312,145. MARSHALL FIELD & COMPANY, Chicago, Ill. Filed Mar. 14, 1931.

Town & Country

For Rubber Tires and Tubes for Automobiles, Automobile Trucks and Trailers.
Claims use since Jan. 20, 1931.

Ser. No. 313,904. CHICAGO PNEUMATIC TOOL COMPANY, New York, N. Y. Filed Apr. 28, 1931.

C. P.

For Flexible Fluid Conduits, Particularly Hose, Wholly or in Part of Rubber or Rubber Compound; High Pressure Hose of Rubber Reinforced with Fabric or Cord; Hose Made of Rubber Combined with Cotton with the Interior Lining of Rubber Heavier Than Ordinary Hose; Braided Fabric Hose, Duck Hose, Armored or Wire Wound Hose, and High Pressure Hose Made of Rubber Combined with Fibrous Material Such as Fabric or Cord with an Interior Lining of Rubber Made Heavier Than Ordinary Hose and the Exterior Wrapped with Wire.
Claims use since January, 1921.

CLASS 36

Musical Instruments and Supplies

Ser. No. 312,277. THE H. N. WHITE CO. OF NEW YORK, New York, N. Y. Filed Mar. 18, 1931.

283,972. CHEMICAL, PHARMACEUTICAL, AND BIOLOGICAL PRODUCTS LISTED HEREINBELOW.

Goods	*Date of first use*
Agar, Laxative, Lilly	Feb. 28, 1930
Agar, Plain (Granular)	Feb. 28, 1930
Agar, Prepared, Lilly	Feb. 28, 1930
Alkaline Aromatic, Pink (in Tablets)	Mar. 5, 1930
Alkaline Aromatic, White (in Tablets)	Mar. 12, 1930
Alum Compound (Ointment)	Sept. 28, 1929
Ammoniated Mercury, Ointment (5 Per Cent).	Nov. 1, 1929
Ammoniated Mercury, Ointment, U. S. P. (10 Per Cent).	Sept. 28, 1929
Amytal (Isoamylethylbarbituric Acid)	Dec. 9, 1929
Analgesic Balm, Lilly	June 4, 1929
Antimeningococcic Serum Polyvalent, Refined and Concentrated (in Vials).	Jan. 9, 1930
Antistreptococcic Serum (Polyvalent) (in Syringe Container).	July 16, 1929
Antistreptococcic Serum, Concentrated Polyvalent, Purified, Refined (Globulin) (in Syringe Container).	July 16, 1929
Antistreptococcic Serum (Erysipelas) Concentrated (in Syringe Container).	Apr. 4, 1930
Antistreptococcic Serum (Puerperal Fever) (Polyvalent) (in Syringe Container).	July 16, 1929
Antistreptococcic Serum (Scarlet Fever), Concentrated (in Syringe Container).	Feb. 10, 1930
Ariphon (in Pulvules or Capsules)	June 21, 1929
Azudine	July 8, 1929
Belladonna, Ointment, U. S. P.	Apr. 18, 1930
Boric Acid, Ointment, U. S. P.	Jan. 7, 1930
Bromo-Solanum, Lilly	Mar. 28, 1930
Calcium Gluconate	Apr. 14, 1930
Calomel, Ointment (5 Per Cent)	Apr. 18, 1930
Camphor and Menthol, Ointment	July 8, 1929
Cas-Cathartic, Lilly	Mar. 12, 1930
Catarrhal Vaccine Combined (Respiratory) (in Aseptic Syringes).	July 16, 1929
Cholera Vaccine, Prophylactic (in Vials)	Nov. 14, 1929
Coal Tar, Ointment, Purified	Dec. 9, 1929
Coco-Santal Compound, Lilly	Apr. 11, 1929
Digiglusin (in Ampoules)	June 9, 1928
Ephedrine Compound, Ointment	July 8, 1929
Ephedrine Hydrochloride	Mar. 2, 1930
Ephedrine Hydrocloride, Syrup	Jan. 12, 1930
Ephedrine with Merthiolate, Solution	Apr. 14, 1930
Ephedrine Sulphate, Lilly	Feb. 11, 1930
Erysipelas Streptococcus Antitoxin Purified, Concentrated (Globulin) (in Syringe Container).	July 16, 1929
Gluco-Calcium, Lilly	Jan. 24, 1930
Glycero-Tonic Compound	Feb. 10, 1930
Gonococcus Mixed Vaccine (in Aseptic Syringes).	July 16, 1929
Hamamelis Compound, Ointment	July 8, 1929
Hemagulen	Dec. 10, 1929
Hexalithia, Effervescent (in Tablets)	Mar. 12, 1930
Ichthyol, Ointment (10 Per Cent)	July 8, 1929
Ichthyol, Ointment (20 Per Cent)	Jan. 7, 1930

The applicant makes no claim to any trade-mark rights to the name "Ichthyol"; and recognizes the trade-mark rights of The Ichthyol Co. to that word, under Trade-Mark Registrations Nos. 61,010 and 61,011, issued February 26, 1907. The applicant, by and with the consent of The Ichthyol Co., uses in its Ichthyol Ointment included in the above list Ichthyol purchased from The Ichthyol Co.

Influenza Mixed Vaccine (in Aseptic Syringes).	July 16, 1929
Kaomin	June 13, 1929

82,182. KNIT UNDERWEAR. Registered June 6, 1911. SPRINGFIELD KNITTING CO., Springfield, Mass. Renewed June 6, 1931, to The William Carter Company, Needham Heights, Mass., a Corporation of Massachusetts, assignee.

82,240. LUBRICATING OILS AND GREASES. Registered June 13, 1911. The R. J. KANTER COMPANY, New York, N. Y., a Corporation of New York. Renewed June 13, 1931.

82,241. LUBRICATING OILS AND GREASES. Registered June 13, 1911. The R. J. KANTER COMPANY, New York, N. Y., a Corporation of New York. Renewed June 13, 1931.

82,462. COCOA WITH MILK AND CHOCOLATE WITH MILK. Registered June 27, 1911. NESTLÉ & ANGLO-SWISS CONDENSED MILK CO., Cham, Switzerland. Renewed June 27, 1931, to Nestle's Milk Products, Inc., New York, N. Y., a Corporation of New York, assignee.

82,574. TOILET CREAM. Registered July 11, 1911. COFFIN REDINGTON CO. Renewed July 11, 1931, to Coffin-Redington Co., San Francisco, Calif., a Corporation of California, successor.

82,583. CREAM CANDY. Registered July 11, 1911. DILLING & COMPANY, Indianapolis, Ind., a Corporation of Indiana. Renewed July 11, 1931.

82,734. HOSIERY. Registered July 18, 1911. WALKER STETSON CO., Boston, Mass., a Corporation of Massachusetts. Renewed July 18, 1931.

82,755. CERTAIN MACHINERY. Registered July 25, 1911. JOHN BROWN & CO. LIMITED, Sheffield, England, a Corporation of Great Britain. Renewed July 25 1931.

82,799. A POLISHING AND CLEANSING MATERIAL FOR METAL AND CUT GLASS. Registered July 25, 1911. A. R. JUSTICE COMPANY. Renewed July 25, 1931, to A. R. Justice Company, Philadelphia, Pa., a Corporation of Pennsylvania, successor.

82,844. A REMEDY FOR VENEREAL DISEASES. Registered July 25, 1911. THE TARRANT COMPANY, New York, N. Y., a Corporation of New York. Renewed July 25, 1931.

82,922. COAL. Registered August 1, 1911. SYCAMORE COAL COMPANY, Vivian, W. Va. Renewed August 1, 1931, to Sycamore Coal Company, Huntington, W. Va., a Corporation of West Virginia.

83,015. NEEDLES FOR SEWING BY MACHINE. Registered August 8, 1911. THE SINGER MANUFACTURING COMPANY, Elizabeth, N. J., a Corporation of New Jersey. Renewed August 8, 1931.

83,024. COAL. Registered August 8, 1911. SYCAMORE COAL COMPANY, Huntington, W. Va., a Corporation of West Virginia. Renewed August 8, 1931.

83,176. NEWSPAPERS. Registered August 22, 1911. THE NEW YORK TIMES COMPANY, New York, N. Y., a Corporation of New York. Renewed August 22, 1931.

83,297. FRESH ORANGES AND GRAPE-FRUIT. Registered August 29, 1911. UPLAND CITRUS ASS'N. Renewed August 29, 1931, to Upland Citrus Association, Upland; Calif., a Corporation of California, successor.

83,372. CAKE. Registered September 5, 1911. THE F. O. STONE BAKING CO., Cincinnati, Ohio. Renewed September 5, 1931, to Wonder Bakeries Co., Inc., Buffalo, N. Y., a Corporation of New York, assignee.

83,502. WATER-GAGES. Registered September 19, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed September 19, 1931.

83,595. A PERIODICAL PUBLICATION. Registered September 26, 1911. NEW YORK EVENING JOURNAL PUBLISHING COMPANY. Renewed September 26, 1931, to New York Evening Journal, Inc., New York, N. Y., a Corporation of New York, successor.

83,590. A REMEDY FOR SYPHILIS AND SIMILAR BLOOD DISEASES. Registered September 26, 1911. H. A. METZ & Co. Rewned September 26, 1931, to H. A. Metz Laboratories, Inc., New York, N. Y., a Corporation of New York, assignee.

83,591. A REMEDY FOR SYPHILIS AND SIMILAR BLOOD DISEASES. Registered September 26, 1911. H. A. METZ & Co. Renewed September 26, 1931, to H. A. Metz Laboratories, Inc., New York, N. Y., a Corporation of New York, assignee.

83,661. VALVES. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,662. LUBRICATORS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,663. OIL-CUPS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,664. OIL-CUPS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,665. GREASE-CUPS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,666. GREASE-CUPS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,668. LUBRICATORS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,669. LUBRICATORS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,671. LUBRICATORS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,673. OIL-PUMPS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,675. OIL-CUPS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,678. LUBRICATORS. Registered October 3, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 3, 1931.

83,698. LAUNDRY STARCH. Registered October 3, 1911. A. E. STALEY M'F'G. CO., Decatur, Ill., and Baltimore, Md. Renewed October 3, 1931, to A. E. Staley Manufacturing Company, Decatur, Ill., a Corporation of Delaware.

83,707. WALL-PAPER CLEANER. Registered October 10, 1911. THE ABSORENE MANUFACTURING COMPANY, St. Louis, Mo., a Corporation of Missouri. Renewed October 10, 1931.

83,710. STEAM-PUMPS. Registered October 10, 1911. THE AMERICAN WELL & PROSPECTING CO., Corsicana, Tex., a Corporation of Oklahoma. Renewed October 10, 1931.

83,751. POP SAFETY-VALVES. Registered October 10, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 10, 1931.

83,752. GATE-VALVES. Registered October 10, 1911. THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, a Corporation of Ohio. Renewed October 10, 1931.

83,755. WINES. Registered October 10, 1911. ANDREW MATTEI, Fresno, Calif. Renewed October 10, 1931.

83,795. WIRE. Registered October 10, 1911. THE WEBB WIRE WORKS, New Brunswick, N. J., a Corporation of New Jersey. Renewed October 10, 1931.

83,806. HEAT-INSULATING MATERIALS. Registered October 17, 1911. ARMSTRONG CORK COMPANY, Pittsburgh, Pa. Renewed October 17, 1931, to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania.

83,813. SARDINES. Registered October 17, 1911. MAX BLOCK. Renewed October 17, 1931, to Max Block & Co. Inc., New York, N. Y., a Corporation of New York, assignee.

83,818. CARBON-PAPER AND TYPE-WRITER RIBBONS. Registered October 17, 1911. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, New York, N. Y. Renewed October 17, 1931, to Columbia Ribbon and Carbon Manufacturing Company, Inc., Glen Cove, N. Y., a Corporation of New York, assignee.

83,853. WATERPROOF FABRICS. Registered October 17, 1911. THE PANTASOTE LEATHER COMPANY, Passaic, N. J., a Corporation of New Jersey. Renewed October 17, 1931.

83,877. CLOCKS AND WATCHES. Registered October 17, 1911. THE WESTERN CLOCK MANUFACTURING COMPANY. Renewed October 17, 1931, to Western Clock Company, Peru, Ill., a Corporation of Illinois, assignee.

83,898. PINE-TAR. Registered October 24, 1911. JAS. CORNER & SONS. Renewed October 24, 1931, to John P. Baer, doing business as Jas. Corner & Sons, Baltimore, Md., successor.

83,917. A GLYCERIN SUBSTITUTE. Registered October 24, 1911. CHAS. W. JACOB & ALLISON, New York, N. Y. Renewed October 24, 1931.

83,927. REFRIGERATORS. Registered October 24, 1911. MAINE MANUFACTURING COMPANY. Renewed October 24, 1931, to The Maine Manufacturing Company, Nashua, N. H., a Corporation of New Hampshire, successor.

83,962. JUTE BAGS. Registered October 24, 1911. YOUNG & METZNER. Renewed October 24, 1931, to Young & Metzner, Inc., Long Island City, N. Y., a Corporation of New York, successor.

83,964. JUTE BAGS. Registered October 24, 1911. YOUNG & METZNER. Renewed October 24, 1931, to Young & Metzner, Inc., Long Island City, N. Y., a Corporation of New York, successor.

83,965. JUTE BAGS. Registered October 24, 1911. YOUNG & METZNER. Renewed October 24, 1931, to Young & Metzner, Inc., Long Island City, N. Y., a Corporation of New York, successor.

83,968. LABELING-MACHINES AND PARTS OF LABELING-MACHINES. Registered October 24, 1911. ECONOMIC MACHINERY COMPANY. Renewed October 24, 1931, to Economic Machinery Company, Worcester, Mass., a Corporation of Massachusetts, assignee.

83,982. ORANGES, LEMONS, GRAPE-FRUIT, LIMES, AND TANGERINES. Registered October 31, 1911. BRADENTOWN CITRUS GROWERS ASS'N, Bradentown, Fla. a Corporation of Florida. Renewed October 31, 1931.

83,984. TEAS. Registered October 31, 1911. BROOKE BOND & COMPANY, LIMITED, London, England, a Corporation of Great Britain. Renewed October 31, 1931.

83,989. SOLE-LEATHER. Registered October 31, 1911. F. P. COVER & SONS. Renewed October 31, 1931, to F. P. Cover & Sons, Inc., Andrews, N. C., a Corporation of North Carolina, successor.

83,993. CANDY KISSES. Registered October 31, 1911. DILLING & COMPANY, Indianapolis, Ind., a Corporation of Indiana. Renewed October 31, 1931.

84,002. CERTAIN FOODS. Registered October 31, 1911. S. HAMILL COMPANY, Keokuk, Iowa, a Corporation of Iowa. Renewed October 31, 1931.

84,006. MINING-MACHINES. Registered October 31, 1911. THE JEFFREY MANUFACTURING COMPANY, Columbus, Ohio, a Corporation of Ohio. Renewed October 31, 1931.

84,053. JUTE BAGS. Registered October 31, 1911. YOUNG & METZNER. Renewed October 31, 1931, to Young & Metzner, Inc., Long Island City, N. Y., a Corporation of New York, successor.

LABELS

REGISTERED JUNE 9, 1931

39,244.—*Title:* ABBOTT'S AROMATIC BITTERS. For Bitters. C. W. ABBOTT & CO., INC., Baltimore, Md. Published February 10, 1931.

39,245.—*Title:* JAY-LIN. For a Game. ALL-FAIR INCORPORATED, Churchville, N. Y. Published February 9, 1931.

39,246.—*Title:* SIMBA. For a Game. ALL-FAIR INCORPORATED, Churchville, N. Y. Published February 9, 1931.

39,247.—*Title:* BUNKER GOLF. For a Game. ALL-FAIR INCORPORATED, Churchville, N. Y. Published February 9, 1931.

39,248.—*Title:* ROW-O-WINKS TIDDLEDY WINKS. For a Game. ALL-FAIR INCORPORATED, Churchville, N. Y. Published February 9, 1931.

39,249.—*Title:* BEAN-EM. For a Game. ALL-FAIR INCORPORATED, Churchville, N. Y. Published February 9, 1931.

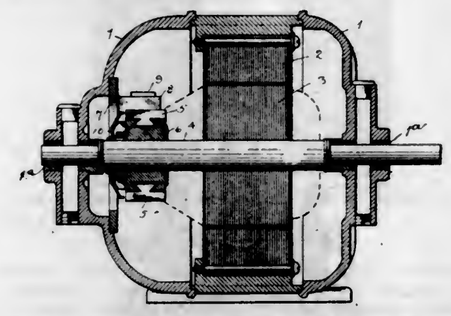
13,232.—*Title:* VOSINE. For Antiseptic for the Nose, Throat and Mouth. THE VOSINE CO., Lynn, Mass. Published March 3, 1931.

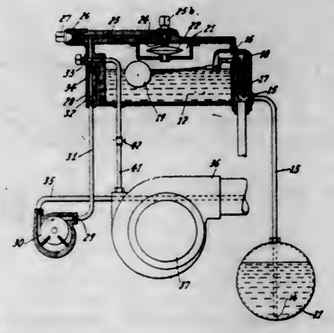
REISSUES



JUNE 9, 1931

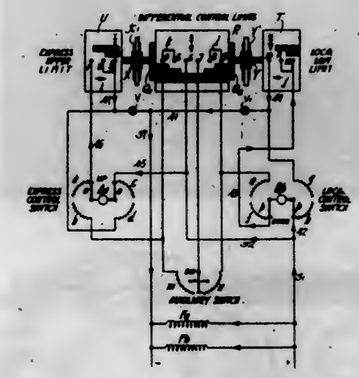
18,092. HIGH TENSION IGNITION AMPLIFIER. PATTERSON O. STEWART, New York, N. Y. Original No. 1,774,339, dated Aug. 26, 1930, Serial No. 448,986, filed May 1, 1930. Application for reissue filed Jan. 16, 1931. Serial No. 509,245. 20 Claims. (Cl. 123—148.)

1. In a device for the ignition system of gas engines, an insulating casing, elongated floating electrodes mounted for relative vibrative conducting movements within said casing, and conductive elements coordinating with the electrodes for the purpose specified.



18,093. SHORT CIRCUITING DEVICE FOR MOTOR COMMUTATORS. EVERETT P. LARSH, Dayton, Ohio, assignor to The Master Electric Company, Dayton, Ohio, a Corporation of Ohio. Original No. 1,678,517, dated July 24, 1928, Serial No. 363,402, filed Mar. 5, 1920. Application for reissue filed May 11, 1929. Serial No. 362,425. 42 Claims. (Cl. 172—279.)

26. In a short circuiting device for electric motors, a series of commutator bars to be electrically interconnected, an annular series of centrifugally actuated contact members located in juxtaposition to the lateral face of the commutator, and an annular contractile spring means concentrically arranged exteriorly of the contact members, against the tension of which said members are radially slidable upon the commutator bars to afford wiping engagement therewith under the action of centrifugal influence.

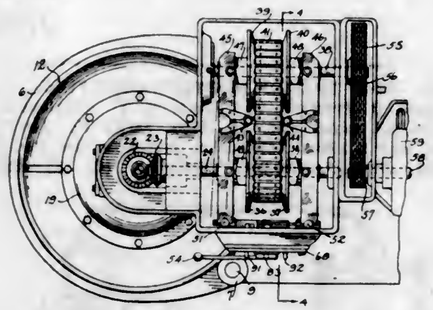


18,094. FEEDING MEANS FOR FLUID FUELS OR THE LIKE. LOUIS LAVOIE, Quebec, Quebec, Canada. Original No. 1,774,714, dated Sept. 2, 1930, Serial No. 180,472, filed Apr. 2, 1927. Application for reissue filed Jan. 6, 1931. Serial No. 507,010. 6 Claims. (Cl. 158—36.1.)

6. A fuel feeding apparatus of the character described comprising a fuel feeding tank, a main suction line, means for maintaining a relatively low grade of vacuum in one section of said line and a relatively high grade of vacuum in another section of said line, said means being adjustable to vary the vacuum in both sections of the line without affecting the ratio therebetween, means connecting the low vacuum section of the line to the feed tank to

maintain in said tank a constant degree of vacuum sufficient to feed fuel thereto from a lower level and a fuel feed channel having its lower end positioned below the fuel level in said tank and its upper end communicating with the high vacuum section of said suction line at a point above the fuel level.

18,095. DUAL ELEVATOR SYSTEM AND CONTROL. FRANK J. SPRAGUE, New York, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original No. 1,763,198, dated June 10, 1930, Serial No. 158,244, filed Dec. 31, 1926. Application for reissue filed Mar. 13, 1931. Serial No. 522,417. 27 Claims. (Cl. 187—16.)

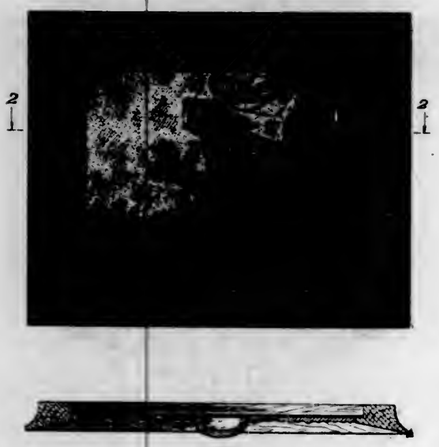


1. In a control system for two independent reversible motors, the combination of manually operated controllers for each of the motors and a supplemental automatically operated controller for one only of the two direction controlling circuits of each of the motors, said controller comprising a reversible floating member controlling said circuits by means of a revolvable spider having gears mounted

so as to freely rotate about its radial axes, and gears on each side of and engaging the spider gears independently driven by the two motors.

18,096. MIXING MACHINE. WALTER F. DEHUFF, Glen Rock, Pa. Original No. 1,781,321, dated Nov. 11, 1930, Serial No. 360,577, filed May 4, 1929. Application for reissue filed Jan. 15, 1931. Serial No. 509,043. 11 Claims. (Cl. 64—8.)

1. In a variable speed gear, the combination with a casing, two parallel shafts mounted therein, a spline on each shaft, a pair of cone-shaped driving elements held on each shaft by the spline and adapted to slide toward and away from each other, a belt operably passing between the driving elements of said pairs, levers pivoted between said parallel shafts and operably connected each to one driving element of each pair, means for simultaneously oscillating both of said levers to cause the driving elements of one pair to approach while the driving elements of the other pair recede from one another, said means comprising a stub shaft, an operating handle at one end for rotating said shaft, a gear at the other end, fixed slides extending radially of the axis of said shaft, at



diametrically opposite points, guides slidable of said slides, and rack bars engaging said gear and connected to said slides.

DESIGNS

JUNE 9, 1931

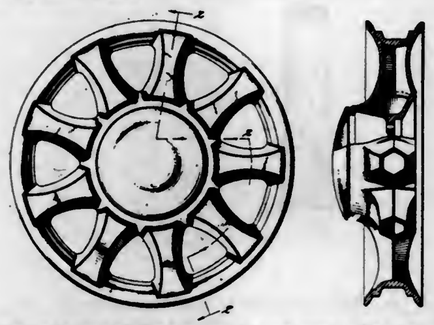
84,314. RAISED METAL PLAQUE. CHARLES M. BECKER, Brooklyn, N. Y. Filed Jan. 20, 1931. Serial No. 38,402. Term of patent 3½ years.

The ornametnal design for a raised metal plaque as shown and described.

84,315. LAMP. CHARLES M. BECKER, Brooklyn, N. Y. Filed Apr. 15, 1931. Serial No. 39,484. Term of patent 3½ years.

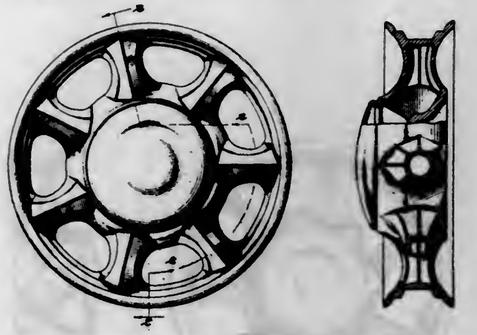
The ornamental design for a lamp as shown.

84,316. CABINET FOR RADIO RECEIVING APPARATUS. CHARLES S. BRADLEY, Philadelphia, Pa., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 17, 1931. Serial No. 38,693. Term of patent 7 years.



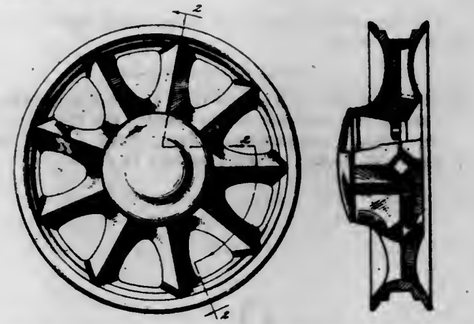
The ornamental design for a cabinet for radio receiving apparatus, as shown and described.

84,317. BOTTLE. ELI BECKER and ISAAC MILLER, Cleveland, Ohio. Filed Apr. 11, 1931. Serial No. 39,456. Term of patent 14 years.



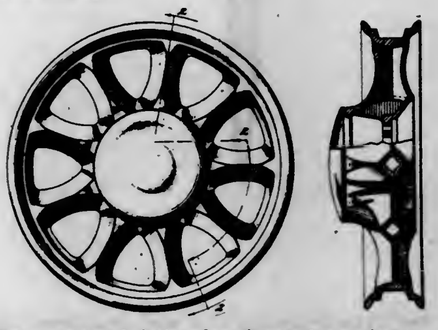
The ornamental design for a bottle substantially as shown.

84,318. NINE SPOKE FLAT HEXAGON VEHICLE WHEEL. PAUL E. BEUTKE and BERT W. NELSON, Los Angeles, Calif., assignors to American Alumalloy Custom Wheel Company, Ltd., Las Vegas, Nev., a Corporation of Nevada. Filed Apr. 8, 1931. Serial No. 39,403. Term of patent 7 years.



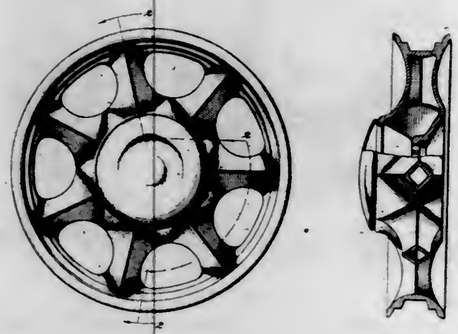
The ornamental design for a nine spoke flat hexagon vehicle wheel, as shown.

84,319. SEVEN SPOKE FLAT OCTAGON VEHICLE WHEEL. PAUL E. BEUTKE and BERT W. NELSON, Los Angeles, Calif., assignors to American Alumalloy Custom Wheel Company, Ltd., Las Vegas, Nev., a Corporation of Nevada. Filed Apr. 8, 1931. Serial No. 39,404. Term of patent 7 years.



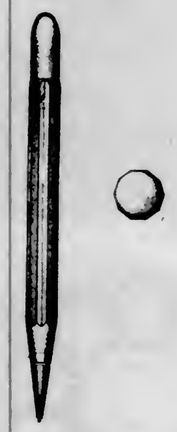
The ornamental design for seven spoke flat octagon vehicle wheel, as shown.

84,320. NINE SPOKE SQUARE VEHICLE WHEEL. PAUL E. BEUTKE and BERT W. NELSON, Los Angeles, Calif., assignors to American Alumalloy Custom Wheel Company, Ltd., Las Vegas, Nev., a Corporation of Nevada. Filed Apr. 8, 1931. Serial No. 39,405. Term of patent 7 years.



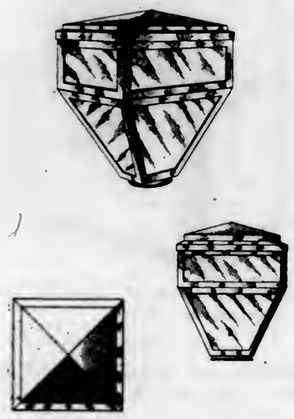
The ornamental design for nine spoke square vehicle wheel, as shown.

84,321. NINE SPOKE SEMISQUARE VEHICLE WHEEL. PAUL E. BEUTKE and BERT W. NELSON, Los Angeles, Calif., assignors to American Alumalloy Custom Wheel Company, Ltd., Las Vegas, Nev., a Corporation of Nevada. Filed Apr. 8, 1931. Serial No. 39,406. Term of patent 14 years.



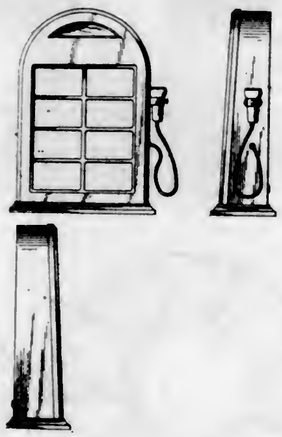
The ornamental design for nine spoke semisquare vehicle wheel, as shown.

84,322. SEVEN SPOKE SQUARE VEHICLE WHEEL. PAUL E. BEUTKE and BERT W. NELSON, Los Angeles, Calif., assignors to American Alumalloy Custom Wheel Company, Ltd., Las Vegas, Nev., a Corporation of Nevada. Filed Apr. 8, 1931. Serial No. 39,407. Term of patent 7 years.



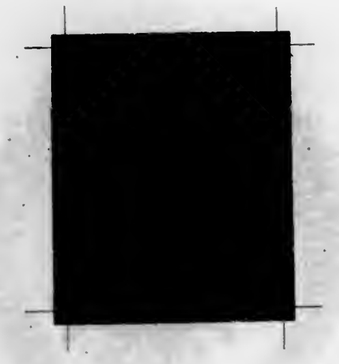
The ornamental design for seven spoke square vehicle wheel, as shown.

84,323. MECHANICAL PENCIL. ANDREAS BIENENSTEIN, Toledo, Ohio, assignor to The Conklin Pen Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 16, 1931. Serial No. 38,322. Term of patent 14 years.



The ornamental design for a mechanical pencil substantially as shown and described.

84,324. ADVERTISING LANTERN. MORTIMER W. BOWEN, Jackson Heights, N. Y., assignor to Vacuum Oil Company, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1931. Serial No. 39,423. Term of patent 14 years.



The ornamental design for an advertising lantern, as shown.

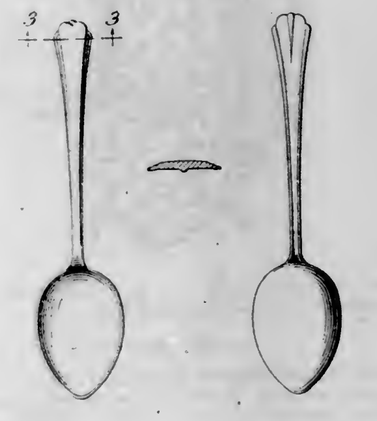
84,325. DISPLAY CABINET. ROSCOE TRACY BURROWS, Barre, Vt. Filed Mar. 2, 1931. Serial No. 38,909. Term of patent 14 years.

The ornamental design for display cabinet, as shown.

84,326. RUBBER OR LIKE ARTICLE. JAMES J. CONWAY, West Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed Feb. 7, 1931. Serial No. 38,581. Term of patent 14 years.

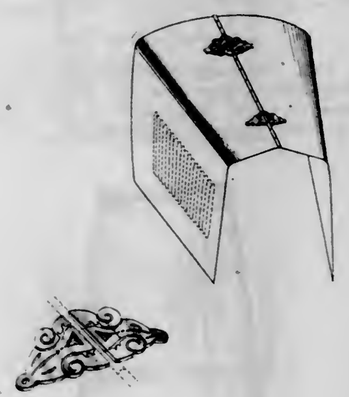
The ornamental design for rubber or like article substantially as shown.

84,327. BRIDGE MEMBER FOR AN OPHTHALMIC MOUNTING. OTTO W. DECHAU, Rochester, N. Y., assignor to Artcraft Optical Co. Inc., a Corporation of New York. Filed Mar. 30, 1931. Serial No. 39,303. Term of patent 7 years.



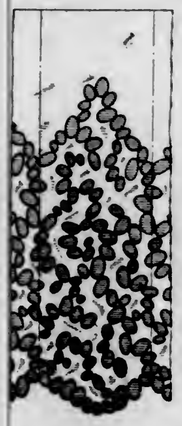
The ornamental design for a bridge member for an ophthalmic mounting, as shown.

84,328. RUBBER SHEETING OR LIKE ARTICLE. WALLACE W. DE LANEY, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed Jan. 29, 1931. Serial No. 38,475. Term of patent 14 years.



The ornamental design for rubber sheeting or like article substantially as shown.

84,329. SPOON OR ANALOGOUS ARTICLE. ALFRED J. FLAUDER, Trumbull, Conn., assignor to Weidlich Sterling Spoon Co., Bridgeport, Conn., a Partnership consisting of Louis Weidlich, Stratford, Conn., Frank B. Weidlich, New York, N. Y., and William Weidlich, Bridgeport, Conn. Filed Mar. 26, 1931. Serial No. 39,248. Term of patent 7 years.



The ornamental design for a spoon or analogous article substantially as shown.

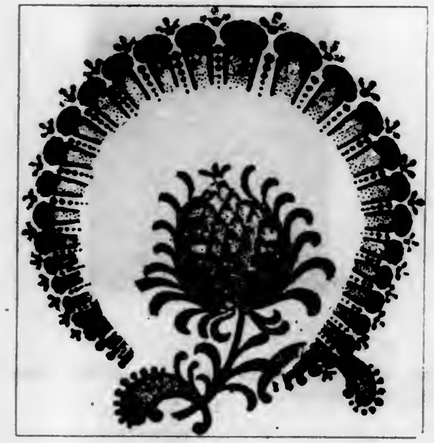
84,330. AUTOMOBILE HOOD. LEONARD J. FOX, Cincinnati, Ohio. Filed Apr. 2, 1930. Serial No. 35,105. Term of patent 14 years.

The ornamental design for an automobile hood as shown.

84,331. EMBROIDERED TEXTILE FABRIC. ERNEST W. FREUDENBERG, Larchmont, N. Y. Filed Mar. 5, 1931. Serial No. 38,956. Term of patent 3½ years.

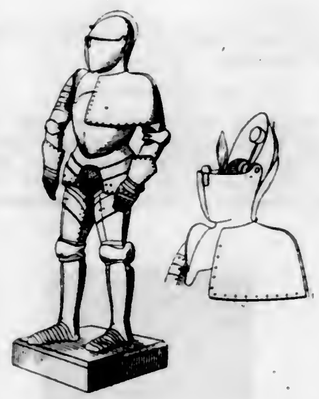
The ornamental design for embroidered textile fabric substantially as shown and described.

84,332. EMBROIDERED TEXTILE FABRIC OR A SIMILAR ARTICLE. ERNEST W. FREUDENBERG, Larchmont, N. Y. Filed Apr. 4, 1931. Serial No. 39,372. Term of patent 3½ years.



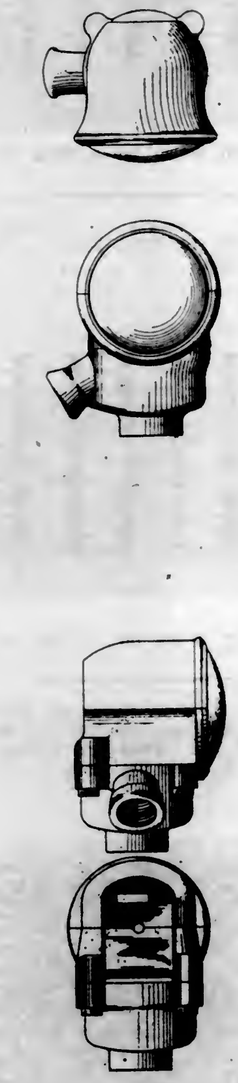
The ornamental design for an embroidered textile fabric or a similar article substantially as shown and described.

84,333. JAR. EDWIN W. FUERST, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 9, 1931. Serial No. 39,412. Term of patent 14 years.



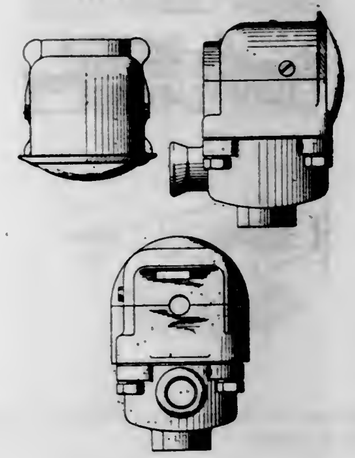
The ornamental design for a jar substantially as shown.

84,334. TEXTILE FABRIC. JACK J. HAUSMAN, Brooklyn, N. Y. Filed Feb. 17, 1931. Serial No. 38,707. Term of patent 3½ years.



The ornamental design for textile fabric, as shown.

84,335. TABLE LIGHTER. RAY R. HUTCHESON, Richmond Hill, N. Y., assignor to Wm. Demuth & Co., a Corporation of New York. Filed Mar. 6, 1931. Serial No. 38,977. Term of patent 7 years.

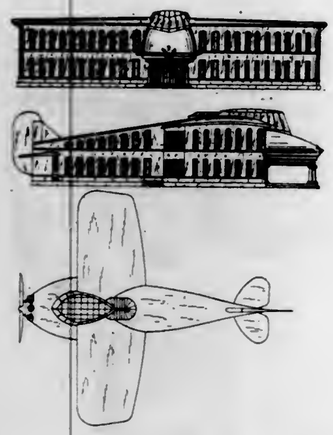


The ornamental design for a table lighter substantially as shown and described.

84,336. METER HOUSING. CHARLES S. HAZARD, Flushing, New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 11, 1930. Serial No. 36,933. Term of patent 7 years.

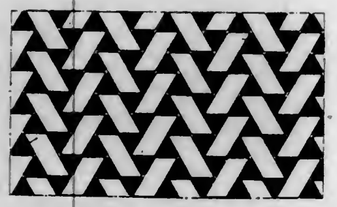
The ornamental design for a meter housing, as shown.

84,337. METER HOUSING. CHARLES S. HAZARD, Flushing, New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 11, 1930. Serial No. 36,934. Term of patent 7 years.



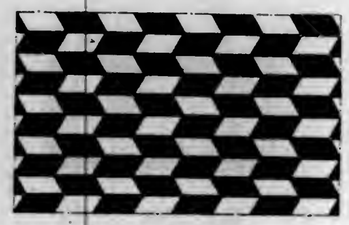
The ornamental design for a meter housing, as shown.

84,338. RADIOCABINET. JOHN J. HEELIHY, Glenwood, Pittsburgh, Pa. Filed May 7, 1930. Serial No. 35,518. Term of patent 14 years.



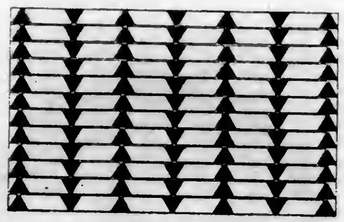
The ornamental design for a radio cabinet, substantially as shown.

84,339. BUILDING STRUCTURE. EDWARD A. HERMSEN, Oakland, Calif. Filed July 29, 1929. Serial No. 32,235. Term of patent 14 years.



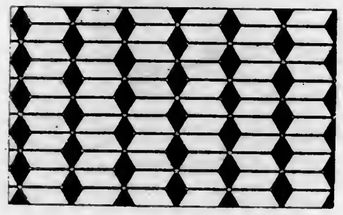
The ornamental design for a building structure substantially as shown.

84,340. TILING. RUSSELL P. HERROLD, Zanesville, Ohio. Filed July 16, 1930. Serial No. 36,369. Term of patent 14 years.



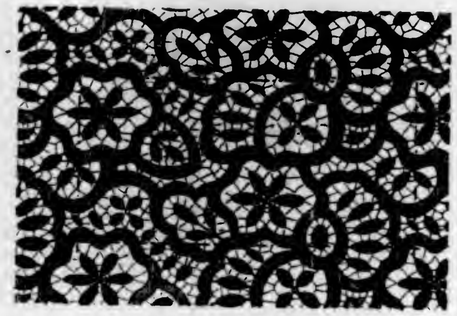
The ornamental design for a tiling, as shown and described.

84,341. TILING. RUSSELL P. HERROLD, Zanesville, Ohio. Filed July 16, 1930. Serial No. 36,370. Term of patent 14 years.



The ornamental design for a tiling, as shown and described.

84,342. TILING. RUSSELL P. HERROLD, Zanesville, Ohio. Filed July 16, 1930. Serial No. 36,371. Term of patent 14 years.



The ornamental design for a tiling, as shown and described.

84,343. TILING. RUSSELL P. HERROLD, Zanesville, Ohio. Filed July 16, 1930. Serial No. 36,372. Term of patent 14 years.

The ornamental design for a tiling, as shown and described.

84,344. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Apr. 1, 1931. Serial No. 39,325. Term of patent 3½ years.

The ornamental design for lace, substantially as shown and described.

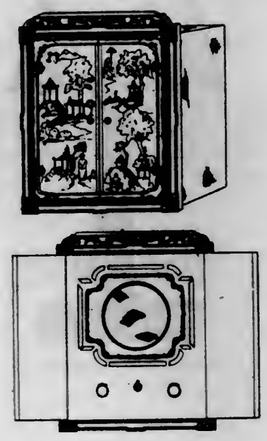
84,345. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Apr. 9, 1931. Serial No. 39,416. Term of patent 3½ years.

The ornamental design for lace, substantially as shown and described.

84,346. LACE. HAGE W. HUCKNALL, Elyria, Ohio, assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Apr. 13, 1931. Serial No. 39,466. Term of patent 3½ years.

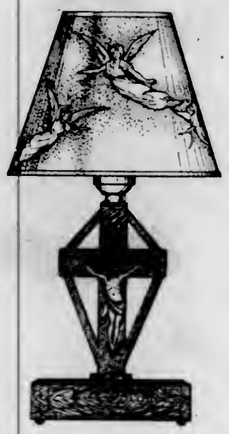
The ornamental design for lace, substantially as shown and described.

84,347. LACE. HAGE W. HUCKNALL, Elyria, Ohio., assignor to The American Lace Mfg. Co., Elyria, Ohio, a Corporation of Ohio. Filed Apr. 16, 1931. Serial No. 39,504. Term of patent 3½ years.



The ornamental design for lace, substantially as shown and described.

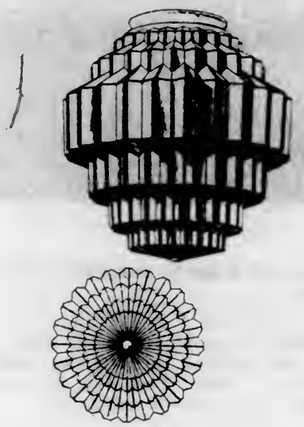
84,348. DRESS. FRANCES A. JACOBS, Chicago, Ill., assignor to The Sterling Company, Chicago, Ill., a Corporation of West Virginia. Filed Mar. 26, 1931. Serial No. 39,246. Term of patent 7 years.



The ornamental design for a dress as shown.

84,349. WALL INSET RADIOCABINET. CARL OSCAR JOHNSON, Spokane, Wash. Filed Apr. 15, 1931. Serial No. 39,493. Term of patent 7 years.

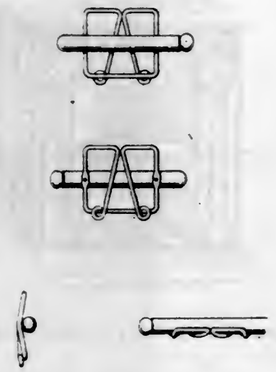
The ornamental design for a radio cabinet, as shown.



84,350. LAMP. GROVER I. JORDAN, Mason City, Iowa. Filed Nov. 17, 1930. Serial No. 37,689. Term of patent 14 years.

The ornamental design for a lamp as shown.

84,351. LIGHTING FIXTURE BOWL OR SIMILAR ARTICLE. NICHOLAS KOPP, Pittsburgh, Pa., assignor to Kopp Glass, Incorporated, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1931. Serial No. 39,340. Term of patent 7 years.

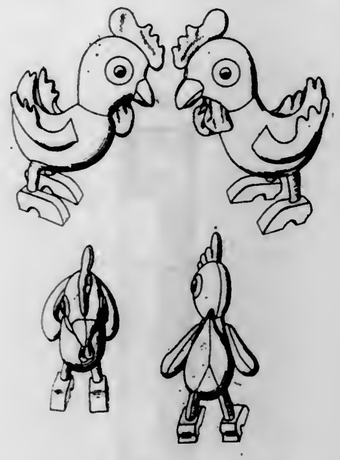


The ornamental design for a lighting fixture bowl or similar article, as shown.

84,352. COMBINED GOLF PENCIL AND WRIST STRAP HOLDER. HALSEY MONROE LARTER, Newark, N. J., assignor to William S. Hicks' Sons, Newark, N. J. Filed Aug. 29, 1930. Serial No. 36,824. Term of patent 3½ years.

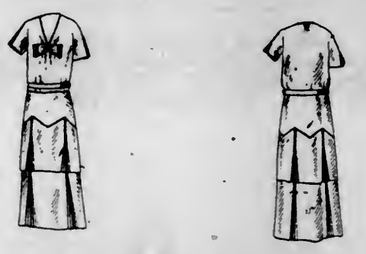
The ornamental design for a combined golf pencil and wrist strap holder, as shown.

84,353. COMBINED GOLF PENCIL AND HOLDER THEREFOR. HALSEY MONROE LARTER, Newark, N. J., assignor to William S. Hicks' Sons, Newark, N. J. Filed Aug. 29, 1930. Serial No. 36,825. Term of patent 3½ years.



The ornamental design for a combined golf pencil and holder therefor, as shown.

84,354. POCKET LIGHTER. CECIL H. LAWRENCE, Attleboro, Mass., assignor to Evans Case Company, a Corporation of Massachusetts. Filed Sept. 17, 1930. Serial No. 37,003. Term of patent 7 years.



The ornamental design for a pocket lighter substantially as shown.

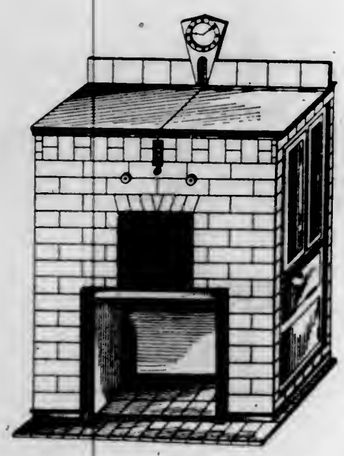
84,355. TOY OR SIMILAR ARTICLE. MILDRED LEE, Santa Monica, Calif. Filed Mar. 10, 1931. Serial No. 39,020. Term of patent 3½ years.

The ornamental design for a toy or similar article, as shown.

84,356. DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 2, 1931. Serial No. 38,905. Term of patent 3½ years.

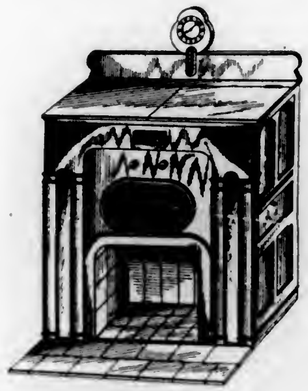
The ornamental design for a dress substantially as shown.

84,357. BRACELET CHAIN. GEORGE U. MEYER, Riverview, R. I., assignor to Providence Stock Company, a Corporation of Rhode Island. Filed Mar. 19, 1931. Serial No. 39,150. Term of patent 3½ years.



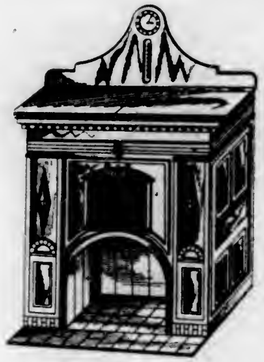
The ornamental design for a bracelet chain, substantially as shown.

84,358. COMBINED CLOCK CASE AND SHELVING. HERMAN MILLER, Zeeland, Mich. Filed Mar. 23, 1931. Serial No. 39,205. Term of patent 3½ years.



The ornamental design for a combined clock case and shelving as shown.

84,359. FIREPLACE CABINET. RICHARD J. NACHTIGALL, Philadelphia, Pa., assignor of two-fifths to Aladar Mikulka, Philadelphia, Pa. Filed Jan. 29, 1931. Serial No. 38,472. Term of patent 14 years.

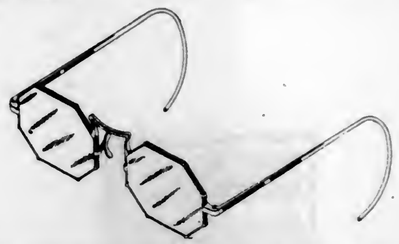


The ornamental design for a fireplace cabinet as shown and described.

84,360. FIREPLACE CABINET. RICHARD J. NACHTIGALL, Philadelphia, Pa., assignor of two-fifths to Aladar Mikulka, Philadelphia, Pa. Filed Jan. 29, 1931. Serial No. 38,473. Term of patent 14 years.

The ornamental design for a fireplace cabinet as shown and described.

84,361. FIREPLACE CABINET. RICHARD J. NACHTIGALL, Philadelphia, Pa., assignor of two-fifths to Aladar Mikulka, Philadelphia, Pa. Filed Jan. 29, 1931. Serial No. 38,474. Term of patent 14 years.

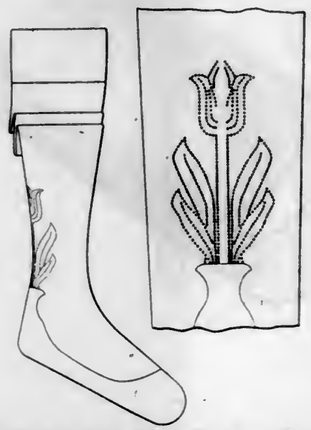


The ornamental design for a fireplace cabinet as shown and described.

84,362. OPHTHALMIC MOUNTING. GEORGE E. NERNEY, Attleboro, Mass., assignor to Bay State Optical Company, Attleboro, Mass., a Corporation of Maine. Filed Oct. 10, 1930. Serial No. 37,213. Term of patent 7 years.

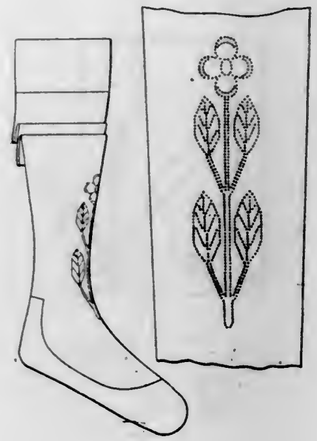
The ornamental design for an ophthalmic mounting as shown.

84,363. OPHTHALMIC MOUNTING. GEORGE E. NERNEY, Attleboro, Mass., assignor to Bay State Optical Company, Attleboro, Mass., a Corporation of Maine. Filed Oct. 10, 1930. Serial No. 37,214. Term of patent 7 years.



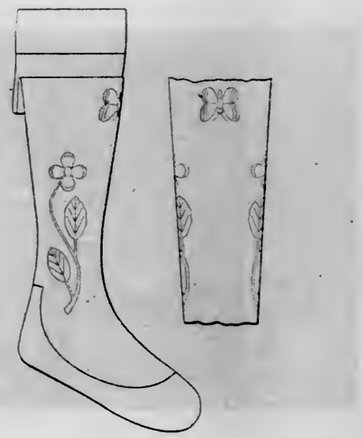
The ornamental design for an ophthalmic mounting as shown.

84,364. STOCKING. HENRY PETERS, Clifton, N. J. Filed Nov. 21, 1930. Serial No. 37,741. Term of patent 3½ years.



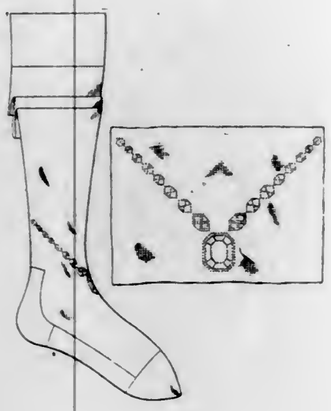
The ornamental design for a stocking as shown and described.

84,365. STOCKING. HENRY PETERS, Clifton, N. J. Filed Nov. 21, 1930. Serial No. 37,742. Term of patent 3½ years.



The ornamental design for a stocking as shown.

84,366. STOCKING. HENRY PETERS, Clifton, N. J. Filed Nov. 21, 1930. Serial No. 37,743. Term of patent 3½ years.



The ornamental design for a stocking as shown.

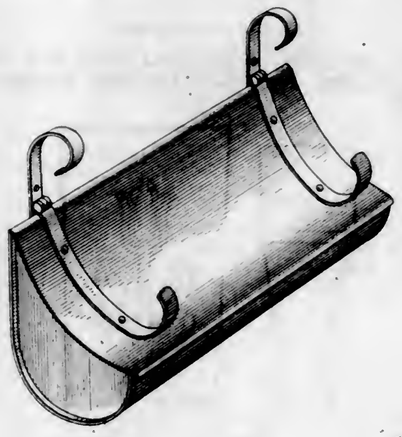
84,367. STOCKING. HENRY PETERS, Clifton, N. J. Filed Nov. 21, 1930. Serial No. 37,744. Term of patent 14 years.

The ornamental design for a stocking as shown.

84,368. STOCKING. HENRY PETERS, Clifton, N. J. Filed Nov. 21, 1930. Serial No. 37,745. Term of patent 14 years.

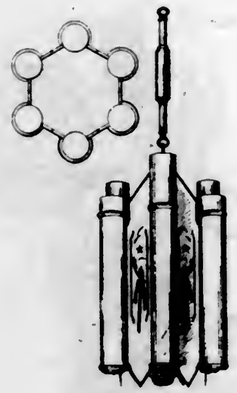
The ornamental design for a stocking as shown.

84,369. RADIOCABINET. JOHN A. RANCORN, Camden, N. J., and EVERETT WORTHINGTON, Chicago, Ill., assignors to R C A Victor Company, a Corporation of Maryland. Filed Apr. 10, 1931. Serial No. 39,432. Term of patent 3½ years.



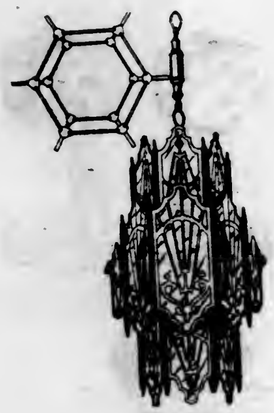
The ornamental design for a radio cabinet substantially as shown.

84,370. RADIOCABINET. JOHN A. RANCORN, Camden, N. J., and EVERETT WORTHINGTON, Chicago, Ill., assignors to R C A Victor Company, a Corporation of Maryland. Filed Apr. 10, 1931. Serial No. 39,433. Term of patent 3½ years.



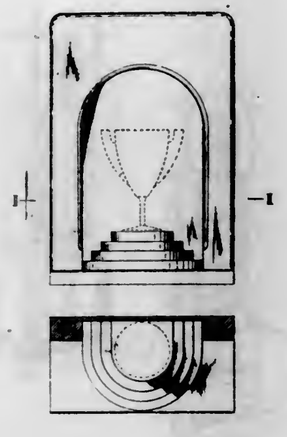
The ornamental design for a radio cabinet substantially as shown.

84,371. MAGAZINE MAIL BOX. WILLIAM H. REIMER, Fulton, Ill., assignor to Patent Novelty Company, Fulton, Ill., a Corporation of Illinois. Filed Feb. 16, 1931. Serial No. 38,672. Term of patent 14 years.



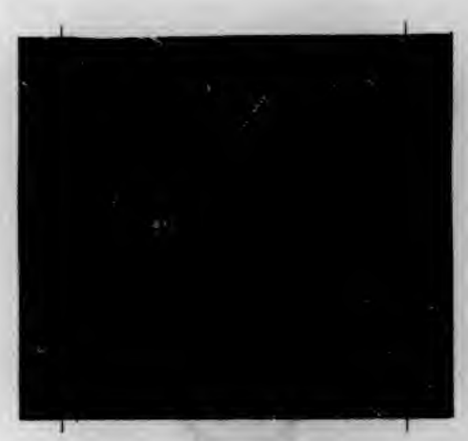
The ornamental design for a magazine mail box, as shown and described.

84,372. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed Feb. 12, 1930. Serial No. 34,495. Term of patent 3½ years.



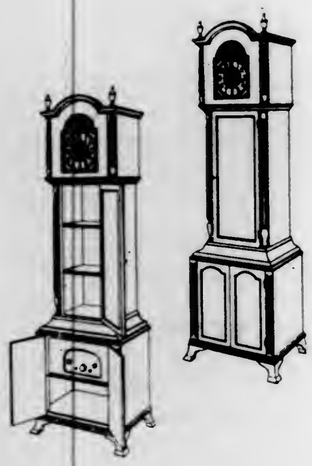
The ornamental design for a lighting fixture, or article of similar nature, as shown and described.

84,373. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed Feb. 26, 1930. Serial No. 34,668. Term of patent 3½ years.



The ornamental design for a lighting fixture, or article of similar nature, as shown.

84,374. TROPHY PLAQUE. NORMAN L. ROULET, Toledo, Ohio. Filed Feb. 14, 1931. Serial No. 38,661. Term of patent 14 years.

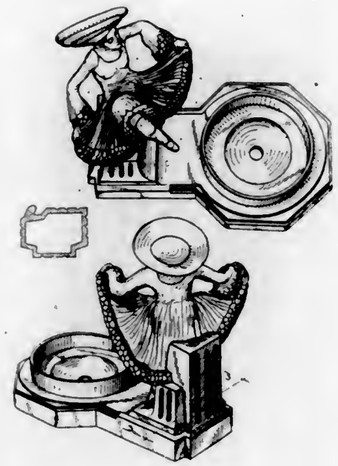


The ornamental design for a trophy plaque as shown.

84,375. TEXTILE FABRIC. HERBERT S. ROYLE, Philadelphia, Pa. Filed Aug. 16, 1930. Serial No. 36,685. Term of patent 3½ years.

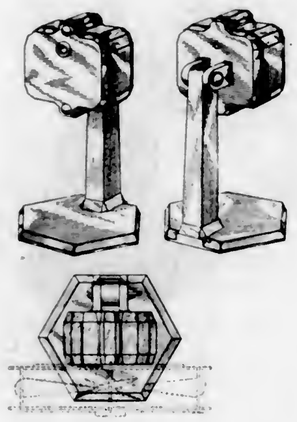
The ornamental design for textile fabric as shown and described.

84,376. RADIOCABINET. WILLIAM RYPKEMA, Bay City, Mich., assignor to Radio Master Corporation of America, Bay City, Mich., a Corporation of Michigan. Filed Mar. 30, 1931. Serial No. 39,296. Term of patent 3½ years.



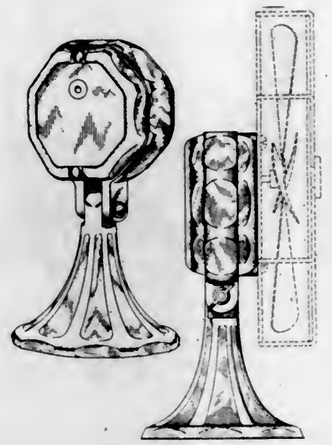
The ornamental design for a radiocabinet, as shown.

84,377. VASE OR ANALOGOUS ARTICLE. GEORGE D. SAILER, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1931. Serial No. 39,382. Term of patent 7 years.



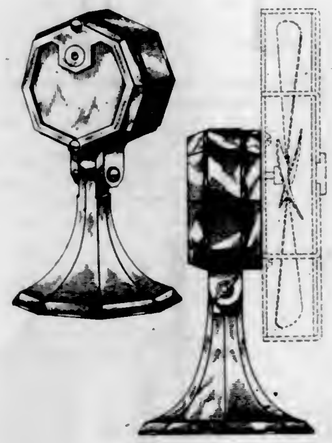
The ornamental design for a vase or analogous article, as shown.

84,378. TABLE LAMP OR ARTICLE OF SIMILAR NATURE. CHARLES SHULMAN, New York, N. Y., assignor to Apt Novelty Company Inc., New York, N. Y. Filed Apr. 7, 1931. Serial No. 39,390. Term of patent 3½ years.



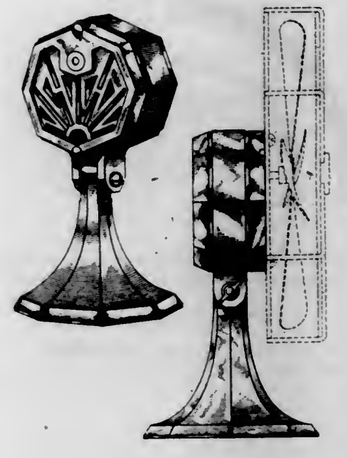
The ornamental design for a table lamp or article of similar nature, as shown.

84,379. PORTABLE ELECTRIC FAN. CLARENCE E. SMITH, Rockford, Ill., assignor to Howard D. Colman, Rockford, Ill. Filed Mar. 28, 1931. Serial No. 39,282. Term of patent 7 years.



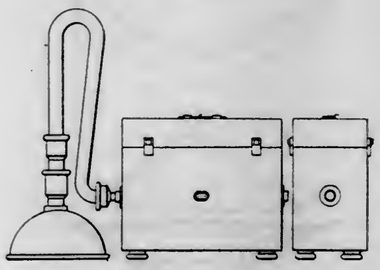
The ornamental design for a portable electric fan, substantially as shown.

84,380. PORTABLE ELECTRIC FAN. CLARENCE E. SMITH, Rockford, Ill., assignor to Howard D. Colman, Rockford, Ill. Filed Mar. 28, 1931. Serial No. 39,283. Term of patent 7 years.



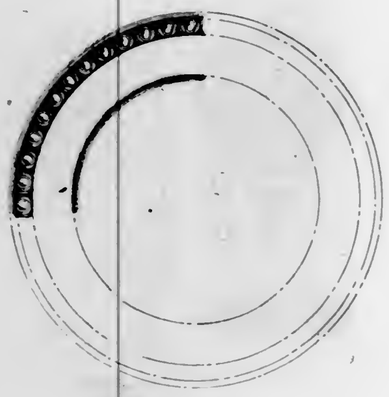
The ornamental design for a portable electric fan, substantially as shown.

84,381. PORTABLE ELECTRIC FAN. CLARENCE E. SMITH, Rockford, Ill., assignor to Howard D. Colman, Rockford, Ill. Filed Mar. 28, 1931. Serial No. 39,284. Term of patent 7 years.



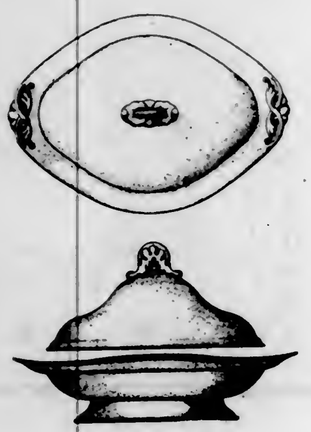
The ornamental design for a portable electric fan, substantially as shown.

84,382. PORTABLE ELECTRIC FAN. CLARENCE E. SMITH, Rockford, Ill., assignor to Howard D. Colman, Rockford, Ill. Filed Mar. 28, 1931. Serial No. 39,285. Term of patent 7 years.



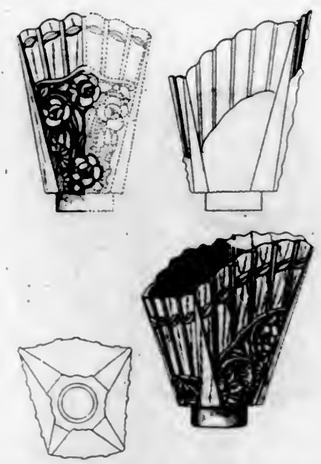
The ornamental design for a portable electric fan, substantially as shown.

84,383. CASING FOR A MASSAGE APPARATUS WITH HOSE AND CUP ATTACHED. SOPHIE STEPHANI, née Kaus, Zurich, Switzerland. Filed Dec. 13, 1928. Serial No. 29,249. Term of patent 7 years.



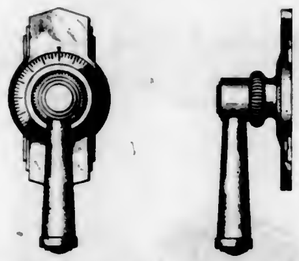
The ornamental design for a casing for a massage apparatus, with hose and cup attached, as shown.

84,384. PLATE OR SIMILAR ARTICLE OF POTTERY. SIDNEY E. THOMPSON, West Englewood, N. J., assignor to Copeland & Thompson, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 12, 1931. Serial No. 39,053. Term of patent 14 years.



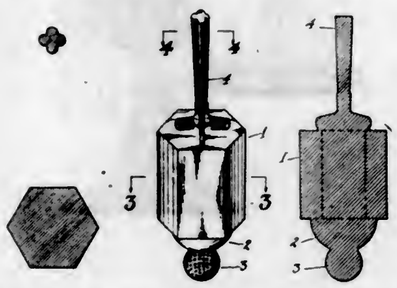
The ornamental design for a plate or similar article of pottery as shown and described.

84,385. COVERED DISH. SIDNEY E. THOMPSON, West Englewood, N. J., assignor to Copeland & Thompson, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 12, 1931. Serial No. 39,054. Term of patent 14 years.



The ornamental design for a covered dish, as shown and described.

84,386. LIGHTING FIXTURE SHADE OR ARTICLE OF SIMILAR NATURE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Lighting Appliance Company, Inc., New York, N. Y. Filed Apr. 1, 1931. Serial No. 39,822. Term of patent 3½ years.

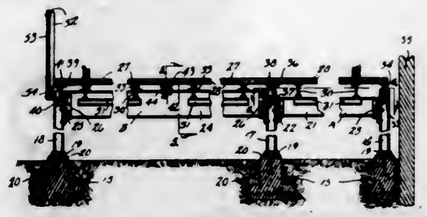


The ornamental design for a lighting fixture shade or article of similar nature, as shown and described.

84,387. COMBINED CONCENTRIC DIAL PLATE, LOCK DIAL AND HANDLE FOR SAFES. CARL F. WOLTERS, Marietta, Ohio. Filed Apr. 20, 1931. Serial No. 39,555. Term of patent 7 years.

The ornamental design for a combined concentric dial plate, lock dial and handle for safes, as shown.

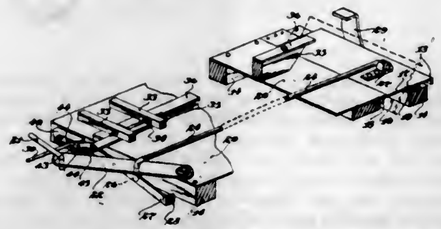
84,388. TEETOTUM. WILLIAM W. WOODROOF and CHARLES T. WOODROOF, Wilkinsburg, Pa. Filed Oct. 10, 1930. Serial No. 37,222. Term of patent 3½ years.



The ornamental design for a teetotum, as shown and described.

CARNEGIE LIBRARY OF ATLANTA

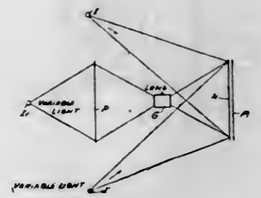
PATENTS



GRANTED JUNE 9, 1931

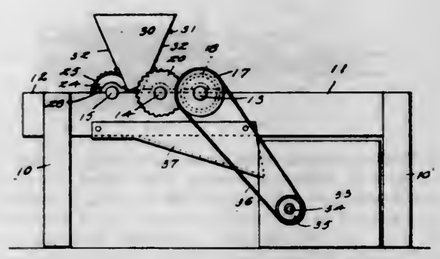
1,808,741. VEHICLE PARKING STRUCTURE. CHARLES F. ALT, Des Moines, Iowa. Filed May 7, 1929. Serial No. 361,155. 8 Claims. (Cl. 20—1.13.)

1. A vehicle parking structure comprising posts, beams removably connecting said posts longitudinally and transversely in pairs, and reinforced concrete slabs supported loosely on said beams to form an upper level parking floor and also to provide a covering for a lower level.



1,808,742. CLEANING SIEVE. ELMER F. ALTMAN, Minneapolis, Minn., assignor to The Self Kleen Thresher Screen Co., Minneapolis, Minn., a Corporation of Minnesota. Filed July 23, 1928. Serial No. 294,716. 4 Claims. (Cl. 209—256.)

1. A device of the class described comprising a sieve, a deck underlying the sieve and having a discharge passage near its delivery end, a gate hinged in respect to the deck and arranged to open and close the discharge passage, said gate when open projecting above the deck and affording a stop plate for directing the materials through the discharge passage, operating connections for the gate including a lever fulcrumed on the frame of the device rearward of the receiving end of the sieve and a longitudinally extended rod, the front end of which is attached to the gate and the other end of which is attached to the lever intermediate of its ends, and a spring on said frame rearward of the receiving end of the sieve and under strain to move the rod forward to close the gate, said lever when the gate is open being arranged to hold the rod against the action of the spring.

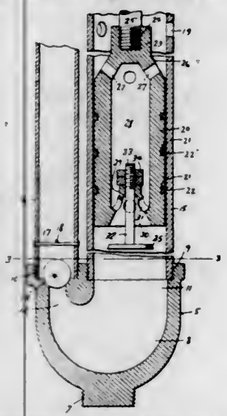


1,808,743. METHOD OF MODIFYING PHOTOGRAPHS BY PRINTING. JAMES T. BARKELEW, Lamanda Park, Calif., assignor, by mesne assignments, to Paramount Publix Corporation, a Corporation of New York. Filed July 6, 1926. Serial No. 120,561. 2 Claims. (Cl. 88—24.)

1. The method of printing a modified positive from a negative, that includes placing an actinic film in printing relationship to the negative, illuminating the negative from one source of illumination, illuminating the negative independently from another source of illumination, and modifying the illumination from one of the sources by interposing a transparent positive of the negative between the source of illumination and the negative and

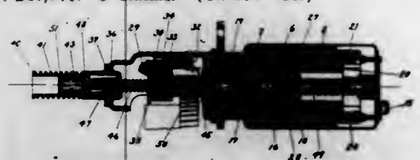
in registration with the negative so that the light rays from the latter source pass through the positive to print the negative.

1,808,744. PINON NUT SHELLER. JAMES G. BAUDINO, Milford, Utah. Filed May 24, 1928. Serial No. 280,262. 1 Claim. (Cl. 146—11.)



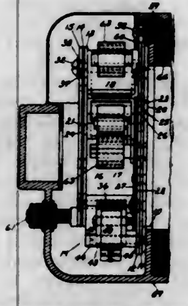
In a nut sheller for pinon nuts and the like, a pair of rolls, a removable covering for the rolls providing the rolls with a burred periphery, the rolls having their adjacent faces spaced, a shaft upon which one of the rolls is mounted, bearings for said shaft, the shaft within one of the bearings having a circumferential series of spaced sockets, a screw adjustable through the cap of the said one of the bearings for selective engagement in said sockets to hold said shaft against rotation and means for rotating the other of the rolls.

1,808,745. PUMP. GEORGE WASHINGTON BLEDSOE, WILLIAM S. LLOYD, and CARL DON YENCER, El Paso, Tex. Filed Jan. 9, 1930. Serial No. 419,632. 1 Claim. (Cl. 103—178.)



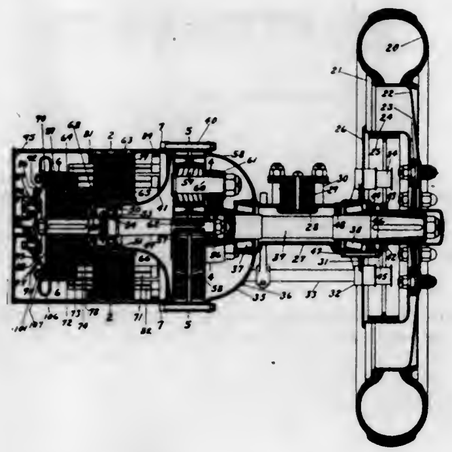
A pump of the character described comprising an elongated, vertically disposed casing, a hollow piston mounted for reciprocation in the casing, an integral tapered projection extending upwardly in the piston from the lower end thereof and terminating in a flat upper end, the upper end portion of the projection having a centrally disposed opening extending therethrough, said projection providing a substantially conical recess in the lower portion of the piston, the recess constituting a valve seat, the projection being still further provided with a plurality of circumferentially spaced passages in intermediate portions establishing communication between the conical recess and the interior of the piston, a reciprocating check valve engageable on the seat to control the passage of

fluid from the casing into the piston through the recess and passages, a threaded stem on the valve extending slidably through the opening in the projection, a nut



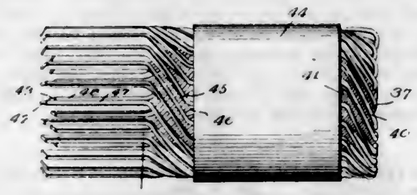
threaded for adjustment on the stem and engageable on the upper end of the projection for limiting the opening movement of the valve, the piston being provided with fluid outlet openings in its upper portion.

1,808,746. ELECTRICAL STARTING MOTOR. VINCENT G. APPLE, Dayton, Ohio. Filed Dec. 22, 1927. Serial No. 241,970. 9 Claims. (Cl. 290—38.)



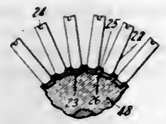
1. Engine starting apparatus comprising: a gear, secured to said engine to revolve said engine, an electric motor, a shaft for said motor axially movable therein, a pinion secured to said shaft normally out of engagement with said gear but adapted to engage said gear when moved axially by said shaft, electric circuit closing means for said motor normally open but operable to be closed by endwise movement of said shaft from its normal non-operating position, means within manual control to apply energy to urge said shaft to move axially, means to release said energy to operate said shaft, and means beyond manual control after said release to operate said shaft to engage and disengage said pinion and to quickly open and close said circuit closing means.

1,808,747. DYNAMO ELECTRIC MACHINE. VINCENT G. APPLE, Dayton, Ohio. Filed June 14, 1928. Serial No. 285,364. 8 Claims. (Cl. 171—324.)



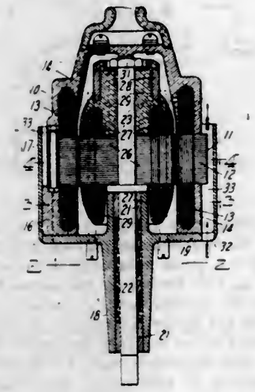
1. In a dynamo operating at variable current output, a self-contained unit comprising a positive brush, a negative brush, a regulating brush and a cutout, all mounted on a somewhat circular ring, said ring being mounted on the dynamo frame and revolvable about the dynamo axis, and contact members positioned on the dynamo frame to convey current to and from said ring and adapted to convey said current equally at any position to which said ring may be revolved.

1,808,748. ELECTRIC MOTOR AUTOMOTIVE AXLE. VINCENT G. APPLE, Dayton, Ohio. Filed June 14, 1928. Serial No. 285,375. 7 Claims. (Cl. 180—60.)



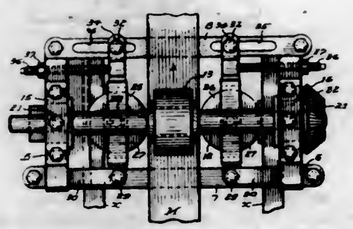
1. The combination of an electric motor automotive axle, of a relatively low speed axle shaft, a relatively high speed motor and reduction gearing, the axle shaft being driven thru the reduction gearing by the shaft of the high speed motor, a housing surrounding said motor, said gearing and said axle shaft, said housing being partitioned into two separate compartments, said gearing and bearings for said shafts being in the one compartment, and said motor being in the other compartment, the shaft of the high speed motor extending into the motor compartment to support the rotative element of the motor but having no rotative support in said motor compartment.

1,808,749. BAR WOUND ARMATURE. VINCENT G. APPLE, Dayton, Ohio. Filed Nov. 9, 1928. Serial No. 318,224. 5 Claims. (Cl. 171—206.)



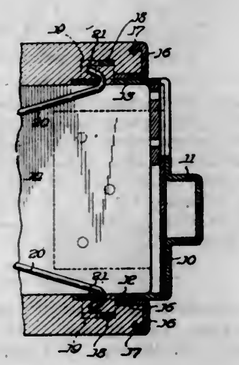
3. In a bar wound armature, a core having a plurality of closed winding apertures near its periphery, a plurality of integral winding loops extending thru and beyond said apertures, the portion adjacent the core being bent to form helical leads and the open ends being displaced radially inward to axially parallel positions relatively near the axis and bound together to compose a commutator.

1,808,750. COMMUTATOR. VINCENT G. APPLE and WALTER M. DOEHRING, Dayton, Ohio; said Doehring assignor to said Apple. Filed Oct. 16, 1929. Serial No. 400,121. 4 Claims. (Cl. 171—321.)



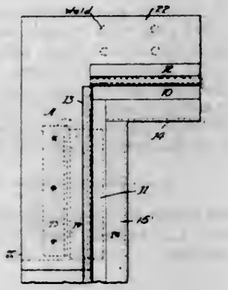
1. A commutator cylinder comprising a plurality of circumferentially spaced apart segments connected by integral bridges each bridge extending radially outward from one segment then circumferentially across one of the spaces, then radially inward to the next segment.

1,808,751. DYNAMO ELECTRIC MACHINE WITH IMPROVED COOLING SYSTEM. VINCENT G. APPLE, Dayton, Ohio. Filed Apr. 7, 1930. Serial No. 442,394. 3 Claims. (Cl. 172—36.)



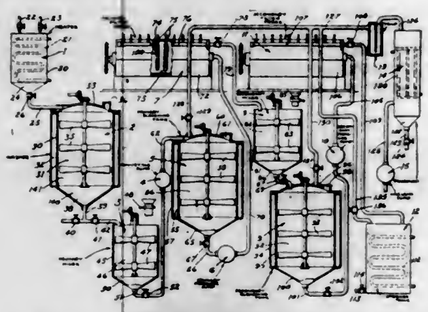
1. The combination in a dynamo electric machine of a magnetizable core, coils on said core, a mass of cementitious insulation of high heat conductivity penetrating and surrounding said coils cementing them to said core and forming a hollow housing open at one end, and a cup shaped member somewhat larger than said housing having a bottom perforated near its periphery, said bottom being secured to the open end of said housing so as to close said open end, the sides of said cup shaped member surrounding said core at some distance therefrom.

1,808,752. EDGING MILL. ROBERT J. BANNER, Youngstown, Ohio. Filed May 5, 1928. Serial No. 275,332. 6 Claims. (Cl. 80—34.)



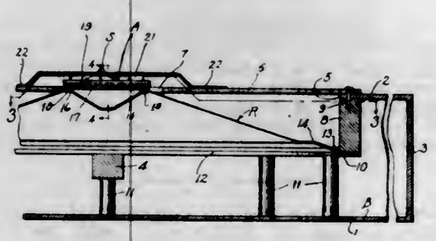
6. In a mill of the class described, a pair of horizontal pinch rolls, housings disposed upon opposite sides of the rolls and forming journals therefor, said housing being respectively vertically separable substantially in the plane of the axis of the lower roll to permit removal thereof and also comprising means to permit removal of the upper roll whereby said rolls may be readily interchanged when required, a pair of transversely extending horizontal rails disposed on opposite sides of said rolls, a pair of frames respectively disposed adjacent the opposite ends of said rolls, an edging roll rotatably mounted adjacent the center of each frame, means for pivotally securing one end of each frame to the adjacent rail, adjustable means for operatively securing the other end of each frame to the other rail, and means for adjustably limiting the outward pivotal movement of each frame.

1,808,753. METAL FRAME AND ANCHOR. ISAAC A. BAUM, Chicago, Ill. Filed Oct. 3, 1928. Serial No. 310,046. 3 Claims. (Cl. 72—98.)



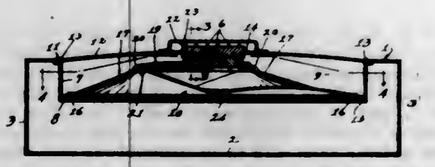
1. In combination a metal frame member of generally channel shape in cross section, the flanges of the channel being adapted to fit against the sides of a masonry wall, plaster anchors struck out of the flanges and projecting laterally outside of the plane of the faces of the flanges, and wall anchors having hooks adapted to engage in the openings formed by striking out the plaster anchors.

1,808,754. METAL CORNER CONNECTION. ISAAC A. BAUM, Chicago, Ill. Filed Oct. 14, 1929. Serial No. 399,619. 5 Claims. (Cl. 189—46.)



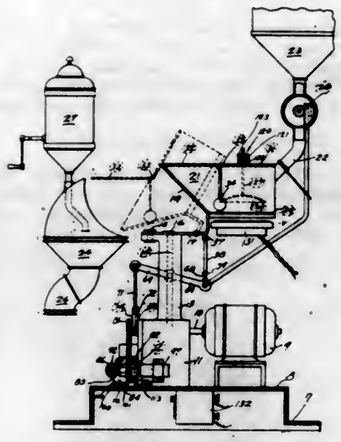
1. In frame construction, the combination of vertical and horizontal intersecting channel-shaped frame members, one of said members having tongues cut out of its flanges and bent inwardly into the plane of the web of said member, a pair of angle plates secured to the other frame member, a member joining the free portions of said plates, said member positioned to lie alongside of said tongues, and a length of bendable metal carried by the first mentioned frame member and adapted to be bent over the plate-joining member when the parts are in final position.

1,808,755. PROCESS OF TREATING BEESWAX. WALTER S. BAYLIS, Los Angeles, Calif., assignor, by mesne assignments, to Filtrol Company of California, a Corporation of California. Filed May 11, 1926. Serial No. 108,269. 2 Claims. (Cl. 87—19.)



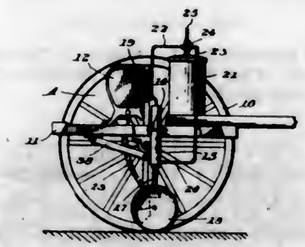
1. A process of bleaching beeswax comprising: melting the beeswax; agitating said beeswax with dilute sulphuric acid; settling out said dilute acid; treating under vacuum said liquefied beeswax with a decolorizing agent comprising an acid-activated colloidal clay at a temperature approximating 300 degrees F.; and separating said decolorizing agent from said beeswax at a temperature approximating 300 degrees F.

1,808,756. STRINGED MUSICAL INSTRUMENT. GEORGE D. BEAUCHAMP, Los Angeles, Calif. Filed Mar. 11, 1929. Serial No. 346,009. 13 Claims. (Cl. 84—296.)



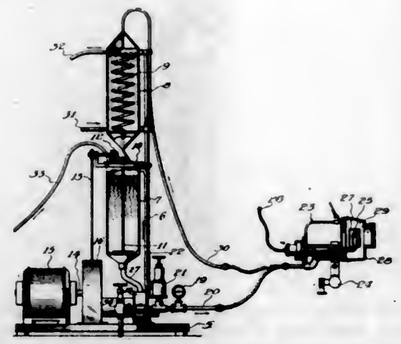
1. A guitar comprising a hollow body having an opening in the top thereof, an annular ring depending from the top and below said opening, a conical metallic resonator supported within said ring with its base downwardly, a neck piece extending longitudinally from said body, strings attached to said neck piece and stretched over said body, and a circular bridge engaging the upper portion of said resonator at its inner side and said strings for holding the strings and the resonator in tension, whereby vibrations may be transmitted from the strings to the resonator.

1,808,757. STRINGED MUSICAL INSTRUMENT. GEORGE D. BEAUCHAMP, Los Angeles, Calif. Filed Jan. 21, 1930. Serial No. 422,337. 10 Claims. (Cl. 84—296.)



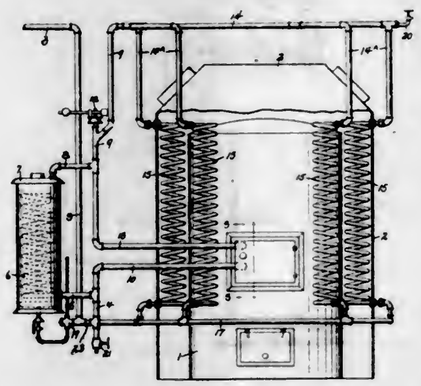
1. A stringed musical instrument including a body with strings held in tension thereon, a single metallic diaphragm mounted in said body, and having a plurality of portions at central points arranged to support said strings, for the purpose described.

1,808,758. POP CORN MACHINE. GEORGE BETTANDORFF, Oakland, Calif., assignor of one-fourth to Harry C. Schroeder, Concord, Calif. Filed July 7, 1928. Serial No. 291,098. 8 Claims. (Cl. 53—4.)



1. In a machine for popping corn or other grain, a motor and a heating element connected with a source of electric energy; a grain receptacle mounted so that the grain therein may be heated by the element when the receptacle is in its normal position, means connecting the receptacle with the motor for causing a tilting movement of the receptacle so as to eject the grain therefrom, and for swinging the receptacle back to its normal position after the ejection of the grain; and electro-responsive means adapted to be connected to a source of electric energy by the accumulated popped grain in the receptacle for rendering said connecting means active.

1,808,759. AGRICULTURAL IMPLEMENT. GEORGE HERBERT BICKERTON, Bluesky, Alberta, Canada. Filed Nov. 9, 1929. Serial No. 406,103. 9 Claims. (Cl. 97—50.)

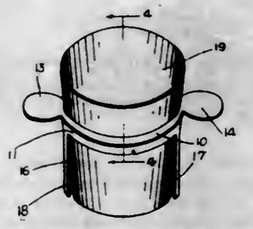


2. An agricultural implement comprising a travelling framework, a plurality of pistons mounted on the framework, standards in the form of piston rods extending from the pistons, carrying cutting members adapted to contact with the ground, and pneumatic means in connection with the pistons controlled from the driver's seat for raising and lowering said cutting members into and from contact with the ground.

1,808,760. IRRADIATING APPARATUS. CHARLES EVERETT BILLS, Evansville, Ind., assignor to Mead Johnson & Company, Evansville, Ind., a Corporation of Indiana. Filed June 10, 1929. Serial No. 369,556. 10 Claims. (Cl. 99—2.)

1. Irradiating apparatus comprising a reservoir for the fluid to be treated, a quartz burner lamp having a casing, a burner, a chamber between the burner and the lamp casing, and inlet and outlet conduits between the lamp chamber and the reservoir, and means for repeatedly circulating the fluid through the lamp chamber.

1,808,761. HEATING SYSTEM. CHARLES F. BRAND, Wheeling, W. Va. Filed May 15, 1929. Serial No. 363,269. 5 Claims. (Cl. 126—101.)

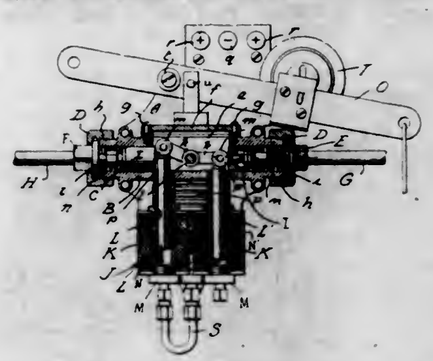


3. In combination with a furnace embodying a combustion chamber and a hot air chamber, the latter in encircling relation to the former, and a gas heater having a water coil therein, water coils in the air chamber, and water connections between the water coil of the gas heater and the water coils in the furnace.

1,808,762. METHOD OF ACCELERATING THE HARDENING OF PLASTIC MATERIALS. ALBERT BRUND and HELGE BOHLIN, Harnosand, Sweden. Filed Apr. 16, 1930, Serial No. 444,868, and in Germany Apr. 5, 1928. 1 Claim. (Cl. 25—154.)

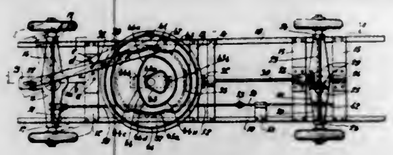
The method of accelerating the hardening of a plastic mass having water therein which consists in passing an electric alternating current therethrough.

1,808,763. HOLDER FOR PAPER CUPS AND THE LIKE. OLIVER HARRY BURDETT, St. Catharines, Ontario, Canada. Filed Mar. 15, 1930. Serial No. 436,082. 3 Claims. (Cl. 65—61.)



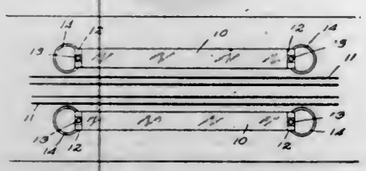
2. A paper cup holder comprising a fibre flanged ring having lug members integral therewith and leg members adjacent to the lug members.

1,808,764. STRIPPING MEANS FOR FLAT WORK IRONERS. FORREST J. COUCH, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 21, 1929, Serial No. 401,143. Renewed Dec. 24, 1930. 5 Claims. (Cl. 68—9.)



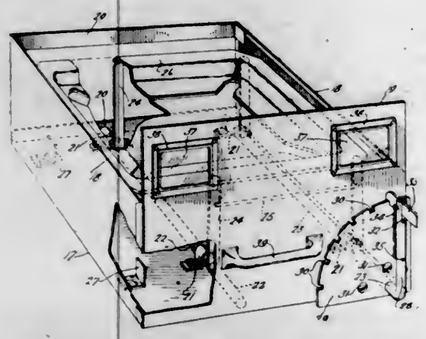
1. In an ironing machine of the type having an ironing chest and a padded ironing roll cooperating therewith and between which chest and roll the work is passed for the ironing operation, and means for stripping the work being ironed from said roll and comprising a tape adapted to be passed through the machine with the work, being interposed between the work and the ironing roll, said tape having a middle body portion of substantially uniform thickness and longitudinal edge portions of a thickness gradually decreasing toward the outer edges thereof.

1,808,765. ELECTROFLUID VALVE. MARK DEAN, Newark, N. J.; Fay Walter Dean executor of said Mark Dean, deceased. Filed Jan. 28, 1929. Serial No. 335,438. 1 Claim. (Cl. 137—139.)



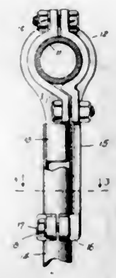
An electro-fluid valve provided with a slidable valve-rod adapted to ply between the inlet and outlet openings of said valve, and a pair of rocker-arms located in the hollow chamber of said casing, adapted to impart reciprocation-movements to said rod,—said rod being provided with two sets of coiled springs at each end, the inner spring being approximately twice as strong as the outer spring and adapted to serve as a compensating spring for the buffer action of the outer spring.

1,808,766. VEHICLE. RAYMOND DE FILIPPIS, Brooklyn, N. Y. Filed Jan. 29, 1930. Serial No. 424,157. 12 Claims. (Cl. 46—48.)



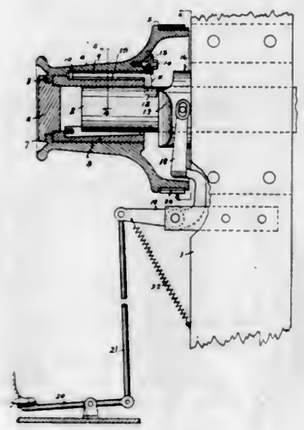
1. In a vehicle, a wheeled body, means mounting said wheels to permit relative vertical movement therebetween for uniformly contacting an uneven roadway, steering means for the vehicle, and actuating means carried by the vehicle operated by the steering means to cause the wheels to move as aforesaid for shifting the center of gravity of the vehicle to increase the stability thereof in turning, the actuating means being in inoperative position in the straight-away driving position of the vehicle, the actuating means including a unitary cam means having upward and downward extending portions for the relative vertical movement of the wheels, and an intermediate connecting portion of reduced size.

1,808,767. BUMPER ELEMENT FOR SAFETY ZONES. JOHN DE GLORIA and HARRY C. SCHROEDER, Oakland, Calif. Filed Apr. 4, 1929. Serial No. 352,374. 3 Claims. (Cl. 256—1.)



1. An approach for passenger loading platforms, in combination with a standard; a U shaped metal member adapted to slidably engage the sides of said standard, said U shaped member being filled with resilient material.

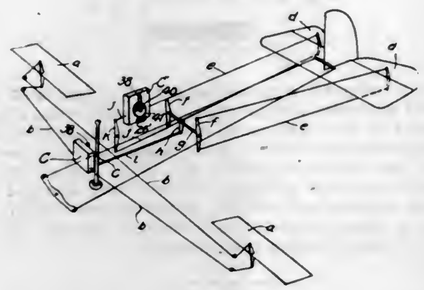
1,808,768. BROILER. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed May 2, 1927. Serial No. 188,078. 5 Claims. (Cl. 126—41.)



1. The combination with a stove having a broiler compartment and front opening therefor, a drawer slidable in the opening, a broiler tray fitting loosely in the drawer, means engaging the under side of the tray operable from the front of the drawer for raising and holding the tray at different elevations, and sight windows at the front of the drawer above the level to which the tray is raised.

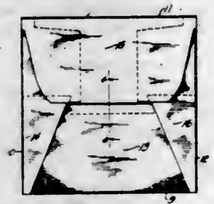
1,808,769. T CONNECTOR. ABRAHAM BERNARD DIBNER, New York, N. Y. Filed Mar. 5, 1926. Serial No. 92,502. 5 Claims. (Cl. 173—273.)

1. An electric T connector for main and branch conductors, comprising a divided head portion adapted to embrace the main conductor, one section of the head being provided with a shank to fit into the branch conductor, and means integral with the other section of the head and projecting beyond the termination of the shank for clamping said branch conductor.



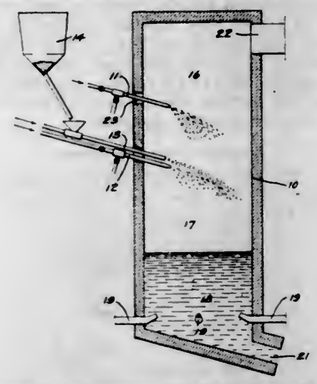
1,808,770. SAFETY CATHEAD. CHARLES R. EDWARDS, Houston, Tex. Filed Aug. 21, 1925. Serial No. 51,693. 4 Claims. (Cl. 254—176.)

1. In a safety device, a cathead, means adapted to support and to drive said cathead, said cathead being adapted to receive and drive a line by friction while said line is manually held in contact with said cathead, engaging means whereby said cathead may be driven in only one direction, means through which said engaging means may be held in engaging position by the operator while manipulating the line, and means preventing a reverse rotation of said cathead.



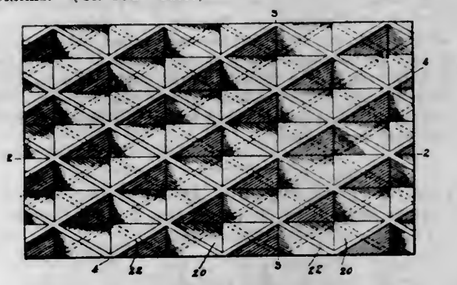
1,808,771. AIRPLANE AUTOMATIC CONTROL. ALBERT E. ELSEA, East St. Louis, Ill. Filed Sept. 20, 1929. Serial No. 393,950. 1 Claim. (Cl. 244—29.)

An aircraft control comprising a casing adapted to be fixed in the aircraft, a shaft mounted in said casing, a pendant lever loosely mounted on said shaft, means for coupling the lever to the shaft, an indicator fixed to the shaft, said indicator being readable in connection with suitable markings on the casing, a manually operable lever fixed to



said shaft, and connecting mechanism operable by said shaft and adapted to be connected to the aircraft stabilizing devices.

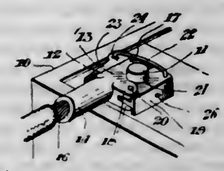
1,808,772. CADDY. ALBERT S. ETHRIDGE, Milwaukee, Wis., assignor to Hummel & Downing Co., Milwaukee, Wis., a Corporation of Wisconsin. Original application filed June 7, 1926, Serial No. 114,156. Divided and this application filed June 25, 1928. Serial No. 288,270. 2 Claims. (Cl. 229—39.)



1. A caddy comprising a sheet of material cut and scored to form four sides permanently interconnectible to form a continuous wall structure, each side having a bottom portion foldably associated therewith, one of said bottom portions having a dovetail recess in the edge thereof remote from its supporting side, the two opposed bottom portions directly adjacent to said recessed bottom portion being foldable over the latter and having side edge portions which when folded, are spaced apart a distance at least equal to the width of the dovetail recess, and also having other portions extending inwardly toward each other beyond said first edge portions to form shoulders adjacent to and in substantial parallelism with the bottom of said recess to thereby form a slot disposed between said shoulders and the bottom of said recess, and the remaining bottom portion being foldable over the shoulders of said two opposed bottom portions and having a dovetail projection freely insertable in and removable from said slot when inward pressure is exerted thereon and while the sides of the caddy are in fully assembled and permanently connected condition.

1,808,773. RECOVERY OF ALKALI METAL COMPOUNDS. CHARLES A. GRONDONA, San Francisco, Calif., assignor to Peebles Processes Inc., San Francisco, Calif., a Corporation of Delaware. Filed Sept. 28, 1927. Serial No. 222,593. 5 Claims. (Cl. 23—48.)

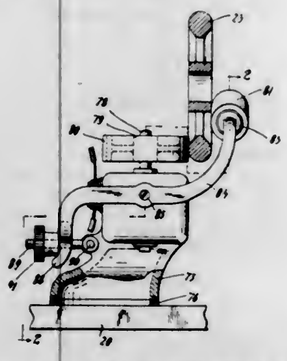
1. In a method of recovery of a salt of an alkali forming metal from black liquor, the step comprising maintaining a high temperature zone of combustion in the furnace by the introduction of black liquor, and introducing additional black liquor and salt cake into the furnace between said zone and the lower portion of the furnace.



1,808,774. SHEET PACKING. CHARLES F. HETTINGER, Camden, N. J., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Aug. 12, 1930. Serial No. 474,783. 16 Claims. (Cl. 154—45.5.)

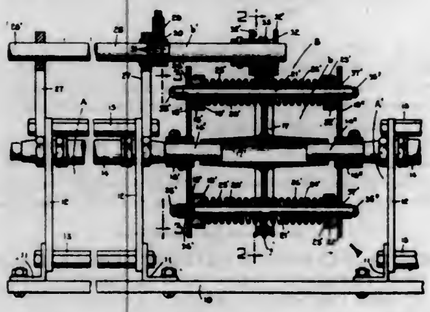
3. A sheet packing having intersecting ridges on its opposite sides forming cavities, the cavities having downwardly converging walls and being disposed with the point of convergence on one side opposite the intersecting point of the ridges on the other side.

15. A sheet packing having similar sides with interspersed cavities formed therein with the apices of said cavities projected to form openings through the opposite sides of the sheet, and yielding material in said cavities.



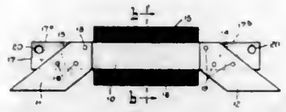
1,808,775. CLAMP FOR BATTERY TERMINAL POSTS. TENIS HOFMAN, Nobleford, Alberta, Canada. Filed Aug. 12, 1929. Serial No. 385,414. 1 Claim. (Cl. 173—259.1.)

A clamp for battery terminal posts comprising a body portion formed with means for receiving the end of a



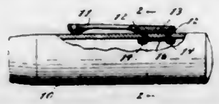
cable and with a half jaw, a second half jaw portion hingedly connected at one end thereof to one end of the first half jaw portion, said half jaw portions when in closed position forming therebetween a post receiving opening, an elongated loop swingably connected to the free end of one of the jaw portions and adapted to swing over the other jaw portion, and a cam lever pivotally connected to the free end of said loop, one of the jaw portions formed with a recess adapted to receive said cam lever when the jaws are in closed position, and a spicular projection carried by one of the jaw portions and forming a projection extending into the post receiving opening.

1,808,776. SEWING MACHINE DRIVE. JOHN HOLTZMAN, New York, N. Y. Filed Jan. 23, 1924. Serial No. 688,042. 7 Claims. (Cl. 74—26.)



1. A driving device for a machine having a hand-wheel, comprising a bracket, a motor mounted in the bracket, a friction wheel fixed on the shaft of said motor, said wheel engaging one side of the hand-wheel, a frame pivoted to said bracket, said frame having a pair of forks disposed in radial relation to the axis of the hand-wheel on the side opposite said friction wheel, rolls revoluble on said forks, and means for adjusting said frame to cause said rolls to grip said hand-wheel.

1,808,777. UNI-CONTROL APPARATUS. LESTER L. JONES, Oradell, N. J. Filed Oct. 2, 1926. Serial No. 139,086. 12 Claims. (Cl. 74—7.)



1. A uni-control radio apparatus comprising, in combination, a plurality of independently adjustable tuning units, an operating means therefor mechanically connectible to the plurality of adjustable units for operating the same in unison and mechanically disconnectible from one of said adjustable units for independently operating the other of the adjustable units, and a single control shaft connected to the operating means for moving the same, the said control shaft being axially shiftable to effect the said connection of the operating means with and disconnection of the same from the said adjustable units.

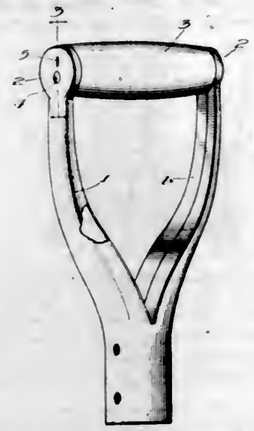
1,808,778. MEANS FOR SUPPORTING MAGNETIC STRUCTURES. LESTER L. JONES, Oradell, N. J. Filed Feb. 11, 1927. Serial No. 167,572. 5 Claims. (Cl. 175—21.)

1. A magnetic structure comprising a laminated body and a supporting element therefor, said supporting element having an area sufficient to give rise to the generation of appreciable eddy currents if the element be cut by lines of flux, the laminations of said body being divided into two sections and said supporting element being arranged in a plane between said sections of laminations whereby the flux or leakage paths of said laminated body do not cut or link with the supporting element.

1,808,779. FASTENING CLIP AND MEANS FOR ATTACHING THE SAME. GABRIEL LARSEN, Springfield, N. J., assignor to L. E. Waterman Company, New York, N. Y., a Corporation of New York. Filed Oct. 22, 1929. Serial No. 401,410. 4 Claims. (Cl. 24—11.)

1. In a device of the character described, a tubular member the wall of which is provided with two spaced openings, a fastening clip the base of which comprises two lugs extending through said openings, and a bar provided with openings located within said tubular member and spanning said openings and extending beyond the same, the ends of said lugs passing through said openings and being bent upwardly and outwardly to secure said bar in position against the inner wall of said tubular member.

1,808,780. ARTIFICIAL COAL UNIT. CHARLES W. LOGAN, Kenmore, N. Y., assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed Mar. 10, 1928. Serial No. 260,785. 6 Claims. (Cl. 272—8.)

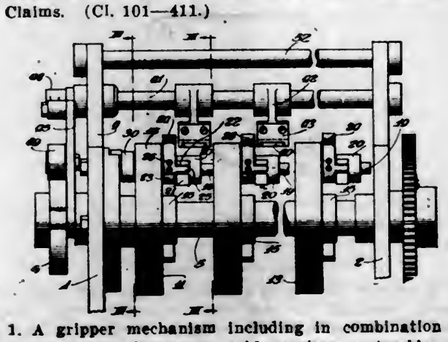


1. A unit adapted to give a vari-colored effect when illuminated comprising a colored translucent base and varicolored pieces of partly blackened glass uniformly distributed throughout its surface and secured thereto in positions such that the exposed surfaces of the glass pieces include the blackened surfaces of said pieces.

1,808,781. TOOL HANDLE. FRANK B. LUTMAN, Columbus, Ind., assignor to Columbus Handle & Tool Corporation, Columbus, Ind., a Corporation of Indiana. Filed Sept. 22, 1930. Serial No. 483,589. 3 Claims. (Cl. 294—57.)

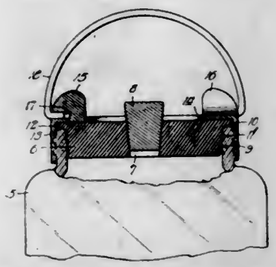
1. In a handle of the type described including a bifurcated sheet metal member formed with terminal opposed

grip-sockets, a transverse wooden grip and a bolt extending longitudinally through said grip arranged to secure said grip between said sockets, means for locking said grip in said grip-sockets comprising a pair of rectangular



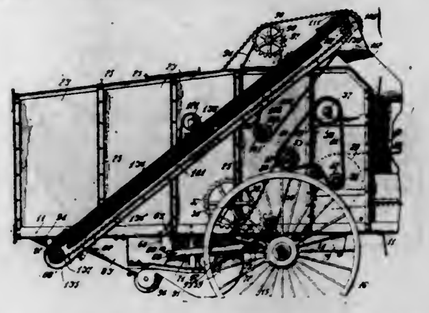
spurs struck inwardly from said sockets and imbedded in the adjacent end of the wooden grip, said spurs being cut upon parallel side lines and a transverse intermediate line defining the ends of the spurs.

1,808,782. LAMP SOCKET. ROSCOE E. MAJOR, Chicago, Ill., assignor to Major Equipment Co., Inc., a Corporation of Illinois. Filed Apr. 30, 1930. Serial No. 448,708. 4 Claims. (Cl. 240—143.)



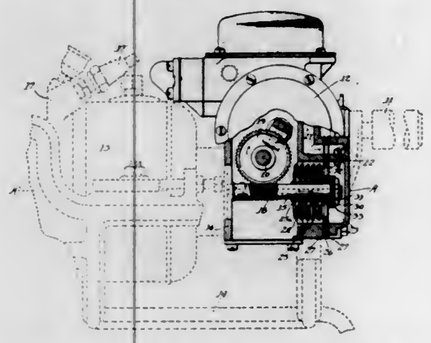
1. An electrical outlet comprising a lamp receptacle, a base plate having an outlet aperture, and having large and small perforations arranged about said aperture, a reflector having an outlet aperture and having round and key hole perforations arranged about said aperture, a pair of plate attaching screws in said receptacle coacting with the small perforations in said base plate, and a pair of reflector attaching screws coacting with the key hole perforations in said reflector, and said round reflector perforations registering with the heads of the plate attaching screws.

1,808,783. GRIPPER MECHANISM. CHARLES L. MOYER, Chicago, Ill., assignor to Quality Hardware and Machinery Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 29, 1929. Serial No. 389,113. 10 Claims. (Cl. 101—411.)



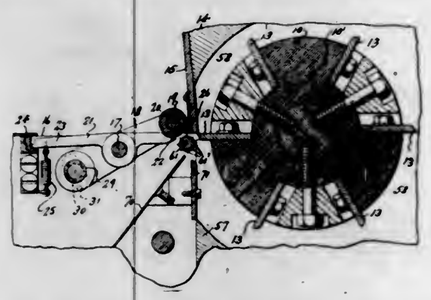
1. A gripper mechanism including in combination rotary carriers, grippers on said carriers, a tumbler for actuating said grippers, and curved flanges spaced circumferentially and radially from each other for tilting said tumbler in opposite directions.

1,808,784. CLOSURE FOR FLUID OR ASPIRATING BOTTLES AND THE LIKE. EDWARD OCASEK, Chicago, Ill., assignor to The Undertakers Supply Co., Chicago, Ill., a Corporation of Illinois. Filed July 20, 1929. Serial No. 379,731. 3 Claims. (Cl. 215—97.)



1. A closure device for bottles and the like comprising a resilient stopper having a portion for fitting tightly in a bottle mouth and an annular flange for engaging the top of the bottle whereby to form an additional seal therefor, and a cap for holding said stopper in place having an annular rim for fitting down over the top of the bottle and a flange extending inwardly from said rim to engage the top of said stopper, said rim having means cooperating with the bottle mouth to clamp said cap tightly thereon, said cap having upwardly extending ears thereon adjacent the periphery thereof to aid in attaching or removing the same, and a bail-like handle pivotally mounted in said ears for carrying the bottle.

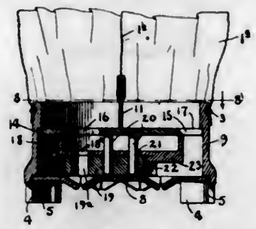
1,808,785. THRASHING MACHINE. LOUIS A. PARADISE and EDWIN FREDERICK HUDDLE, Moline, Ill., assignors to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed May 21, 1927. Serial No. 193,128. 2 Claims. (Cl. 130—27.)



1. In a combined harvesting and thrashing machine, the combination of a thrashing cylinder, a conveyor for feeding the harvested grain to said thrashing cylinder, a straw walker receiving the straw from said cylinder, an oscillatory grain feeding pan disposed below said thrashing cylinder and said straw walker, a first cleaning shoe receiving the grain from said feeding pan, a second oscillatory grain feeding pan disposed below said straw walker and adapted to feed grain to said first cleaning shoe, a grain auger and a separate tailings auger for said first shoe, a second cleaning shoe disposed above said straw walker, an elevator for conveying the grain from said grain auger up to said second shoe, a tailings auger for said second shoe and a tailings elevator receiving the tailings from both of said tailings augers at different points and discharging the same to said feeding conveyor.

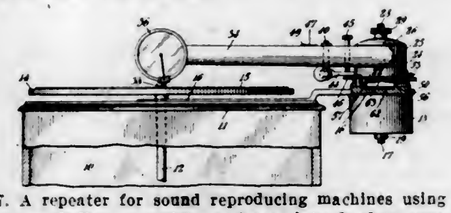
1,808,786. FLEXIBLE PACKING. LAWRENCE M. PERSONS, Chicago, Ill., assignor to Cook Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1927. Serial No. 238,504. 6 Claims. (Cl. 103—57.)

1. In combination, a motor having its shaft provided with an axial passage therein, a pump, a housing having a chamber into which liquid is delivered by said pump and into which one end of said motor shaft extends, said motor shaft receiving the fluid in said chamber through said axial passage for delivery to an outlet at the opposite end, and means for supporting said end of the motor shaft in one wall of said chamber including a relatively rotatable sleeve and collar on said shaft, both having cooperating bearing surfaces, and a resilient packing fixed between said housing and one end of said sleeve, said packing tending to urge said sleeve to engage against said collar whereby to maintain said bearing surfaces in close contact and to thereby retain a lubricant film therebetween and prevent leakage of fluid between said surfaces.



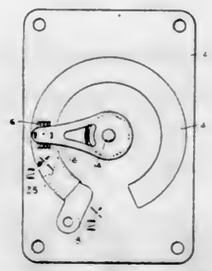
1,808,787. PELT DEHAIRING MACHINE. ROBERT H. PLASS, Montclair, N. J., assignor to The Chapal Donner Corporation, Newark, N. J., a Corporation of New Jersey. Filed Dec. 13, 1929. Serial No. 413,836. 16 Claims. (Cl. 19—2.)

1. In a machine of the kind described, a cutting mechanism, means to feed pelts to said cutting mechanism, and a movable comb means adjacent the cutting mechanism operative to sweep outwardly and away from the cutting mechanism and a pelt fed thereto hair or fur filaments severed from the latter.



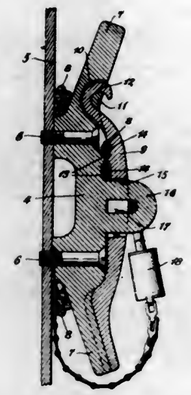
1,808,788. DOUGH FORMING APPARATUS. NEAL PROOS, Grand Rapids, Mich. Filed May 17, 1927. Serial No. 191,995. 7 Claims. (Cl. 107—1.)

6. A dough forming apparatus comprising, a divided container having a shoulder, a removable dividing plate in the container bearing against said shoulder and having openings communicating with opposite sides of the container, means for positioning the dividing plate relative to the container, a separable directing means engaging said dividing plate and having passages to direct dough from one opening of the dividing plate to certain openings of a die plate and from the other opening of the dividing plate to certain other openings of the die plate, means for positioning the directing means relative to the



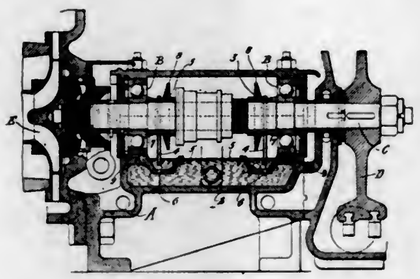
dividing plate, a die plate having a plurality of openings detachably secured to the container and bearing against the directing means to hold it in engagement with the dividing plate and to hold the dividing plate against said shoulder, means for positioning the die plate relative to the container, and means for ejecting dough from the container.

1,808,789. SOUND REPEATER FOR SOUND REPRODUCING MACHINES. DANIEL WILLIAM RANTINE, Brooklyn, N. Y. Filed Aug. 24, 1928. Serial No. 301,815. 12 Claims. (Cl. 274—15.)



7. A repeater for sound reproducing machines using a flat record disc, comprising a base plate fixed to extend from the machine, a laterally rockable and axially rotatable base ring mounted on said plates, a series of rings interengaged at their edges, a cover thereover, means for clamping said series of rings as a unit, hinge connections between said base ring and unit, a pair of opposed reproducer carrying arms attached to two adjacent relatively rotatable rings of said series, said reproducers having styli to engage the grooves of a record, means for adjusting the distance apart of said reproducers, means for raising and lowering the styli upon said hinge, and means for rocking said rings and associated parts in timed alternate relation.

1,808,790. VARIABLE RESISTANCE. EMIL REISMAN, Brooklyn, N. Y., assignor to Technidyne Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1929. Serial No. 350,478. 10 Claims. (Cl. 201—55.)

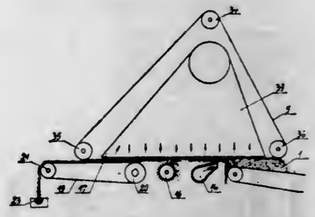


3. A resistor comprising a resistance film, and a painted metallic terminal therefor, said resistance film being placed in contact with the metallic terminal by being coated thereover.

1,808,791. HALYARD CLEAT. WALTER A. SAGUE, Buffalo, N. Y. Filed Mar. 27, 1930. Serial No. 439,339. 7 Claims. (Cl. 24—132.)

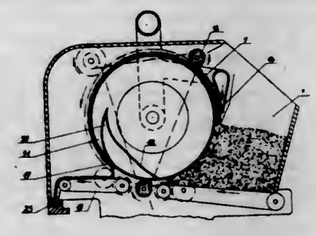
5. In a halyard cleat, the combination with a member about which the free end of a halyard may be wound and which is provided with means permitting the strands of the halyard, after being wound about said member to the extent desired, to be drawn across its face, of a member pivotally mounted upon said first mentioned member for engaging said strands and means for locking said pivoted member against said strands.

1,808,792. LUBRICATING DEVICE. CHRISTOPHER A. SCHELLENS, Marblehead, Mass., assignor to C-S Engineering Company, Jersey City, N. J., a Corporation of Delaware. Filed Dec. 28, 1926. Serial No. 157,526. 3 Claims. (Cl. 308—138.)



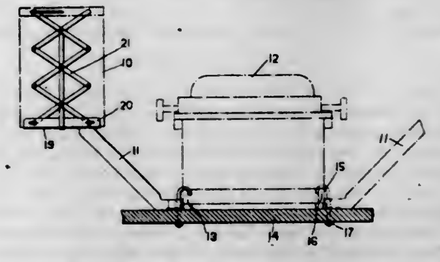
1. In combination with a shaft and its bearing, of means for lubricating the bearing including an oil reservoir, an oil ring for picking up oil from said reservoir, and an oil directing member on which the oil ring deposits oil, said member having a cone-like portion for leading oil to the bearing, and a flanged portion for spraying oil over the bearing in the form of fog.

1,808,793. BEARING METAL. ROBERT JAY SHOEMAKER, Chicago, Ill., assignor to S. & T. Metal Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 2, 1928. Serial No. 297,119. 6 Claims. (Cl. 75—1.)



6. Metallic compound consisting of the following substances in proportions by weight approximately as follows: tin 1.0%; calcium 0.5%; mercury 0.25%; magnesium 0.075%; aluminum 0.05%; and lead to make up 100%.

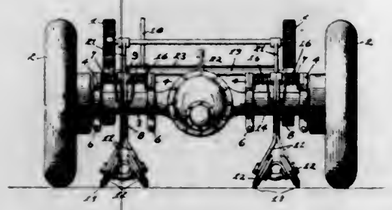
1,808,794. MEANS FOR SPREADING CUT TOBACCO. FRANZ HEINRICH BENNO STELZER, Dresden, Germany, assignor to the Firm "Universelle" Cigarettenmachinen-Fabrik J. C. Muller & Co., Dresden, Germany. Filed July 8, 1929, Serial No. 376,703, and in Germany July 5, 1928. 5 Claims. (Cl. 131—39.)



1. Means for spreading cut tobacco comprising in combination with a sieve band subjected to suction action and serving to form a tobacco fleece, an impervious feed band disposed adjacent the delivery point of the sieve band, said impervious band interrupting the suction action adjacent the delivery point of said sieve band, and serving to carry the tobacco fleece out of the range of the suction action exerted on the sieve band.

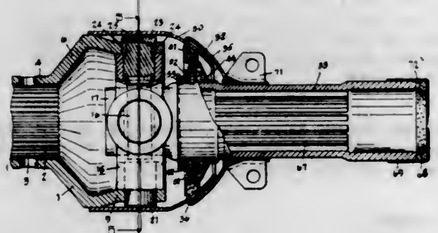
1,808,795. MEANS FOR SPREADING CUT TOBACCO. FRANZ HEINRICH BENNO STELZER, Dresden, Germany, assignor to the Firm "Universelle" Cigarettenmachinen-Fabrik, J. C. Muller & Co., Dresden, Germany. Filed Aug. 1, 1929, Serial No. 382,612, and in Germany July 5, 1928. 6 Claims. (Cl. 131—39.)

1. Means for spreading cut tobacco comprising a moving sieve band for carrying a tobacco fleece, a suction chamber closed by said band and means for gradually reducing the suction action exerted on said sieve band towards one end whereby the fleece may be delivered from the sieve band.



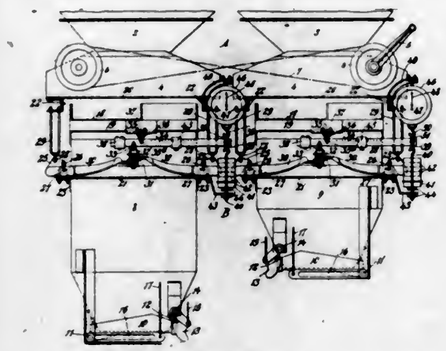
1,808,796. BOOK SUPPORT. THOMAS J. SMYTH, East Elmhurst, Long Island, N. Y. Filed May 5, 1927. Serial No. 188,896. 6 Claims. (Cl. 120—28.)

1. A book rack comprising a base, an extensible back carried thereby and including a plurality of pairs of crossed



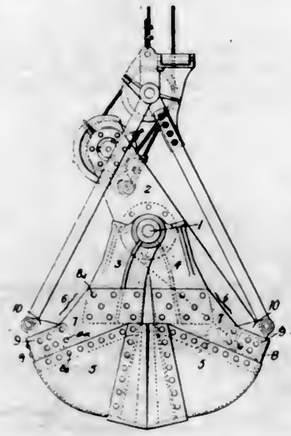
levers, the levers of each pair being pivoted to each other at their mid-point and at their ends to the ends of the levers of adjacent pairs, a toggle extending between the mid-points of pairs of levers to maintain the back in extended position, and a pivot carried by the base for reception in a bearing on an arm.

1,808,797. ANTISKIDDING DEVICE. CARL UHLMAN, San Francisco, Calif. Filed May 11, 1929. Serial No. 362,303. 8 Claims. (Cl. 188—5.)



1. An anti-skid device for automobiles comprising a pair of arms pivotally and slidably mounted adjacent the rear wheels of an automobile; a pair of rollers mounted upon each arm, the rollers of each pair being inclined in opposite directions and diverging toward their lower edges; means for normally holding the arms and rollers in an inoperative position; means for resiliently resisting transverse sliding movement of the arms; and means for moving the arms to an operative position with the rollers engaging the surface of the roadway between the rear wheels of the automobile to resist skidding movement of said wheels.

1,808,798. UNIVERSAL JOINT BOOT. BERTIS H. URSCHEL, Bowling Green, Ohio, assignor to Urschel Engineering Company, Bowling Green, Ohio, a Corporation of Ohio. Filed Mar. 7, 1928. Serial No. 259,800. 5 Claims. (Cl. 64—89.)

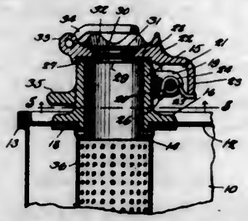


1. In a universal joint, a shell, a cap for closing one end of the shell, the shell having flattened portions and forming bearings for a pin of the universal joint, a key for keying the said pin to the shell, a shaft, a sleeve fitting the end of the shell having the cap and covering the key and the ends of the pin to prevent displacement of the key and the pin, one end of the sleeve having a substantially spherical portion centered in the center of the universal joint and having an opening for receiving a section of the shaft, a closure plate and a gasket connected to the section of the shaft for closing the opening of the sleeve.

1,808,799. WEIGHING BATCHER. WILLIAM MAYO VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Dec. 17, 1928. Serial No. 326,585. 6 Claims. (Cl. 265—27.)

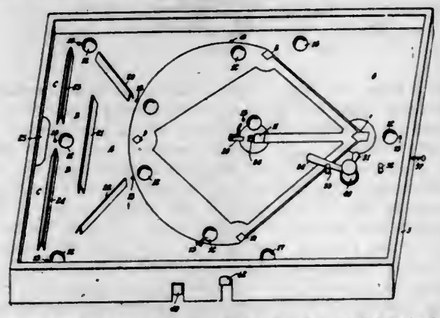
1. A weighing batcher including, in combination, a hopper, a fixed superjacent material supply means, connections therebetween including levers, and a scale beam connected to a lever and fulcrumed on the hopper.

1,808,800. BUCKET CONSTRUCTION. WILLIAM MAYO VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Dec. 21, 1928. Serial No. 327,635. 7 Claims. (Cl. 37—184.)



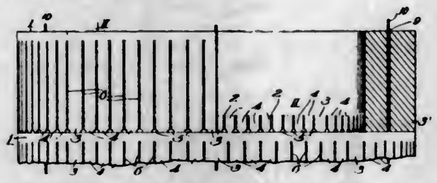
1. The combination of a bucket hinge member, a scoop, a scoop corner bracket, and a separately formed adapter member to which all of said parts are secured, said hinge member being capable of use with a scoop of a different size by changing the adapter member.

1,808,801. VOLATILE LIQUID CONTAINER. SYDNEY S. WEIL, Baltimore, Md. Filed Apr. 18, 1928. Serial No. 271,087. 3 Claims. (Cl. 220—88.)



1. In a volatile liquid container, a receptacle having a delivery opening, a closure for said opening having an opening communicating with the delivery opening, said closure having hinge connection with the receptacle at one side of the delivery opening, a fusible member cooperating with the closure to hold the latter closed over the opening, a disk normally closing the closure opening and adapted automatically to free the closure opening under

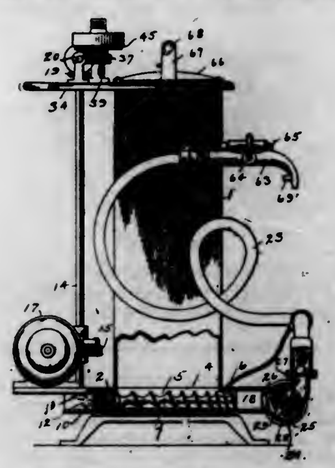
abnormal heat conditions, and a foraminous tube extending downwardly from around said delivery opening and



having a closed bottom, the sum of the cross sectional areas of the foramina in the tube being greater than the cross sectional area of the delivery opening.

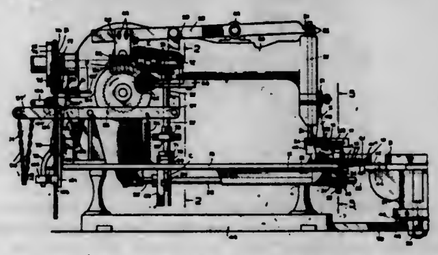
1,808,802. BALL GAME APPARATUS. ALEXANDER WEINBERG, New York, N. Y. Filed Apr. 3, 1929. Serial No. 352,064. 12 Claims. (Cl. 273—89.)

1. In a ball game apparatus, a ball, a playing field having a pitcher's box and a home plate, a ball-impelling member for delivering the ball from the pitcher's box to the home plate, and means for supporting the ball in front of said impelling member and for shifting the relative positions of the ball and impelling member whereby the impelling member may be applied to the ball at different points to effect its delivery along selected lines of travel from the pitcher's box to the home plate.



1,808,803. WELL SCREEN. GEORGE AUSTIN, Kansas City, Mo. Filed Apr. 15, 1929. Serial No. 355,275. 3 Claims. (Cl. 165—5.)

1. A well screen comprising a plurality of superimposed ring members, each provided with radial slots or passages in their lower ends, the slots or passages having upward extensions in the form of grooves in the exterior surface of the member; the lower end of the member being formed with spaced recesses individual to and communicating with and increasing the width of the lower ends of the respective slots or passages.

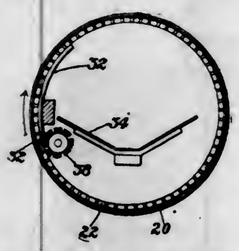


1,808,804. GREASE DISPENSER. JACOB BALDNER and GEORGE BALDNER, Xenia, Ohio; said George Baldner assignor of his entire right to Kenneth S. Clapp, Cleveland, Ohio. Filed May 15, 1922, Serial No. 561,080. Renewed Dec. 3, 1930. 19 Claims. (Cl. 221—101.)

1. In a dispensing apparatus of the character described, a reservoir, motor actuated ejector means, a discharge conduit, and a motor control switch located in proximity to the discharge end of said conduit for initiating the operation of the motor with means for maintaining

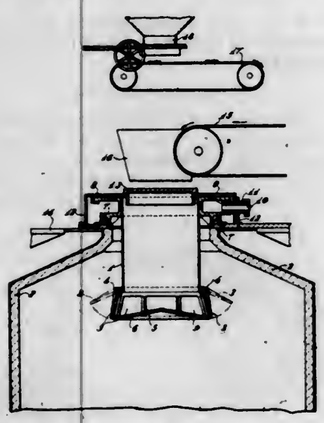
the motor in operation independent of the said switch until a predetermined quantity of commodity is discharged through said conduit.

1,808,805. POWDER PUFF SEWING MACHINE. ROGER BIHLER, College Point, New York, N. Y., assignor, by mesne assignments, to Baronet-Lorna Co. Inc., College Point, N. Y., a Corporation of New York. Filed Aug. 12, 1926. Serial No. 128,885. 33 Claims. (Cl. 112—2.)



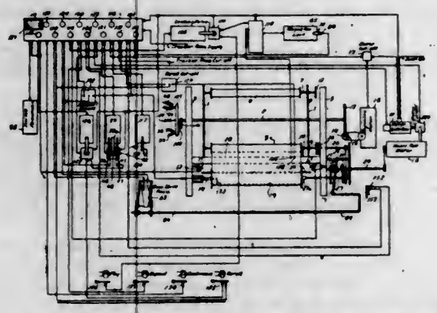
2. In a machine for sewing circular multiply articles, a machine head including an operating shaft, a rotatable work-feeding work table for receiving assembled plies of material and for stitch-feeding the same to the machine needle, a supporting plate for said work table slidably mounted for adjustment on said machine head, gearing supported on said plate and connecting the work table with said operating shaft, a pressure plate movable into and out of engagement with the multi-ply assembly for holding the plies of material together and in engagement with the work table to be rotated thereby, and means for intermittently operating the shaft to actuate the work table in unison with the stitching operations of the needle.

1,808,806. APPARATUS FOR NAIL SORTING. BASIL POMEROY COOPER, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 11, 1927, Serial No. 225,519, and in Great Britain Nov. 9, 1926. 4 Claims. (Cl. 209—95.)



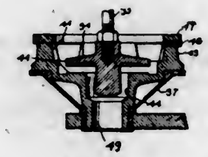
1. A machine for sorting metallic fastenings having, in combination, a rotary drum provided with a plurality of shallow, circular pockets of a diameter to receive only those fastenings that are not longer than the desired length, means for removing from the vicinity of the pockets, as the pockets move up during the rotation of the drum, all

fastenings other than those completely within a pocket, a retaining plate to prevent the escape of such of the fastenings as are completely received within the pockets



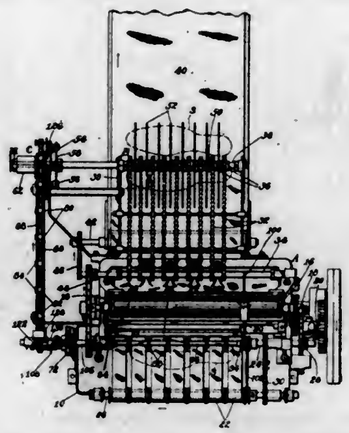
as they continue to move up during the rotation of the drum, and a receptacle arranged to receive the fastenings as they pass beyond the retaining plate.

1,808,807. GAS MANUFACTURE. BROWN F. DE GRAW, Fort Wayne, Ind., assignor to The Western Gas Construction Co., a Corporation of Indiana. Filed Apr. 15, 1929. Serial No. 355,054. 7 Claims. (Cl. 214—18.)



1. A charging device for gas producers comprising a rotatable hopper for receiving fuel, doors for said hopper that are normally closed, and means for rotating said hopper to cause said doors to open and to distribute the fuel contents of said hopper.

1,808,808. MUSIC ROLL MAGAZINE. JOSEPH HUNTER DICKINSON, Larchmont, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Oct. 15, 1928. Serial No. 312,599. 24 Claims. (Cl. 84—120.)

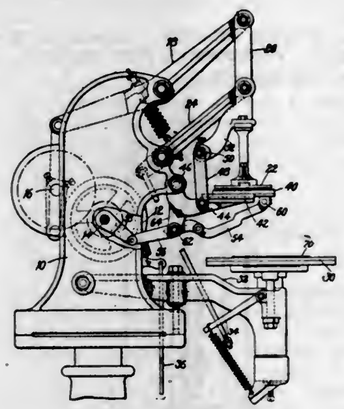


1. In combination, a magazine for operatively supporting a plurality of music-rolls; a tractor bar; a take-up spool; drive means for said magazine; a pneumatically operated magazine-lock; a ported valve operated by said magazine-lock and operatively connected with said drive means, said lock when in locked and unlocked positions respectively operating said valved port to stop and to start the magazine drive; and selective means for operating said lock to stop the magazine with any selected roll in operative position relatively to the tracker bar; said means comprising a valved port operatively connected to the magazine-lock pneumatic.

1,808,809. APPARATUS FOR PLATING. DWIGHT T. EWING, East Lansing, Mich. Filed Oct. 5, 1927. Serial No. 224,046. 1 Claim. (Cl. 204—5.)

In a work holder for plating the inside of a cup-shaped differential gear casing, said casing having a plurality of differential spider notches therein which are required to be left unplated, a cup-shaped support into which said casing is received, a ring adapted to rest upon the rim of the casing, said ring having a plurality of ribs extending therefrom into the notches in the casing, an anode disposed in said casing and shaped so as to follow the internal contour thereof, whereby the anode will be spaced a uniform distance from the inside walls of the casing, and means for lowering said work holder and casing and ring from said anode whereby the casing may be conveniently removed from the work holder, said ring and notches effectively preventing the depositing of metal on the abutting casing surfaces.

1,808,810. POSITIONING APPARATUS. SIDNEY J. FINN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Refiled for abandoned application Serial No. 191,806, filed May 16, 1927. This application filed Nov. 23, 1929. Serial No. 409,409. 30 Claims. (Cl. 91—51.)

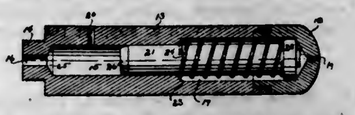


1. The combination with movable work-positioning means, of means including an element governed by the work during the travel of said work past the element toward the positioning means for controlling the movement of the positioning means.

1,808,811. FIREWORKS. JOSEPH GIOIOSA, Milton, Mass. Filed Sept. 9, 1930. Serial No. 480,658. 1 Claim. (Cl. 102—20.)

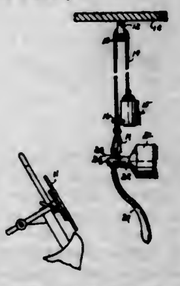
A firework having, in combination, a frame, a clamp fast thereto and embodying a pair of oppositely disposed spring arms adapted to clamp a firework display unit therebetween, and a prong projecting from one of said arms toward the other.

1,808,812. INKING DEVICE FOR MARKING MACHINES. PERLEY R. GLASS, Wayland, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 10, 1927, Serial No. 225,211. Renewed May 1, 1930. 14 Claims. (Cl. 101—335.)



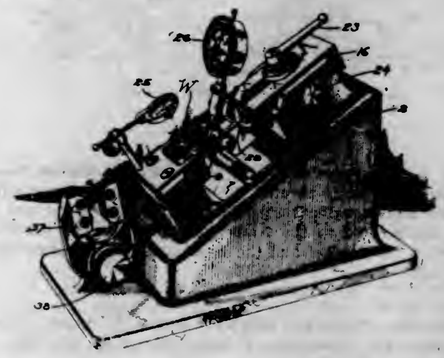
1. In a marking machine having a marking device and a platen which are relatively movable to bring the marking device into contact with a piece of work supported on the platen a pad for applying ink to the marking device, a support for said pad, and means for sliding said pad on the support and at the same time swinging the support to bring the pad into contact with the marking device when the latter is separated from the platen.

1,808,813. INTERCHANGEABLE JOURNAL FOR TEXTILE ROLLS. ALBERT M. GUILLET, Charlotte, N. C. Filed July 11, 1929. Serial No. 377,398. 7 Claims. (Cl. 19—141.)



1. A roll for textile machinery comprising an extended bore in each end of the roll, a smaller bore in the central portion of the first named bore, and extending further into the roll, the smaller bore being threaded, a sloping portion between the smaller and larger bores and a journal member adapted to fit into the large and small bores, the end of the journal member being threaded to threadably engage the threads in the smaller bore, said journal having a tapered portion adapted to fit against the sloping portion joining the larger and smaller bores.

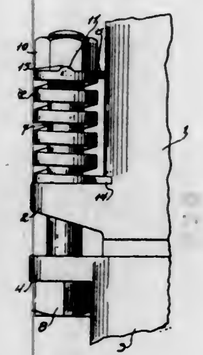
1,808,814. AUTOMATIC AIR MIXING APPARATUS FOR INTERNAL COMBUSTION MOTORS. LOREN A. HART, Charlevoix, Mich. Filed June 21, 1928. Serial No. 287,310. 5 Claims. (Cl. 137—153.)



1. In a device of the class described, a body member designed to be screwed into the intake manifold of an internal combustion motor, a bore in said body member communicating with the inside of said manifold, a second bore in the rear portion of said body member communicating with the first mentioned bore, a shoulder in said last mentioned bore, a passageway in said body member communicating with the outside atmosphere and the first mentioned bore, a piston slidably mounted in said bores, a head formed on the rear end of said piston, and a coil spring embracing said piston and engaging said head and said shoulder.

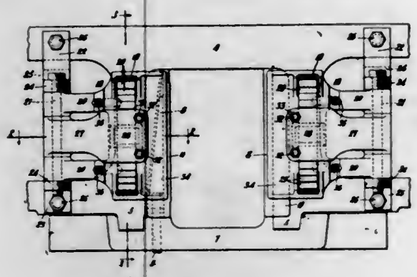
1,808,815. DEVICE FOR INKING PRINTING PRESSES. PAUL S. HERVEY and HASKELL A. BILLINGS, Des Moines, Iowa. Filed Dec. 23, 1929. Serial No. 415,932. 7 Claims. (Cl. 101—341.)

1. In a device of the class described, a receptacle designed to hold ink to be used on a printing press, a base member on said receptacle, a rounded end on said base member, a passageway in said base member having one end communicating with the inside of said receptacle and its other end communicating with said rounded end, and a means for forcing desired amounts of ink from said receptacle through said passageway to said press.



1,808,816. SCREW THREAD TESTING DEVICE. CHARLES G. JOHNSON, Hartford, Conn., assignor to Pratt & Whitney Company, Hartford, Conn., a Corporation of New Jersey. Filed June 30, 1924. Serial No. 728,122. 21 Claims. (Cl. 33—199.)

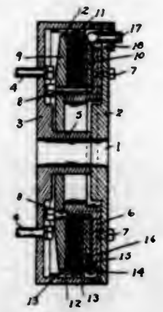
19. A screw holding cradle comprising the combination of a pair of coaxial and relatively spaced annular members,



the peripheries of the members being V-shaped in cross section to engage a screw between adjacent threads thereof, means holding one of the members against movement axially, the other member being movable axially, and a pair of rollers located in opposed relation to the members in a manner cooperating therewith to support the screw.

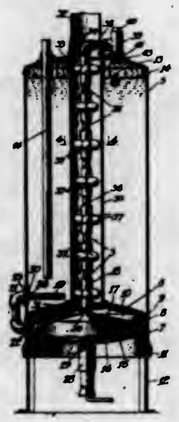
1,808,817. ROCK DRILL. EDWARD L. OLDHAM, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Filed Mar. 8, 1928. Serial No. 260,192. 1 Claim. (Cl. 285—130.)

In a rock drill, an apertured flange, a bolt extended therethrough, a nut on the bolt and a helical spring disposed on the bolt between said flange and said nut, the ends of said spring being extended tangentially to abut against said drill in such a manner that any torque on said spring is taken in end thrust by said extended ends, and interlocking means on said spring and nut.



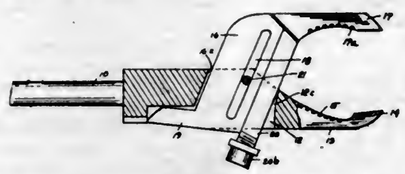
1,808,818. LATERAL MOTION DEVICE FOR LOCOMOTIVES. SAMUEL S. RIEGEL, Scranton, Pa. Filed Mar. 17, 1928. Serial No. 262,478. 21 Claims. (Cl. 105—80.)

6. A lateral motion device for locomotive driving boxes including a lever pivoted at one end to the locomotive frame and engaging the box structure at its other end, a bracket secured to the frame and spring means reacting between the bracket and the lever at a point intermediate its ends.



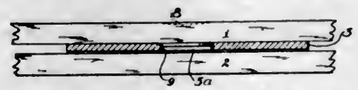
1,808,819. VEHICLE BRAKE. GRANT W. RIGBY, Pittsburgh, Pa. Filed Aug. 9, 1930. Serial No. 474,092. 6 Claims. (Cl. 188—72.)

2. In a disk brake comprising a drum and a disk arranged to rotate with the drum, the combination of a backing member and a slidable disk having co-operating inclined surfaces, a contractile member lying against said



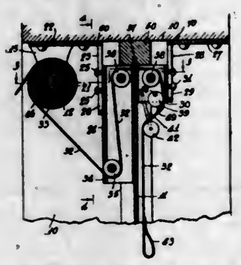
inclined surfaces, and means for contracting said member to cause the same to exert a wedging action between the backing member and the slidable disk.

1,808,820. WATER HEATER. THOMAS A. RONSTROM, Chicago, Ill. Filed June 13, 1927. Serial No. 198,565. 1 Claim. (Cl. 122—16.)



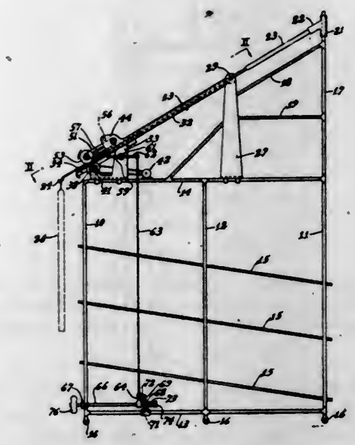
A water heater comprising a tank and a combustion chamber therennder; a flue extending from said combustion chamber vertically through said tank; a heating drum in said combustion chamber, the top of said drum being adjacent and substantially parallel to the bottom of said tank; a circulating pipe connected with the upper part of said drum, extending upwardly through said flue and connected at its upper end to the upper portion of said tank; radiating hollow arms on said pipe at various levels, the arms at each level being staggered with respect to the arms at adjacent levels; a pipe connecting one side of said drum with the lower portion of said tank; said last mentioned pipe extending radially outwardly through the side wall of said combustion chamber and then upwardly and radially inwardly into the lower portion of said tank to a position adjacent the side of said flue; a vertical partition in said drum starting at a point opposite said last mentioned pipe and extending thence in both directions substantially parallel to the periphery of said drum thereby causing the incoming water to separate into two separate streams; and a burner below said drum, said burner being positioned closely adjacent the bottom of said drum and provided with radial openings projecting flame substantially parallel to the bottom of said drum.

1,808,821. ALLIGATOR WRENCH. JOSÉ RUBALCABA, Los Angeles, Calif. Filed Dec. 16, 1929. Serial No. 414,354. 1 Claim. (Cl. 81—151.)



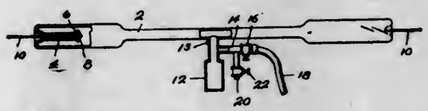
In a tool, in combination a handle carrying a fixed shank terminating in a forward curved serrated jaw, and having a central vertical slot, said slot having a forward curved edge and a rearward inclined edge, a movable shank projecting slidably in said slot and rocking adjustably against said curved edge, a serrated curved jaw carried at the forward end of the movable shank, the fixed shank and the movable shank having interengageable stops to shoulder the movable shank rigidly when its jaw engages work against the fixed jaw, means locking the movable shank in adjusted position in said slot, and means carried by said movable shank and engageable with the fixed shank to prevent the accidental removal of the movable shank from the fixed shank.

1,808,822. MEANS FOR SECURING ANTIFRICTION PADS TO LEAF SPRINGS. ARTHUR A. SCHUPP, Saginaw, Mich., assignor to Fredericksen Company, Saginaw, Mich., a Corporation of Michigan. Filed Dec. 5, 1928. Serial No. 323,836. 4 Claims. (Cl. 267—47.)



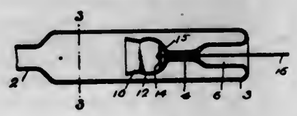
1. In a leaf spring whose leaves are separated near their free ends by intervening pads of anti-friction material, means for fastening a pad to a leaf comprising a boss struck from the material of the spring and projecting from a face thereof, said boss disc-shaped with abrupt peripheral edges at its disk face and likewise at the junction of the boss with the face of the spring, and a centrally apertured pad of anti-friction material which is of greater thickness than the boss and is received thereon in force-fitting relation thereto.

1,808,823. AWNING FIXTURE. JOHN W. SHAW, Norwood, N. J., assignor to Bing & Bing, Inc., a Corporation of New York. Filed May 24, 1928. Serial No. 280,150. 21 Claims. (Cl. 156—44.)



4. Operating mechanism for a spring roller type awning mounted exteriorly of a sash, including an operating tape therefore having its handle end disposed interiorly of the sash, of tape checking means disposed interiorly of the sash and preventing the tape from being drawn outwardly by the roller, and means acting automatically to normally urge the tape toward proper position to be retained by the check means.

1,808,824. GARMENT BAGGING MACHINE. WILLIE A. SHIELDS, Birmingham, Ala., assignor of one-half to Clifton M. Ellis, Birmingham, Ala. Filed Dec. 18, 1929. Serial No. 414,971. 9 Claims. (Cl. 226—18.)

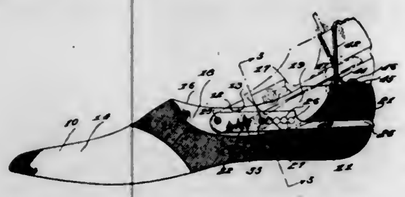


1. In a garment bagging machine, a fixedly secured pole for slidably supporting an empty bag and disposed at an angle to the horizontal, means for mounting a garment to be bagged at the lower end thereof, a slide extending in substantial parallelism with the pole positioned below the pole for supporting the sides of the bag, said slide being pivotally mounted below the pole, and means for raising the lower end of the slide up level with the pole.

1,808,825. LUMINESCENT TUBE. GEORGE E. TEASDALE, Kansas City, Kans. Filed May 4, 1929. Serial No. 360,446. 1 Claim. (Cl. 176—126.)

In combination, a glass tube closed at each end, a solid stem formed integral with each end of said tube and extending into the latter, each stem having a convex terminal, a concavo-convex electrode fixed to the inner end of each stem, and a conductor connected to each electrode.

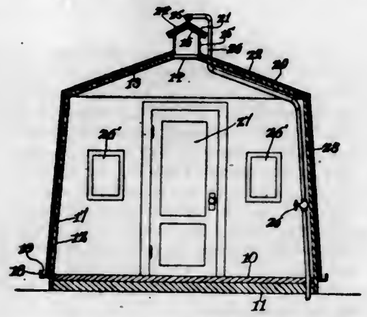
1,808,826. LUMINESCENT TUBE. GEORGE E. TEASDALE, Kansas City, Kans. Filed July 12, 1929. Serial No. 377,703. 1 Claim. (Cl. 176—126.)



In combination, a transparent tube of the character described, stems extending inwardly from the outer ends of said tube, bell-shaped shields formed integral with the inner ends of said stems and provided with flaring mouths, disk electrodes located at the closed ends of said shields, and conductors connected to said disks.

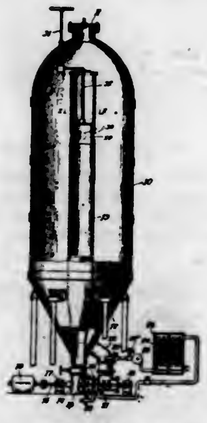
1,808,827. WINDOW AND FLAP OPERATOR. ROSCOE G. WOLD, Phoenix, Ariz. Filed Jan. 12, 1929. Serial No. 332,124. 4 Claims. (Cl. 268—109.)

1. An operator for a hinged window comprising a guide for attachment to the window, said guide having an abutment, a lever slidably engaged with said guide and having means to engage said abutment to hold the lever normally against sliding with respect to the guide, a fulcrum for said lever adapted for mounting on the window frame, and a second lever fulcrumed at one side of the first named lever, the two levers being provided with hand grip portions adapted to be moved toward each other to move said levers in scissors-like manner, said second lever being adapted upon such movement to thrust against a portion of said guide and cause movement of the first named lever from engagement with said abutment.



1,808,828. SHOE TREE. ARTHUR R. ANDERSON, North Arlington, N. J. Filed Nov. 14, 1929. Serial No. 407,224. 3 Claims. (Cl. 12—128.1.)

1. A shoe tree comprising co-operating toe and heel sections; said sections provided jointly with a longitudinal slit substantially centrally thereof; said heel section provided with a longitudinal guide opening in the plane of said slit; a link having one end thereof disposed in said slit and pivotally secured to said toe section; the opposite end of said link movably disposed in said guide opening; spring latching means in said heel section; said link provided with means for co-operation with said latching means for effecting longitudinal adjustment between said sections; and reinforcing means detachably secured to said heel section and entering same on either side of said guide opening.

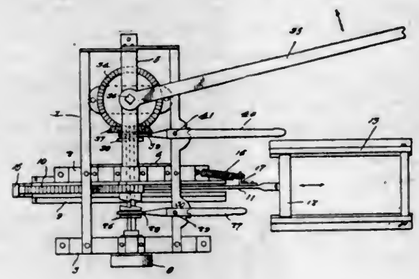


1,808,829. BUILDING. CECIL E. BARNES, Los Angeles, Calif. Filed Nov. 25, 1929. Serial No. 409,658. 1 Claim. (Cl. 62—90.)

A building comprising a floor, oppositely sloping roof frames, an impervious sloping closure coextensive with and secured upon the upper face of each frame, a water conducting element possessing an absorbent characteristic coextensive with and secured upon the outer face of said closure, oppositely sloping outer wall frames connected at their upper ends to the outer ends of said roof frames and extending to said floor, an impervious, sloping outer wall forming member secured against the outer face of each wall frame and extending from the top of the latter to a point opposing said flooring, each of said members having an outwardly directed angle-

shaped portion at its lower end to provide a water collecting trough, a water conducting element possessing an absorbent characteristic secured to the outer face of each of said members and extending from the top of the latter to within said trough, a water supply pipe arranged within the building adjacent a wall and a roof frame, extending up through the latter and positioned to discharge water upon said conducting elements on the said closures upon the roof frames, and said pipe including means positioned in the building for controlling the water discharge.

1,808,830. METHOD OF AND APPARATUS FOR DIGESTING WOOD. JOSEPH E. BOND, Appleton, Wis. Filed May 27, 1929. Serial No. 366,295. 9 Claims. (Cl. 92—7.)

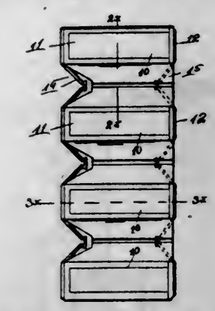


1. The method of operating a digester having a vertical open top tube therein which consists in charging chips into the digester and tube then delivering hot acid to the bottom of the tube and causing it to rise and overflow over the top of the chips in the space around the tube then continuously pumping acid and chips from the bottom of the space around the tube and discharging said acid and chips upwardly through said tube, withdrawing cooled acid from the digester, indirectly heating the same at a point exterior of the digester and returning the heated acid to the moving body of material.

7. The combination of a digester having a vertical open top tube therein, a pump having its inlet connected to the bottom of the space surrounding the tube and its outlet connected to said tube, means for continuously withdrawing cooled acid from the lower portion of the digester, means for indirectly heating the withdrawn acid, and means for returning the heated acid to the moving body of chips and acid passing through the pump.

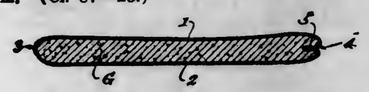
1,808,831. PROCESS FOR RECOVERING FATTY PRODUCTS. HENRY L. BORG, Stamford, Conn., assignor to Postum Company, Incorporated, Battle Creek, Mich., a Corporation of Delaware. Filed Jan. 21, 1928. Serial No. 248,573. 5 Claims. (Cl. 87—6.)

5. In a process for treating a finely divided cacao bean mass which contains not less than approximately 30% of cocoa butter, whereby said butter may be removed from the solid constituents of the mass, which includes the step of slowly agitating the mass in the presence of approximately 12% by weight of water while maintaining the mass at a temperature of approximately 100° C.



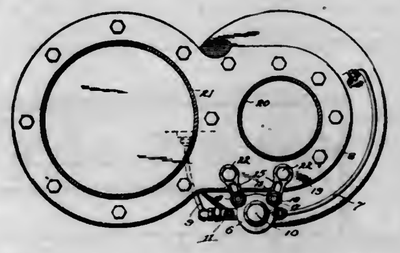
1,808,832. HAY PRESS. GEORGE W. BOWMAN, Seymour, Tex. Filed Oct. 29, 1928. Serial No. 315,795. 1 Claim. (Cl. 100—5.)

In a hay press having a press chamber and a plunger slidable therein, means for actuating the plunger comprising a rack bar connected to the plunger, a pair of alined shafts disposed transversely above the rack bar, one of said shafts being of polygonal cross-section and having an end portion of circular cross-section, the other of the shafts being of circular cross-section and having an end portion of polygonal cross-section in opposed relation to the circular end portion of the first named shaft, means for independently rotating said shafts, a segmental pinion supported on the polygonal end of the circular shaft and having a bore including a polygonal portion for the reception of the polygonal end of the circular shaft for causing the pinion to rotate therewith and a circular portion for receiving the circular end of the polygonal shaft for permitting independent rotation therebetween, a clutch element on the segmental pinions, a clutch element mounted for longitudinal sliding movement on the polygonal shaft for engagement with the first named clutch element for effecting the rotation of said pinion with said polygonal shaft when the operating means for the circular shaft is in inoperative position, said pinion cooperating with the rack bar to move the plunger carried thereby forwardly into the press chamber.



1,808,833. ADJUSTABLE PACKING CASE. ALLAN L. BRACK, Rochester, N. Y. Filed May 4, 1928. Serial No. 275,160. 2 Claims. (Cl. 229—16.)

1. A packing case having panels arranged in rings and columns with a plurality of panels in each column, the panels in each ring being connected by scores and the panels in each column being connected by flutes all formed of a single sheet of paper products, said case being com-

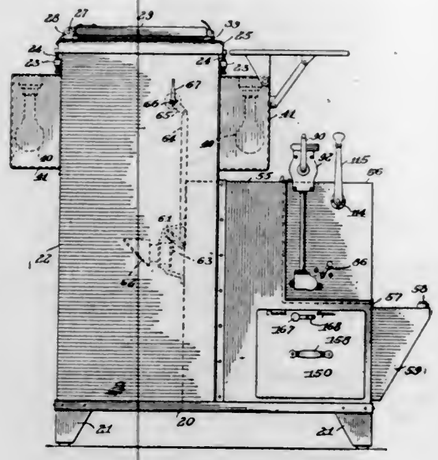


pressible lengthwise by moving the panels toward each other and bending the flutes between them, the flutes being bent inwardly against the article contained in the package.

1,808,834. CLEANING PAD. RUDOLPH BUSCH, Sr., Shelltown, Md. Filed Mar. 6, 1929. Serial No. 344,840. 1 Claim. (Cl. 87—23.)

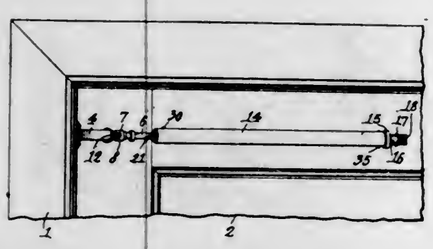
In a cleaning pad, a fabric container stitched together on all sides and containing a powdered cleaning compound comprising approximately 90% calcium carbonate, approximately 8% sodium carbonate and approximately 2% sodium chlorid.

1,808,835. SUPPORT FOR LUBRICATORS. CHARLES ALBERT CAMPBELL, Watertown, N. Y., assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed Nov. 27, 1926. Serial No. 151,228. 4 Claims. (Cl. 184—105.)



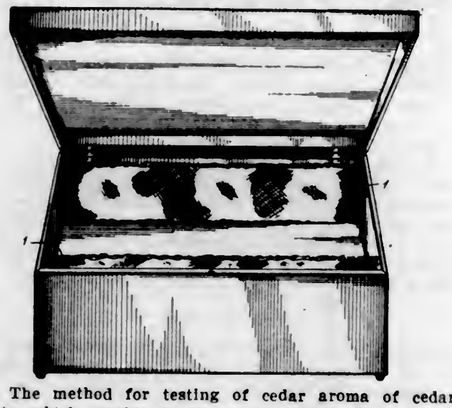
4. The combination of a lubricator body, a pump structure having a plurality of spaced threaded connectors which hold parts of the pump structure in assembled relation; a pair of arms each supported by a corresponding one of said threaded connectors and each underlying a portion of the lubricator body; pins projecting upward from said arms through a portion of said lubricator body said pins being parallel with each other and with the axes of said threaded connectors; and removable means on said pins for retaining said body.

1,808,836. PHOTOGRAPHIC APPARATUS. ARTHUR W. CAPE, Rochester, N. Y., assignor to Photostat Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 1, 1929. Serial No. 343,653. 23 Claims. (Cl. 95—34.)



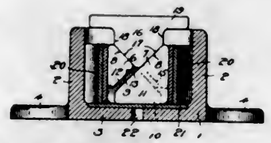
1. In a photographic apparatus, the combination with a camera, of a receptacle into which exposed prints from

said camera are fed, said receptacle having an opening for passage of said prints, flanges adjacent the edges of



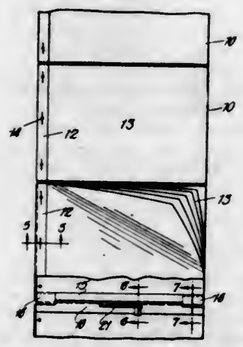
said opening, and a trough-shaped member movable into cooperation with said flanges to seal said opening and to prevent passage of light therethrough into said receptacle.

1,808,837. DOORCHECK. ANDREW B. CLARK, Thomasville, Ga., assignor of one-half to Roscoe Luke, Thomasville, Ga. Filed May 27, 1929. Serial No. 366,416. 2 Claims. (Cl. 16—49.)



1. In a check for swinging doors, cooperating members comprising a holder and a screw, means for mounting said cooperating members for swinging movement and for holding one of them against rotation, and a free nut threaded on the screw and having threaded movement with respect to one of said cooperating members longitudinally of the screw, said cooperating members having relative right line movement in one direction to bring the nut into end engagement with one of said cooperating members for rotation therewith and for threaded movement along the screw when the door is opened, said cooperating members having relative right line movement in an opposite direction, when the door is closed, to effect an end spacing of the nut and that one of the said cooperating members with which the nut is brought into engagement as aforesaid.

1,808,838. METHOD OF AROMA TESTING OF CEDAR CHESTS. ERNEST C. CROCKER, Belmont, Mass., assignor, by mesne assignments, to The Lane Company, Inc., a Corporation of Virginia. Filed July 18, 1930. Serial No. 468,980. 7 Claims. (Cl. 23—230.)



7. The method for testing of cedar aroma of cedar chests, which consists in using cheese cloth sheets, coating said sheets with about 5% of their weight with rosin, suspending the sheets within the chest, weighing the fabric, closing the chest, and noting from time to time how rapidly said sheets pick up cedar aroma.

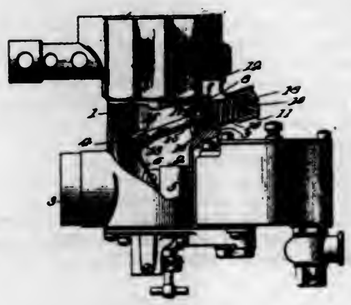
1,808,839. SIDE-BEARINGS. DONALD C. DAVIS, deceased, Buffalo, N. Y., by Lou Bradshaw, executrix, Buffalo, N. Y., assignor to The Gould Coupler Company, New York, N. Y., a Corporation of Maryland. Filed Apr. 18, 1929. Serial No. 356,051. 5 Claims. (Cl. 308—138.)

1. A side bearing for railway cars involving a housing, a plurality of wedge shoes slidably mounted in said housing, a wedge block for actuating said shoes, and resilient means for opposing movement of said shoes, the latter having portions normally disposed on opposite sides of the apex of said wedge block.

1,808,840. CARBON PACK. KARL R. DENCKLAU, Plainfield, N. J. Filed May 28, 1930. Serial No. 456,557. 13 Claims. (Cl. 282—3.)

1. The combination of a plurality of carbon pack units, and releasable means for connecting said carbon pack units in continuous strip formation.

1,808,841. PAINT COMPOSITION. JOHN R. DURBON, Junction City, Kans. Filed June 14, 1926. Serial No. 115,962. 1 Claim. (Cl. 134—16.)

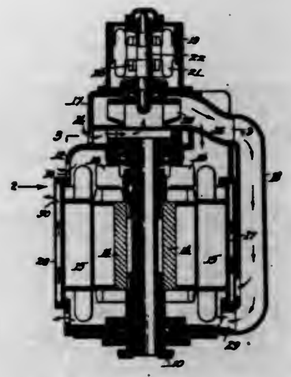


A composition for dressing automobile tops and the like consisting of an equal amount of linseed oil, Japan drier and a paint, the paint consisting of 12 5/10 percent pigment and 87 5/10 percent vehicle, the pigment consisting of carbon 16 percent, calcium phosphate 77 percent, calcium carbonate 3 percent, silicate 2 percent, water 2 percent and the vehicle consisting of rosin 14 8/10 percent, fixed fatty oils 31 9/10 percent, ash 2 percent, and mineral spirits 51 3/10 percent.

1,808,842. AEROPLANE WING. JOHN PAUL FEDOR, New Castle, Ind. Filed Aug. 18, 1930. Serial No. 476,101. 6 Claims. (Cl. 244—31.)

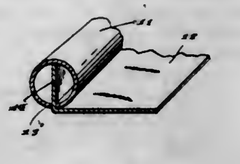
1. In all metal airfoils, a top covering having its leading edge turned under, a bottom covering having its leading edge secured to the turned under part of the leading edge of the top covering, a set of spaced I-beams paralleling the longitudinal center line of the wing and located between said top and bottom coverings, and a zigzag bracing sheet extending alternately over and under successive I-beams from the leading to the trailing edge of the wing and located between said top and bottom coverings, and means permanently securing the aforesaid parts together as an integral structure.

1,808,843. CARBURETOR. JACOB RICHARD FRANCIS, Flint, Mich. Filed June 15, 1921, Serial No. 477,768. Renewed Sept. 8, 1930. 4 Claims. (Cl. 261—63.)



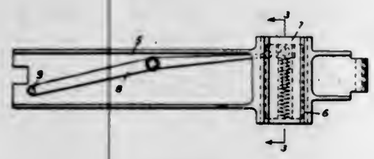
1. A carburetor having a mixing chamber provided with a fuel nozzle and a pivoted air valve, a rod pivotally connected to said air valve extending transversely across said mixing chamber and an adjusting screw mounted within the wall of said mixing chamber carrying a coil spring having a connection with said rod.

1,808,844. PURIFICATION OF WOOL GREASE. FRIEDRICH FAICK, Uerdingen, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 27, 1928, Serial No. 265,231, and in Germany Apr. 13, 1927. 3 Claims. (Cl. 87—12.)



1. A process of preparing pure bleached wool grease free of water and dirt from emulsions of wool grease rich in water which consists in heating the emulsion together with an inorganic reducing bleaching agent under conditions of high temperatures and super-atmospheric pressure.

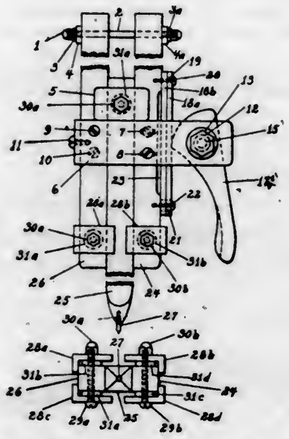
1,808,845. COOLING DEVICE FOR MOTORS. ALBERT J. GIFFORD and BENJAMIN S. T. BISHOP, Shrewsbury, Mass., assignors to Leland-Gifford Company, a Corporation of Massachusetts. Filed Oct. 8, 1929. Serial No. 398,207. 2 Claims. (Cl. 172—36.)



1. The combination with a main motor, of a fan motor, a fan on the fan motor shaft, a casing around said fan, means for delivering the air from the fan into the main motor at a plurality of levels, a casing surrounding the main motor and having an annular air space around the stator of the main motor and means for introducing the air currents from the fan into said space and into the space around the exposed parts of the windings of the stator.

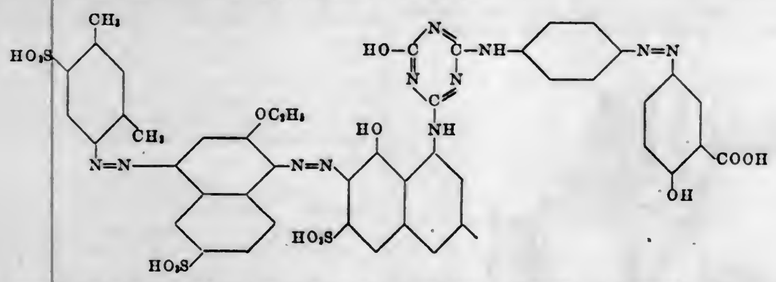
1,808,846. BEDSPRING GUARD. MORRIS GOLDBERG, Brooklyn, N. Y. Filed Mar. 18, 1929. Serial No. 347,917. 1 Claim. (Cl. 5—193.)

A side guard member for a bed spring comprising a tubular member split longitudinally at its base and an angle iron presenting horizontal and vertical legs, said vertical leg being clamped within the split of said tubular member and having its upper edge abutting the upper peripheral wall thereof, said horizontal leg being adapted for attachment to a bed spring.



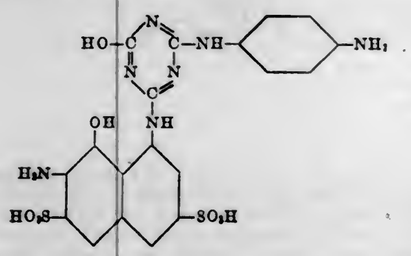
1,808,847. BELT FEED MECHANISM FOR MACHINE GUNS. JAMES L. HATCHER, U. S. Army, Winchester, Va. Filed Jan. 24, 1931. Serial No. 511,071. 5 Claims. (Cl. 89—33.) (Granted under the act of Mar 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

5. In a machine gun, a member having a transverse feedway, a slide mounted in the feedway, a spring opposing movement of the slide, and recoil operated means for moving the slide to energize the spring.



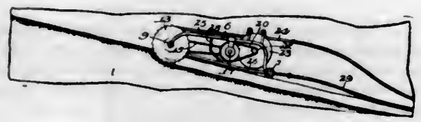
1,808,848. TRIPOD. JACK ELLIS HAYNES, St. Paul, Minn., assignor to Haynes Equipment Corporation, St. Paul, Minn., a Corporation of Minnesota. Original application filed Apr. 3, 1928, Serial No. 267,108. Divided and this application filed Dec. 30, 1929. Serial No. 417,544. 2 Claims. (Cl. 248—43.)

1. A tripod leg assembly comprising a pair of leg members spaced apart, an intermediate leg member slidably arranged between the lower end portions of the first named leg member for longitudinal movement and provided on opposite sides with plates which bear on said spaced leg members, a U-shaped yoke extending across and enclosing said leg members and secured to one of the first named leg members for movement relative thereto in a direction transverse thereof, a cam pressure plate assembly on the outer side of one of said first named leg members, a manually operable cam pivotally mounted in said yoke and bearing against said cam pressure plate assembly, and leg guides secured to the outside leg members.

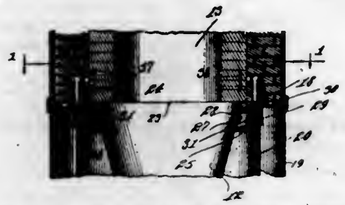


1,808,849. NEW POLYAZO DYESTUFFS. WINFRID HENTRICH and MAX HARDTMANN, Wiesdorf-on-the-Rhine, JOSEF HILGER, Cologne-Mulheim, and RUDOLF KNOCHE, Leverkusen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 16, 1928, Serial No. 320,002, and in Germany Nov. 22, 1927. 3 Claims. (Cl. 260—27.)

3. As a new product the polyazo dyestuff of the probable formula:

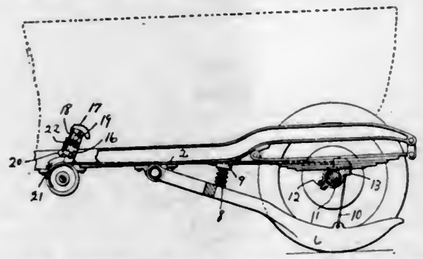


dyeing cotton from a Glabuer salt-sodium carbonate bath brilliant green shades of very good fastness to light and yielding upon reduction with stannous chloride and hydrochloric acid one molecule of 1-3-dimethyl-4-aminobenzene-6-sulfonic acid, one molecule of 1.4-diamino-2-ethoxy-naphthalene-6-sulfonic acid, one molecule of the compound of the following formula:



and one molecule of 1-amino-4-hydroxy-benzene-3-carboxylic acid.

1,808,850. MINING MACHINE. FRED A. HOMEWOOD, Roosevelt, Utah. Filed June 30, 1928. Serial No. 289,406. 3 Claims. (Cl. 262—19.)

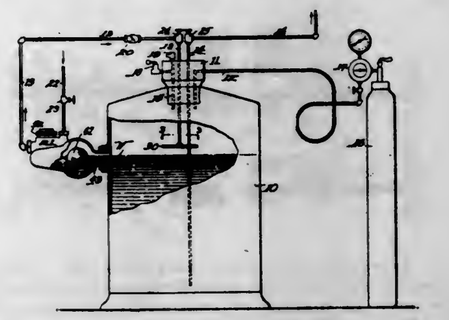


1. A machine for mining ore of the character set forth, comprising a frame, a rotary air engine mounted in the frame, means for supplying air to the engine, a saw mounted in the frame, means for driving the saw from the engine, an exhaust pipe leading from the engine to a point adjacent to the saw, a conductor pipe for carrying away the cuttings and a jet from the exhaust to the conductor pipe for forcing air rearwardly through said conductor pipe.

1,808,851. LIMEKILN. WILLIAM J. KUNTZ, York, Pa. Filed July 9, 1927. Serial No. 204,562. 2 Claims. (Cl. 222—8.)

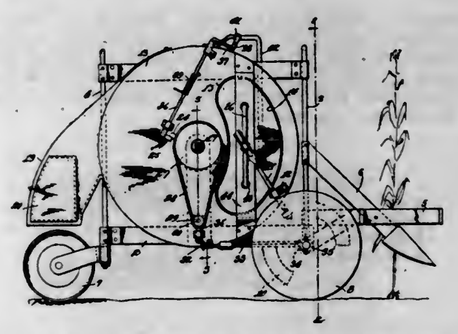
1. A device of the character described comprising a kiln having a combustion furnace, a cooler to receive burned lime from the kiln, a water jacket formed of metal and secured to the cooler adjacent the combustion furnace of the kiln, means for supplying the jacket with water, and means for conducting the steam from the jackets to the combustion furnace.

1,808,852. ANTISKID DEVICE. OLA LANCE, Evanston, Wyo., assignor of one-fourth to C. F. Schmidt, Uinta County, Wyo. Filed Mar. 25, 1927. Serial No. 178,323. 2 Claims. (Cl. 188—5.)



1. In an anti-skid device for vehicles, the combination of a cross member, means for mounting said cross member on the supporting frame of the vehicle, a pair of rearwardly extending diverging arms provided with bearings at one end rockably mounted on said cross member, brace arms connecting said first mentioned arms together, said brace arms being rockably connected with said cross member, and said first mentioned arms terminating at their free ends in downwardly disposed longitudinally extending offset portions, said offset portions being of convex form in vertical cross section, spring members operatively associated with the frame of the vehicle and with said first mentioned arms for normally urging the offset portions of the first mentioned arms in contact with the surface of the ground, said offset portions being adapted to constitute anti-skid elements, and means for raising and lowering the first mentioned arms with respect to the ground.

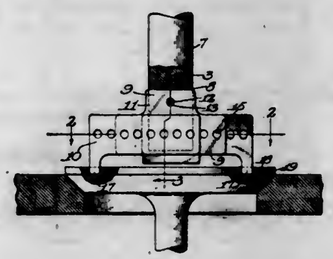
1,808,853. LUBRICATING OIL AND PROCESS OF MAKING SAME. CLARENCE JAMES LIVINGSTONE, Pittsburgh, and WILLIAM A. GRUSE, Wilkinsburg, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed May 18, 1928. Serial No. 278,908. 8 Claims. (Cl. 87—9.)



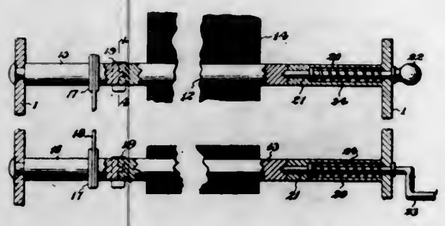
1. A liquid lubricant consisting of petroleum oil as its principal constituent, minimal amounts of soap and a miscible thinning agent of lower viscosity than said petroleum oil.

1,808,854. CARBONATING APPARATUS. JOSEPH E. MALONE, Worcester, Mass., assignor of forty per cent to Daniel O'Connell, Worcester, Mass. Filed July 20, 1928. Serial No. 294,142. 9 Claims. (Cl. 261—70.)

1. Carbonating apparatus comprising a closed mixing tank, an inlet thereto for gas under pressure, a normally closed outlet for carbonated water, means to regulate the admission of water so as to automatically maintain a substantially constant water level in said tank, and below the top thereof, thereby to leave a space for gas and a spray device in said tank connected to said water supply and positioned above the constant water level, and in the path of gas entering said space.

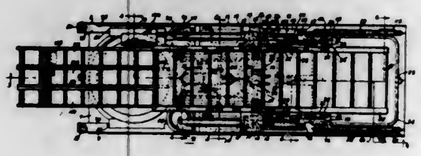


1,808,855. CORN HARVESTER. FRANK MATOUSHEK, Colome, S. Dak. Filed Apr. 30, 1930. Serial No. 448,625. 11 Claims. (Cl. 56—103.)



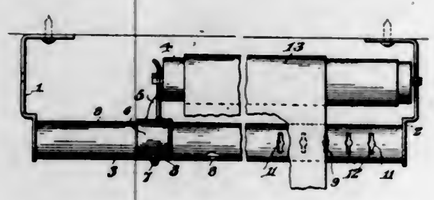
1. In a corn harvester for detaching the ears from the standing stalks, an ear stripper, and a plunger for deflecting the stalks laterally into the path of the ear stripper.

1,808,856. VALVE GRINDER. FRED W. MILLER, Chicago, Ill. Filed Nov. 19, 1928. Serial No. 320,416. 4 Claims. (Cl. 51—29.)



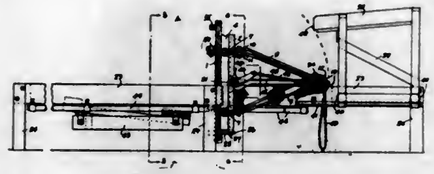
1. A valve grinder comprising a brace having a slot in the shank thereof, a central bit having a series of longitudinally arranged holes therein, means for securing said bit in the slot, and side bits having series of longitudinal projections adapted to engage with said holes, said side bits being held in engagement with the center bit by the sides of the slot.

1,808,857. COPY ATTACHMENT FOR TYPEWRITERS. CARL H. MONSEES, Salisbury, Md. Filed Dec. 10, 1927. Serial No. 239,065. 1 Claim. (Cl. 197—133.)



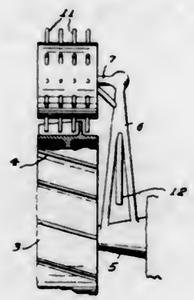
A typewriter attachment comprising side members, clamps at the lower ends thereof, stub shafts journaled to the upper end of one of the side members, grooved pulleys fast to the stub shafts, a drive belt connecting the grooved pulleys, barrels projecting inwardly from the upper end of the other side member in line with the respective stub shafts, and spring actuated pins in the barrels and projecting beyond the ends thereof and having gripping elements at their outer ends, the inner ends of the stub shafts and pins being adapted to engage rollers therebetween to support and effect rotation of the rollers as and for the purpose specified.

1,808,858. MINING MACHINE. EDMUND C. MORGAN, deceased, New York, N. Y., by Olive Eugenie Morgan, executrix, New York, N. Y. Original application filed June 7, 1920, Serial No. 387,137. Divided and this application filed Sept. 28, 1927. Serial No. 222,479. 19 Claims. (Cl. 262—9.)



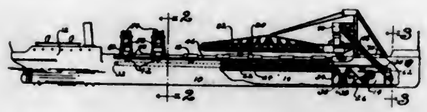
2. In a mining machine, the combination with a supporting frame, of an upright kerf-cutter mounted thereon, means for supporting said kerf-cutter in folded relation to said frame, a fluid pressure breaker on said kerf-cutter, and means for operating said breaker when said kerf-cutter is in upright position.

1,808,859. WINDOW SHADE TRIMMER. HARVEY E. MORROW, New London, Iowa. Filed June 20, 1930. Serial No. 462,661. 5 Claims. (Cl. 164—36.)



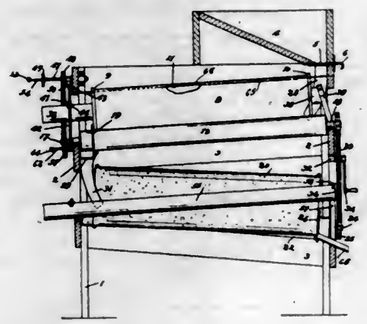
1. A trimmer comprising a tubular rod having a plurality of openings in the length thereof and extending through opposite sides, said rod having transverse slots in one side intersecting the openings, and a blade formed with a shank adapted to pass through selected openings in the sides of the rod, the transverse slots accommodating the blade.

1,808,860. CONCRETE STAVE MAKING MACHINE. AXEL H. NELSON, Turlock, Calif. Filed Dec. 14, 1927. Serial No. 239,992. 5 Claims. (Cl. 25—42.)



1. A concrete stave-making machine comprising a collapsible form, means for holding said form in a vertical position, the top end of said form being open for receiving the self-hardening mixture whereby the mixture may be tamped in the form while being poured thereinto.

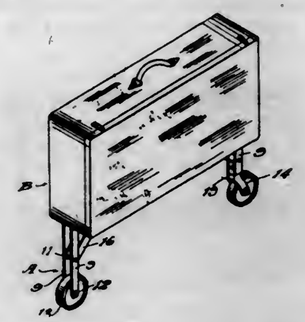
1,808,861. WHEEL CLEANER FOR TRACTORS. ERNEST PAGAARD, Ross, Iowa. Filed Feb. 27, 1929. Serial No. 343,186. 1 Claim. (Cl. 280—158.)



In a wheel cleaner for tractors provided with wheels having obliquely disposed peripheral lugs, a standard supported upon the vehicle axle housing and comprising an integral laterally extending arm, a cleaner wheel freely supported upon said arm, and teeth for said wheel extending outwardly from the periphery thereof into immediate proximity to the periphery of the tractor wheel and its peripheral lugs for contact with and removal of such extraneous matter as may be lodged thereupon, said teeth being arranged in parallel rows extending transversely of the wheel circumference, such contact serving as the sole means for rotating said cleaner wheel upon its support.

1,808,862. UNLOADING DEVICE. HARRY W. PETERSON, Detroit, Mich. Filed Mar. 7, 1929. Serial No. 344,943. 2 Claims. (Cl. 214—15.)

1. In a freight boat including a hull having a deck substantially inclosing the top thereof, a plurality of longitudinally spaced filling hatches located at the central portions of said deck, a longitudinally extending substantially horizontal platform in said hull having outer edge portions supported by the side thereof, supporting structure depending from said deck for supporting the inner edge portions of said platform independently of the floor of said hull, a longitudinal conveyor mounted on said platform extending substantially from one end to the other end of said hull, a plurality of aligned small hatches extending through said deck, each located in related proximity to one of said filling hatches and in registration with said conveyor, means for removing material from said filling hatches and discharging the same through said small hatches upon said conveyor; and elevating conveying mechanism at the discharge end of said conveyor for receiving material therefrom.

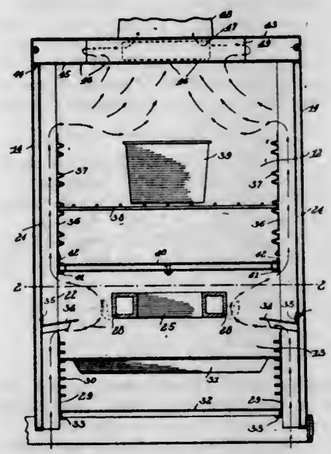


1,808,863. GRAIN SEPARATING MACHINE. WILLIAM THOMAS PIERCE, Birtle, Manitoba, Canada. Filed Aug. 17, 1928, Serial No. 300,354, and in Canada May 5, 1928. 1 Claim. (Cl. 209—78.)

In a grain separating machine, a supporting frame, a pair of upper similarly inclined cylindrical drums rotatably supported from the frame and arranged side by side and both having a lining presenting considerable nap, a hopper overlying the upper ends of the drums, feed chutes leading from the hopper into the ends of the drums, a centrally located rotatably mounted oppositely inclining drum underlying the former drums and rotatably carried by the frame, said latter drum having a lining presenting considerable nap, means for collecting grain discharging from the lower ends of the upper drums and delivering the same into the upper end of the lower drum, means for simultaneously rotating the drums, similar grain collecting and discharge chutes extending longitudinally of the drums, means supporting the rear ends of the upper chutes and the front end of the lower chute from the frame for oscillatory movement, a vertical spindle rotatably mounted centrally on the rear end of the frame between the adjacent projecting ends of the upper chutes, a horizontally disposed cross arm secured to the spindle and having the extending ends thereof overlying and swivelly attached to the adjacent ends of the chutes, a further vertically disposed spindle rotatably carried by the rear end of the frame and located to the side of the adjacent projecting end of the lower chute, a crank arm extending from the latter spindle and overlying and pivotally attached to the latter end of the latter chute, cranks secured to the adjacent ends of the spindles, a link pivotally connecting the latter cranks, a crank secured to the upper end of the central spindle, means for oscillating the latter crank to simultaneously reciprocate the shoes and a scraper carried by the frame and extending longitudinally of each drum and contacting with the lining thereof in a location overlying the chutes.

1,808,864. COLLAPSIBLE WHEELED SUPPORT FOR SUITCASES OR LIKE RECEPTACLES. JOHN B. PINHEIRO, Oakland, Calif. Filed Feb. 25, 1929. Serial No. 342,421. 5 Claims. (Cl. 190—41.)

1. A wheeled vehicle for carrying cases comprising a receptacle adapted to be disposed in a longitudinal aperture in the bottom of said carrying case, brackets pivotally mounted in said receptacle and disposed at the opposite ends thereof, wheels rotatably mounted at the outer



ends of said brackets, means for locking said brackets in operative position, and means for locking said brackets in folded position within said receptacle.

1,808,865. INTERIOR WALL FINISH. ARLIE WILLIAM SCHORGER, Madison, Wis., assignor to C. F. Burgess Laboratories Inc., Madison, Wis., a Corporation of Delaware. Filed Mar. 31, 1927. Serial No. 180,072. 2 Claims. (Cl. 106—34.)

1. A composition for interior wall finish comprising 40 to 60 parts of ground calcium sulphate, 15 to 35 parts of ground mica, 10 to 15 parts of fine asbestos, 8 to 10 parts of ground casein, and 5 to 7 parts of hydrated lime.

1,808,866. GAS OVEN CONSTRUCTION. THOMAS A. SOULTS, Rochester, N. Y., assignor to Sterling Range and Furnace Corporation, Rochester, N. Y., a Corporation of New York. Filed Dec. 6, 1927. Serial No. 238,160. 1 Claim. (Cl. 126—39.)

A cooking stove having separate upper and lower cooking compartments, a gas burner in the upper portion of the lower compartment having oppositely disposed portions each provided with openings arranged to discharge the gas outwardly toward the side walls of the compartment, vertically arranged air inlet conduits located at the sides of said lower compartment below the burner, plates overlying said conduits and extending inwardly from the side walls of the stove towards said burner portions and terminating short of the latter to afford open-

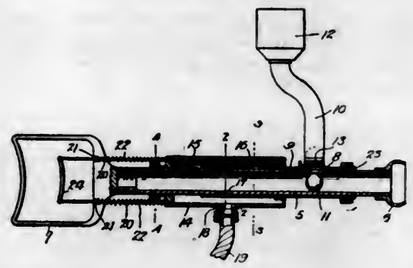
ings for the passage of air discharging from the conduits, said plates being substantially in alinement with the burner and the air being directed by said plates to said openings and into the path of the discharging gas, and vertically disposed outlet conduits at the sides of the upper compartment for discharging the products of combustion from the burner.

1,808,867. DIRECTIONAL ANTENNA ARRAY. JOHN STONE STONE, San Diego, Calif., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 26, 1927. Serial No. 163,774. 12 Claims. (Cl. 250—11.)

2. A directive antenna system comprising a plurality of pairs of linear arrays, each linear array consisting of a plurality of radiators, the radiators of each array being separated by unequal and predetermined distances, the linear arrays of each pair being a definite distance from each other, said pairs of arrays being situated side by side and at a predetermined distance apart.

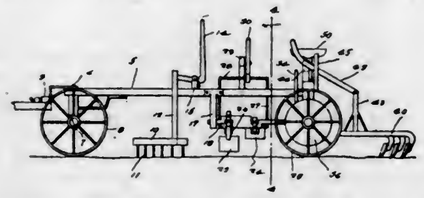
1,808,868. DIRECTIONAL ANTENNA ARRAY. JOHN STONE STONE, San Diego, Calif., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed Jan. 26, 1927, Serial No. 163,774. Divided and this application filed Dec. 19, 1928. Serial No. 326,972. 14 Claims. (Cl. 250—11.)

4. A directive antenna system comprising a plurality of radiators constituting a plurality of arrays, the radiators of each array forming a cylindrical parabola, and means for energizing the radiators of the various arrays with currents that lag by definite phase angles corresponding to the distances between the respective arrays.



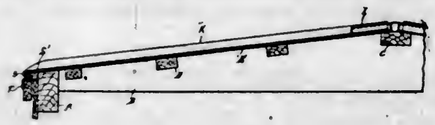
1,808,869. DIRECTIONAL ANTENNA ARRAY. JOHN STONE STONE, San Diego, Calif., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed Jan. 26, 1927, Serial No. 163,774. Divided and this application filed Nov. 23, 1929. Serial No. 409,402. 4 Claims. (Cl. 250—11.)

2. A directive antenna system comprising a linear array of conductors, said conductors being placed side by side at equal intervals, and means for energising said conductors with currents of unequal and predetermined amplitudes and of equal phase and frequency, said array effecting a beam of energy equivalent to that of a cylindrical parabolic surface having an equivalent source of energy coincident with its focal line.



1,808,870. FLUE CLEANER. SAMUEL S. STRASBURG, Akron, Ohio. Filed Apr. 19, 1930. Serial No. 445,768. 1 Claim. (Cl. 15—104.06.)

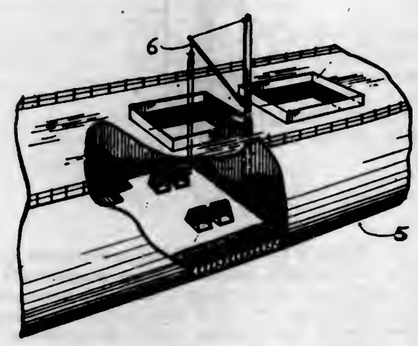
A device for cleaning tubes, comprising a tubular body portion having an open end to be fitted against a tube to be cleaned, a handle on the opposite end of the body portion, said body portion having an opening near the open end, means for feeding balls to the body portion through the opening, said body portion having openings disposed intermediate the ends thereof, a tubular valve member slidably mounted on the body portion and having openings to register with the last mentioned openings, and having an



opening adapted to register with the first mentioned opening, a cylinder secured to the tubular valve member and spaced therefrom to provide an air chamber, means for directing air under pressure to the air chamber, and a handle carried by the cylinder to be gripped by the operator for moving the valve member to bring the openings of the valve member and body portion into registry to admit air and balls to the body portion.

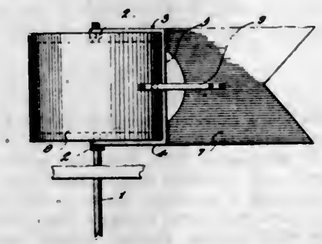
1,808,871. COTTON CHOPPER. HAL TAYLOR, Moncure, N. C., assignor of two-thirds to James F. Alaston, Pittsboro, N. C. Filed May 18, 1929. Serial No. 364,071. 1 Claim. (Cl. 97—19.)

A machine of the class described comprising a wheeled structure, a crank shaft mounted for rotation in the structure, means for operatively connecting the crank shaft with one wheel of the structure for actuation thereby, a pair of shanks engaged on the cranks of the crank shaft, blades on said shanks, a loop frame slidable vertically through the structure and having open top pocket portions at the bottom thereof to slidably receive the shanks and support the intermediate portions thereof, a guide member for the upper portion of said frame, a lever swingably and pivotally mounted on said guide member and engaged with said frame so that by swinging the lever said frame may be raised or lowered for adjusting said shanks and blade.



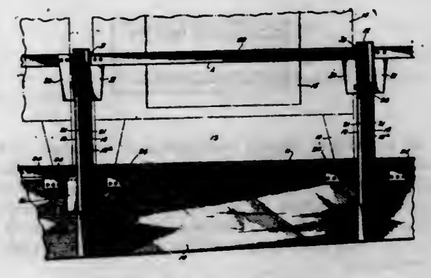
1,808,872. CAR ROOF. WILLIAM D. THOMPSON, Detroit, Mich., assignor, by mesne assignments, to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 21, 1925. Serial No. 57,730. 4 Claims. (Cl. 108—5.)

2. A universal car roof applicable to all variations in size and type of freight cars in general use on standard



gauge tracks comprising a sheet intermediate the ridge and the eaves having continuous weather proofing means along its sides and across its ridge end, a flashing forming a weatherproof joint with the lower end of said sheet, and a ridge cap overlapping the upper end of said sheet and bearing thereon to form a weatherproof joint, the overlap being variable dependent upon the width of the cars and permitting adjustment to correspond to maximum and minimum widths.

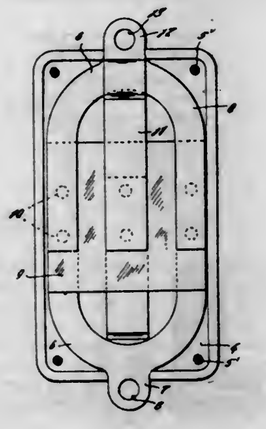
1,808,873. METHOD AND APPARATUS FOR TRANSFERRING CARGOES BY CRANE. FRANCIS H. WEEKS, New York, N. Y. Filed Apr. 16, 1929. Serial No. 355,480. 2 Claims. (Cl. 214—152.)



1. Method of transferring a cargo consisting of tree trunk sections, the length of which is several times the diameter, by means of a number of successively employed cargo carriers, which comprises assembling a number of said sections into a bundle of substantially circular cross-section, binding said bundle transversely with a closed ligament of fixed length, thereafter transferring said bundle by crane out of a cargo carrier and into a second cargo carrier, maintaining said bundle during transportation in said second cargo carrier, and thereafter removing said bundle and applied ligament by crane as a unit from said second cargo carrier, whereby the labor of stowing said sections individually and of assembling same into crane loads for successive transfers is obviated.

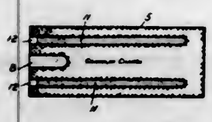
1,808,874. WIND MOTOR. TARLE F. WILSON, Bay Lake, Fla. Filed Feb. 24, 1928. Serial No. 256,685. 1 Claim. (Cl. 170—12.)

A wind motor comprising a vertical shaft, a wind wheel secured to said shaft, a U-shaped frame extending radially from said shaft including upper and lower arms and a connecting bight portion, the arms receiving the wind wheel therebetween and being provided with aligned bearings receiving said shaft, a semi-circular protecting housing for said wheel having one end rigidly secured to the inner face of the bight portion of the U-shaped frame and encasing substantially half of the wheel, and a wind vane having right angularly extending attaching feet rigidly secured to the outer face of the bight portion of said U-shaped frame.



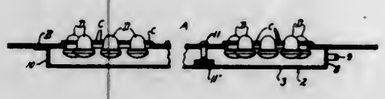
1,808,875. SECTIONAL FREIGHT CAR. GRAHAM C. WOODRUFF, Bronxville, N. Y., assignor to The L. C. L. Corporation, a Corporation of Delaware. Filed Apr. 12, 1929. Serial No. 354,638. 7 Claims. (Cl. 105—366.)

1. In a freight car the combination of bulkheads transversely disposed on the car in spaced relation to form a plurality of compartments on the car, posts at both ends of each bulkhead, vertical runways on each post, a bar extending across the end of each compartment and slidably mounted in said runways, a gravity lock in said runway to hold the bar in closed position to the posts.



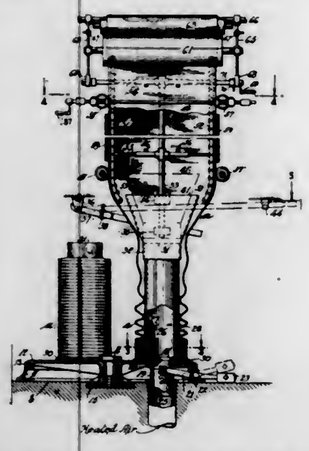
2. In a freight car, the combination with bulkheads transversely disposed on the car in spaced relation to form a plurality of compartments on the car, posts at each end of each bulkhead, a bar extending across the end of each compartment, and slidably mounted in said runways, a latch mounted on the bulkhead adapted to engage and hold the bar in its elevated position at the top of the posts.

1,808,876. LIGHTNING ARRESTER. CURTIS MOAELAND WRAY, La Fayette, Ind. Filed Apr. 5, 1929. Serial No. 352,828. 1 Claim. (Cl. 175—30.)



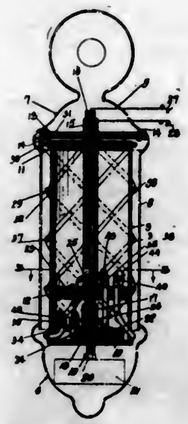
A lightning arrester comprising a housing, said housing comprising a rectangular frame and a pair of side plates for disposition against opposite sides of the frame, a pair of conductor elements, each of substantially U-shape, each end of the frame being provided with an opening, each conductor element being provided with a lug at its bight portion for disposition through one of the openings in the frame, the said conductor elements being of such length as to permit their leg portions to be disposed in overlapping relation, and a sheet of di-electric material interposed between the said elements.

1,808,877. PROPELLANT CHARGE FOR PROJECTILES AND METHOD OF FORMING THE SAME. CECIL G. YOUNG, Dover, N. J. Filed Dec. 21, 1929. Serial No. 415,800. 11 Claims. (Cl. 102—1.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



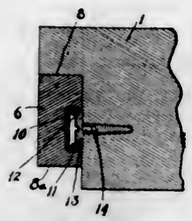
1. A propellant charge comprising a container having pockets and formed of a plurality of individual grains of powder cemented together without loss of identity, a main charge of loose grains of powder within the container and having the same characteristics as the grains forming the container, and inserts of black powder in the pockets of the container.

1,808,878. SIGN. STEPHEN S. ADAMS, St. Louis, Mo. Filed Feb. 27, 1931. Serial No. 518,629. 8 Claims. (Cl. 40—130.)



1. A sign of the class described, comprising a panel, cataphotes supported by said panel, a housing mounted on said panel at the rear face thereof for enclosing the rearmost portions of said cataphotes, and means for supporting said housing for sliding movement with respect to said panel.

1,808,879. FABRIC DRYING AND FINISHING MACHINE. EMILE B. BATES, Leicester, England. Continuation of application Serial No. 341,799, filed Feb. 21, 1929. This application filed June 5, 1930. Serial No. 459,370. 16 Claims. (Cl. 26—56.)

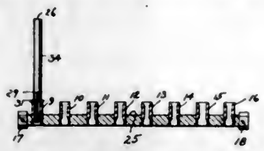


1. In a drying machine for fabrics, the combination, a turntable, a plurality of cartridges arranged on said turntable, each having a hollow stem upon the outside of which the wet fabric is placed, a tenter frame arranged to receive the fabric from said cartridges for drying purposes, an air supply pipe below said turntable and an adjustable sleeve for connecting the stem of one of said cartridges with said air supply pipe and means for raising said sleeve and for holding it in the connected position.

1,808,880. MEANS FOR BARBER POLE ILLUMINATION. MORRIS W. BERGER, San Francisco, Calif. Filed Nov. 27, 1929. Serial No. 410,157. 7 Claims. (Cl. 40—126.)

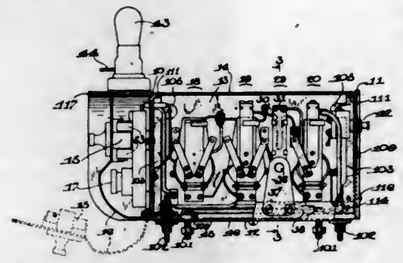
1. In a device of the class described, a revolvable opaque cylinder, independent inert-gas tubes semi-spirally arranged about said cylinder and having their intermediate sections alternating with each other and their electrodes positioned within an adjacent end of the cylinder, said tubes containing inert-gases of diverse character, and adapted, when illuminated, to display alternate colors, means for energizing the electrodes thereof, and means for constantly rotating said cylinder.

1,808,881. BUFFER. REES BEYNON, Chicago, Ill., assignor to Dryden Rubber Company, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1929. Serial No. 370,644. 1 Claim. (Cl. 16—86.)



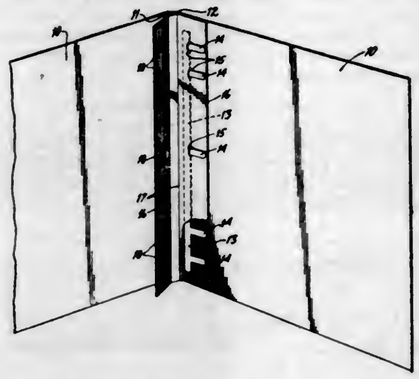
In combination, a rabbeted door jamb having a socket in its face and rabbeted edge, a resilient buffer member registered in said socket with a portion projecting outwardly beyond said rabbeted edge, a male snap fastener member comprising a mounting screw on the door jamb and in the socket, said screw having a head portion with a circumferential groove formed therein, said buffer member having a recess formed therein, a female snap fastener member secured in said recess, said female member having a spring for engaging in said groove whereby said buffer member is removably held in said socket.

1,808,882. PATTERN MECHANISM FOR CROCHET KNITTING MACHINES. SAMPSON BROADWIN, Brooklyn, N. Y. Filed Nov. 14, 1929. Serial No. 407,068. 3 Claims. (Cl. 66—156.)



1. In a pattern mechanism for crochet knitting machines, a plurality of links, bosses formed thereon, a

socket engaged in each said boss each said socket having a perforation of two diameters extending therethrough, a pin arranged in each said socket, each said pin being

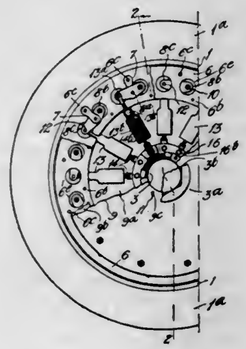


provided with an expansible means for retaining the pin in the socket and an enlarged head adapted to engage in that part of said perforation having the larger diameter.

1,808,883. SWITCH BOX FOR AUTOMATIC GENERATING PLANTS. ANTON FRANK BROTZ, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Original application filed Oct. 5, 1925, Serial No. 60,702, Patent No. 134,557. Divided and this application filed May 23, 1927. Serial No. 193,658. 10 Claims. (Cl. 247—9.)

1. A switch box comprising end castings, a horizontal bottom member connected thereto, a vertical insulating panel mounted between the end castings and fitting against the bottom member, a cover hinged to the end castings and engaging the bottom member and forming a tight enclosure with the end castings and the panel and the bottom member, and switching mechanism mounted on the panel within the enclosure, there being screened openings in the bottom member for ventilation and preventing the entrance of insects to the enclosure.

1,808,884. LOOSE-LEAF FOLDER. EARL M. BUCKLAND, Chicago, Ill., assignor to Rockwell-Barnes Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 1, 1930. Serial No. 499,204. 6 Claims. (Cl. 129—25.)

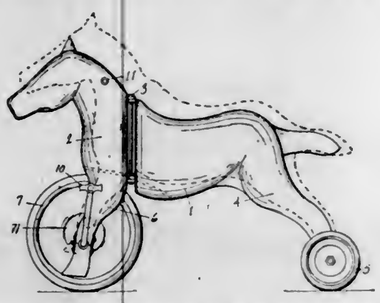


4. A folder adapted to contain loose leaves, comprising a member folded along median lines to provide connected cover portions, a plurality of substantially flat bendable metal tongues secured to said member adjacent one median fold line so as to lie parallel to one of the cover portions, said tongues being adapted to be bent up perpendicularly to said cover portion with their substantially flat faces extended parallel to said median fold line.

1,808,885. SURFACE ROD LINE PICK-UP. ALFONSO V. CLARK, Casey, Ill. Filed May 16, 1929. Serial No. 363,698. 7 Claims. (Cl. 74—17.)

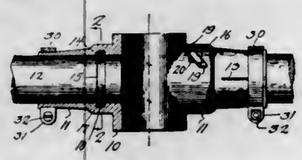
1. In combination, a post, a ratchet rod slidably mounted therethrough, means for retaining ratchet rod in predetermined relationship with said post, a second post, a disconnecting hook associated therewith connected to said ratchet rod, a reciprocating member adapted to engage teeth successively to said ratchet rod and means on said reciprocating member for connection to a power plunger rod.

1,808,886. SHOCK ABSORBING ROAD WHEEL OF VEHICLES. THOMAS LEE COURTNEY, Maryborough, Victoria, Australia. Filed May 14, 1930. Serial No. 452,197. 3 Claims. (Cl. 152—47.)



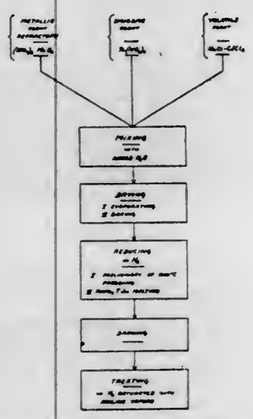
2. A shock absorbing wheel having fixed to each side of its hub a disc, spaced apart pins connecting the disc peripheries, levers each having one end mounted on one of said pins, a connection from each lever to the wheel rim, and at the other end of each lever a connection to a spoke of variable length, a spring device to control variation of said length as the result of wheel shock, a floating ring surrounding the hub, and a connection of each spoke to said ring.

1,808,887. HOBBY HORSE. BENJAMIN H. DUNKLEY, Kalamazoo, Mich. Filed May 23, 1930. Serial No. 454,897. 3 Claims. (Cl. 208—42.)



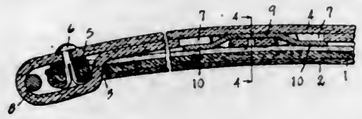
1. In a hobby horse, the combination of the body of the horse, the front portion of the horse hinged thereto by vertical pivot, wheels for the rear legs of the horse, a crankshaft axle therefor the cranks of which are journaled to the lower ends of said rear legs, a driving floor wheel disposed between and guided by the front legs of the horse and having an extended hub, a crankshaft with an offset center with its bearing disposed ec-

centrically to the center of the hub through the fore legs of the horse, cranks and pedals on the opposite ends of



said crankshaft, and handles at each side of the horse's neck for steering the same, coacting as described for the purpose specified.

1,808,888. PROPELLER. OLE FAHLIN, Sioux City, Iowa. Filed Dec. 28, 1929. Serial No. 417,090. 7 Claims. (Cl. 170—173.)

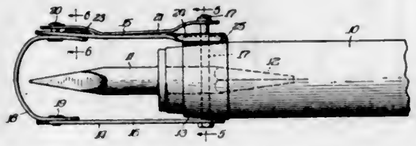


1. In an aeroplane propeller, a hub comprising a hub proper and sockets formed integrally therewith, each socket being provided with an internal annular recess, a blade shank received in the socket and formed with an annular recess registering with the socket recess to form therewith an annular space, the socket wall having an aperture communicating with said space, means insertible through said aperture and received in said space for transmitting longitudinal pull of the shank to the socket, and means to clamp the socket into gripping engagement with the shank.

1,808,889. MANUFACTURE OF METAL HAVING HIGH EMISSIVITY. COLIN G. FINK, Yonkers, N. Y. Filed June 21, 1924. Serial No. 721,493. 7 Claims. (Cl. 250—27.5.)

1. The process of producing a ductile metallic alloy having relatively high electronic emissivity, comprising mixing together with the aid of water soluble salts containing respectively a metallic agent, an emissive agent and a volatile agent, drying and reducing the mixture, pressing, sintering, the sintering temperature being such as to assure alloying of the components, drawing the reduced mass, and subsequently treating the drawn filament in an atmosphere of dry hydrogen.

1,808,890. DETACHABLE HANDLE. COLIN GRANT, Jackson, Mich., assignor of one-third to Clare R. Deem and one-third to Samuel Gay, Jackson, Mich. Filed May 26, 1930. Serial No. 455,646. 10 Claims. (Cl. 190—57.)

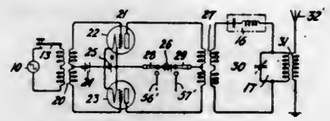


10. In a detachable handle, the combination of a main body portion of leather formed into channel shape and tapered toward the ends, and perforated with a transverse slot near each end, and a connecting strap disposed in the said channel extending around the ends and upwardly through the said slots and meeting and joined at the center.

1,808,891. PIKE POLE GUARD. ERIC O. HAMREN, Oshkosh, Wis., assignor to Leach Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Oct. 2, 1929. Serial No. 396,704. 6 Claims. (Cl. 294—19.)

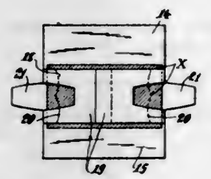
1. The combination, with a pole, and a pike at one end of the same, of a guard removably associated with the pike, said guard being pivotally mounted on the pole whereby to permit it to be swung forwardly from either side of the pole into a protecting position with respect to the tip of the pike or backwardly into an unobstructive position at either side of the pole.

1,808,892. PIKE POLE GUARD. ERIC O. HAMREN, Oshkosh, Wis., assignor to Leach Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Mar. 1, 1930. Serial No. 432,372. 8 Claims. (Cl. 294—61.)



1. The combination with a pole, and a pike at one end thereof, of an improved guard removably associated with the pike, said guard being pivotally mounted on the pole whereby to permit the guard to be swung forwardly into a protective position with respect to the tip of the pike or backwardly into an inoperative position alongside the pole and in alignment therewith.

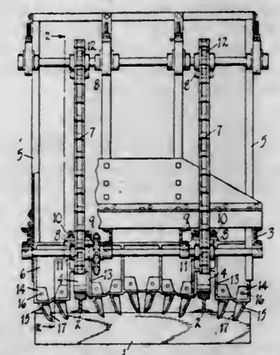
1,808,893. INSECTICIDE. LEON C. HECKERT, Bristol, Pa., assignor to Röhm & Haas Company, Philadelphia, Pa., a Corporation of Delaware. Filed May 2, 1930. Serial No. 449,364. 9 Claims. (Cl. 167—22.)



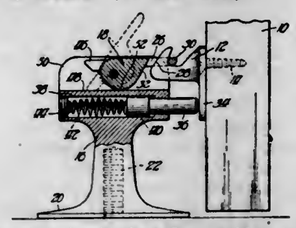
1. An insecticide comprising an aliphatic thiocyanate, the organic residue of which comprises a negative group.

1,808,894. ELECTRIC WAVE TRANSLATION SYSTEM. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1924, Serial No. 709,736. Renewed Apr. 11, 1929. 23 Claims. (Cl. 250—17.)

5. In an electric wave translation system, a plurality of three-electrode space discharge devices, means for varying the individual impedance of said devices alternately from infinite to small finite values successively, an electric circuit including said devices arranged to have constant impedance, and selective elements associated with said circuit for transmitting desired waves and suppressing undesired waves, the combined reactance of said elements being substantially zero for all waves.



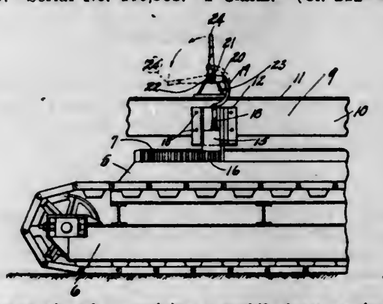
1,808,895. DISPLAY DEVICE. ABRAHAM HOLTZMAN, New York, N. Y. Filed Aug. 15, 1930. Serial No. 475,463. 6 Claims. (Cl. 206—82.)



1. An article holder adapted to be mounted on a support, said holder being formed integrally from a single blank to present a body having a display aperture, end flaps on said body to fold over said aperture, tabs sheared from said flaps adapted to enter slits in the support, and side flaps on the body for folding over the end flaps.

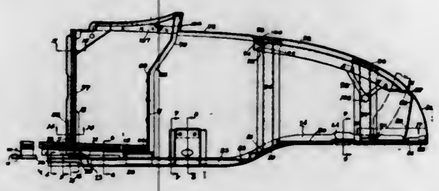
1,808,896. ROADBED WORKING MACHINE. CORWILL JACKSON, Chicago, Ill. Filed Aug. 22, 1930. Serial No. 476,991. 15 Claims. (Cl. 104—12.)

1. In a machine of the class described, the combination of a truck adapted to travel upon a railway track, vertical ways on said truck, a crosshead constituting a drop hammer reciprocatingly mounted in said ways and recessed on its under side to receive the rails of a track, said crosshead having downwardly facing sockets therein at each side of the recesses disposed in inwardly stepped relation, downwardly and inwardly projecting blade-like tools disposed in said sockets in inwardly facing sets, said tools having vertical central rib-like cutters, and means for actuating said crosshead.



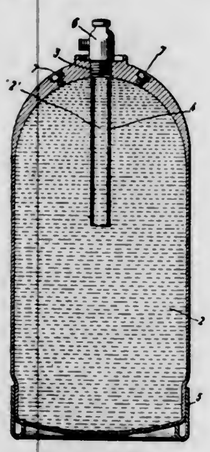
1,808,897. BUILDER'S HARDWARE. ELVIN H. JOHNSON, Winnetka, Ill. Filed Jan. 23, 1930. Serial No. 422,696. 7 Claims. (Cl. 292—246.)

1. A support, a latch pivoted on said support, a hook for engaging said latch, said hook and latch having cooperating cam surfaces for lifting the latch over the point of the hook to interlock the parts, and cam surfaces for throwing the latch clear of the hook upon further inward movement of the hook, said cam surfaces comprising two spaced surfaces on said latch and a single surface on said hook; said latch and support having cooperating portions for holding said latch in position to be engaged by said hook, or thrown back out of the way and inoperative, said support housing all but the outer tip of said latch in both positions, and resilient plunger means acting generally parallel to the movement of said hook and housed in said support, and tending to push said hook away from said support beyond the position for interlocking engagement with said latch.



1,808,898. TURNTABLE LOCK. JOHN M. KERR, Bay City, Mich., assignor to Bay City Shovels, Inc., Bay City, Mich., a Corporation of Michigan. Filed Oct. 17, 1929. Serial No. 400,363. 1 Claim. (Cl. 212—69.)

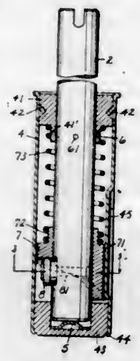
A power shovel comprising a mobile base, a ring gear secured thereto, a turntable mounted on the base and



revoluble upon a vertical axis, a vertically disposed slide secured to said turntable, a locking member slidably mounted therein, and provided with a plurality of teeth for engagement with said ring gear, a link pivotally connected to said locking member, a shaft, a bell crank rotatably journaled thereon, and a curved link connecting said first mentioned link with the bell crank.

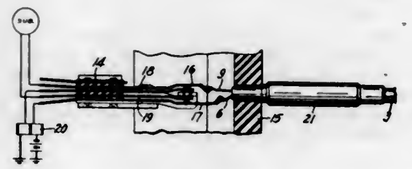
1,808,899. PRESSED METAL ROADSTER BODY. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 9, 1926. Serial No. 80,362. 18 Claims. (Cl. 296—28.)

1. A sill structure for automobile bodies comprising inverted and obverted metal channel sections arranged end to end with their adjacent ends overlapping and longitudinally joined together in their overlapping portions through their side walls on one side and through a bottom wall and a side wall on the other.



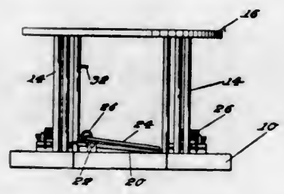
1,808,900. PROCESS AND APPARATUS FOR STORING ACETYLENE. EUGENE GEORGE LUENING, Louisville, Ky., assignor, by mesne assignments, to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 12, 1927. Serial No. 190,719. 14 Claims. (Cl. 23—246.)

1. A storage device for explosive fluids, including a container having a mouth, a filler of suitable porosity, and a partition of solid non-expansible porous material of greater density interposed between said filler and said mouth.



1,808,901. ROTARY AUTOMATIC CONTROL MEANS. JAMES J. MCGERRY, Chicago, Ill., and CHARLES H. WHITING, Kalamazoo, Mich. assignors to Rotary Utility Corporation, Chicago, Ill. Filed Aug. 4, 1930. Serial No. 473,106. 3 Claims. (Cl. 155—95.)

8. In a structure of the class described, the combination of a revoluble shaft, a casing having a head journaled on said shaft and having a suitable thrust bearing, a sliding cam on the said shaft, a spring for actuating the same



and a cooperating cam roller, one of which is secured to the said shaft and the other of which is secured to the said casing.

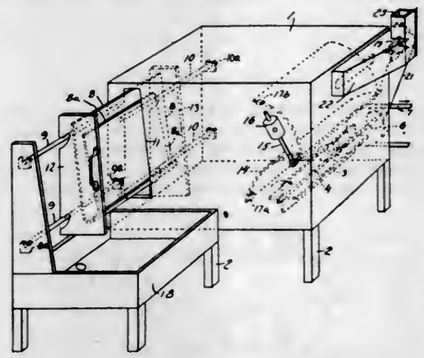
1,808,902. TELEPHONE PLUG. EMIL C. MUELLER, Elizabeth, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 17, 1930. Serial No. 453,176. 2 Claims. (Cl. 179—96.)

1. In a test plug for spring jacks of the type wherein a pair of cut-off springs normally engage the inner surfaces of the tip and ring springs of the spring jacks, in combination, a holder, and a pair of contact springs mounted thereon and adapted when inserted in said spring jack to engage said tip and ring springs on the outer surfaces of said springs to press these springs firmly against the inside cut-off springs.

1,808,903. ANIMAL TRAP. SVEN NELSON, Hornepayne, Ontario, Canada. Filed Aug. 21, 1930, Serial No. 476,931, and in Canada Aug. 26, 1929. 3 Claims. (Cl. 43—81.)

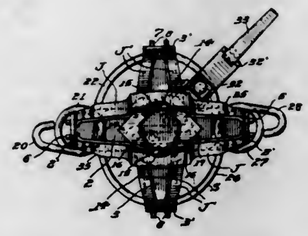
1. An animal trap including a base having an opening for the passage of animals upwardly therethrough, and spring traps spaced about the said opening, said spring traps comprising platforms and spring-operated jaws pivotally mounted on the platforms, said platforms being themselves pivotally mounted on the base and comprising release elements for the spring jaws upon depression of the platforms.

1,808,904. DAM AND METHOD OF CONSTRUCTING THE SAME. FRED A. NOETZLI, Los Angeles, Calif. Filed Mar. 15, 1928. Serial No. 261,979. 19 Claims. (Cl. 61—30.)



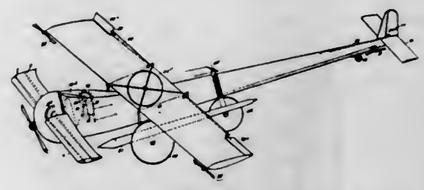
1. An arch dam comprising a plurality of arch laminæ, and an area of substantially loose contact between two adjoining said laminæ, said area extending upward from the bottom of said laminæ to the downstream face of said dam.

1,808,905. BUILDING MATERIAL. FRANK PAYNE, Chicago, Ill., assignor to Western Brick Company, Danville, Ill., a Corporation of Illinois. Filed May 28, 1928. Serial No. 281,196. 2 Claims. (Cl. 72—18.)



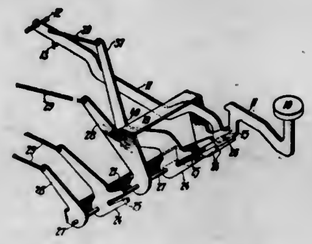
1. Building material having acoustical properties comprising burned shale bonded together with cement, the surface of the material being smooth and exposing smooth, cut surfaces of the burned shale.

1,808,906. ETCHING MACHINE. FRANK T. POWERS, Douglaston, N. Y. Filed Aug. 15, 1930. Serial No. 475,564. 4 Claims. (Cl. 41—9.)



1. The combination in an etching machine of the type described, of a carrier for the object to be etched, cooperating with a plurality of track members, part of which are located wholly within the etching chamber, and part of which are located wholly without the etching chamber.

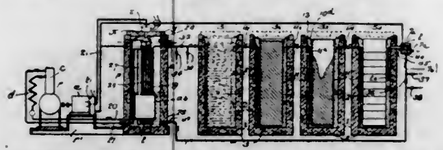
1,808,907. TRAP. LEOPOLD C. SCHNEIDER, Hatboro, Pa. Filed Apr. 11, 1929. Serial No. 354,221. 11 Claims. (Cl. 43—88.)



1. An animal trap comprising a base, two pairs of jaws respectively pivotally secured to the base, each jaw being of substantially arcuate contour and having a notch at the center of its inner edge, a spring arranged to directly actuate one of said pairs of jaws, means carried by said pair of jaws operative to actuate the other pair of jaws, and releasable means to hold all of the jaws in open position in opposition to the force of the spring.

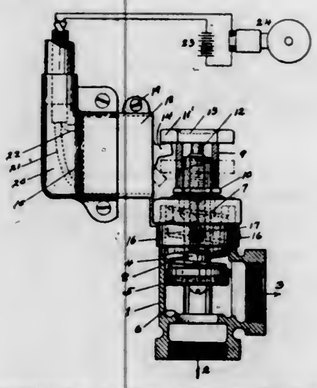
1,808,908. FLYING MACHINE. FRANK STEINMANN, Sr., De Soto, Mo. Filed May 8, 1930. Serial No. 451,309. 9 Claims. (Cl. 244—14.)

1. In a flying machine in combination with a main sustaining plane, an auxiliary stabilizing wing in conjunction with main tiltable propeller, mounted on the forward end of fuselage, capable of adjustment to vary the incidence thereof and interconnected means for simultaneously varying the incident of the flying machine including a circular section of slotted tubing secured to forward end of fuselage or nacelle, means for pivoted movement around the slotted circular guide comprising the housing for propeller shaft, a crosshead and bearing for universal joint connection affixed to motor shaft within.



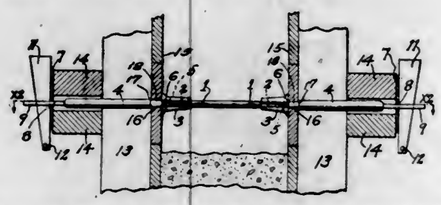
1,808,909. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Hillside, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 7, 1930. Serial No. 426,495. 15 Claims. (Cl. 197—27.)

1. In a portable typewriting machine having a standard key-lever system and a type-bar system of materially



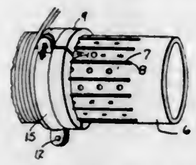
less width than the key-lever system, and a system of driving connections between the key-levers and the type-bars, said driving connections including bell-cranks, some of which are plain or flat and others of which are in the form of bails extending inwardly from the outer key-levers, each bail including an outer power-arm engaging its key-lever and also including an inner arm connected to drive the type-bar, the plain bell-cranks being interspersed with the drive-arms of the various bails.

1,808,910. REFRIGERATING APPARATUS. GARDNER TUFTS VOORHEES, Boston, Mass. Filed Apr. 18, 1921. Serial No. 462,283. 9 Claims. (Cl. 62—101.)



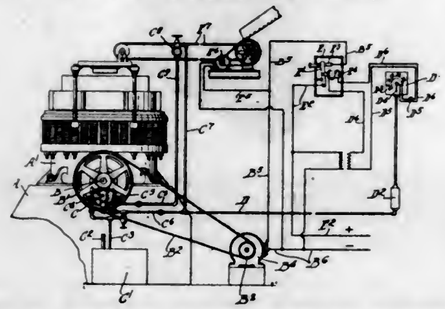
1. In a secondary refrigerator the combination of two concentric metallic cups and an insulating ring between and fixed to and joining their open upper ends, insulation between their opposed surfaces, a detachable brine conduit to and a detachable brine conduit from the inner cup.

1,808,911. VALVE ALARM. KENNETH WATSON, San Francisco, Calif. Filed Sept. 8, 1930. Serial No. 480,385. 9 Claims. (Cl. 137—162.)



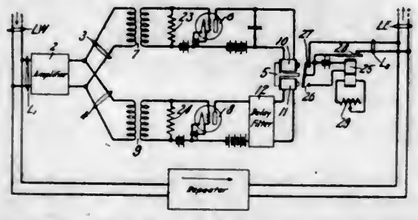
2. In combination, a pipe valve provided with means for automatic closing and a fusible link holding the same open, an electric alarm circuit provided with a switch arranged adjacent said valve, and means on said valve arranged to trip said switch upon closing movement of said valve.

1,808,912. ART OF AND MEANS FOR MOLDING CONCRETE STRUCTURES. JOHN MELVILLE WILLARD, Los Angeles, Calif. Filed July 7, 1928. Serial No. 290,983. 10 Claims. (Cl. 25—131.)



6. In a device for setting and holding concrete forms, the combination of a tension bar provided with a threaded end portion, and a flat rectangular end portion, a longitudinally directed slot in said flat end portion, a bearing plate movably carried on said flat end portion and longitudinally movable thereon, and a wedge inseparably but movably carried in said slot and adapted to bear against said bearing plate, said bearing plate being slidably carried by said tension bar between said wedge and threaded end of said bar.

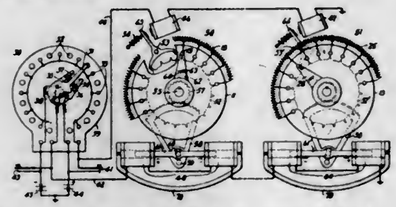
1,808,913. HOLDING RING FOR MANUFACTURING WELL SCREENS. HILLSMAN D. WILSON, Jr., Houston, Tex., assignor to Howard F. Smith, Houston, Tex. Filed Nov. 25, 1929. Serial No. 409,733. 6 Claims. (Cl. 29—89.)



1. A holding ring of the character described comprising a band of material shaped to encompass a screen pipe, said band having notches on its inner face to receive and space apart the wire ribs longitudinally of said pipe, said band being slidably axially along said pipe.

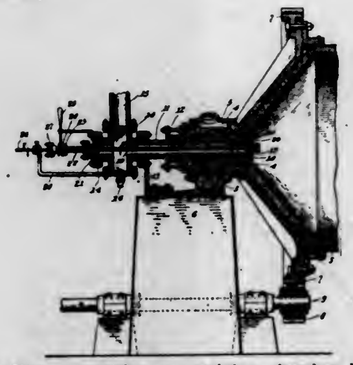
1,808,914. AUTOMATIC CONTROL FOR CONE CRUSHERS. GEORGE W. BENNETT, Milwaukee, Wis., assignor to Nordberg Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 16, 1929. Serial No. 386,403. 13 Claims. (Cl. 83—10.)

1. In combination, a crushing machine, an electrically actuated drive therefor, and an actuating circuit for said drive, an oil circulation system associated with the crushing machine, and means for breaking the drive actuating circuit in response to stoppage in the oil circulation system.



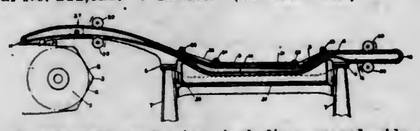
1,808,915. REPEATER CIRCUITS. BJÖRN G. BJÖRNSON, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1926. Serial No. 142,566. 11 Claims. (Cl. 178—44.)

1. In a signaling system, a path for steady alternating currents and voice currents, branches for said path,



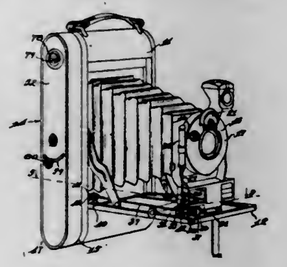
a rectifier in each branch, means for causing the effects of the rectified currents to act in opposition to one another, and means causing the effect in one branch to be predominant when said steady alternating currents are alone flowing in said path and the effect in the other branch to predominate when voice currents are flowing in said path.

1,808,916. CIRCUIT CONTROL SYSTEM. JOHN C. BURKHOLDER, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 13, 1925. Serial No. 68,823. 7 Claims. (Cl. 178—44.)



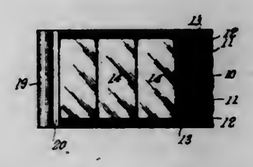
1. A circuit control apparatus comprising a rotary switch including a ratchet and pawl, a source of positive and negative impulses, means connected to said source and differently responsive to said positive or negative impulses for determining the direction of rotation of said ratchet, and means controlled by electrical impulses for determining the number of operations of said pawl.

1,808,917. FILTER. EDWIN BURT, Canutillo, Tex. Filed Dec. 10, 1928. Serial No. 325,036. 4 Claims. (Cl. 210—180.)



1. A filter comprising a revolving chamber having a hollow axial trunnion at one end; a supply nipple extending into said trunnion; connections for introducing material through said nipple; a valve seating against the inner end of said trunnion; a tubular valve stem for said valve passing outwardly through said nipple; an air supply nipple projecting into said valve stem; a spring on said valve stem holding said valve to its seat; and means outside of said nipple for manipulating said valve stem.

1,808,918. CONVEYER MECHANISM. GEORGE FREDERICK CROESSANT, Wyomissing, Pa. Filed Aug. 8, 1927. Serial No. 211,522. 7 Claims. (Cl. 198—109.)

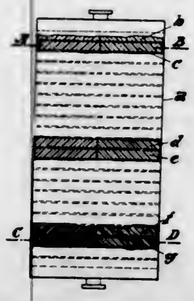


1. A conveyer mechanism including spaced side bars having endless runways consisting of upper and lower runs connected by return bends, said runs converging acutely to one of said bends, and an endless belt, the side edges of which are supported and guided by said runways; the belt being supported at said bends solely at its side edges.

1,808,919. AUTOMATIC FILM MOVING DEVICE FOR SINGLE EXPOSURE CAMERAS. EDWARD E. ELLIS, Alhambra, Calif., assignor of one-half to Oliver C. Stratton, Santa Monica, Calif. Filed July 11, 1927. Serial No. 204,782. 12 Claims. (Cl. 95—82.)

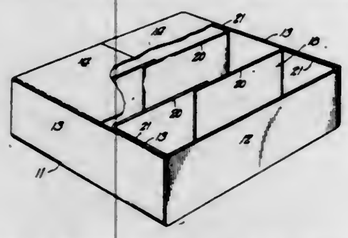
1. In the art described, the combination of a camera having a spool to wind a film thereon, a shutter mechanism and a removable back, a spring motor, a drive train from the motor to rotate the spool, a winding mechanism for the motor, an escapement mechanism for the said drive train, means preventing replacement of the back until actuation of the winding mechanism, said means interacting with the escapement, means controlled by the starting of the shutter actuating mechanism to engage the escapement means controlled by the shutter actuating mechanism after the closing of the shutter to release the escapement and allow rotation of the spool by the spring motor.

1,808,920. FLEXIBLE METALLIC STRAP. WILLIAM FORSTNER, Irvington, N. J., assignor to Forstner Chain Corporation, Irvington, N. J. Filed Dec. 1, 1928. Serial No. 323,182. 5 Claims. (Cl. 63—3.)



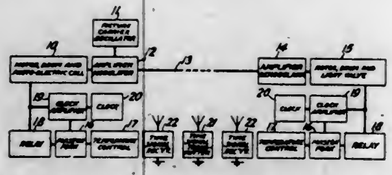
4. A flexible metallic strap comprising a woven wire strip having inturned selvaged edges, a plurality of narrow uniformly flat plates disposed transversely of said strip to extend over its inturned edges and spaced therebetween in juxtaposed relation, said plates being of lesser length than the width of said strip to disclose marginal portions adjacent both inturned edges, means for slidably confining said plates thereto, and means at the ends of said strip to retain said plates thereon.

1,808,921. METALLIC FILLING FOR COLD ACCUMULATORS. MATHIAS FRÄNKL, Augsburg, Germany, assignor to Philipp August Weydmann, Vienna, Austria. Filed July 21, 1928, Serial No. 294,356, and in Germany Aug. 1, 1927. 4 Claims. (Cl. 257—6.)



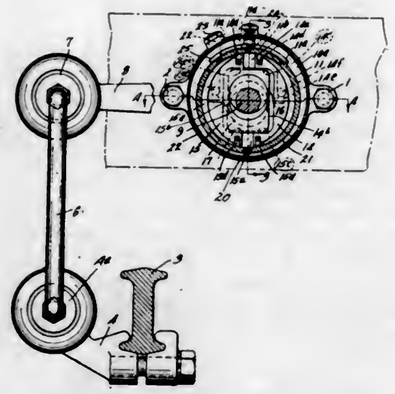
1. A cold accumulator comprising a shell, the inside space of such shell being divided into a number of zones, strips of sheet metal disposed in each of said zones and adapted to be chilled by a stream of cold gas passing

through the accumulator and to cool a subsequent stream of warmer gas, said strips disposed in such a way that



from zone to zone the extent of their surface and the mass of metal toward the colder end become greater, while the total flow area of the gas channels becomes smaller.

1,808,922. CONTAINER. CLARENCE P. GALLISTEL, Chicago, Ill., assignor to Container Corporation of America, Chicago, Ill., a Corporation of Delaware. Filed Apr. 22, 1929. Serial No. 356,977.. 1 Claim. (Cl. 229—27.)

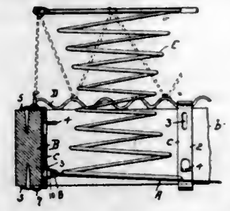


A container formed from a rectangular blank of sheet material comprising a bottom or main wall portion, two side walls, two end walls, elongated flaps integral with each side wall at each end thereof and each providing a portion substantially one-third the width of said bottom and providing another portion approximately one-half the length of said bottom whereby said elongated flaps may be folded so that their first mentioned portions lie inside and against the adjacent end walls and the second mentioned portions extend inwardly of the container to cooperate in pairs to form two partitions separating the interior of the container in substantially three equal parts, and additional portions on said rectangular blank integral with said end walls and extending to a distance substantially equal to the termini of said elongated flaps, said additional portions adapted to be folded inwardly to meet along a line substantially midway of the length of the container to form a second main wall or cover portion.

1,808,923. SYNCHRONIZING SYSTEM. JOSEPH W. HORTON, Cambridge, Mass., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 29, 1929. Serial No. 350,965. 6 Claims. (Cl. 178—69.5.)

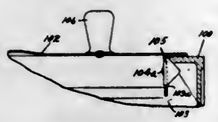
1. The method of synchronizing moving mechanisms, such as are employed in electrical image producing systems, comprising motive means at each station for causing the movement of corresponding parts of the apparatus, which method comprises independently generating at each station fluctuating energy of substantially constant frequency for controlling said motive means at that station, obtaining an indication at each station proportional to the exact time required for the generation of at least several million cycles of energy from said source at said station, and checking the indication at each station against the same source of time measure.

1,808,924. HYDRAULIC SHOCK ABSORBER. STEPHEN JENCICK, Chagrin Falls, Ohio. Filed Jan. 14, 1929. Serial No. 332,415. 18 Claims. (Cl. 188—88.)



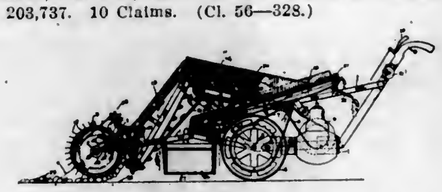
1. A shock absorber comprising a fluid-containing casing adapted for connection to one part of an automobile or the like, a plurality of plunger members within said casing, said casing and members being adapted for relative radial reciprocating movement therebetween and having oppositely disposed compression surfaces, rotatable means adapted for connection to a relatively movable part of an automobile or the like for causing relative movement between said compression surfaces towards and from each other so as to vary the compression of the fluid therebetween, and means of communication between opposite sides of the individual plunger members for the fluid so as to permit compression of the fluid also between said plunger members.

1,808,925. COMPOSITE CONDUCTOR. WILLIAM G. KNOX, Manhasset, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 9, 1926. Serial No. 153,678. 15 Claims. (Cl. 178—45.)



1. A signaling conductor comprising a plurality of component strands in close contact, and a thin layer of chromium on the contacting surface of at least one of said component strands, said layer being effective in preventing adhesion of said one strand to another of said strands during a heat treatment at temperatures of 700° C. or higher.

1,808,926. CHAIR SEAT AND COUCH BOTTOM. JACOB KRONHEIM, Cleveland, Ohio. Filed Nov. 29, 1929. Serial No. 410,395. 7 Claims. (Cl. 155—179.)

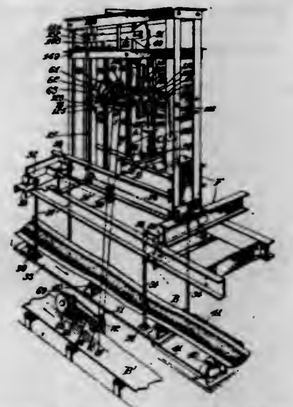


7. Suspensory means for resilient chair seats and couches, comprising a hanger having right-angled end portions grooved transversely, and a main body portion provided with a perforated ear and a slot relatively near the opposite right-angled ends thereof.

1,808,927. DOMESTIC APPLIANCE. RALPH L. LEE, Dayton, Ohio, assignor to Delco Light Company, Dayton, Ohio, a Corporation of Delaware. Original application filed Mar. 31, 1923, Serial No. 629,201. Divided and this application filed May 25, 1925. Serial No. 32,584. 4 Claims. (Cl. 220—55.)

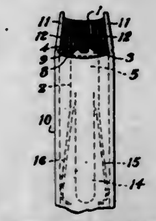
2. Washing apparatus having a tub provided with an opening, a cover extending inside said opening for sealing said opening, a plurality of spring-pressed members carried at a plurality of spaced apart points by one of said elements and adapted to cooperate with the other element for impositively locking the cover at said plurality of points on said tub in sealing position, said member being disposed within the inclosure formed by the tub and cover.

1,808,928. FRUIT GATHERING MACHINE. PETER H. LINT, San Jose, Calif. Filed July 6, 1927. Serial No. 203,737. 10 Claims. (Cl. 56—328.)



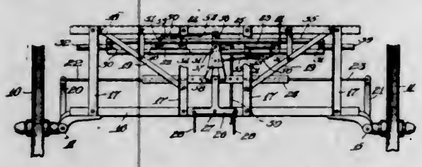
1. A fruit gathering machine comprising a frame, a rotatable fruit impaling drum mounted at the forward end thereof adapted to roll upon the ground, and a single supporting ground wheel cooperating with said drum spaced rearwardly therefrom, conveyor and draper means mounted on said frame arranged to carry fruit from said impaling drum, and a receiver into which said fruit is discharged, a small preponderance only of the weight of the machine being forwardly overbalanced with respect to the axis of said ground wheel and a guiding handle at the rear end of the frame for guiding the machine.

1,808,929. SULPHURIC ACID FUMING AND DECOMPOSITION PROCESS FOR THE RECOVERY OF ZINC. HERBERT HART MAYER and ROSS GEORGE LA MOTTE, Helena, Mont. Filed Sept. 29, 1926. Serial No. 138,566. 3 Claims. (Cl. 23—125.)



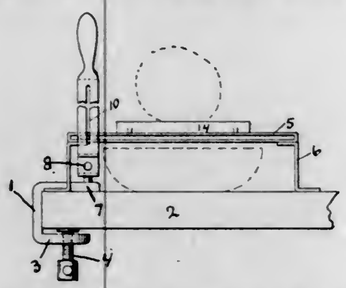
1. The process for treating zinc-bearing material which comprises mixing the material with a quantity of sulphuric acid in excess of that required to convert zinc and other metals contained therein to the sulfate form, subjecting the resulting mixture to a fuming operation to effect the desired conversion of metals to the sulfate form, roasting the resulting product to convert at least a portion of the zinc sulfate to zinc oxide, and recovering zinc from the roasted product by leaching with a sulphuric acid solution.

1,808,930. WEIGHER. EDWIN H. MESSITER, New York, N. Y., assignor to Merrick Scale Mfg. Company, Passaic, N. J., a Corporation of New Jersey. Filed Apr. 13, 1927. Serial No. 183,255. 61 Claims. (Cl. 265—28.)



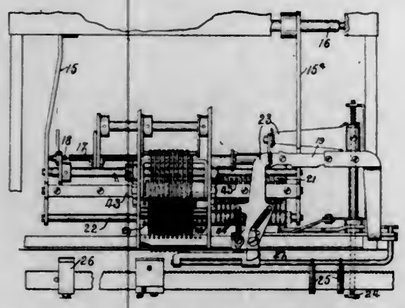
1. In a weigher, a travelling conveyer, scale mechanism having a support for a portion of the conveyer, balance mechanism to maintain the scale mechanism in position of equilibrium with no load on the conveyer and to counterbalance the load on that portion of the conveyer travelling over the support, a weight indicator, actuating means for the indicator movable in synchronism with the travel of the conveyer and normally uncoupled from the indicator, means to couple the actuating means with the indicator at successive predetermined movements thereof corresponding with predetermined lengths of conveyer travel, and means operative by the movement of the scale mechanism out of its normal position of equilibrium by the load applied thereto by the conveyer to control the coupling of the indicator with and the actuation thereof by the actuating means proportional to the weight of the load applied to the scale mechanism and indicate the weight of the material transported by each successive predetermined length of conveyor travel.

1,808,931. BOOKMARK. ROBERT H. MOORE, New York, N. Y. Filed May 21, 1929. Serial No. 364,898. 6 Claims. (Cl. 281—42.)



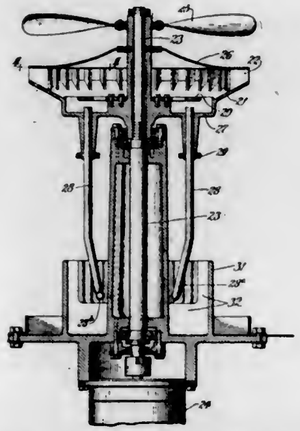
1. A book mark comprising a single piece of material adapted to be inserted between the back binding and leaves of a book, said material having a portion adapted for securing a marker cord thereto, said material consisting of springy portions normally projecting away from each other, and one of said portions being adapted to press against the interior side of the back binding and the other against the leaves of the book.

1,808,932. CULTIVATOR. JOHN R. ORELIND, Moline, Ill., assignor to Minneapolis-Moline Power Implement Co., Moline, Ill., a Corporation of Delaware. Filed Oct. 21, 1929. Serial No. 401,080. 6 Claims. (Cl. 97—155.)



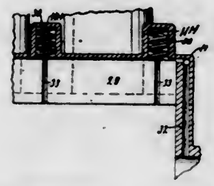
2. A cultivator having outside drag bar supports comprising off set members, the upper ends of said members extending laterally across the cultivator adjacent one another, inside drag bar supports having upper ends extending laterally adjacent the lateral extensions of the outside drag bar supports, clamping devices for selectively clamping the extensions of the inner supports to the extensions of either of the outer supports, means for moving the drag bar supports laterally, and connections between said moving means and said clamps.

1,808,933. VEGETABLE CUTTER. FRITZ PAHLOW, Chicago, Ill. Filed May 3, 1928, Serial No. 274,948. Renewed Dec. 8, 1930. 2 Claims. (Cl. 146—78.)



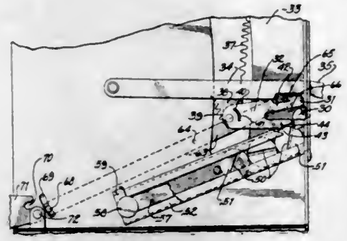
1. A device of the class described, including a support, cutting blades supported thereon, a reciprocating cutting blade movable beneath said first blades, a clamp on said support beneath said blades, angular bearing posts on the clamp, a U-shaped frame having perforated wings at its intermediate portion, pivoted on said posts, and the ends of said frame being slotted to receive the ends of the reciprocating blade.

1,808,934. CALCULATING MACHINE. WALTER J. PASINSKI, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 17, 1927. Serial No. 213,459. 3 Claims. (Cl. 235—60.)



1. The combination in a calculating machine having actuator racks and a transfer mechanism positioned opposite the same, of a plurality of counters carried by a slidable frame which is movable longitudinally to separately position the counters in active position between the racks and transfer mechanism, each of said counters comprising a series of pinions some of which have different numbers of teeth than others and an individual series of trip pawls for each counter pivoted on said frame and movable longitudinally therewith into and out of active relation to said transfer mechanism.

1,808,935. HUMIDIFIER. EMIL J. P. PLANERT, Union City, N. J. Filed Aug. 13, 1928. Serial No. 299,213. 3 Claims. (Cl. 183—24.)

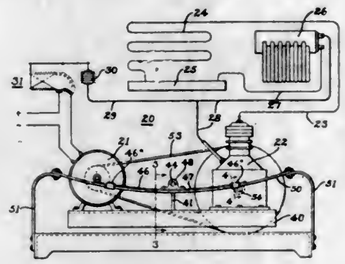


1. In apparatus of the class described, a member having a series of radial vanes and rotatable about a vertical axis, a plurality of tubes adapted to carry liquid secured to said member for rotation therewith and having forwardly projecting portions at their lower ends, a reservoir adapted to hold liquid into which the projections dip, means for maintaining a supply of liquid in said reservoir, means for preventing rotation of the liquid by said lower ends of the tubes, and means for deflecting said liquid toward said vanes.

1,808,936. ROTARY VALVE. LAWRENCE J. ROCHE, Harmony, Minn. Filed Dec. 13, 1926. Serial No. 154,642. 2 Claims. (Cl. 123—59.)

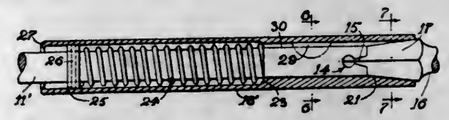
1. In a gas engine having a rotatable tubular gas intake and exhaust valve with transverse depressions in its exterior adapted during rotary movement of the valve to successively open passage means for intake of fuel to the engine and exhaust passage means from the respective compression chambers of the engine; an elongated compression bar member mounted in a groove provided in the engine head adjacent the exterior of said valve and longitudinally thereof, said bar having an elongated bearing surface contacting with the said valve, yieldable means pressing the said bar against the valve, and lubrication conducting means consisting of oil conducting passages provided in said engine head and leading to the outer parts of said bar, and further lubricating means in the bar comprising the provision of oil passages in the bar leading to its surface contacting with the valve, said latter conducting means being in communication with the first described conducting means.

1,808,937. VENDING MACHINE. EDWARD SCHULTZ, Chicago, Ill. Filed May 31, 1929. Serial No. 367,887. 13 Claims. (Cl. 194—54.)



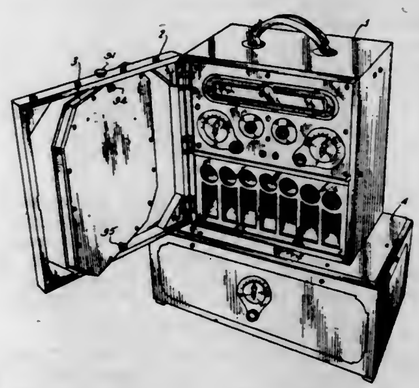
1. A vending machine comprising a compartment, a closure therefor and coin freed mechanism controlling the locking of said closure comprising means adapted to retain an inserted coin in predetermined position, resilient means normally tending to move the retaining means out of coin engaging position, means operable from the exterior of the compartment and adapted to be engaged by said coin to effect the release of said closure, and means controlled by the withdrawal of said closure for releasing the retaining means.

1,808,938. SULPHUR SLUDGE TREATMENT. GILBERT E. SEIL, Newark, N. J., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 7, 1926. Serial No. 107,522. 8 Claims. (Cl. 23—229.)



7. A process for separately recovering sulphur and solid extraneous material from a sludge containing the same comprising: depositing the sludge on a filtering medium; bringing steam alone into contact therewith while on said filtering medium to melt the sulphur; and concurrently filtering the melted sulphur away from the sludge through the filtering medium as it melts thereon under the heat of said steam.

1,808,939. REFRIGERATING APPARATUS. OTTO M. SUMMERS, Dayton, Ohio, assignor to Frigidaire Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 24, 1928. Serial No. 264,505. 5 Claims. (Cl. 248—16.)

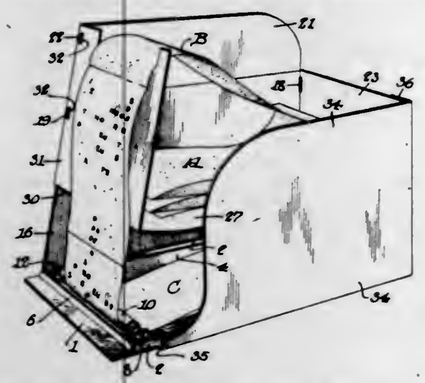


1. In a support for driving and driven members oscillating about a substantially definite axis, the combination of a supporting member, means for floatingly supporting said member substantially about said axis of oscillation, said means including upwardly concave strap members and means connecting said member to said strap.

1,808,940. BRACE CHUCK. CHARLES S. THOMAS, San Diego, Calif. Filed Mar. 7, 1928. Serial No. 259,772. 6 Claims. (Cl. 279—89.)

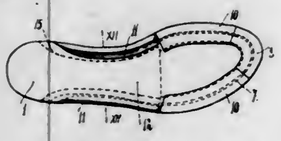
1. In a chuck of the character described, the combination of a driving shank having means at the outer end thereof for interlocking engagement with the end of a bit permitting coupling and uncoupling only by transverse movement of the bit with respect to the shank, a single sleeve slidable on the shank having means in the telescoping joint therebetween for holding the sleeve against turning relative to the shank, said sleeve having a tapered polygonal-shaped socket in the outer end thereof to receive the complementarily formed tapered end of the bit whereby to center the same and make wedging engagement therewith and transmit drive thereto, an annular shoulder on the shank having the inner end of the sleeve arranged to telescope thereon, spring means within said sleeve acting between the shoulder and the sleeve normally urging the sleeve outwardly toward its holding position, and means serving to limit the outward movement of the sleeve.

1,808,941. RADIO SYSTEM. ARTHUR F. VAN DYCK, Yonkers, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Nov. 7, 1925. Serial No. 67,474. 6 Claims. (Cl. 250—14.)



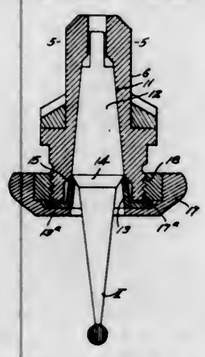
3. In combination with a portable cabinet comprising a radio receiving circuit, and a loop antenna removably mounted on the cabinet, a non-portable, supporting cabinet, containing means for operating said portable receiving circuit more efficiently, said last mentioned means including a tunable resonant circuit adapted to be connected to a grounded antenna, and means provided on the portable cabinet to receive the loop antenna when removed from said mounting, said last means being so disposed relative to the said tunable resonant circuit that the tunable circuit may be coupled to the portable receiving circuit by the loop antenna.

1,808,942. FOLDABLE NOTE PAD HOLDER FOR STENOTYPE OPERATORS. ALFRED C. ALLEN, Washington, D. C. Filed Sept. 30, 1930. Serial No. 485,524. 14 Claims. (Cl. 120—29.)



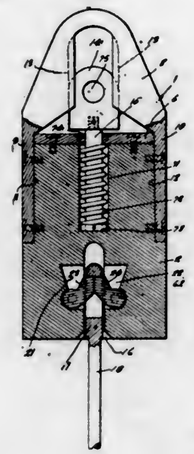
1. In a foldable note pad holder for stenotype operators, the combination of a base, an upright side member hing-

edly attached to the base, an upright rear member hingedly attached to the side member, a horizontal plate member hingedly connected to the side member for receiving the note paper which has been transcribed, a front member for holding a portion of the note pad to be transcribed, said



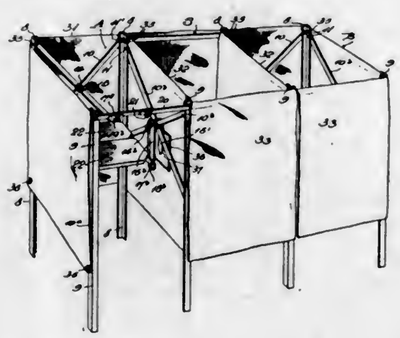
member being hingedly attached to the horizontal strip, means for supporting said front member in a slanting position, and means for fastening the aforesaid members one to the other in normal position for holding the stenotype note paper.

1,808,943. INSOLES FOR BOOTS AND THE LIKE. JAROSLAV BENDA, Prague, Czechoslovakia. Original application filed Oct. 11, 1924, Serial No. 743,140, and in Czechoslovakia Oct. 19, 1923. Divided and this application filed May 8, 1926. Serial No. 107,819. 5 Claims. (Cl. 36—22.)



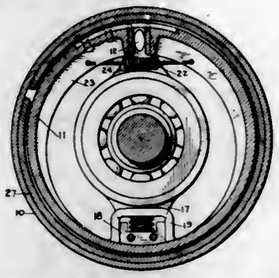
1. In an insole for boots and shoes, the combination with a sewing lip comprising strips which are connected to the insole, of a shank piece which covers the rear part of the sole including the entire heel portion and which carries the sewing lips at the waist, the shank piece as well as its sewing lips being cemented in position.

1,808,944. TOOL COUPLER. RAY W. BROWN, Altadena, Calif., assignor, by mesne assignments, to Henry Dalzell Wilson, Pittsburgh, Pa. Filed Jan. 30, 1929. Serial No. 336,317. 4 Claims. (Cl. 279—91.)



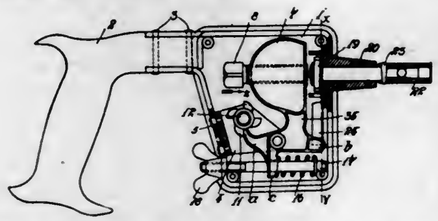
4. A coupler including a nut, a socket having an internal conical shoulder and a shank seat, a shank having a body part to bear on said seat and having a shoulder of reverse angle to and opposite said socket shoulder, and a slit wedging device interlocked loosely in the bore of the nut and having an annular nose extending axially and whose rim is contracted by said socket shoulder against and under said shank shoulder, as the nut is screwed on the socket.

1,808,945. COMBINATION AUTOMATIC BOAT RELEASE AND UTILITY HOOK. OLA D. BUTLER, Quantico, Va. Filed Sept. 24, 1929. Serial No. 394,873. 6 Claims. (Cl. 9—23.)



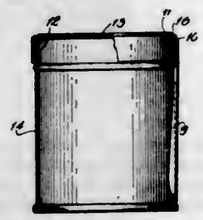
2. A device of the character described comprising a bolt adapted for connection to a hoisting apparatus, a locking arm connected to said bolt, a casing movably mounted on the bolt and locking arm, a pair of gripping jaws journalled in the casing and adapted to open and close and selectively controlled means cooperating with the gripping jaws and said locking arm for turning said jaws to open position as the hoisting force is released.

1,808,946. VOTING BOOTH. ISAAC S. DRAPER, Sullivan, Ind. Filed Nov. 18, 1929. Serial No. 408,018. 14 Claims. (Cl. 20—3.)



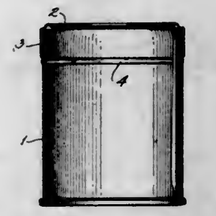
6. In a voting booth frame, a rear corner post, a rear brace connected to and inclining from said rear post, a shelf support, and means for supporting the front end of said shelf-support, the rear end of said shelf-support resting in the acute angle between said post and brace.

1,808,947. BRAKE MECHANISM. ARTHUR H. EDGERTON, Lakewood, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 15, 1929. Serial No. 378,351. Renewed Mar. 23, 1931. 5 Claims. (Cl. 188—178.)



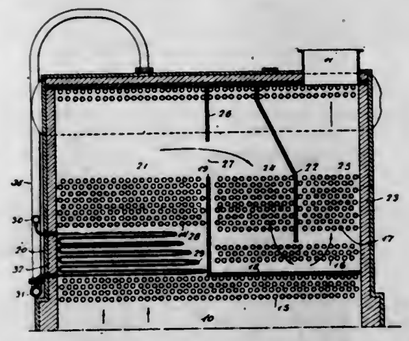
1. In a brake mechanism, a brake drum, a brake shoe in the form of a split-ring, a floatable friction member interposed between said drum and said shoe, and guiding means conforming to the contour of said shoe carried by one end of said shoe and overlapping the other end of said shoe.

1,808,948. PERCUSSIVE HAND TOOL. LOUIS FLUHR and ANTHONY VERHAAR, Brussels, Belgium. Filed Apr. 24, 1930, Serial No. 447,078, and in Belgium July 20, 1929. 2 Claims. (Cl. 255—41.)



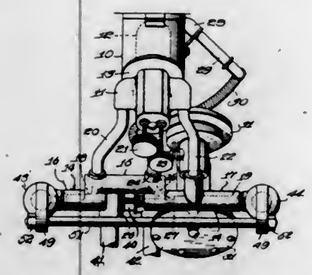
1. A percussive hand hammer, comprising a casing, a bent lever pivotally mounted in said casing, a striker integral with said lever, a cam wheel mounted for rotation in said casing and adapted to engage said lever, a spring acting upon said lever for bringing it back to its normal position after engagement by said cam and for imparting the required impulsion to the striker, a pawl pivotally connected to said lever, a ratchet wheel integral with the tool and adapted to be rotated by said pawl, a second pawl preventing the rotation of the ratchet wheel in the opposite direction, and the striking tool receiving percussive movements from the striker and intermittent rotary movements from the ratchet wheel.

1,808,949. DIPPER FOR SNUFF OR THE LIKE. JOHN C. FLYNN, Mount Vernon, N. Y., assignor to George W. Helme Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 29, 1928. Serial No. 329,209. 6 Claims. (Cl. 220—85.)



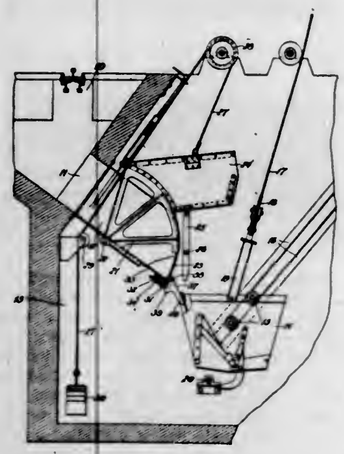
2. In combination with a can for snuff or the like and its flanged cover, a dipper structure of sheet material adapted for detachable connection to the cover and comprising a member having frictional peripheral engagement with the cover and a spoon connected to said member at one side and so positioned that when connected to the cover in place on the can body, the spoon extends downward close to the body wall.

1,808,950. DIPPER FOR SNUFF OR THE LIKE. JOHN C. FLYNN, Mount Vernon, N. Y., assignor to George W. Helme Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 29, 1928. Serial No. 329,210. 3 Claims. (Cl. 220—85.)



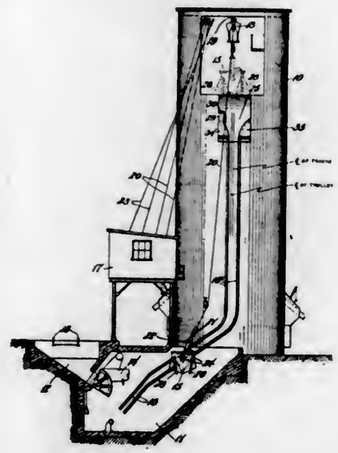
1. The combination with a can for snuff or the like, of a flanged cover, a spoon or dipper permanently connected with the cover in position to lie close against and substantially parallel with the side wall of the can when the cover is in place, the spoon being curved transversely throughout substantially its entire length to provide a concave surface for the snuff, and the curvature conforming to the curvature of the side wall of the can whereby to enable a close position of the spoon against the wall.

1,808,951. BOILER WITH SUPERHEATER. CHARLES W. GORDON, Pleasantville, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 5, 1929. Serial No. 330,496. 4 Claims. (Cl. 122—478.)



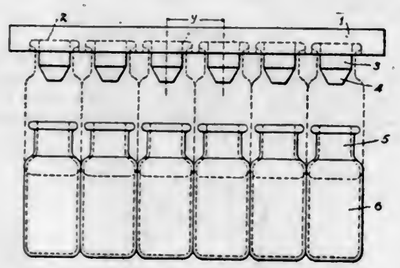
3. In a boiler, a furnace having walls, and a plurality of groups of water tubes within said walls arranged in different substantially horizontal planes, a plurality of substantially vertical baffles extending longitudinally of said tubes, a baffle in a plane substantially parallel to the planes of said groups and located above the lowest of said groups, said horizontal baffle extending from one of said vertical baffles transversely of said tubes to one of the walls of the furnace, said baffles providing a plurality of gas passes including a first gas pass having a relatively wide portion below the plane of said horizontal baffle and a relatively restricted portion above the plane of said horizontal baffle, those tubes only of one or more of said groups which are within said restricted portion being omitted to provide a clearance space, and a superheater arranged in said clearance space and having tubes arranged transversely of said water tubes.

1,808,952. BURNER SUPPORTING MEANS. SEELEY C. GULICK, Champaign, Ill. Original application filed Mar. 10, 1928, Serial No. 260,762. Divided and this application filed Oct. 15, 1928. Serial No. 312,677. 3 Claims. (Cl. 158—2.)



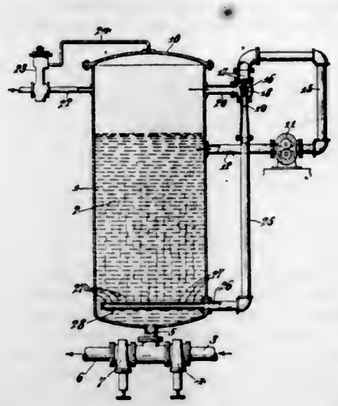
3. Mounting means for an oil burner comprising a body forming a part of the burner and having alined substantially horizontal end portions terminating in frusto-conical faces, a pair of elbows arranged outwardly of said body and each having one branch provided with a frusto-conical face adapted to engage against one of said first named frusto-conical faces, said body and said elbows being provided with passages forming supply means for the burner and communicating with each other through said frusto-conical faces, the passages through said elbows being continuous and unbroken, a pair of substantially parallel pipes possessing a substantial degree of resiliency and being anchored at one end, said pipes being free from each other intermediate their ends and having their opposite ends threaded in the other branches of said elbows, each of said elbows being provided with a laterally extending integral ear, and a releasable bolt passing through said ears for drawing said elbows toward each other.

1,808,953. HOPPER GATE. HAROLD E. HALLENBECK, Hudson, N. Y., assignor to Gifford-Wood Company, Hudson, N. Y., a Corporation of New York. Filed Apr. 16, 1929. Serial No. 355,517. 4 Claims. (Cl. 214—125.)



4. In combination, a chute having the lower end terminating in arcuate edges; a closure gate for the chute adapted to gravitate to open position when released; said gate comprising a pair of frames arranged at opposite sides of the chute and pivoted thereto; a curved plate secured between the outer ends of the frames and cooperating with the arcuate edges of the chute to close the latter when the gate is raised; means for releasably holding the gate in closed position; said means comprising a latch; a hoist bucket adapted to be lowered into filling position beneath the gate; and a pivoted bell-crank lever associated with the latch and having a short arm engageable with the latch and having a longer arm arranged to be engaged by the bucket when the latter is lowered, whereby the gate is automatically opened.

1,808,954. GUIDING MEANS FOR TROLLEY BUCKETS. HAROLD E. HALLENBECK, Hudson, N. Y., assignor to Gifford-Wood Company, Hudson, N. Y., a Corporation of New York. Filed Oct. 9, 1930. Serial No. 487,627. 7 Claims. (Cl. 214—119.)

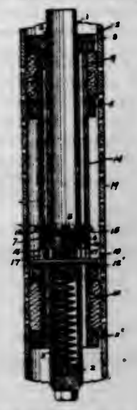


1. In combination, a bucket having rollers on opposite sides; a pair of upwardly extending tracks upon which the bucket rollers on each side travel; a pair of substantially vertical guide plates secured to the upper ends of the tracks; the bucket also having downwardly projecting fenders on each side; and means on the guide plates adapted to be engaged by said fenders to straighten the bucket as it descends, so that the rollers may properly engage the tracks.

1,808,955. MULTIPLE NECK GAUGE FOR BOTTLES. CARL G. HILGENBERG, Baltimore, Md. Filed Apr. 10, 1930. Serial No. 443,063. 2 Claims. (Cl. 33—174.)

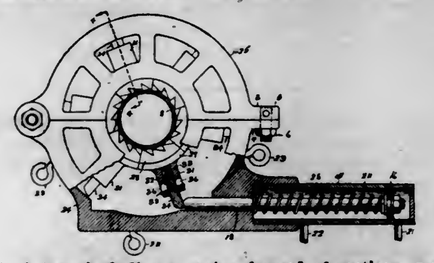
2. A gauge for inspecting bottles comprising a base having a plurality of recesses of the shape and dimensions of the outer periphery of the bottle necks, and plugs disposed centrally of said recesses for gauging the openings in said necks, said recesses and plugs being spaced to correspond to the center distances of the bottles when inserted in said recesses and with adjacent bottles in contact.

1,808,956. APPARATUS FOR AND METHOD OF COMBINING LIQUIDS AND GASES. SIGMUND G. KETTERER, Philadelphia, Pa., assignor to Schutte and Koerting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 17, 1930. Serial No. 461,696. 4 Claims. (Cl. 261—77.)



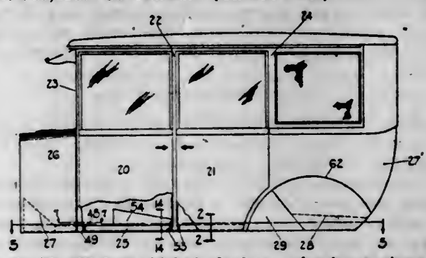
1. The method of treating a liquid with a gas, which comprises the continuous withdrawal of liquid from a body thereof contained in a closed receptacle, causing movement of the said liquid as a stream, causing a flow of gas from the top portion of said receptacle into the said stream of liquid, conducting the mixed stream of gas and liquid to the bottom portion of the said body of liquid and discharging the said mixed stream into the latter, permitting the unabsorbed or uncombined gas to bubble up through the said body of liquid, and thereafter causing a re-flow of the said portion of unabsorbed or uncombined gas into said stream of liquid and conducting the same with the said liquid back into the said body of liquid.

1,808,957. MANUFACTURE OF SEAMLESS TUBES. WILHELM KUNST, Barmen, Germany, assignor to Heinrich Esser, Hilden, Germany. Filed Apr. 4, 1927, Serial No. 181,010, and in Germany Jan. 17, 1927. 2 Claims. (Cl. 80—62.)



2. The process of producing seamless tubes by rolling, comprising reducing the wall thickness of a comparatively thick-walled tubular blank in a piercing mill, thereafter reducing the diameter of the said blank to the final diameter in a reducing mill and thereafter reducing the wall-thickness of said blank to the final thickness in a two-high rolling mill.

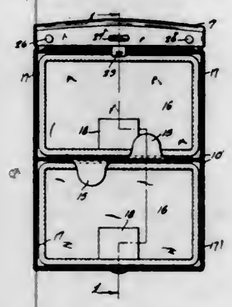
1,808,958. WELL SCREEN WASHER. CHARLES H. LANE and CHARLES H. REYNOLDS, Houston, Tex. Filed Sept. 3, 1929. Serial No. 390,012. 7 Claims. (Cl. 166—20.)



1. A well screen washer including a tubular stem having an outlet port, a yieldably mounted plunger therein normally blocking said port, a tubular perforated packer support around and spaced from the stem, spaced expansible packers around said stem support, means operable by said plunger and effective to simultaneously expand said packers.

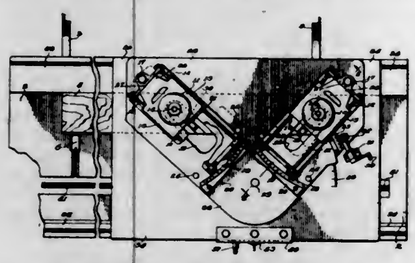
1,808,959. TONG. CHARLES H. LANE and CHARLES H. REYNOLDS, Houston, Tex. Filed Sept. 7, 1929. Serial No. 391,094. 6 Claims. (Cl. 81—54.)

1. A tong including a casing formed of sections, means for securing the sections together about a pipe, gripping means in the casing engageable with the pipe therein and adapted to rotate the pipe, yieldably mounted dogs on said gripping means, means operable by fluid under pressure and operatively connected with and adapted to impart partial rotations to said gripping means, said fluid pressure operable means including a reciprocable rod engageable successively with said dogs.



1,808,960. VEHICLE BODY CONSTRUCTION. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 29, 1924. Serial No. 740,425. 36 Claims. (Cl. 296—28.)

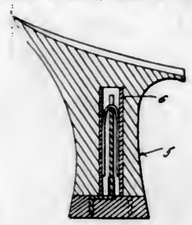
1. A side sill for vehicle body frames having an inverted channel section, the outer wall of which is extended in the



form of an angle section facing inwardly and downwardly whereby the sill forms the thresholds, the lower abutments for the doors, and a finish strip for the lower edge of the body.

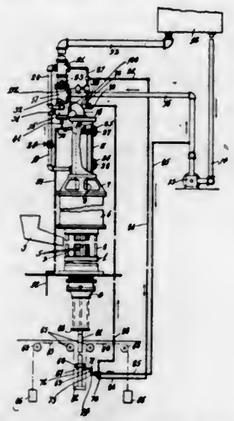
1,808,961. COMPACT AND PUFF HOLDER FOR VANITY BOXES. ANKER S. LYHNE, Bridgeport, Conn.; The Bridgeport City Trust Co., Bridgeport, Conn., executor of said Anker S. Lyhne, deceased, assignor to The Bridgeport Metal Goods Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 3, 1929. Serial No. 360,191. 6 Claims. (Cl. 132—83.)

1. In a vanity box, a substantially rectangular section, a second section hinged thereto, and a pair of separate and independent trays for holding cosmetic arranged side by side in one of said sections, said trays having upright side walls about their peripheries, the wall on one edge of each tray having an extension over the adjacent tray and located to one side of the center line of the tray to provide a holder to overhang a puff and hold it in said tray.



1,808,962. MACHINE FOR ROUTING STAIR STRINGERS. GEORGE MACKAY, Jackson, Mich. Filed Sept. 18, 1930. Serial No. 482,781. 7 Claims. (Cl. 144—136.)

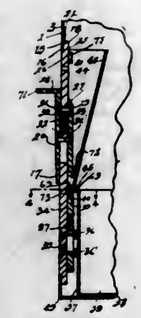
1. In a routing machine, a frame structure, a plurality of routing units, supporting means for said routing units shiftably mounted upon said frame structure whereby said units may be simultaneously adjusted along said frame structure, angularly related guide means for each of said routing units whereby said units may be shifted angularly toward and away from each other, and each of said units being provided at its opposite ends with tool chucks.



1,808,963. REMOVABLE HEEL LIFT. VINCENT MARINO, Haverhill, Mass. Filed Aug. 11, 1930. Serial No. 474,520. 2 Claims. (Cl. 36—42.)

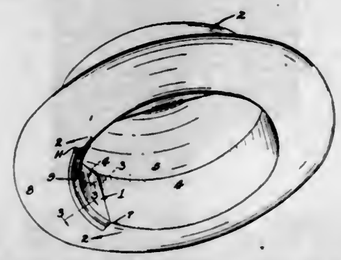
1. A removable top lift of the type described comprising a shoe heel, provided with a vertical bore extending from its bottom side to a point near its upper side, a tubular dowel pin forced into said bore, the bottom side of said heel and the bottom end of said pin being provided transversely with co-incident slots, an attaching structure comprising a flat T-shaped member, a pair of lateral projections on one side of the lower longitudinal edge of the cross head having points downwardly projecting from the outer edges, a similar lateral projection on the other side of the cross head having a point downwardly projecting from the outer edge, a top lift adapted to be secured to said attaching structure and by said projections and said points, the free end of the vertical member of the T-formation provided with a slot, and a V-shaped spring wire

element having its bend disposed in said slots, the adjacent side portions of said slots being bent toward each other to retain said V-shaped wire therein, said vertical member of said T-formation adapted to be inserted in the dowel pin in the heel and the arms of the cross head thereof adapted to be disposed with the slots of the dowel pin and the bottom side of the heel, said V-shaped wire adapted to springedly contact the walls of said pin to retain said formation therein.



1,808,964. EXTRUSION MACHINE. WILLIAM MCCLINTOCK and FRANK Y. PEARNE, Los Angeles, Calif., assignors to Pacific Clay Products, Los Angeles, Calif., a Corporation of California. Filed July 28, 1929. Serial No. 380,297. 22 Claims. (Cl. 25—16.)

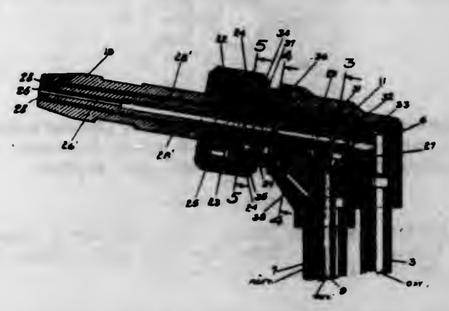
1. In a machine for the formation of articles by extrusion, a cylinder for plastic material, means for expressing said material from said cylinder, a pressure cylinder, a piston in said pressure cylinder operably connected to said expressing means, a tank for fluid, a source of fluid under pressure, a multiple port slide valve, and pipe means connecting said valve with opposed ends of said cylinder, the tank and said source of fluid pressure, said valve being adapted to selectively connect either end of said pressure cylinder with said source and simultaneously connect the opposed end of said cylinder with said tank.



1,808,965. VENDING MACHINE. ORA L. MOBLEY, Cincinnati, Ohio. Filed Mar. 25, 1930. Serial No. 438,735. 13 Claims. (Cl. 124—69.)

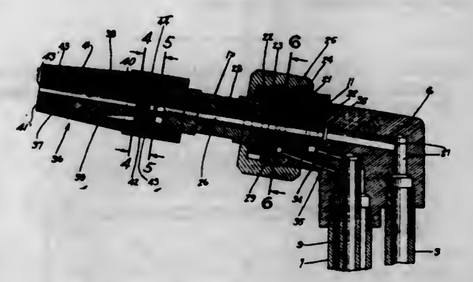
1. A vending device comprising a container for packages of goods to be vended, said container having an opening therein, a trough slidably mounted beneath said opening and having compartments adapted to receive said packages through said opening, said trough having a lug connected therewith, a vertical front plate mounted in said container and having a coin slot therein, a lower rear-bar slidably mounted adjacent the rear of said plate and positioned below said coin slot and having a cut-out in its upper inner surface whereby a space is provided between

the upper edge of said bar and said front plate, said lug adapted normally to contact said bar and prevent slidable movement of said trough in one direction, means whereby a coin, passed through said coin slot, enters said cut-out, and manually operative means to engage said coin and force said bar downwardly below said groove, whereby said lug is adapted to enter said groove and said trough is adapted to be manually slid with one of said compartments outside said container.



1,808,966. HATBAND PROTECTIVE MEANS. JOHN C. MORGAN, Los Angeles, Calif. Filed Nov. 28, 1927. Serial No. 236,158. 4 Claims. (Cl. 2—185.)

1. A hat band protecting shield comprising a sheet of non-absorbent material; means for securing said sheet to the sweat band of a hat; a flange extending forwardly from the lower edge of said sheet for a short distance under the hat brim; and a bead on said flange provided with openings through which perspiration may pass from said flange into the bead.

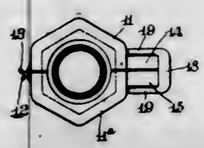


1,808,967. CUTTING TORCH. STUART PLUMLEY, Minneapolis, Minn., assignor to Smith Welding Equipment Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed June 27, 1929. Serial No. 374,074. 4 Claims. (Cl. 158—27.4.)

4. In a torch, the combination of a head provided with a tip having a central cutting orifice and a plurality of preheating orifices disposed around said cutting orifice, means for supplying a cutting fluid to said cutting orifice, conduits for supplying acetylene and oxygen to said preheating orifices, said head having annular cavities therein, one of which communicates directly with the acetylene supply conduit and the other with the oxygen supply conduit, said head also having annular chambers therein arranged to encircle said tip and directly communicating with said preheating orifices, one of said chambers having an annular narrow fuel passage connecting it with the cavity connected with said acetylene supply conduit and the other of said chambers having an annular narrow passage con-

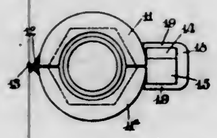
necting it with the cavity connected with the oxygen supply conduit, said annular narrow passages causing the flow of gases from said cavities to their respective chambers, to be equally distributed around the tip body, whereby each of said preheating orifices will receive an equal supply of fuel gas.

1,808,968. CUTTING TORCH. STUART PLUMLEY, Minneapolis, Minn., assignor to Smith Welding Equipment Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed July 29, 1929. Serial No. 381,926. 7 Claims. (Cl. 158—27.4.)



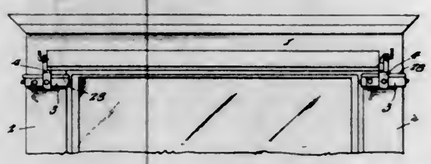
7. In a torch, the combination of a handle portion provided at one end with a head having oxygen and acetylene ports therein, a tip demountably secured to said head and including an intermediate section and a terminal section, said terminal section comprising a cylindrical member abuttingly engaged with one end of said intermediate tip section, and an outer tubular member fitting over said cylindrical member and having its walls spaced from the periphery of said cylindrical member to provide a narrow, annular passage between said members, means for securing said terminal tip members to said intermediate section, means connecting said annular passage with said oxygen port, an orifice in said inner member having means connecting it with said oxygen and acetylene ports, and valves for controlling the delivery of oxygen and acetylene to said annular passage and said orifice respectively.

1,808,969. METER SEAL. JOHN LAWRENCE POSTER, Columbus, Ohio. Filed Nov. 17, 1928. Serial No. 320,072. 1 Claim. (Cl. 70—123.)



A sealing device for pipe couplings including a pair of shells having neck members, said neck members pro-

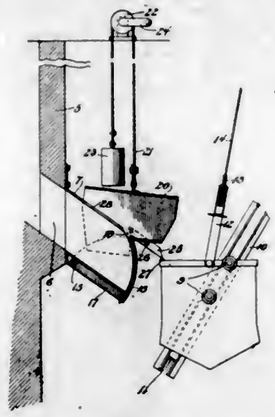
vided with notches in their ends and notches in their inner faces, a key for latching said neck members together including legs to lie opposite the outer faces of said neck



members and means on the key to engage said end notches, an intermediate leg carrying a spring to engage the notches of the inner faces of said neck members.

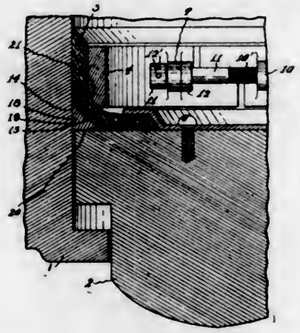
1,808,970. METER SEAL. JOHN LAWRENCE PORTER, Columbus, Ohio. Filed Nov. 19, 1928. Serial No. 320,276. 4 Claims. (Cl. 70—123.)

1. A sealing device for a pipe coupling including a pair of shells provided with cooperating neck members, one of which neck members has a groove at the outer side thereof, a key for locking said neck members together including a head portion provided with a leg to enter said groove, and a spring carried by said key having a hook to engage the bottom of said groove to prevent the withdrawal of the key.



1,808,971. CURTAIN AND SHADE HANGER. EDWARD ROBERTS, Atchison, Kans. Filed June 23, 1930. Serial No. 463,300. 1 Claim. (Cl. 156—24.)

A curtain support comprising a clamp to extend across a side stile of a window frame, means to releasably secure said clamp in a set position upon the stile, a bracket carried by said clamp and consisting of a strip of material having one end portion bent to form a standard and an arm extending forwardly from the upper end of the standard, the other end portion of said strip being folded upwardly in spaced relation to itself to form a clamp encircling sleeve and terminating in tongues extended through recesses formed in opposite sides of the standard and clinched against the sleeve, and means to releasably secure the bracket in a set position upon the clamp.



1,808,972. GATE. CLAIR M. ROOT, Detroit, Mich., assignor to Gifford-Wood Company, Hudson, N. Y., a Corporation of New York. Filed Dec. 29, 1925, Serial No. 78,163. Renewed Feb. 11, 1931. 7 Claims. (Cl. 214—125.)

4. A device for discharging material from a hopper into a hoisting bucket, comprising a combined gate and chute movable into a position to discharge into the bucket when the latter is lowered, and means engageable by the bucket when the latter is hoisted to raise the chute and close the gate, said means being pivoted

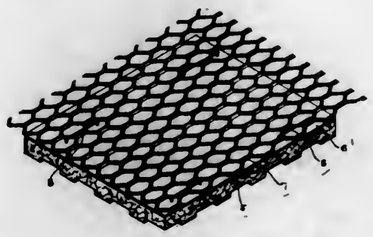
to the chute in such a position as to drop by gravity to afford clearance for the bucket as the latter is returned to filling position.

1,808,973. HYDRAULIC PISTON PACKING. HERMAN J. B. SCHARNBERG, Fort Wadsworth, N. Y. Filed Aug. 7, 1928. Serial No. 298,111. 17 Claims. (Cl. 74—109.)

1. A hydraulic press piston of the class described comprising a hydraulic cup leather and an expandible continuous metal fillet supporting ring for supporting the fillet of said cup leather.

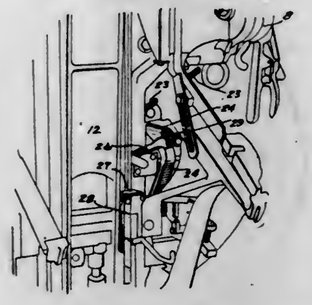
1,808,974. MEANS FOR CABLE LAYING. FERDINAND WILKENS, Meldorf, Holstein, Germany. Filed Sept. 21, 1929, Serial No. 394,293, and in Germany Apr. 18, 1928. 4 Claims. (Cl. 111—5.)

1. An implement for laying underground cables, pipe lines and like articles in the ground at a distance below the surface of the soil, comprising in combination: a tractor; a swinging carrier beam pivotally mounted on said tractor; a knife-shaped supporting member attached to said carrier beam at the end remote from the pivot thereof; and mandrel means mounted on said knife-shaped



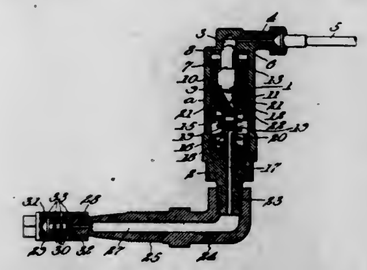
supporting member, for producing a closed underground channel by radial displacement and compression of the soil, said mandrel means having a greater diameter than the thickness of said knife-shaped supporting member and having the cable attached to it to enable the cable to be drawn into the underground channel.

1,808,975. SHEET MATERIAL CONTAINER FOR BULK ICE CREAM AND OTHER PRODUCTS. WILBUR L. WRIGHT, Fulton, N. Y., assignor to Oswego Falls Corporation, Fulton, N. Y., a Corporation of New York. Filed Apr. 30, 1930. Serial No. 448,545. 4 Claims. (Cl. 229—4.5.)



1. A paper container embodying a tubular barrel of stiff strong sheet fibrous material having a lower end extension longitudinally slit to form an annular series of longitudinal tongues, said barrel creased to expand from flat collapsed form to operative tubular form; bottom and top paper material exterior slip covers to exteriorly receive and tightly cover the otherwise open ends of the expanded barrel; and a separately formed stiff oversize paper material disk to form the inner bottom floor of the container and tightly press and expand the lower end of the expanded barrel against the surrounding rigid flange of the bottom slip cover and clamp the tongues of the body against the end wall of the bottom cover.

1,808,976. PLASTER BOARD. MILTON S. WUNDERLICH, St. Paul, Minn., assignor to Flaxlinum Insulating Company, St. Paul, Minn., a Corporation of Minnesota. Filed June 16, 1930. Serial No. 461,571. 10 Claims. (Cl. 72—124.)

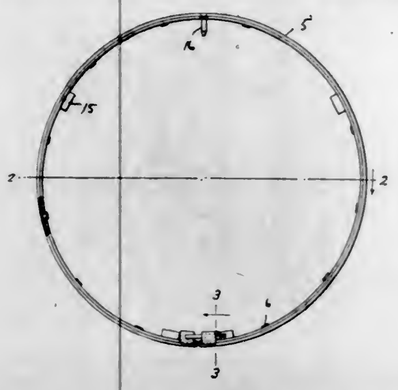


2. A composite lath and heat insulating material, comprising a felted flexible insulating layer and a flexible layer of expanded metal lath secured thereto, said material being flexible.

1,808,977. KNIFE WIPER FOR TYPE CASTING MACHINES. GEORGE L. CURLE, Minneapolis, Minn. Filed June 28, 1929. Serial No. 374,529. 13 Claims. (Cl. 199—62.)

1. In a type casting machine the combination with the type slug trimming knives thereof, of a wiper blade mounted for movement over said knives with a combined wiping and shearing action, and connections for intermittently operating the wiping blade from a movable part of the machine.

1,808,978. TERMINAL VALVE FOR FORCE FEED LUBRICATORS. FRANK W. EDWARDS, Chicago, Ill. Filed July 8, 1927. Serial No. 204,218. 6 Claims. (Cl. 184—76.)

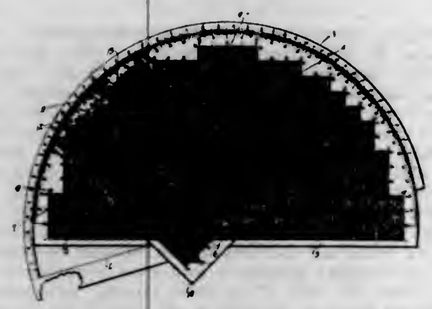


1. In a terminal valve for force-feed lubricators, a body having an inlet port and an outlet port, a housing slidable in said body, a check valve carried by said housing and acting under the influence of oil pressure to open said inlet port, means for seating said valve to close said inlet port, and means carried by the housing and cooperating with means adjacent to the outlet port for opening and closing said outlet port in response to the opening and closing of said inlet port.

1,808,979. EMERGENCY RIM AND PROTECTOR. ANDREW W. FITZ, Council Bluffs, Iowa. Filed Sept. 11, 1928. Serial No. 305,213. 1 Claim. (Cl. 152—23.)

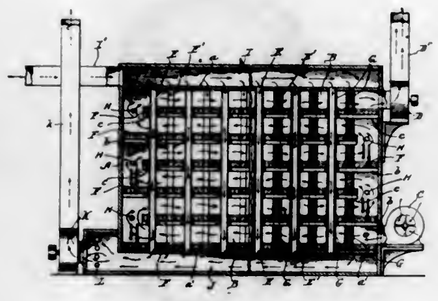
An emergency tire and protector for automobile tire rims of the character described comprising a resilient split band including inner and outer laminations and an intermediate lamination, the intermediate lamination having its ends spaced inwardly from the ends of the inner and outer laminations, means securing the laminations together, a flat metallic strap extending transversely between the inner and outer laminations in one end portion of the bands and anchored therein adjacent one end of the intermediate lamination, said strap projecting laterally from the sides of the band, integral, substantially U-shaped hooks on the ends of the strap, a flat metallic strap extending transversely between the inner and outer laminations in the other end portion of the band and an-

chored therein adjacent the other end of the intermediate lamination, right angularly disposed, integral, apertured ears on the ends of the second named strap, and means



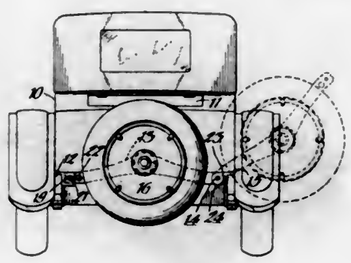
pivotally connected to the ears and adjustably engageable with the hooks for detachably connecting the ends of the band together in a manner to draw said ends toward each other.

1,808,980. BEARING FOR CLUTCH RELEASES. DAVID E. GAMBLE, Detroit, Mich., assignor to The Borg & Beck Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1926. Serial No. 109,238. 2 Claims. (Cl. 192—98.)



1. A clutch release yoke bearing comprising an anti-friction bearing block and a cup cast on said block, the bearing portion of said block projecting beyond the face of the cup, and said cup having integral and radially disposed supporting members projecting outwardly from the periphery and at the back thereof.

1,808,981. CALCULATING DEVICE. CLIFTON A. GLASS, Kansas City, Mo. Filed Jan. 31, 1927. Serial No. 164,718. 6 Claims. (Cl. 33—75.)

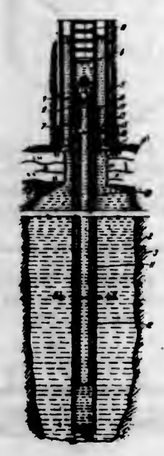


1. A calculating device comprising a semi-circular scale having arcuately-arranged graduations in terms of slope, a semi-disk pivoted on the axis of said scale and having peripheral graduations in terms of slope registerable with the graduations of said scale and right angularly intersecting lines, and a transparent index pivoted on the axis of said scale having longitudinal and transverse graduations cooperating with said lines to identify unknown dimensions and unknown angles.

1,808,982. AIR CONDITIONER. GORDON D. HARRIS, Stamford, Conn., assignor to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed Apr. 14, 1926. Serial No. 101,870. 25 Claims. (Cl. 62—139.)

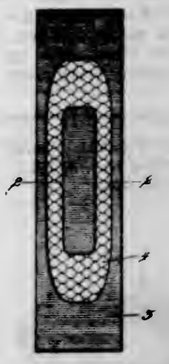
1. In an apparatus of the class described, the combination of a flow channel including a plurality of passes, means for circulating air within the flow channel and through the successive passes thereof, means for artificially heating the air at the stages of its flow within the successive passes of said flow channel, a series of tubular members extending across the passes of said flow channel, absorbent material supported by said tubular members and exposed within the passes of said flow channel for the contact of air therewith, means for charging said absorbent material with liquid, and means for circulating air within said tubular members independently of the air flow within said flow channel.

1,808,983. CARRIER FOR SPARE WHEELS AND TIRES. EDWARD S. HEBELER, Buffalo, N. Y. Filed Dec. 29, 1928. Serial No. 329,115. 2 Claims. (Cl. 224—29.)



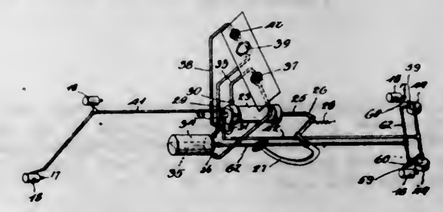
1. A carrier for the spare wheel or tire of a vehicle, comprising a vertically-swinging supporting member fulcrumed at one side of the longitudinal axis of the vehicle for movement in a plane crosswise thereof and including means for holding a spare wheel or tire thereon, means applied to the vehicle at one side of the fulcrum of said supporting member for sustaining the latter in position centrally at the rear end of the vehicle, and means on the vehicle for sustaining said member in a reversed position at the opposite side of said fulcrum transversely at one side of the vehicle above the ground and clear of its rear end to render the same accessible.

1,808,984. TOOTHED DRUM FOR QUACK GRASS DIGGERS AND PLOWS. SAMUEL H. HEINMILLER, New Hampton, Iowa. Original application filed June 1, 1929, Serial No. 367,720. Divided and this application filed Mar. 20, 1930. Serial No. 437,443. 1 Claim. (Cl. 97—216.)



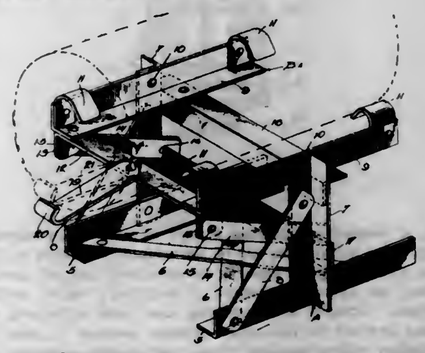
In a quack grass digger and plow, a drum, teeth of V-form in side elevation and of rectangular form in front elevation, means pivotally connecting the teeth to the drum with their forward sides extending radially from the drum, and means yieldingly holding the teeth against pivotal movement.

1,808,985. PUMP. GEORGE A. HELMLING, Pampa, Tex. Filed Sept. 14, 1928. Serial No. 306,066. 2 Claims. (Cl. 103—220.)



1. In apparatus of the character described including a casing, a working barrel, a standing valve support in the barrel having a lower end depending below the barrel, a strainer, and a gas trap pipe adapted to depend in the strainer, a coupling including upper and lower portions screw threaded to receive respectively the barrel and the strainer and adapted to support the valve support, said coupling including an intermediate portion provided with a port located below the valve support for admitting air from the casing to the barrel, said lower portion having an internal threaded shoulder for supporting the gas trap pipe in spaced relation with the strainer.

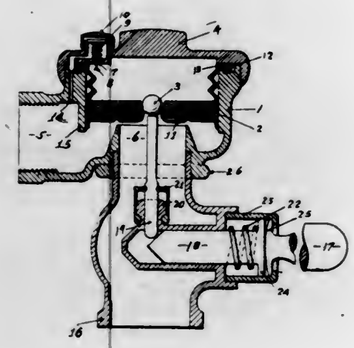
1,808,986. STENCIL. RALPH W. HUNTER, Jacksonville, Fla. Filed Apr. 29, 1929. Serial No. 358,816. 3 Claims. (Cl. 107—127.)



1. A stencil having a base of flexible material having stencil openings therethrough, and a continuous layer of wire mesh embedded between the surfaces thereof, said material being bonded together through the wire mesh openings.

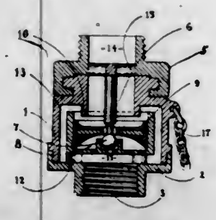
1,808,987. FLUID-OPERATED FOUR WHEEL BRAKING SYSTEM FOR LAND VEHICLES. DWIGHT C. KELLOGG, Carthage, Mo. Filed May 23, 1924. Serial No. 715,445. 9 Claims. (Cl. 188—152.)

9. The combination with mechanism for applying a brake for a pivot wheel by fluid pressure; of means coaxial with the wheel pivot mechanically operated by the wheel upon pivoting of the wheel to control the fluid to the mechanism to cut off the supply and vent it after a predetermined pivotal movement of the wheel.



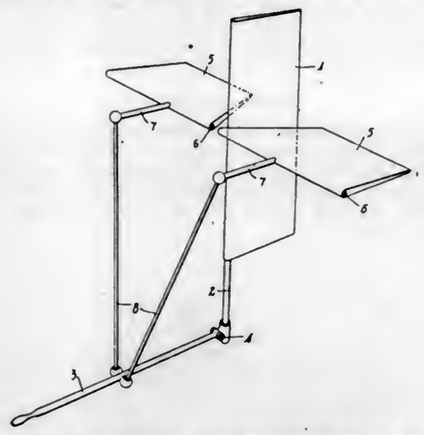
1,808,988. BARREL RACK. NATHAN LANG, Jr., Charleston, Ill. Filed Dec. 27, 1927. Serial No. 242,701. 3 Claims. (Cl. 248—58.)

1. In a barrel rack, a substantially rectangular barrel supporting frame including a pair of spaced side arms and spaced barrel supporting brackets secured to each arm adjacent the respective ends thereof and extending above



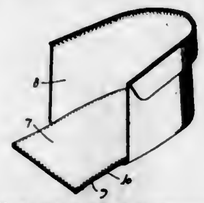
said arms, the brackets on one arm being spaced from each other and being also spaced from the brackets on the other arm to thus provide a multipoint support for a barrel carried by the frame, and a barrel engaging hook pivotally connected to one end of the frame and adapted to extend therefrom for cooperation with the barrel for initially loading the latter onto the frame, said hook and said spaced brackets being alone adapted to engage said barrel.

1,808,989. FLUSH VALVE. JESSE D. LANGDON, Los Angeles, Calif. Filed Nov. 8, 1927. Serial No. 231,915. 6 Claims. (Cl. 137—93.)



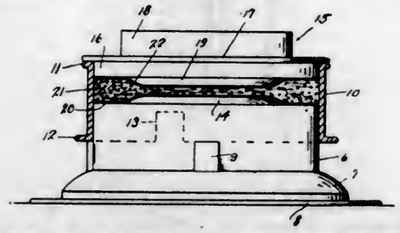
1. A valve comprising a body having a seat, and a valve member of flexible material movable in the body and having a metal plate partly embedded in said material, said plate and flexible material being both arranged to contact with said seat.

1,808,990. AUTOMATIC COUPLER VALVE. JESSE D. LANGDON, Los Angeles, Calif. Filed Mar. 1, 1928. Serial No. 258,402. 5 Claims. (Cl. 284—18.)



3. A coupler comprising a pair of coupler members, a main valve member in one of the coupler members to close same and having an opening therein, said coupler member having an aperture therein, a secondary valve member disposed between said opening and said aperture, and means carried by the other coupler member to open the secondary valve member when the coupler members are brought together, said main valve member adapted to be closed and opened by fluid pressure within the first named coupler member when the secondary valve member is closed and opened, respectively.

1,808,991. STEERING GEAR FOR AIRSHIPS. JESSE D. LANGDON, Los Angeles, Calif. Filed Apr. 8, 1929. Serial No. 353,623. 6 Claims. (Cl. 244—29.)

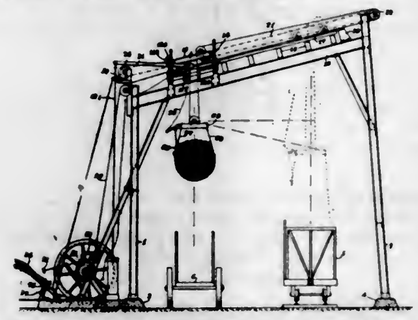


1. A steering gear for airships comprising a vertical shaft, a rudder connected to said shaft, lever arms mounted to turn on a horizontal axis, ailerons connected with said arms, a hand lever connected with said shaft to turn with same and adapted to be swung upwardly and downwardly, and links connecting said lever and arms.

1,808,992. COMBINED COUNTER LINER AND HEEL CUSHION. JESSE D. LANGDON, Los Angeles, Calif. Filed Apr. 12, 1929. Serial No. 354,578. 4 Claims. (Cl. 36—55.)

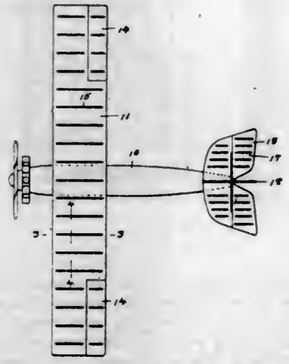
1. A counter liner for a shoe comprising a bottom portion formed with a pocket, and a cushion expanded laterally in said pocket to straighten out said bottom portion, the mouth of the pocket being of less width than the cushion.

1,808,993. PATTY FORMING DEVICE. NORRIS FEY MURRAY, Hinsdale, Ill. Filed Oct. 28, 1929. Serial No. 402,980. 1 Claim. (Cl. 107—19.)



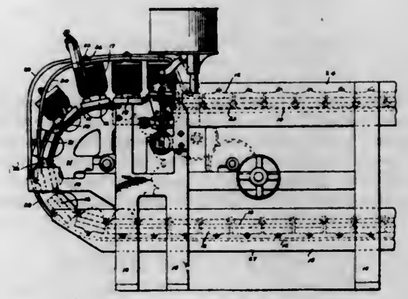
A food forming device of the character described comprising a base, an upwardly extending body on the base, a sleeve slidable on the body, said sleeve being open at its upper end, means for maintaining the sleeve in a position projecting a substantial distance above the top of the body, and a member for closing the upper end of the sleeve when the base within the confines of the sleeve has been filled with food, said means for maintaining the sleeve elevated comprising a plurality of cleats or formed lugs on the said body upon which the lower end of the sleeve may rest and which engages into recesses on the said sleeve when the sleeve is rotated to register said recesses with the cleats.

1,808,994. ADDITIVE COMPOUND OF DIETHYL BARBITURIC ACID AND 4-DIMETHYLAMINO-2.3-DIMETHYL-1-PHENYL-5-PYRAZOLON. PAUL PFEIFFER, Bonn-on-the-Rhine, Germany. Filed Mar. 20, 1925, Serial No. 17,130, and in Austria Mar. 27, 1924. 1 Claim. (Cl. 260—33.)



As a new product, the additive compound obtained by combining diethyl barbituric acid with 4-dimethylamino-2.3-dimethyl-1-phenyl-5-pyrazolon substantially in molecular proportion such compound forming substantially colorless needles of silky luster melting about between 113–115° C., dissolving in water and being decomposed by benzene.

1,808,995. LOADING APPARATUS. GERMAN VIERA RODRIGUEZ, Manzanillo, Cuba. Filed June 8, 1926. Serial No. 114,494. 4 Claims. (Cl. 265—32.)

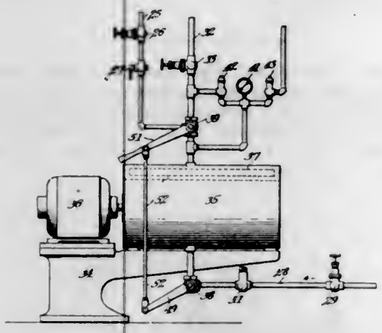


1. A weighing apparatus including a movable track section, plates carried by said movable track section, stirrups connected to said plates and supported from a fixture, a long arm connected to one of said plates and extending transversely of and beneath the track section and to a point beyond the opposite side of the track section, a short arm connected to the other of said plates and extending transversely of the track section to a point substantially in the longitudinal median line thereof, a swinging knife edge support carried by the long arm to provide a knife edge bearing for the free end of the short arm, and weight indicator operating mechanism connected to the free end of the long arm.

1,808,996. AIRPLANE. ROYALL H. ROYSTER, Oxford, N. C. Filed Nov. 23, 1928. Serial No. 321,418. 1 Claim. (Cl. 244—2.)

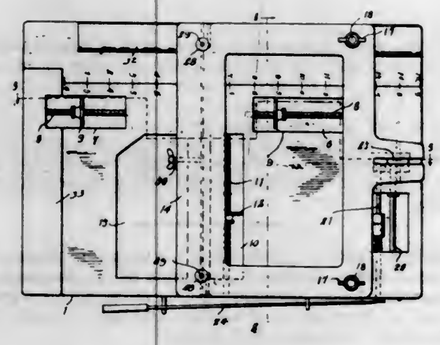
In an airplane, a wing including upper and lower walls having relatively narrow spaced slots and the slots of one wall alining with the slots of the other wall, and spaced pairs of strips connecting the upper and lower walls and forming air passages in alinement with the alining slots of the walls, said slots disposed in the direction of flight of the device to divide the upper surface of the wing into separate vacuum chambers during the flight of the airplane.

1,808,997. STRIPPER FOR PASTRY CAKE BAKING MACHINES. CHARLES SCHROEDER and HARRY TATOSIAN, Bridgeport, Conn., assignors to Ice Cream Cone Machinery Inc., Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 4, 1928. Serial No. 244,447. 2 Claims. (Cl. 107—58.)



1. The combination with a cone cake baking machine including a series of hingedly connected pairs of baking irons, means for moving the same in a horizontal plane, means for raising one iron of each pair from the other of said pair of a cake picking device in the line of travel of each of the pair of baking irons while open, said picking device comprising a finger to engage and traverse the face of each of said irons as they move forward past the picker.

1,808,998. CELLULOSE FILM. SAMUEL E. SHEPPARD and JAMES G. MCNALLY, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 30, 1930. Serial No. 424,548. 2 Claims. (Cl. 95—9.)

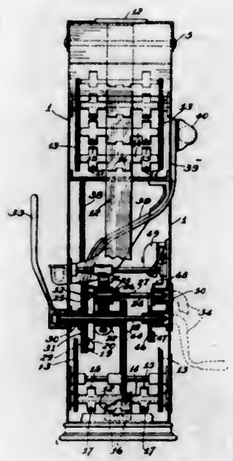


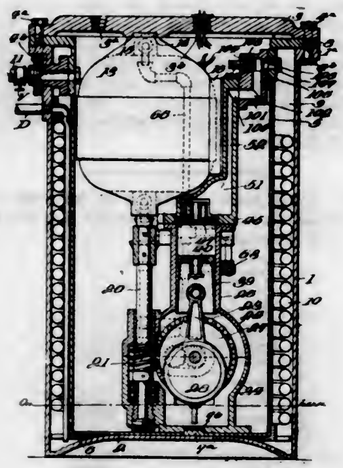
1. A substantially flat laminated cellulose ester film base comprising at least two laminæ having the grain of one lamina at an angle to the grain of the adjacent lamina, one lamina being composed of cellulose acetate and the other lamina being composed of cellulose nitrate.

1,808,999. REFRIGERATION. THOMAS SHIPLEY, York, Pa., assignor to York Ice Machinery Corporation, York, Pa., a Corporation of Delaware. Filed Oct. 12, 1927. Serial No. 225,774. 20 Claims. (Cl. 62—115.)

1. The method of arresting the refrigerative action of an evaporator containing at least a small quantity of volatile refrigerant in the liquid state, which consists in isolating the evaporator and admitting thereto gaseous refrigerant at a controlled pressure higher than that corresponding to the temperature of the liquid refrigerant in the evaporator.

1,809,000. PAPER FOLDING MACHINE. ELZA R. STEALY, Shenandoah, Iowa. Filed Jan. 4, 1929. Serial No. 330,164. 4 Claims. (Cl. 270—80.)

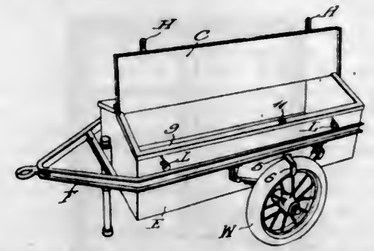




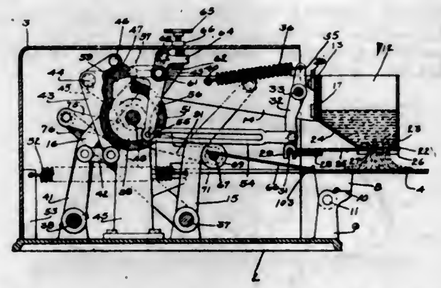
1. An appliance of the class described, a folding blade having a tapering sharp lower edge, a cooperating tapering slot structure, a paper guide near one end of the slot structure running at right angles with the slot, an adjustable guide near opposite end of slot adjustable parallel with the slot, an adjustable guide at each side of the slot individually adjustable toward and from the slot, means for adjusting the blade so that its lower edge will be parallel with the slot, and means for lowering the blade to force the material to be folded into the slot thereby forming a clear cut sharp fold, and again raising said blade to release the folded material from said slot.

1,809,001. COIN CONTROLLED VENDING MACHINE. ALBERT THOKE, Pittsburgh, Pa., assignor to D. L. Clark Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 19, 1928. Serial No. 326,946. 6 Claims. (Cl. 312—97.)

1. In a coin controlled vending machine a shaft rotatable within a casing, means for rotating said shaft in one direction, a notched disk borne by said shaft, a bar secured at one end to said casing and at the other end engaging said shaft in the form of a spring-compressed bearing, said bar being provided with a bore, and a bolt mounted in said bore and movable both rotatably and longitudinally therein and adapted to engage the notches of said disk.



1,809,002. REFRIGERATING APPARATUS. LUCIEN L. TORREY, Los Angeles, Calif. Filed Jan. 31, 1925. Serial No. 6,079. 15 Claims. (Cl. 62—115.)



1. In a refrigerating unit, an outer and an inner tank, a compressor in said inner tank, means to close said inner tank from the atmosphere, said compressor in operative condition preventing reflux of gas from said outer to said inner tank through said compressor, and means to shut off communication between said tanks in the inoperative condition of said compressor.

1,809,003. TRAILER WHEEL LOCK. JOHN VAN VORST, Schenectady, N. Y., assignor to Mohawk Asphalt Heater Company, Schenectady, N. Y., a copartnership composed of John Van Vorst and George M. Baker. Filed Apr. 14, 1930. Serial No. 444,238. 6 Claims. (Cl. 188—31.)

1. In a vehicle having an enclosure, and a wheel spaced laterally therefrom, said enclosure having an opening near said wheel; a wheel-holding member adapted for engagement with said wheel and for passage through said opening, and means within said enclosure for locking said wheel-holding member against withdrawal from said opening.

1,809,004. MACHINE FOR BAKING CAKES. FRANK J. VIERLING and JAMES JESSEN, Minneapolis, Minn., assignors to Edward S. Harrison, Minneapolis, Minn. Filed Jan. 12, 1928. Serial No. 246,248. 11 Claims. (Cl. 107—4.)
